whence he infers that the whole of Arabian fable, devis, peris, fairies, enchanters, giants, oracular birds, &c. &c. are derived. With respect to astronomy, as illustrated by these records, we need only notice that they corroborate Humboldt's theory,—that the twelve signs of the zodiac are not the original emblems, but altered from a more ancient sphere of the celestial mansions used in Central Asia. In these we see astrology as the parent of astronomy, and the rabbit (so frequent in Mexican hieroglyphics),* the ocelot, the sea-monster (so common to all the oldest systems), the raven (so distinguished in northern mythology), and other signs, the connexion of which with the Egyptian, the Grecian, and the Celtic, &c. is so remarkable, and throws so singular a light upon the early history and superstitions of the human race. In Buddhism we also find the hells, or rather hades of other regions, (for this faith has none but purgatorial punishments); and there is little in [the machinery of] Dante, or of Shakespeare's Hamlet, (brought from the Euxine by our ancestors, who were Buddhists), not to be recognised in these eastern stories. Still we cannot define Buddhism to be strictly a mythology: from Mr. Upham's researches, it is rather exhibited in the form of a class of opinions or doctrines, influential upon an immense portion of Asia, and operating on the moral and political government of the people. It appears to be a substitution for, or a reformation upon, the Paganism of the East,† of which the only existing memorials seem to be here preserved, inclusive of those which relate to that most extraordinary of worships, (if not in its commencement, for that was naturally grafted upon the weakness and fears of man, at least in its progress), Kappoism, or demon-worship, and the Bali or planetary influences. As if the Budha could not destroy or expel this strange creed, he was obliged to admit it into a partnership, and engraft it on his own, about two thousand three hundred and forty years ago,—the date Gaudma assigned to modern Buddhism,—its anterior doctrines going back to the deluge.

The introduction thus sums up the chief points of general inquiry:—

"The sum of these remarks amounts to this—that Buddhism is in itself a primitive doctrine, of parallel pretension with Brahminism; that the later faith recognises its earlier doctrine, and incorporates its author with its philosophy; that the fatal wars which drove Buddhism from India originated in the principles which we trace in the revival of the present system of doctrine of the Budha; and that the most important link therein is manifestly the doctrine of the metempsychosis—a principle alike subsisting both in the anterior eras and in the present Budha-verouse, or law of Gaudma.

"The Budha Gaudma is the object of the highest veneration: he presides over their universe; he is superior to all the gods; he is a worker of miracles and a muni, or divine teacher; and he conceived and accomplished his desire of becoming a Budha (or an omniscient teacher and saint) in the *manoepeleka*, or earth. This sublime act, as they deem it, is the grand excellency of the Budha, as thereby he procured (according to Buddhist doc-

* The arbitrary sign of the fish-god, the Cipactli of Mexico, and the Macchara of Buddhism, is of itself a signal approximation between the zodiacal signs of the two continents; also the two voids, shown in the plates of the *Nehates*, whereby those so born are without a star for any horoscope: they are meannest, nameless and unhappy. The epagomene days are very important.

† A reference to Sir W. Drummond's *Origines* will greatly instruct readers inquisitive upon this subject.—Ed.

trine) salvation, or nirwana, for mankind; and hence our earth is termed, in reference to this peculiar and remarkable distinction, *the Ford of Nirwana*, or the road to the supreme state of felicity, which the inhabitants of the three other islands or continents are incapable of acquiring or aspiring to; and the Buddhist writings lay a particular stress on this high and remarkable privilege of man; for the entire scope and force of the doctrine of Buddhism is in no point more distinctive and strongly marked than in its ruling and vital principle, that 'the ascent to divinity is only to be acquired from the state of man.'

The jatakas of the Budha, or that portion which explains the transmigration of souls, is almost precisely the same with the doctrines afterwards promulgated by Pythagoras. Some instances of the change into various forms are illustrated by very curious plates. The drawings whence these engravings were lithographed are now preserved by the Royal Asiatic Society; and Mr. Phillips, in his lectures at Somerset House on painting, two years ago, mentioned them as being the only examples extant of the old mode of teaching by pictures. It is still common in Ceylon; where, on certain festivals, as we have been informed, the priests venture to comment on the past life, and convey admonition as to the future conduct of their rulers, by hanging up allegorical and descriptive pictures in their temples.

"The long struggle (says our author) between the Buddhists and the Brahmins dispersed the former over all the regions of central Asia, and through the islands of the Eastern Archipelago; in the various migrations which followed we may account for striking coincidences existing between India and Egypt and the Phœnician colonies; but how can we account for a conformity of astronomical and astrological data, and of religious rites and ceremonies, and connect together those of the Buddhists and the inhabitants of the new continent of America? Many interesting approximations between the traditions of the new continent and those of followers of the religion of Budha, have been illustrated with peculiar force by M. Humboldt; but in nothing are they more strongly evidenced than in the practice of picture-writing, 'exhibiting the representation of an event with pictures,' in which the objects represented are in a state of action with each other.' We find many valuable particulars in the recital of the first conquerors of the new world, such as those concerning the paintings which were sketched by the Mexican artists to convey to the unfortunate Montezuma a representation of the wonderful strangers who had arrived within his dominions; and of the same class with the Mexican paintings, according to the remarks of M. Humboldt, may be ranked the sketches contained in the Siamese manuscripts* in the Library at Paris. In these subjects, as well as in the observations

of ancient writers, and in many portions of the Chinese annals, we may trace the purpose of instruction by the eye; and the development of the legends, which we shall see recorded in these plates, will have a higher interest, from their belonging to the class of representations which apparently gave rise to pictorial history."

There is no head or division of this work which would not furnish us with overpowering matter for any review within the compass of our limits; and we are therefore left without any alternative, except that of taking a snatch here and there, the most likely to interest the general reader. Still we must pass by all the extraordinary remains of the demon worship, and the imaginative accounts of the Dewa-loka, or six heavens, out of which hundreds of Arabian nights' tales might be fabricated, full of trials of life, colloquial dialogues, and pictures of manners. The gods in the Dewa-loka heavens "are invested with qualities combining an agency and interest in the actions of man, which become thereby associated with their superior powers and dignity. These gods are termed the *Nat*;^{*} their character and operative influence on man are described in various parts of the Buddhist writings with the richest imagery, elucidating most of the grandeur, etiquette, and observances of the great princes and monarchs of this faith, who appear to have been intent upon transfusing the details of the Tavateinza heaven and of the Dewa-loka into their titles and usages, and to have framed their courts after the royal and splendid scenes of the *Nat* paradise. In these abodes are the mines of gold and silver, of diamonds, rubies, and all precious stones; gardens, or a paradise of sandal, and all odoriferous woods; trees, the produce of which are robes (splendid personal ornaments), and all sorts of riches: these are at the disposal of the gods for great and virtuous kings and men, votaries of the Budha.

"In the Tavateinza heaven grows the padze-zebayn tree, on which, instead of fruits, hang precious garments, delicious viands, and whatever can give enjoyment to the *Nat* deities; beyond which are seven rows of palm-trees, on which grow gems of gold and silver. In the centre of the garden grows the celebrated flower which is as large as a chariot-wheel. The garden is called *nanda*, or crowd, because the *Nat* gods frequent it in multitudes to pull the flower, and wear it in their hair. Here is the renowned twining-plant, *lota*, which every thousand years produces a most exquisite fruit. In order to get at this fruit, the *Nat* gods assemble in crowds for one hundred years before it ripens; and for one whole year sing and dance, accompanied by drums and other musical instruments. Having eaten of that fruit, the *Nat* become inebriated for four entire months. Sekkraia and his thirty-two counsellors and gods periodically visit the celebrated tree, or *lota*, which is the sacred image of the heavens. This tree is surrounded with several padze-zebayns, and when it flowers its ruddy splendour extends all around. Arrived there, Sekkraia takes his seat on his magic stone, and the whole assembly, seated, begin to celebrate the festival, which lasts for four months. They need not ascend the tree to

gather the flowers, for the *Nat* of the winds shake it, and make the flowers fall; and lest the beauty of the flowers should be spoiled, the winds support them, and permit them not to touch the ground. The whole bodies of the *Nat* are then covered with the odorous dust coming from the stamens of the flowers."

[To be concluded in our next.]

The Naval Officer; or, Scenes and Adventures in the Life of Frank Mildmay. 3 vols. 12mo. London, 1829. Colburn.

ONE of the consequences of the pseudo-literary, or rather of the publishing, fashion of the day, is, that it tempts persons to write, who, in other times, would never have thought of that employment:—the bookselling trade wants names; and blue-stocking miladias, young lordlings, the gentle of both sexes who have tastes for scribbling, captains naval and military having in peace-time nothing else to do, and a miscellaneous et-cetera of candidates, are readily encouraged to become authors, and lend the names required—"for a consideration." Besides these, there are the imitators and drudges of lower grade, who, to do them justice, play the characters of rank, title, and gentility, they are pleased to assume, with an *éclat* little short of that attained by the real owners; and cause and effect alternate—there are plenty of writers, plenty of puffing, plenty of mediocrity, plenty of readers, and more than plenty of books.

Where one is nearly as good as another, and the works produced are so very like Peter Pindar's razors, individual criticism is hardly worth while; but out of compliment to Captain Marriott, who is stated to be the Frank Mildmay of this novel, we shall bestow a few remarks upon his labours. The captain appears to be a sensible and a clever man, but novel-writing is not his forte—as a good and gallant officer we are told he is, but his reputation is not raised by this attempt at penmanship. This we presume to pronounce on several grounds. *First*, because the scope and tendency of his narrative is to depreciate the profession to which he has the honour to belong;—unintentionally, we firmly believe, yet still injuriously, as it must tend to degrade the naval character in the esteem of the country. *Secondly*, because there are several personal portraits, easily to be recognised, which must hurt the feelings of the parties if living, and of their friends and relatives if dead;—an offence excusable in a book-seller's hack, but not creditable to an officer of high station in the service. *Thirdly*, because there are frequent instances of allusions which would be most indecorous and unbecoming in decent society, and which no writer of any kind ought ever to have committed to the press. *Fourthly*, because there is a tone of great exaggeration throughout. And, *fifthly*, because there is a considerable portion of description, relative to the freedoms of a sailor's life, mixed up (to our judgment very improperly) with religion or religious cant; and the conclusion is brought about by a scene to which we can apply no other terms but those of rank (though we are sure unintended) profanation. Having these strong objections in our mind, we must confess our regret that this respectable gentleman should have joined the corps of amateur authors:—book-making is a difficult and dangerous business, and far better left alone than taken up by those who have no immediate vocation that way.

In other respects, the volumes before us display an acquaintance with the world, especially the aqueous part of it, and the abilities of a well-informed man. The first of them relates

* "The coincidences with Mexican subjects go much deeper than the use of picture-writings only. The Budha Gaudma, in his reprobation of human sacrifices and enforcement of bloodless rites, by substituting flowers and incense for his service, exhibits a striking resemblance to the Mexican deity, the mild Quetzalcoatl, who is described as exercising the same pleasing influence over the Mexican tribes, but his harmless rites were despised and set at naught by the fierce Aztec race. There is, indeed, much of magic and violence strangely commixed with the milder tenets of Buddhism, and we shall find, lurking in its historical dogmas, many traces of violence and bloodshed. These are, in fact, indications of two different sources of doctrine: the primary one, the mild and benign; the fiercer and more palpable, the seed of a much later era."

* "If the inferior gods of Jugandere are described so as to remind us of the interesting tales of the Arabian Nights, the *Nat* deities are more essentially the presiding genii of the Arabian fictions and the beneficent fairies of the West; they bestow riches at will; they can assume all forms; they wield the elements. The diamond fruits of Aladdin's garden are an exact copy of their gardens, and of the produce of the padze-zebayn tree."

to the author's adventures as a school-boy and midshipman; and, though the theme has been oft repeated, it is by far the most amusing portion of the work. The second and third volumes become more dull and tedious; being, in short, very matter-of-fact history, with a spice of romance thrown in, and a few well-known anecdotes appropriated, in order to relieve the prolix monotony of common-place cruises, voyages, and affairs. To exhibit both the faults and the merits of the performance, we shall now go through with the *Naval Officer*, and point out as briefly as possible why we have censured, and why we have praised.

Under the assumed name of Mildmay in the title-page, the quotation is curiously indicative of the contradictions which follow; for the first line is

"My muse by no means deals in fiction!"

At school, however, master Mildmay paints himself in colours of more hardened and obdurate vice than, we trust, ever belongs to juvenile years out of a tale of fiction. At page 9 he is a blushing child when half detected in pillaging a hen-roost; and, in the next page, a few months has made him an "adept in vice" seemingly, from having robbed the orchard occasionally without being found out. But this violent contrast is out-done by a companion, "Tom Crauford, a fine, spirited fellow; up to every thing; loving mischief, though not vicious," &c.: the proof of which character is, that after helping him to abscond, this *fine, spirited fellow* joins the pursuit against him, and, when overtaken, this *not vicious* boy acts with the most consummate falsehood and hypocrisy. "Tom Crauford (says the author) helped me to scale the wall; and when he supposed I had got far enough to be out of danger from pursuit, went and gave information, to avoid the suspicion of having aided and abetted. After running a mile, to use a sea phrase, I hove to, and began to compose, in my mind, an oration which I intended to pronounce before my father, by way of apology for my sudden and unexpected appearance; but I was interrupted by the detested usher and half a dozen of the senior boys, among whom was Tom Crauford. Coming behind me as I sat on a stile, they cut short my meditations by a tap on the shoulder, collared and marched me to the right about in double quick time. Tom Crauford was one of those who held me, and outdid himself in zealous invective at my base ingratitude in absconding from the best of masters, and the most affectionate, tender, and motherly of all school-dames."

A more odious young scoundrel could scarcely be imagined; but this arises out of the fondness for exaggerated effects, for which we have blamed the author. Again, when bidding farewell to his mother, on departing for sea, there is equal violence done to nature and probability, merely for the sake of striking expression. "The letting down of the rattling steps completely overthrew the small remains of fortitude which my dearest mother had reserved for our separation, and she threw her arms round my neck in a frenzy of grief. I beheld her emotions with a countenance as unmoved as the figure-head of a ship; while she covered my stoic face with kisses, and washed it with her tears. I almost wondered what it all meant, and wished the scene was over. My father helped me out of this dilemma; taking me firmly by the arm, he led me out of the room: my mother sank upon the sofa, and hid her face in her pocket-handkerchief. I walked as slowly to the coach as common decency would permit. My father looked at me, as if he would

inquire of my very inward soul whether I really did possess human feelings? I felt the meaning of this, even in my then tender years; and such was my sense of propriety, that I mustered up a tear for each eye, which, I hope, answered the intended purpose. We say at sea, 'When you have no decency, sham a little;' and I verily believe I should have beheld my poor mother in her coffin with less regret than I could have foregone the gay and lovely scenes which I anticipated."

Could this have been true, so brutal a son never would have turned out any thing but a ruthless ruffian, whereas our hero was only a bit of a blackguard. But it is not our intention to follow him through all the sights and actions appertaining to this amiable quality. His account of a ship in harbour (p. 64) is not very correct. At Trafalgar he ridiculously describes the sailors with *tears running down their cheeks* when Nelson's famous signal was hoisted;—sailors going into battle are not so apt to pipe and anivel; and in this his first fight he absolutely tells us—the boy thirteen years old!—that he was secretly pleased when he saw two men killed near him, because they had witnessed his starting back when a heavy shot threw the water over his face! Indeed, his whole account of his feelings on this occasion is vastly unnatural.

"When we had once got fairly into action, I felt no more of this, and beheld a poor creature cut in two by a shot with the same indifference that at any other time I should have seen a butcher kill an ox. Whether my heart was bad or not, I cannot say; but I certainly felt my curiosity was gratified more than my feelings were shocked, when a raking-shot killed seven and wounded three more. I was sorry for the men, and, for the world, would not have injured them; but I had a philosophic turn of mind; I liked to judge of causes and effects; and I was secretly pleased at seeing the effect of a raking-shot."

"I attended (he continues) the surgeon in the steerage, to which place the wounded were removed, and saw all the amputations performed, without flinching; while men who had behaved well in the action fainted at the sight. I am afraid I almost took a pleasure in observing the operations of the surgeon, without once reflecting on the pain suffered by the patient. Habit had now begun to corrupt my mind. I was not cruel by nature; I loved the deep investigation of hidden things; and this day's action gave me a very clear insight to the anatomy of the human frame, which I had seen cut in two by shot, lacerated by splinters, carved out with knives, and separated with saws!"

This, as Dominie Samson would exclaim, is "prodigious!" and it appears that our worthy young friend's elegant tastes were not improved by other circumstances; for he says, "I renewed my acquaintance with the classic authors. Horace and Virgil, licentious, but alluring, drove me back to the study of Latin, and fixed in my mind a knowledge of the dead languages, at the expense of my morals." A wonderful and odd effect, certainly! Who that ever read the ancient poets would fix upon *Virgil* (without question the purest as respects his morality) as peculiarly entitled to the epithet of "licentious?"

At a future time he was brought back among the dead from an attack on an enemy; and he relates, that Murphy (another midshipman and bitter adversary of his) "seeing my supposed lifeless corpse, he gave it a slight kick, saying, at the same time, 'Here is a young cock that has done crowing! Well, for a

wonder, this chap has cheated the gallows!! The sound of the fellow's detested voice was enough to recall me from the grave, if my orders had been signed: I faintly exclaimed, 'You are a liar!' which, even with all the melancholy scene around us, produced a burst of laughter at his expense." Of this same Murphy he afterwards tells us, previous to saving him from drowning, it was "the desire of oppressing my enemy under an intolerable weight of obligation, that induced me to rush to his rescue: moreover, as I stood on the gangway witnessing his struggles for life, I felt that I was about to lose all the revenge I had so long laid up in store; in short, I could not spare him, and only saved him, as a cat does a mouse, to torment him." Need we repeat, that all this in boyhood is utterly unnatural? To avoid it, we will go to the longest extract we intend to make. The service led the midshipman to land on the eastern coasts of Spain, where the humane Suchet (see our last Gazette) was then carrying on his ameliorating war. "In the article of dress (he states), our 'catalogue of negatives,' as a celebrated author says, 'was very copious;' we had no shoes nor stockings, no linen, and not all of us had hats—a pocket-handkerchief was the common substitute for this article: we clambered over rocks, and wandered through the flinty or muddy ravines in company with our new allies, the hardy mountaineers. These men respected our valour, but did not like our religion or our manners. They cheerfully divided their rations with us; but were always inexorable in their cruelty to the French prisoners; and no persuasion of ours could induce them to spare the lives of one of these unhappy people, whose cries and entreaties to the English to intercede for, or save them, were always unavailing. They were either stabbed before our faces, or dragged to the top of a hill commanding a view of some fortress occupied by the French, and, in sight of their countrymen their throats were cut from ear to ear. Should the Christian reader condemn this horrid barbarity, as he certainly will, he must remember that these people were men whose every feeling had been outraged. Rape, conflagration, murder, and famine, had every where followed the steps of the cruel invaders; and however we might lament their fate, and endeavour to avert it, we could not but admit that the retaliation was not without justice."

Our countrymen entered upon the defence of the castle of Trinity, the capture of which by the French was a necessary prelude to the fall of Rosas, respecting which the following is interesting.

"One morning, very early, I happened to have the look-out. The streak of fog which during the night hangs between the hills in that country, and presses down into the valleys, had just begun to rise, and the stars to grow more dim above our heads, when I was looking over the castle-wall towards the breach. The captain came out and asked me what I was looking at. I told him I hardly knew; but there did appear something unusual in the valley, immediately below the breach. He listened a moment, looked attentively with his night-glass, and exclaimed, in his firm voice, but in an undertoned manner, 'To arms!—they are coming!' In three minutes every man was at his post; and though all were quick, there was no time to spare, for by this time the black column of the enemy was distinctly visible, curling along the valley like a great centipede; and, with the daring enterprise so common among the troops of Napo-

lezen, had begun in silence to mount the breach. It was an awful and eventful moment; but the coolness and determination of the little garrison was equal to the occasion. The word was given to take good aim, and a volley from the masked guns and musketry was poured into the thick of them. They paused—deep groans ascended! They retreated a few paces in confusion, then rallied, and again advanced to the attack; and now the fire on both sides was kept up without intermission. The great guns from the hill fort, and the Swiss sharpshooters, still nearer, poured copious volleys upon us, and with loud shouts cheered on their comrades to the assault. As they approached and covered our mine, the train was fired, and up they went in the air, and down they fell buried in the rains! Groans, screams, confusion, French yells, British hurrahs, rent the sky! The hills resounded with the shouts of victory! We sent them hand-grenades in abundance, and broke their shins in glorious style! I must say that the French behaved nobly, though many a tall grenadier and pioneer fell by the symbol in front of his warlike cap. I cried with rage and excitement; and we all fought like bull-dogs, for we knew there was no quarter to be given. Ten minutes had elapsed since the firing began, and in that time many a brave fellow had bit the dust. The head of their attacking column had been destroyed by the explosion of our mine. Still they had re-formed, and were again half way up the breach when the day began to dawn; and we saw a chosen body of one thousand men, led on by their colonel, and advancing over the dead which had just fallen. The gallant leader appeared to be as cool and composed as if he were at breakfast; with his drawn sword he pointed to the breach, and we heard him exclaim, '*Suivez moi!*' I felt jealous of this brave fellow—jealous of his being a Frenchman; and I threw a lighted hand-grenade between his feet—he picked it up, and threw it from him to a considerable distance. 'Cool chap enough that,' said the captain, who stood close to me; 'I'll give him another,' which he did, but this the officer kicked away with equal *sang froid* and dignity. 'Nothing will cure that fellow,' resumed the captain, 'but an ounce of lead on an empty stomach—it's a pity, too, to kill so fine a fellow—but there is no help for it.' So saying, he took a musket out of my hand, which I had just loaded—aimed, fired—the colonel staggered, clapped his hand to his breast, and fell back into the arms of some of his men, who threw down their muskets, and took him on their shoulders, either unconscious or perfectly regardless of the death-work which was going on around them. The firing redoubled from our musketry on this little group, every man of whom was either killed or wounded. The colonel, again left to himself, tottered a few paces farther, till he reached a small bush, not ten yards from the spot where he received his mortal wound. Here he fell; his sword, which he still grasped in his right hand, rested on the boughs, and pointed upwards to the sky, as if directing the road to the spirit of its gallant master. With the life of the colonel, ended the hopes of the French for that day. The officers, we could perceive, did their duty—cheered, encouraged, and drove on their men, but all in vain! We saw them pass their swords through the bodies of the fugitives; but the men did not even mind that—they would only be killed in their own way—they had had fighting enough for one breakfast. The first impulse, the fiery onset, had been checked by the fall of their brave

leader; and *saute qui peut*, whether coming from the officers or drummers, no matter which, terminated the affair, and we were left a little time to breathe, and to count the number of our dead. The moment the French perceived from their batteries that the attempt had failed, and that the leader of the enterprise was dead, they poured in an angry fire upon us. I stuck my hat on the bayonet of my musket, and just shewed it above the wall. A dozen bullets were through it in a minute: very fortunately, my head was not in it! The fire of the batteries having ceased, which it generally did at stated periods, we had an opportunity of examining the point of attack. Scaling ladders and dead bodies lay in profusion. All the wounded had been removed; but what magnificent 'food for powder' were the bodies which lay before us!—all, it would seem, picked men; not one less than six feet, and some more: they were clad in their grey capots, to render their appearance more *sombre* and less discernible in the twilight of the morning; and as the weather was cold during the nights, I secretly determined to have one of these great coats as a *chère amie* to keep me warm in night-watches. I also resolved to have the colonel's sword to present to my captain; and as soon as it was dark I walked down the breach, brought up one of the scaling ladders, which I deposited in the castle; and, having done so much for the king, I set out to do something for myself. It was pitch dark. I stumbled on; the wind blew a hurricane, and the dust and mortar almost blinded me; but I knew my way pretty well. Yet there was something very jackal-like in wandering about among dead bodies in the night-time, and I really felt a horror at my situation. There was a dreadful stillness between the blasts, which the pitch darkness made peculiarly awful to an unfortified mind. It is for this reason that I would ever discourage night-attacks, unless you can rely on your men. They generally fail: because the man of common bravery, who would acquit himself fairly in broad day-light, will hang back during the night. Fear and Darkness have always been firm allies, and are inseparably playing into each other's hands. Darkness conceals Fear, and therefore Fear loves Darkness, because it saves the coward from shame; and when the fear of shame is the only stimulus to fight, day-light is essentially necessary. I crept cautiously along, feeling for the dead bodies. The first I laid my hand on made my blood curdle. It was the lacerated thigh of a grenadier, whose flesh had been torn off by a hand-grenade. 'Friend,' said I, 'if I may judge from the nature of your wound, your great-coat is not worth having.' The next subject I handled had been better killed. A musket ball through his head had settled all his tradesmen's bills; and I hesitated not in becoming residuary legatee, as I was sure the assets would more than discharge the undertaker's bill; but the body was cold and stiff, and did not readily yield its garment. I, however, succeeded in obtaining my object; in which I arrayed myself, and went on in search of the colonel's sword; but here I had been anticipated by a Frenchman. The colonel, indeed, lay there, stiff enough, but his sword was gone. I was preparing to return, when I encountered, not a dead, but a living enemy. 'Qui vive?' said a low voice. '*Anglois, bête!*' answered I, in a low tone; and added, '*mais les corsaires ne se battent pas.*' '*C'est vrai,*' said he; and growling, '*bon soir,*' he was soon out of sight. I scrambled back to the castle, gave the countersign to the sentinel, and shewed my new great-coat

with a vast deal of glee and satisfaction; some of my comrades went on the same sort of expedition, and were rewarded with more or less success. In a few days, the dead bodies on the breach were nearly denuded by nightly visitors; but that of the colonel lay respected and untouched. The heat of the day had blackened it, and it was now deprived of all its manly beauty, and nothing remained but a loathsome corpse. The rules of war, as well as of humanity, demanded the honourable interment of the remains of this hero; and our captain, who was the very flower of chivalry, desired me to stick a white handkerchief on a pike, as a flag of truce, and bury the bodies, if the enemy would permit us. I went out, accordingly, with a spade and a pick-axe; but the tirailleurs on the hill began with their rifles, and wounded one of my men. I looked at the captain, as much as to say, 'Am I to proceed?' He motioned with his hand to go on, and I then began digging a hole by the side of a dead body, and the enemy, seeing my intention, desisted from firing. I had buried several, when the captain came out and joined me, with a view of reconnoitring the position of the enemy. He was seen from the fort, and recognised; and his intention pretty accurately guessed at. We were near the body of the colonel, which we were going to inter; when the captain, observing a diamond ring on the finger of the corpse, said to one of the sailors, 'You may just as well take that off; it can be of no use to him now.' The man tried to get it off, but the rigidity of the muscle after death, prevented his moving it. 'He won't feel your knife, poor fellow,' said the captain; 'and a finger more or less is no great matter to him now: off with it.' The sailor began to saw the finger-joint with his knife, when down came a twenty-four pound shot, and with such a good direction, that it took the shoe off the man's foot, and the shovel out of the hand of another man. 'In with him, and cover him up!' said the captain. We did so; when another shot, not quite so well directed as the first, threw the dirt in our faces, and ploughed the ground at our feet. The captain then ordered his men to run into the castle, which they instantly obeyed; while he himself walked leisurely along through a shower of musket-balls from those cursed Swiss dogs, whom I most fervently wished at the devil, because, as an *aide-de-camp*, I felt bound in honour as well as duty to walk by the side of my captain, fully expecting every moment that a rifle-ball would have hit me where I should have been ashamed to shew the scar. I thought this funeral pace, after the funeral was over, confounded nonsense; but my fire-eating captain never had run away from a Frenchman, and did not intend to begin then. I was behind him, making these reflections; and as the shot began to fly very thick, I stepped up alongside of him, and by degrees brought him between me and the fire. 'Sir,' said I, 'as I am only a midshipman, I don't care so much about honour as you do; and therefore, if it makes no difference to you, I'll take the liberty of getting under your lee.' He laughed, and said, 'I did not know you were here, for I meant you should have gone with the others; but since you are out of your station, Mr. Mildmay, I will make that use of you which you so ingeniously proposed to make of me. My life may be of some importance here; but yours very little, and another midshipman can be had from the ship only for asking: so just drop astern, if you please, and do duty as a breast-work for me!' 'Certainly, sir,' said

I, 'by all means,' and I took my station accordingly. 'Now,' said the captain, 'if you are doubled up, I will take you on my shoulders!' I expressed myself exceedingly obliged, not only for the honour he had conferred on me, but also for that which he intended; but hoped I should have no occasion to trouble him. Whether the enemy took pity on my youth and innocence, or whether they purposely missed us, I cannot say: I only know I was very happy when I found myself inside the castle with a whole skin; and should very readily have reconciled myself to any measure which would have restored me even to the comforts and conveniences of a man-of-war's cockpit."

We have mentioned that this work is calculated to lower the navy in the eyes of England; and though two or three apologetic salvos are thrown in, such is its general bearing. At page 210 the portrait of a brute of a captain;* at 214 that of a bad admiral; at 223 a story of an infidel commander;† and many other passages in the succeeding vo-

* "When much excited, he had a custom of shaking his shoulders up and down, and his epaulettes on these occasions flapped like the huge ears of a trotting elephant. At the most distant view of his person or sound of his voice, every midshipman not obliged to remain fed like the land-crabs on a West India beach."

† It is told by a seaman about to be hanged for mutiny. "When I was (says he) an officer's servant, I was one day tending the table in the ward-room, and I heard the commander of a sloop of war, who was dining there with his son, say that it was all nonsense—that there was no future state, and the Bible was a heap of lies. I have never been happy since." After describing the execution of this man, at some length, we are regaled with a story. "That the execution of a man on board of a ship of war does not always produce a proper effect upon the minds of the younger boys, the following fact may serve to prove:—There were two little fellows on board the ship; one was the son of the carpenter, the other of the boatswain. They were both of them surprised and interested at the sight, but not proportionally shocked. The next day I was down in one of the wings reading by the light of a tallow-dip—edgewise, a fighting edgewise, when these two boys came adding down the main hatchway by one of the chains. Whether they swam and thought I would not 'peach,' or whether they supposed I was asleep, I cannot tell; but they took their seats on the cables in the heart of the tier, and for some time appeared to be in earnest conversation. They had some articles folded up in a dirty check-shirt and pocket-handkerchief; they looked up at the battens to which the hammocks are suspended, and producing a long rope-yarn, tried to pass it over one of them; but unable to reach, one boy climbed on the back of the other and effected two purposes, by reeling one end of the line, and bringing it down to the cables again. They next unrolled the shirt, and, to my surprise, took out the boatswain's kitten, about three months old; its fore paws were tied behind its back, its hind feet were tied together, and a fishing-lead attached to them; a piece of white rag was tied over its head as a cap. It was now pretty evident what the fate of poor puss was likely to be, and why the lead was made fast to her feet. The rope-yarn was tied round her neck; they each shook one of her paws, and pretended to cry. One of theurchins held in his hand a sife, into which he poured as much flour as it would hold out of the handkerchief, the other held the end of the rope-yarn: every ceremony was gone through that they could think of. 'Are you ready?' said the executioner, or he that held the line. 'All ready,' replied the boy with the sife. 'Fire the gun,' said the hangman. The boy applied one end of the sife to his mouth, blew out all the flour, and in this humble imitation of the smoke of a gun poor puss was run up to the battens, where she hung till she was dead. I am assured to say I did not attempt to save the kitten's life, although I caused her foul murder to be revenged by the cat. After the body had hung a certain time, they took it down and buried it in the shot-locker; this was an indelible offence, as the smell would have proved, so I lodged the information; the body was found, and, as the facts were clear, the law took its course, to the great amusement of the bystanders, who saw the brats that upon a gun and well flogged. The boatswain ate the kitten; first, he said, because he had 'learned to eat cats in Spain; secondly, because she had not died a natural death (if thought otherwise); and his last reason was more singular than either of the others—he had seen a picture in a church in Spain, of Peter's vision of the anti-christian down in the sheet, and there was a cat among them: observing an alarm of suspicion in my eye, he thought proper to confirm his assertion with an oath. 'Rabbit! say I—now, think I didn't know a cat from a rabbit! Why, she has got short ears and long tail, and t'other has got white claws, as we calls it!'"

lumes, all tend to produce this effect. But it is time we should close Vol. I.: the author's wit at a masquerade at Minorca—his pious feelings on hearing of his mother's death (improved by an old story adopted for the nonce*)—his return to England—his running away from his father's house—his saving a young lady's life—and his joining a band of strolling players, out of love for their Juliet,—finish its pages; and with them nearly all the interest of the publication.

As novel-writing, however, is now the mania in vogue, and as this species of publication usurps the place of more wholesome literature, we shall next week offer some further remarks on the subject, and on the indecencies and profanity which unfit this particular work for the public eye.

The Sorrows of Rosalie. Fourth edition, with Additional Poems. Ebers and Co.

It has often been matter of regret to us that there should be so lamentably few good song-writers among our poets; and we therefore hail with greater pleasure this new edition of a popular author, because she has removed, by her additions to the volume, a considerable portion of that feeling. These additions chiefly consist in a small collection of lyric compositions of much beauty,—not only admirable in themselves, but peculiarly adapted for the purposes of singing, as we know from their having been arranged to music by the authoress herself, who is about to appear, ere long, in the double character of bard and musician.

The "Fairy Bells" is sweet as the sound of music heard on waters in summer evening deep and still, but better adapted to the guitar and voice of moonlit serenader than our pages; so we shall commence with a song to the tune of our friend Crofton Croker.

To the air No. 5, in the "Legends of the Lakes."

"Oh, Erin, sweet Erin 'thy strains
To the heart-broken echo are dear;
And each note in its sweetness remains
Long, long on the listening ear."

* It runs thus:—"I was walking the deck in no very happy state of mind, reflecting seriously on parts of that Bible which for more than two years I had never looked into, when my thoughts were called to the summons which poor Quidd had received, and the beauty of the funeral service which had heard read over him.—I am the resurrection and the life." The moon, which had been obscured, suddenly burst from a cloud, and a cry of horror proceeded from the look-out man on the starboard gangway. I ran to inquire the cause, and found him in such a state of nervous agitation that he could only say, 'Quidd! Quidd!' and point with his finger into the water. I looked over the side, and, to my amazement, there was the body of Quidd.

'All in dreary hammock shrouded,' perfectly upright, and floating with the head and shoulders above water! A slight undulation of the waves gave to the appearance of nodding his head; while the rays of the moon enabled us to trace the remainder of the body underneath the surface. For a few moments I felt a horror which I cannot describe, and contemplated the object in awful silence, while my blood ran cold, and I felt a sensation as if my hair was standing on end. I was completely taken by surprise, and thought the body had risen up to warn me; but in a few seconds I regained my presence of mind, and I soon perceived the origin of this re-appearance of the corpse. I ordered the cutter to be manned, and, in the mean time, went down to inform the first-lieutenant of what had occurred. He laughed, and said, 'I suppose the old boy finds salt water not quite so palatable as grog. The some more shot to his feet, and bring the old fellow to his moorings again. Tell him the next time he trips his anchor, not to run on board of us. He had his regular allowance of prayer; I gave him the whole service, and I shall not give him any more.' So saying, he went to sleep again. * * * The cutter being manned was sent with more shot to attach to the body and sink it. When they attempted to hold it with the boat-hook, it eluded the touch, turning round and round, or bobbing under the water and coming up again, as if in sport; but accident saved them any further trouble; for the bowman, reproached by the boat's crew for not hooking the body, got angry, and darting the spike of the boat-hook into the abdomen, the pent-up gas escaped with a loud whoosh, and the corpse instantly sunk like a stone. Many jokes were passed on the occasion; but I was not in humour for joking on serious subjects."

But even when those sounds should be gay,
Such sorrow is mixed with their tone,
And each note melts so slowly away,
That our hearts feel their sadness alone!
Oh, 'tis thus when life's sunshine is o'er,
And its visions in darkness are hid,
When the friends of our youth are no more,
And our hearts will not beat as they did,—
A sound will bring back thoughts that pass
Like a shadow o'er all that is glad;
We may laugh if we will, but, alas!
E'en the sound of our laughter is sad."

The poems which follow are "beautiful exceedingly;" the first verses of "Highland Mary" breathe of Burns.

"Long Ago!"

Long ago! oh, long ago!
Do not those words recall past years,
And, scarcely knowing why they flow,
Forc'd to the eyes unbidden tears?
Do ye not feel, as back they come,
Those dim sweet dreams of olden days,
A yearning to your childhood's home,
Peopled with tones of love and praise—
Long, long ago!

Long ago! when many a sound
Awoke to mirth which seldom now,
And many an eye was sparkling round
That weeps beneath a darkened brow:
When with our whole young happy hearts
We loved and laughed away the time,
Nor thought how quickly all departs,
So cherished in life's early prime—
Long, long ago!

Long ago! the hopes we nursed
Of happiness, of earthly fame,
Were bright as bubbles are that burst—
A glittering drop, an empty name!
Oh, but to be one hour again
(Whatever that sweet hour might cost)
Free from dim mem'ry's torturing pain,
With those we loved—with those we lost—
Long, long ago!

Long ago! who breathes there here
O'er whom the past hath no such power?
Young heart! if now thy sky is clear,
Beware, beware the future hour!
Perchance the chords that echo now
In after years thou'lt hear again,
And gazing on each faded brow
Wilt sighing say, 'I heard that strain
Long, long ago!'"

"Que ne suis-je en feu?—Old French ballad."

I would I were the slight fern growing
Beneath my Highland Mary's shade,
I would I were the green tree throwing
Its shadow o'er her gentle head!
I would I were a wild flower springing
Where my sweet Mary loves to rest,
That she might pluck me while she's singing,
And place me on her snowy breast!
I would I were in yonder heaven
A silver star, whose soft dim light
Would rise to bless each summer even,
And watch my Mary all the night!
I would, beneath those small white fingers,
I were the lute her breath has framed—
The gentle lute, whose soft note lingers,
As loath to leave her fairy hand!
Ah, happy things! ye may not wander
From Scotland to some darker sky,
But ever live unchanging yonder
To happiness and Mary nigh!
While I at midnight sadly weeping
Upon its deep transparent blue,
Can only gaze while all are sleeping,
And dream my Mary watches too!"

We are puzzled to choose, where every thing is so pretty; perhaps, however, the following may please best, as some contrast to the foregoing.

"Chatter's Farewell."

Farewell, thou dearest of all things
Beneath the bright and blessed sky;
Since thy loved voice the mandate brings,
'Twill not be hard to die.
And yet, now it thy voice which spoke
The wild and withering word of Death?
Thy voice, whose tones the love awoke
Which haunts my parting breath!
Oh! when the heart which hath so well
Its deep and lone devotion proved
Is still, and tongues have ceased to tell
How guiltily it loved,
Wilt thou—wilt thou who for that crime
Hast doomed its warm life-blood to pour,
Think sometimes of the olden time—
The smile and song of yore?
Yes, Mary, yes! each burning thought
The quivering lip refused to own,
Each glance of love shall rise unthought,
And haunt thee when alone!"

When watching as we watched the rays
Of evening's pale and gentle star,
Merry will bring my shortened days—
Thou'lt weep for Chateaur!

"The Captive."

In my dungeon I sat weeping
Till I sank to brief repose,
And forgot while I was sleeping
That I slept among my foes!
For sweet music round came floating,
Music of my native land,
For whose dear sake my life devoting,
I had sought a foreign strand.
Ravished, I enraptured listened
To the well-remembered lay,
In mine eye soft tear-drops glistened,
Which I would not wipe away;
In mine ear were voices ringing—
Tones whose magic now is past,
Rosalie lips around me bringing
Which have breathed and sung their last!
Oh, 'twas sweet! but soon awaking,
I could hear no sound at all,
Save the mournful billow breaking
Hoarsely o'er my dungeon-wall.
Back the cruel winds had driven
What had been so dear to me,—
I caught it like a harp from heaven,
Fading o'er the dreary sea!"

Amongst the most beautiful of the miscellaneous poems which Mrs. Norton has added to her collection in the present edition, is a touching epistle addressed to her brother at Madras. It is contrasted by a high strain of vision, addressed to Erin, which is far too vivid and Hibernian for our taste, though it displays as high poetical powers as any thing that Mrs. Norton has written. Unwilling to mix our own poetical feelings with the fierce politics and wrongs of the green isle, we are therefore glad to content ourselves with the beautiful lyric specimens we have already quoted, and recommending this half-new volume to the public as another pleasing example of female genius.

HYDROPHOBIA.

[On reviewing the stories of four military and marine brothers last Saturday, we mentioned a striking case of hydrophobia, of which one of them was witness at Dublin in 1816; and as the narrative is both remarkable and interesting, we proposed it to our readers. It follows.]

"ABOUT three months ago, a large French dog, belonging to one of the officers, was observed to grow uncommonly surly, and attempted to bite at every dog he met in the streets: this change of temper in the animal was attributed by his master (who was very fond of him) to his having eaten a quantity of meat which had been given to him highly seasoned with pepper, &c. However, towards the evening of the day on which the change in the animal was perceived, he became at intervals quite outrageous, and bit his master and two more officers who happened to be in the room: notwithstanding, his master was inclined to think it was done more in rude play than any thing else; consequently, no measure was taken to secure him. That evening I saw the dog, and thought him uncommonly ruffled; when I attempted to caress him, and was patting him on the back, he turned at me, and savagely growled, although he used to know me well. The next day he was more violent, and furiously bit at several dogs who crossed his way; still, unfortunately, no measure was taken to secure him, his master supposing nothing was the matter with him. On the evening of the second day, the dog was lying in his master's room, perfectly tranquil, when this unfortunate young man (who has fallen the victim) entered; he remained in it some time before the dog took any notice of him; however, he suddenly made a spring at him, seized him by the shoulder, and pulled him to the ground, and tore the arm down to the shoulder, and was with difficulty taken off him. A sergeant of the regiment happened to enter the room on

duty, about this time; the dog seized him by the leg, and tore away a considerable portion of flesh; he bit also two soldiers, one by the nose and the other on the hand. Still the animal was suffered to be at large, and even slept in his master's room by his bedside, and licked his face repeatedly. The following morning the master of the dog began to feel some alarm, and asked me to go with him to look at him. I advised him to have him shot: he agreed. As we were going to the spot where he lay, he bolted up, snapping at every thing which came in his way. He passed close by me; I called him, but he did not notice me. He ran through the streets of Dublin; bit a number of dogs and a child: he attempted to seize a man, who fortunately had a hammer in his hand, with which he struck him on the head and killed him. The tongue of the dog was immediately cut out upon the spot by a physician, who on examination pronounced the animal to have been in an advanced stage of hydrophobia. None of the officers or soldiers who had been bitten knew the decision of the physician; nor did they know of any ill effects having arisen to those who had been bitten. However, the child died; and three dogs which had been bitten died in about six weeks, exhibiting symptoms of hydrophobia. All this was kept secret, therefore no cause of alarm from report could have excited hydrophobic feelings in the unfortunate young man who has fallen a sacrifice; on the contrary, he was in high spirits, and applied for leave of absence to go and see his friends in Worcestershire, as he had some intentions of being married. He obtained leave, thinking it might divert his attention, and he left us with the same flow of spirits. During his absence, all was forgotten; and those remaining who had suffered, (though not quite so severely), recovered their cheerful habits. The period of leave granted to my poor friend having expired, he set out from his father's house a few days ago, in perfect health, to rejoin his regiment. (This he told me a few hours before he died.) When he got to Birmingham, he said he had a curious taste in his mouth, which made him not relish his breakfast as usual. However, it gave him no alarm, nor did he again think of it till he got to Shrewsbury, when he found he had a great disrelish to both eatables and drinkables when put before him, although he felt an inclination to eat and drink when not before him. He could not account for this, but observed he felt no alarm, until he called for porter, feeling thirsty. When it was brought, he put it to his mouth, but the moment he took a mouthful, he dashed the glass from his lips, and spit the porter over the table, and I believe the passengers rose up and said he was mad. This extraordinary feeling, of not being able to eat and drink, though he wished to do so, caused him some uneasiness, though he was willing to believe it was the effect of a sore throat, and comforted himself under this idea. He proceeded by the coach to Holyhead, ruminating what could be the cause of this sensation, when the coach passed a small lake of water, the surface of which being ruffled by the wind, he immediately shuddered at the sight, and with a kind of horror he could not describe, hid his face with his hands:—for the first time, the dreadful idea of hydrophobia struck him. When he arrived at Holyhead, he wished to wash before dinner, and called for water; when it was brought to him, and in the act of putting it towards his face, he screamed violently, threw the water about the room, and was convulsed for some time: the servant left the

room alarmed. He then tried to clean his teeth, but could not get the brush into his mouth, on account of the water remaining upon it. The packet by this time was ready to sail, and he embarked. Poor fellow! while he was relating his sad tale to me, we were sitting together by the fire-side, he having just landed from Holyhead, which place he sailed from the night before; consequently, this was the third day only since his attack at Shrewsbury. He had then been on shore about two hours, and had ordered a coach, and drove up to the royal barracks. Before he began to tell me, on his arrival, of the symptoms he had experienced on his journey, he greeted me on our first meeting with, 'How are you, my dear fellow? Here I am at last returned, but I fear with hydrophobia!' I affected to laugh at it, but was much shocked, and replied, it could only be imaginary: he said, it could not be so, for he thought he should have died coming on shore in the boat; he was so much affected at the sight of the water, that they were obliged to cover him, in order that he might not see it. He also observed, that if he had remained on board one day longer, he felt convinced that he should have died mad. I was still inclined to think there might be a good deal of imagination in my friend, and endeavoured to persuade him to believe so; although I cannot describe the poignancy of my feelings at hearing him relate what he suffered at intervals since he left Shrewsbury. In the course of our conversation, some dogs began to bark in the barrack-yard: he sprang up suddenly from his chair, looking over my shoulder, and said in a hurried manner, 'Dogs!' If I were to live a thousand years, I should never forget that moment; something struck me so forcibly that the poor sufferer would die, that I was afraid to meet his eyes, fearing he might discern signs of alarm in me, from emotion. He was in the act of peeling an orange, which we had persuaded him to try to eat, as he had taken nothing since he rejected the porter at Shrewsbury. When he had taken off the rind, he put a small piece into his mouth; but as soon as he felt the liquid, he became greatly convulsed, spit out the orange, and gave an inward scream. When he recovered himself, he burst into a fit of laughter, and said, 'There! was not that like the bark of a dog?' A physician arrived soon after, who is eminent in Dublin. As soon as he entered the room, the poor fellow apologised to him for having given him the trouble to come, as he thought he had symptoms of hydrophobia, but believed it was only the effect of a sore throat, therefore would give him no further trouble. He appeared to catch at any thing which might give hopes of life. We were very anxious to learn the decision of the physician, on his leaving the room: upon inquiry, he pronounced his death to be inevitable. It is unnecessary to describe the state of our minds on receiving this melancholy news:—to know that our brother officer, with whom we were conversing, to all external appearance in perfect health and apparent spirits, was to be numbered with the dead in a few hours, was deeply distressing. The doctor added, that he was in an advanced stage of hydrophobia, that bleeding him copiously, in order that he might die easy, was the only thing that could now be done for him. I remained with him some time, conversing about various things (though completely forced on my part), as his spirits remained good. On leaving him, I asked him when he intended to dine at the mess; he replied, he could not dine with us that day, but

he thought he should be able to do so in a day or two, when his sore throat was better. After he was bled he felt relieved, thought he should sleep well, and hoped to be able to drink water by the next morning. Some time after, in the course of the evening, he appeared at intervals rather wild and confused, and told an officer to get out of his way, or he would bite him. Afterwards, he became more tranquil, and sent his compliments to one of the married ladies of the regiment for a prayer-book; but begged it might not be mentioned, or he should be laughed at. About midnight he became very violent, so that three men could scarcely hold him: he afterwards recovered a little, and fell into a kind of slumber, which was disturbed by his springing up now and then, and crying out, 'Do you hear the dogs?' in a quick and hurried voice: he also imagined at times that he barked like a dog. He requested he might be left alone, about one o'clock in the morning, his servant only remaining in the room, when, in about ten minutes, he looked up at the man, quite calm and collected, and said, 'he regretted that his mother and sisters were not with him.' He then prayed a short time, turned himself round, burying his face in the pillow, and expired without a groan.—Such was the melancholy end of one of the finest young men in his majesty's service."

SIGHTS OF BOOKS.

Oxford and Locke. By Lord Grenville. London, 1829. Murray.

THIS pamphlet, from the lettered retirement of Dromore, is of much interest to the classic literature of England. It clearly exculpates the University of Oxford from the charge of having expelled the immortal Locke, and shews that this was an arbitrary act of the government of Charles the Second, in which the College of Christ Church was simply (and could not be otherwise) the passive instrument.* The vindication is drawn forth in consequence of Professor Stewart's having adopted the calumny from the incautious expressions of Mr. Fox and other writers, including Pope, to whom Lord G. administers a little wholesome correction for a very erroneous passage in the *Dunciad*, alluding to this supposed expulsion. Some other particulars in the life of our great philosopher are happily illustrated. The pamphlet is elegantly and feelingly written.

The School-boy. By the Rev. W. Birch, M.A. 12mo. pp. 16. Rivingtons.

"WHAT is there in a name?" Much more than unphilosophical people generally imagine. We remember a poor fellow of a custom-house officer in Edinburgh, of the name of Alexander Gun, whose inevitable fate was thus entered in the books of that establishment, "A GUN discharged for making a false report:" and here we have the *School-boy* done by Will. Birch, *Magister Artium!* Indeed, we know many instances wherein the name had an obvious influence on the fate of the individual. Having said thus much on the author, we have only to observe of his poem, that it is a pleasing composition to incite the youthful to study and improvement.

* From the following extract, it would, however, appear that Mr. Locke himself thought Oxford hostile to him. Speaking of the third edition of his *Essay*, he thus writes to Mr. Motteux: "But what perhaps will seem strange, and possibly please you better, an abridgment is now making (if it be not already done) by one of the University of Oxford, for the use of young scholars, in the place of an ordinary system of logic. From the acquaintance I had of the temper of that place, I did not expect to have it get much footing there."—Dated Oates, April 26, 1688.

Parry's Fourth Voyage. 18mo. pp. 211. J. Murray.

THE world in a walnut-shell, and a quarto volume into a snuff-box. This is one of those little diamond curiosities in our growing class of cheap publications.

Domestic Instruction on useful and interesting Subjects. By Mrs. Mathias, author of "The Laundry Maid," &c. 18mo. 2 vols. London, 1829. Seeley and Co.

A SWEET little book for children, with much of useful information, and much of pleasing variety. Really, if the young do not grow up virtuous and intelligent, it will not be for want of teaching and temptation to knowledge.

Arcana of Science, &c. for 1829. 12mo. pp. 286. London, 1829. Limbird.

FOR the mature and instructed, this is a valuable register of the progress of science and arts during the past year. Engravings, and a low price, qualify it for extensive utility.

Calamities of the Catholic Question; a Story of the Times. 12mo. pp. 41. Hookham.

A LITTLE pamphlet from the pen of Lord Nugent, in which, by means of a domestic story in middle life, he endeavours to bring the follies of the virulent controversy on this great question home to our hearths and bosoms. It is favourable to tolerance, and to all the Romish religion except confessions, which the noble writer seems to think gives the man, priest, more than a proper influence over the female portion of society.

ARTS AND SCIENCES.

Eighth Letter from M. Champollion.

Island of Philoe, 8th December.

ON the evening of the 5th we arrived here in the holy island of Ostris, at the extreme frontiers of Egypt, among the black Ethiopians, as a brave Roman of the garrison of Syene would have said.

I left Thebes on the 26th of November, and in the evening landed at Hermonthis: we ran on the morning of the 27th to the temple, which the more excited my curiosity, because I had no precise notion of the time of its erection; nobody had yet designed a single one of these royal legends. I passed the whole of the day there; and the result of this prolonged examination was, to convince me, by the inscriptions and the sculptures, that this temple was erected under the reign of the last Cleopatra, daughter of Ptolemy-Auletes, and in commemoration of the birth of Ptolemy-Cesarion, her son (as history says) by Julius Caesar.

The cells of the temple is in fact divided into two parts; one great apartment (the principal), and one very small one, serving instead of the sanctuary: we enter this by a small door towards the angle on the right: the whole of the back wall of this little apartment, which is called in the hieroglyphic inscription the "chamber of lying-in," is occupied by a bas-relief, representing the goddess Ritho, the wife of the god Mandou, delivered of the god Harphre; she is lying down, and supported and served by several goddesses of the first order. The divine midwife takes the child from the mother,—the divine nurse holds her hands to receive it, assisted by a rocker. The father of all the gods, Ammon (Amon-Ra), is present, accompanied by the goddess Soven, the Egyptian Lucina, protectress of childbirth. Lastly, queen Cleopatra is supposed to

be a witness of this divine accouchement, of which her own will be, or rather has been, an imitation.

The other wall of this chamber represents the suckling and education of the young divinity; and on the lateral walls are represented the twelve hours of the day, and the twelve hours of the night, under the figures of women, having a starry diadem on their heads. Thus the astronomical table of the ceiling, designed by the commission of Egypt, may, perhaps, be only the nativity of Harphre, or, more probably still, Cesarion, the new Harphre. This zodiac therefore has no reference to the summer solstice, or the epoch of the foundation of the temple of Hermonthis.

On leaving the small room, to enter the large one, we saw a large bas-relief sculptured on the wall to the left of this principal apartment; it represents the goddess Ritho recovering from her lying-in, supported by Soven, and presented to the assembly of the gods. The divine father, Amon-Ra, affectionately gives her his hand, as if to felicitate her on the birth of her son; and the other gods partake in the joy of their chief. The rest of the apartment is decorated with pictures, in which the young Harphre is successively presented to Ammon, to Mandou his father, to the gods Phre, Phtals, Sevek (Saturn), &c. who welcome him, presenting to him their characteristic insignia, as if resigning in favour of the child all their power and their particular attributes; and Ptolemy-Cesarion, with an infantine countenance, is witness of all these presentations of his image, the god Harphre, whose representative on earth he is. All this is priestly flattery, but entirely in the taste of ancient Egypt, which placed its kings on a level with its gods. All these dedications and inscriptions, both interior and exterior, of the temple of Hermonthis, are made in the name of Ptolemy-Cesarion, and his mother Cleopatra. There is, therefore, no doubt of the date of its erection. The columns of a kind of pronaos before it, have not all been sculptured; the work has remained imperfect, and this is perhaps caused by the dedication of the temple. Augustus and his successors, who finished so many other temples begun by the Lagides, could not be very eager to finish this monument, erected in honour of the birth of the son of Julius Caesar, a royal child whose rights they did not respect.

On the evening of the 28th we reached Esne, not intending to stay there. I therefore sailed a little farther to the south, and landed on the east bank, to visit the temple of Contra-Lato. I arrived there very late; it had been demolished within the last fortnight to strengthen the quay of Esne, which the Nile threatens, and will one day carry off.

In the morning of the 29th I went to visit the great temple of Esne, which, thanks to its new destination as a magazine of cotton, will escape destruction for some time. I found there, as I expected, pretty good architecture, but detestable sculpture. The most ancient portion is the back of the pronaos, that is to say the door, and the back of the cella, against which the portico was built. This part is of the time of Ptolemy Epiphanes. The cornice of the façade of the pronaos bears the imperial legends of Claudius; the cornices of the lateral basis the legends of Titus; and in the interior of the pronaos the walls and columns are covered with the legends of Domitian, Trajan, and particularly Antoninus, and, lastly, of Septimius Severus, which I find here for the first time. The temple is dedicated to Chnouphis; and I learn, by a hieroglyphic inscription of one of

the columns of the pronaos, that if the sanctuary of the temple exists, it must be as ancient as the time of Thoutmosis III. (Mœris). But all that is to be seen at Esné is of modern date; it is one of the monuments most recently finished.

On the 29th, in the evening, we were at Eliethya (El Kal). I explored the enclosure and the ruins with a lantern in my hand; but I found nothing more. The remains of two temples had disappeared; they were demolished a short time ago, in order to repair the quay of Esné, or for some other modern construction.

I visited the great temple of Edfou (Apollonopolis Magna) in the afternoon of the 30th. This is untouched; but the sculpture is very bad. The best and the most ancient part is of the time of Ptolemy Epiphanes; next that of Philometor and Evergetes II.; then Soter II. and his brother Alexander: these two last are extremely laboured. I have found here Berenice, the wife of Ptolemy Alexander, with whom I had already been made acquainted by a demotic contract. The temple is dedicated to Aroëris (the Greek Apollo): I shall study it, as well as all the others, in detail, on my return from Nubia.

The quarries of Siâsis (Djebel Selselah) have much interested me. We landed there on the 1st Dec. at one o'clock. There, my eyes fatigued with so many sculptures of the time of the Ptolemies and the Romans, saw again with delight these Pharaonic bas-reliefs. These quarries are very rich in inscriptions of the eighteenth dynasty. There are some small chapels excavated in the rock, by Amenophis-Memnon, Horus, Rhamess the Great, Rhamess his son, Rhamess Mefamon, Mandoul: it has beautiful hieratic inscriptions. I shall study all this on my return, and I promise myself very interesting results from this spot.

On the evening of the 1st Dec. we arrived at Ombos. I hastened to the great temple on the morning of the 2d: the most ancient part is of Ptolemy Epiphanes, the rest of Philometor and Evergetes II. A curious fact is, the surname of Triphane constantly given to Cleopatra, the wife of Philometor, both in the great hieroglyphic inscription sculptured on the front frieze of the pronaos, and in the bas-reliefs of the interior: it is for you Greeks of Egypt to explain this singularity. I had already found this surname in one of the demotic contracts in the Louvre. The temple of Ombos is dedicated to two divinities. The right hand, and noblest part, to the old Seveh, with the crocodile's head, (the Egyptian Saturn, the most terrible form of Atcham), to Athyr and the young god Khous. The left part of the temple is dedicated to a second triad of inferior rank, namely, Aroëris (or Aroëris Apollo), to the goddess Tsouenofré, and to their son Paevitho. In the wall of the enclosure surrounding the temple of Ombos, is a gate of excellent workmanship, and of the time of Mœris: it is the remnant of the primitive edifices of Ombos.

It was not till the 4th of Dec. in the morning that the wind permitted us to reach Syene (Assouan), the last town of Egypt to the south. There too I experienced great regret: the two temples of the island of Elephantina, which I went to visit as soon as the heat of the sun had abated, are likewise demolished. I was obliged to be contented with a ruined gate, dedicated to the name of Alexander (son of the conqueror), to the god of Elephantina, Chnouphis, and with a dozen of hieroglyphical procynemata

(acts of adoration) carved on an old wall; lastly, with some Pharaonic fragments, which are scattered about, and employed as materials in the buildings of the time of the Romans. I had examined in the morning the remains of the temple of Syene: it is the most wretched sculpture I have seen; but I have found there, for the first time, the imperial legend of Nerva, which, to my knowledge, does not exist elsewhere. This little temple was dedicated to the gods of the country and of the cataract, Chnouphis, Saté (Juno), and Anoukis (Vesta).

On the morning of the 6th, I visited with much pain from gout the great temple at Philoe. Our barks are preparing for the voyage to Nubia, where we shall have something new to see. I shall write from that country if I have opportunity, before my return to Egypt. For the rest, all goes on well.

ROYAL INSTITUTION.

MARCH 13.—Mr. Brockedon "on a new mode of sketching effects rapidly in *chiaro-scuro*, and on its application to lithography." The lecturer stated the principle of the method to be that of mezzotinto, and detailed the following as the process:—an unctuous black ground is laid over a white surface of Bristol card-board, or similar material, and the lights taken out by a knife, the forefinger, or any other convenient means. Mr. Brockedon showed specimens of art wrought in this simple way by Mr. Harding and himself: he then pointed out its successful application to lithography in some productions from stone, the work of Westall and of foreign artists; and spoke of the capabilities which the method gave to lithography where it thus obtained perfect command over a mezzotinting process.

Mr. Brockedon's subject was short but plainly and well told, and altogether that which best becomes the theatre of the Royal Institution at the evening meetings of its members, where it has been too frequently the practice of young lecturers to weary their auditory by prolix and dry detail.

On the library-table were a very interesting set of models of agricultural implements used in India; they were on the scale of one inch to a foot: the drill ploughs and "scarifiers" (used in India, we believe, as the harrow in England) were exceedingly interesting; they had been made in India by native artists, and brought from thence by Colonel Briggs. Several presents in literature were also exhibited.

INSTITUTION OF CIVIL ENGINEERS.

MARCH 3d.—Mr. Clegg offered several facts evincing the complete protection of gasometers, when properly coated with coal tar. The principles of the common method of preserving wrought iron were explained by Mr. Farey. The iron, when at a dull red heat, is dipped in water, and, by the explosive force of the steam disengaged, is freed from scales and extraneous substances; the immediate application of linseed oil prevents the formation of any fresh film of oxide, while, from the heat still retained by the iron, the oil is more readily disposed to penetrate the inequalities of the surface thus varnished. Mr. Field described the several processes for the preservation of the iron provisions tanks used in Capt. Parry's first Polar Expedition. The conversation concluded with some observations on iron roofs, and on the test* for the comparative durability of build-

* The effects produced by this test are purely mechanical. The operation of tetrahedral crystals, possessing, for this purpose, similar chemical qualifications to those of the Glauber salt, would be still more speedy and effective.

ing-stone: the latter has been already noticed in the *Literary Gazette*.

MARCH 10th.—Some curious particulars relative to the Cornish mines were communicated by the President of the Royal Society. The water which percolates the veins of copper ore becomes a solution of sulphate of copper and other salts, and is destructive to the iron pipes of the pumps. In one instance, the maker's name painted in white lead effectually preserved the iron so coated; and important advantages have accrued from this accidental suggestion.

Mr. M'Neil read a paper explanatory of the specimen of road pavement he had lately presented to the Institution. He described the road-making of France, Spain, and Holland; and compared, with the assistance of appropriate sections, the plan termed *Macadamisation*, and the system at present pursued by Mr. Telford under the parliamentary road commissioners. He remarked on the increase of friction occasioned by ill-constructed wheels; and mentioned the various prices of the road-metals* tried and approved on the Holyhead road. He lastly enumerated several experiments connected with the improvement of the metropolitan roads. The results of these experiments serve to establish the fact, that materials judiciously chosen, though at first expensive, will, in the end, obviate the necessity of heavy repairs, and will consequently diminish the growing inconveniences of the present system, which, in the despatch of business, frequently threatens retardation where facility should be afforded. Mr. M'Neil received the thanks of the Institution; and the conversation closed with some remarks by Mr. James Walker, on the advantage of stone wheel-tracks or rail-ways.

On the Practicability of a Journey by Land from the Copper River, to the Polar Sea and Hudson's Bay.

THE Russian possessions on the north-western coast of America afford a most eligible opportunity for bringing such an enterprise to bear. The Copper River, lying in 60° of northern latitude, and 144° of western longitude from Greenwich, with the mouth of which only we are at present acquainted, would be the point from which we would start. Independently of important accessions to geographical science, such an enterprise would probably bring accessions also of territory, rich in copper and abounding with costly furs.

The information obtained from the natives and the fur-merchants, agrees in stating, that the Copper River springs from the declivity of a steep mountain, and that its banks are inhabited by the Ugaleksauts, a kindly and peaceable race of men. At its mouth, and in the vicinity of the bay of Tschingatschin, lie the two islands, Sukli and Nutschik: on the latter, the American company has established a colony, which is visited every year by several Russian vessels, and is become the staple of the fur-trade in that quarter. Bajenoff, a Russian merchant, having been employed by Baranoff, the Company's superintendent, to explore the sources of the Copper River, penetrated for a distance of three hundred wersts into the interior, and was returning homewards with an enormous body of copper, when an Indian chief, apparently anxious that the covetous spirit of the Russian traders should not be

* A literal example of the technical term road-metals was lately afforded on part of a London road, broken up for the purpose of improvement, where scraps of the steel iron, to the amount of several tons, had been mixed with gravel, in order to ensure a trustworthy foundation.

blinded by an unlooked-for result, eased the plunderer of his valuable burden. On this excursion Bajenoff discovered another stream, which flows into the Copper River, and is capacious enough to be navigable. At some distance from it, he saw such immense numbers of rein-deer, that, as the Indians assured him, he might have captured thousands of them with ease. White bears, lynxes, martens, and beavers, were seen in abundance. He also learned that there was another considerable river to the north, which runs into the sea.

M. Klimofski, another Russian trader, had also followed the course of the Copper River for a space of two hundred wersts. He found its banks covered with dense forests, but it did not appear adapted to the purposes of navigation, though he conceived it might prove useful in facilitating inland communications. At the foot of a mountain in the interior dwelt the Atankmians, a race whose disposition he found to be quite as friendly as that of the Ugalakmians. They are accustomed during the winter season to unite with other tribes of Indians who inhabit the opposite side of the mountain, and celebrate certain festivities, which last for several months: on this occasion, the cutlery which is obtained from the Russians by the Ugalakmians, passes through the medium of the Atankmians into the hands of their visitors from the other side. Klimofski brought back samples of the finest quality of copper, as well as a few base guineas, which must have reached this tribe from the district of Hudson's Bay: this fact is sufficient to demonstrate the possibility of a communication between that Bay and the Copper River. An expedition, composed of a commandant, a writer, a naturalist, a draftsman, and two mariners acquainted with smith's work and carpentry, would be perfectly competent to bring such an attempt to a successful issue. They would either avail themselves of the vessels which annually sail to Kamtschatka, and thence to the island of Sitka, or travel by land to Ochotzk, whence they would embark on board of the ships which depart in the spring of the year for Nutchik, and thus reach the Copper River. They would have sufficient occupation during the first summer in exploring the coasts, or examining the Elias mountains; the ensuing autumn would find them amongst the Atankmians, from whom it would be requisite to demand hostages for their safety; they would spend the winter with these people, and take advantage of the festivities to which we have alluded, to become acquainted with the Indians of remoter parts, and acquire such information from them as would remove many of the difficulties which might otherwise harass their journey of discovery the succeeding spring. Their first attempt should be to reach the Polar Sea, and afterwards to penetrate to the Mackenzie River; nor would the probability of their finding mines of silver in those quarters fail of imparting additional interest to such an enterprise.—*See second Article.*

TRAVELLERS.

At a very recent sitting of the Académie Royale des Sciences in Paris, an account was read of a journey made by a naval officer named Hoff in the eastern part of the Indian archipelago. The work was accompanied with a map, on which is marked a river—the Dourga, whose mouth was recently discovered.

At the same sitting, M. Fontanier gave some particulars of his travels in Georgia, Persia, and Turkey, and stated several very interesting circumstances relative to those countries.

M. Honoré Vidal, who recently arrived from the Levant, gave an account of his numerous journeys in Asia and Egypt, from 1807 to 1828. It appears that M. Vidal has crossed the deserts of Arabia four times, under the most painful circumstances, and in the most disagreeable seasons. He has also visited every part of Mesopotamia and Babylon, and has made two journeys from Bagdad to Constantinople by sea and by land. In addition to this, M. Vidal has traversed Syria, Anatolia, Asiatic Turkey, Persia, a part of Armenia, and the coast of the Black Sea and Egypt: he has undertaken all these journeys almost wholly at his own expense, actuated solely by a love of science. His knowledge of the Turkish language, and his acquaintance with Mussulman customs, enabled him to introduce himself almost every where, and to make a number of interesting observations relative to distances, the courses of rivers, &c., which he intends to publish as soon as his notes are completed, and to present them to the Geographical Society. M. Jomard announced, that M. Drovetti, the French consul in Egypt, had been enabled, in a great measure, to realise his philanthropic project; as six young Africans, from the most remote parts of Ethiopia, had been sent to France to be educated, and to obtain a knowledge of European customs. M. Jomard gave a statement of the progress these young Africans had made in their studies; from which it appeared, that those who are learning chemistry underwent an examination a few days ago, and answered in the most satisfactory manner the questions put to them.

LITERARY AND LEARNED.

Oxford, March 14.—On Wednesday last the Proctors for the ensuing year were elected by their respective societies, and the election announced to the Vice-Chancellor, in conformity with the Caroline statute.

The Rev. J. T. Round, M.A. Balliol College; the Rev. R. A. Thorpe, M.A. Corpus Christi College.

On Thursday the following degrees were conferred: *Bachelors in Divinity*—Rev. H. Biddulph, Rev. G. J. Majendie, Fellows of Magdalen College.

Masters of Arts—J. Beames, Grand Compounder, Rev. R. C. Brackenbury, Lincoln College; Hon. and Rev. A. C. Talbot, All Souls' College; J. Corfe, Magdalen College; Rev. J. Jerram, Wadham College. *Bachelors of Arts*—G. Caldwell, Merton College.

ROYAL SOCIETY.

MARCH 19th. The President in the chair.—Capt. Sabine's paper "on experiments made with the pendulum *in vacuo*," was resumed and concluded.

Capt. Phillips was admitted and took his seat as a fellow; Capt. Hutchinson, the Director of the British Foundry in India (Calcutta), and D. Elliotson, of Jesus College, Cambridge, were elected.

March 5. A paper was read, entitled, "Anatomical description of the foot of a Chinese female." By Bransby Blake Cooper, Esq.; communicated by P. M. Roget, M.D. Sec. R.S.

The foot of which an account is here given was obtained from the dead body of a female found floating in the river at Canton, and had all the characters of deformity consequent upon the prevailing habit of early bandaging for the purpose of checking its natural growth. To an unpractised eye it has more the appearance of a congenital malformation, than of being the effect of art, however long continued; and appears at first sight like a club foot, or an undischarged dislocation. From the heel to the great toe the length of the foot measures only four inches; the great toe is bent abruptly backwards, and its extremity pointed directly upwards; while the phalanges of the other toes are doubled in beneath the sole of the foot, having scarcely any breadth across the foot

where it is naturally broadest. The heel, instead of projecting backwards, descends in a straight line from the bones of the leg, and imparts a singular appearance to the foot, as if it were kept in a state of permanent extension. From the doubling-in of the toes into the sole of the foot, the external edge of the foot is formed in a great measure by the extremities of the metatarsal bones; and a deep cleft or hollow appears in the sole of the foot, across its whole breadth. The author gives a minute anatomical description of all these parts, pointing out the deviations from the natural conformation. He remarks, that from the diminutive size of the foot, the height of the instep, the deficiency of breadth, and the density of the cellular texture of the foot, all attempts to walk with so deformed a foot must be extremely awkward; and that in order to preserve an equilibrium in an erect position, the body must necessarily be bent forwards with a painful effect, and with a very considerable exertion of muscular power.

At a late sitting (Dec. 18) the following paper was read: "On the Water of the Mediterranean." By W. H. Wollaston, M.D. F.R.S.

The late Dr. Marcet, in his examination of sea-water, of which he has given an account in the Philosophical Transactions for 1819, had been unable, for want of a sufficient number of specimens of water taken at various depths in the Mediterranean, to draw any certain inference as to what becomes of the vast amount of salt brought into that sea by the constant current which sets in from the Atlantic through the straits of Gibraltar, and which, on the evaporation of the water, must either remain in the basin of the Mediterranean or escape by some hitherto unexplained means. In the hope of obtaining further evidence on this question, he had requested Captain Smyth, R.N., who was engaged in a survey of that sea, to procure specimens of water from the greatest accessible depths. The specimens collected by Captain Smyth were, in consequence of Dr. Marcet's death, given to other persons and applied to other objects. Dr. Wollaston, however, fortunately obtained the three remaining bottles of the collection. The contents of one of these, taken up at about fifty miles within the Straits, and from a depth of 670 fathoms, was found to have a density exceeding that of distilled water by more than four times the usual excess; and accordingly it left upon evaporation more than four times the usual quantity of saline residuum. The result of the examination of this specimen accords completely with the anticipation that a counter-current of denser water might exist at great depths in the neighbourhood of the Straits, capable of carrying westward into the Atlantic as much salt as enters into the Mediterranean with the eastern current near the surface. If the two currents were of equal breadth and depth, the velocity of the lower current need only be one-fourth of that of the upper current, in order to prevent any increase of saltness in the Mediterranean.

SOCIETY OF ANTIQUARIES.

MARCH 19. Hudson Gurney, Esq., M.P., V.P., in the chair.—A paper by the Rev. John Webb was read, descriptive of the rights, customs, and history, of the monks of the Abbey Church of St. Peter's, Gloucester, from its first institution. Some very curious and interesting extracts were given from the early charters. Walter Froster, abbot, passed a chronicle of the monastery to be compiled in 1412,

and to him the antiquary is chiefly indebted for the re-edification of the building.

Mr. Lynch was admitted a fellow of the Society; and notice was given that the ballot for the Rev. John Breton, LL.D., Head Master of Bedford School; and Robert Lanyon, jun., of Lostwithel, esq., would take place on Thursday, the 26th March.

ROYAL ASIATIC SOCIETY.

MARCH 16th. — Anniversary meeting. The president in the chair. After some preliminary business, the Madras auxiliary of the Royal Asiatic Society, lately established by the governor and principal officers of the presidency of Madras, was admitted into union. The Society's report for the past year announced the union of the Bombay Literary Society with the Royal Asiatic; the publication of the first part of the second volume of the Society's Transactions; the election of three natives of Asia, who had signalled themselves by their love of literature, as honorary and corresponding members; the presentation of a great number of donations to the library and museum; and, though last, not least in importance, Col. Tod's intention of bequeathing his valuable oriental library to the Society. The auditors next reported on the state of the Society's finances; and Sir Alexander Johnston reported the proceedings of the committee of correspondence. Council and officers for the present year were then elected.

In the evening the members dined together at the Thatched House Tavern, the Right Hon. C. W. Wynn, the president, in the chair, supported by their Excellencies Counts Munster and De Moltke, Mr. Barbour the American minister, Colonels Tod and Briggs, Lieut. Alexander the traveller, and several other persons of distinction.

MADRID.

THE annual public meeting of the Royal Academy of History at Madrid took place on the 28th of last November. The president, M. de Navarrete, gave an account of their proceedings for the year. The digest of the Chronicle of Fernand IV., which had been suspended for twenty years, has been continued by several committees, and is nearly ready for the press. Other committees have been employed in preparing for publication the General History of the Indies, by Ponzalo-Fernandez de Oviedo. Materials have been collected for the seventh volume of the Memoirs of the Academy, which will soon appear, and which will contain dissertations on numismatics, on the history of Castile, that of Arragon, &c. Although the Academy was exceedingly desirous of speedily publishing the Royal Statutes (*el fuero real*) of King Alphonso the Wise, it had been obliged to retard their appearance, for the purpose of collating the various manuscripts. The Mirror of the Laws (*el espejulo*) will accompany the volume of Royal Statutes. The weekly meetings of the Society were occupied throughout the year by the reading of a number of very interesting papers by the various members. M. de Navarrete has been re-elected president.

FINE ARTS.

ROYAL ACADEMY.

MARCH 11th. Mr. Phillips delivered a lecture on painting. — After some preliminary remarks on the acquiring of practical knowledge, the lecturer divided the principles of his art into two classes; the first embraced design, composition, colouring, and chiaro-scuro, and might be termed the elementary principles; the second

were its governing principles, which consist in the regulations by which the elementary ones are best employed, and are deduced from experience, and illustrated by examples found in the labours of intelligent artists. Some hints on imitation and outline followed. In alluding to the interesting and beautiful series of designs from Homer, Dante, Eschylus, and Hesiod, by Flaxman, Mr. Phillips successfully proved how valuable a portion of the art of painting was design, which in itself possessed such a degree of power, that colour, light, and shade, were of no effect without it, and even composition was chiefly dependent upon it. Annibal Carracci characterised it as the beginning, the middle, and the end of the art. In closing his remarks on this part of the subject, the lecturer observed, that to be capable of drawing a line at once correct and free, and fitted to its purpose, was to possess an instrument of power over all the attributes of the art of painting. In describing the details of design, Mr. Phillips cautioned the students against acute or right angles, as unfavourable to grace and beauty in the limbs of figures, though frequently available for expression: the same remark was applicable to parallel lines, though Raffaele had frequently and beautifully employed figures in parallel direction, to enforce expression in the most direct manner. Mr. Phillips next glanced at the works of the Greek sculptors, traced the growth of design under the influence of the taste and skill displayed in the paintings of Raffaele, took a review of various of the works of this great master, and illustrated the subject by drawings and prints from his works and those of M. Angelo — drew a contrast between the lines of the one and the other, observing that Raffaele, when at his best, was more gentle than Angelo — less convex, with, at the same time, less of occasional acuteness — the muscles not so full, nor so much in action, and the parts of the joints less distinctly marked; hence the sensation created in viewing some of the works of Raffaele was more agreeable, but less forcible in expression, than M. Angelo's produced. Mr. Phillips closed his lecture by a few animated remarks on composition, and defined it to be of two kinds in historical painting; one the offspring of sentiment, the other merely technical: the first was the firm foundation upon which rests the composition of the Florentine school; the other distinguished that of Venice after Titian's time: the same remark applied also to Parma, and frequently to the Bolognese schools, where each sacrificed the principle of the other to attain its own end. The lecture was numerously attended.

MARCH 16th. — The President in the chair. Mr. Westmacott, in this his last lecture for the season, treated of composition, which he stated to be the same throughout the whole range of art; it is either simple or compound. In sculpture it is divided into three heads; — 1st, simple, as it applies to construction or action in a single object, for example the Apollo; 2d, columnar, which includes two or more objects, whose base is confined or nearly parallel with its bulk, as in the group of the Venus and Cupid of the Vatican; and 3d, pyramidal, whether it regards height or extent, as in the group of the Laocoon. Mr. Westmacott then particularly enjoined an attention to due equipoise or balance of figure, and said that he could not express his meaning more intelligibly than by stating, that if the figure were merely divided, there being no artificial support, its weight would be equal: the necessity of strictly adhering to proportion in this

point, was proved from nature, by the limits of whose laws it was not possible to transgress this balance; the chin could not exceed the line of the clavicle, &c.: he next quoted instances of fine balance in seated and erect figures, and defined columnar composition, enforcing a strict attention to quantity. Pyramidal composition followed; it assumes a different character, not requiring so strict an adherence to the balances at the angles. Mr. Westmacott illustrated this head of his discourse, by directing the attention of his numerous auditory to the Laocoon, in nearly the following words: — In the swelled and ample chest, in the inspiration of breath, in the contraction of the abdomen, whether arising from anguish, fear, or collection of strength to disentangle himself from the writhing of the serpents; in the greatness of the conception, in the marvellous design, and no less masterly execution, the artist's intelligence is equally displayed. The lecturer then offered a few remarks on *alto* and *basso rilievo*; and closed his subject with what might be termed some valedictory observations, in which he enjoined the students to pursue their studies with diligence, and, above all, to maintain the ground which they had gained: to him, as professor, they owed but temporary belief, and he asked only the suspension of their judgment until they had been fully instructed in the principles which he had endeavoured to inculcate.

The lecture was illustrated by fine specimens of drawings from bronzes, in the possession of the Chevalier Brondstedz, and other costly productions.

NEW PUBLICATIONS.

Select Views in Greece. By H. W. Williams. No. XII. Longman and Co.

To this, the last Number of Mr. Williams's highly interesting and elegant work, might be justly appended the old epigraph, "*Finis coronat opus.*" The print of "*Athenæ restored.*" in particular, is exquisitely beautiful. In so saying, however, we are very far indeed from intending to detract from the merits of "the City and Castle of Lávadia," "Nemea," "Argos," or the lovely composition entitled "Grecian Landscape." In concluding his work, Mr. Williams expresses his obligations to the gentlemen to whose assistance he has been indebted in the course of the execution of it, especially to Mr. Cookerell and Mr. Patterson: "to the former, for the inimitable beauty and accuracy of the sketches which he has furnished for many of the engravings; and to the latter, for the masterly manner in which he has assisted in furnishing apposite quotations and original translations for the subjects." The result of their united labours has certainly been the completion of a publication which must henceforth be considered indispensable to the library of every man of taste and classical knowledge and feeling.

Autographs of Royal, Noble, Learned, and Remarkable Personages conspicuous in English History; accompanied by concise Biographical Memoirs, &c. By John Gough Nichols. Part IX. J. B. Nichols and Son.

THIS is so singularly curious and interesting a publication, that we are happy to learn that, since the fifty plates in which the collection was intended to be comprised have been finished by the engraver, the proprietors have received so many valuable communications and suggestions from various friends, that they are induced to extend their work with one additional No. Instead of ten parts, there-

fore, there will be eleven; and the eleventh will consist of the usual number of plates, and embrace some of the most interesting, and certainly the scarcest, autographs in the whole series.

Fisher's Illustrations of England. Nos. II. and III. Fisher and Son; Ackermann; Jones and Co.

LIVERPOOL furnishes the subjects for these two Nos. of this pleasing work; and the views which they contain afford abundant evidence of the wealth and growing taste of that populous and enterprising commercial town.

Her Royal Highness the Duchess of Kent; and the Princess Victoria. Drawn from life by S. Catterson Smith, and on stone by R. J. Lane, A.R.A. Dickinson.

SLIGHT sketches, of which we prefer the first mentioned. On the resemblance of either, we are incompetent to pronounce.

SUFFOLK STREET GALLERY.

WE have taken a hurried glance at the annual Exhibition of British Artists about to open in Suffolk Street; and of which the private view is fixed for next Wednesday. We have much pleasure in stating, that it contains many pictures very honourable to our native school, and especially in landscape, to which Hoffman, Glover, Roberts, Stanfield, and others, are distinguished contributors. There are also many clever productions in familiar life, portraits, fanciful designs, fruit-pieces, hunting, water-colour drawings, engravings, &c. &c.; and the sculpture-room is possessed of considerable attractions.

THE COLOSSEUM.

THE Committee of the trustees into whose management this extraordinary work has fallen seem to be proceeding with great energy and judgment, for which they deserve much praise. Turning their attention to the principal, we had almost said the single, object of public interest, they have appointed Mr. Parris to proceed with and finish the picture; and that very able artist is rapidly executing the remainder of what he had previously executed so far, and in so excellent a manner. We are told it will be completed in May. In the mean time, all the rooms, &c. are left *in statu quo*: the Swiss cottage and the conservatories have been finished; but Undine (the sweet figure by Sievier) has disappeared from the fountain. The scheme of reading-rooms, dining-rooms, club-rooms, aviary, &c. is relinquished. On the whole, we are glad to see the main design going on so rapidly and so well: the receipts, we hear, amount to about 40*l.* or 50*l.* daily.

MR. WILLIAM DANIELL'S PICTURES AND DRAWINGS.

WE have been favoured with a sight of these beautiful performances, at the house of the artist, in Russell Place; and, as we anticipated, were highly gratified. The various works from his pencil, which have for a long course of years enriched our public exhibitions, have rendered the talents and taste of Mr. Daniell too well known to need any eulogium from us, at this time of day; but we may remark that, successfully as his pictures and drawings have always stood the test of comparison with contemporary merit in those exhibitions, they are seen to so much greater advantage in his own rooms, and with the benefit of his own arrangement, that many of our old acquaintance have the air of perfect novelty. Such is the case, for instance, with the two remarkably fine

paintings of a Crocodile feeding on a dead Elephant, and the Boa destroyed by the comrades of a man sleeping in a boat. Perhaps the only novelty, in the full meaning of the word, is the picture of that exquisite specimen, in white marble, of oriental architecture, in its best period, erected at Agra by one of the emperors of the East for his favourite queen, and known by the name of the Taje Mahl. The representation is worthy of the original, and is one of Mr. Daniell's happiest productions. The drawings for the prints of Windsor Castle and its vicinity, which were noticed in the *Literary Gazette* a few weeks ago, rank in every respect with the most brilliant specimens of the powers of water-colours that we have ever met with.

BIOGRAPHY.

M. PACHO, the celebrated French geographer, has fallen by his own hand. He was born at Nice in 1795, at which period that town belonged to France. He was educated at the college of Tournon. His derangement, and the dreadful act which terminated his existence, were, it is said, the consequences of the injustice of which he was the victim. "The sole fruit," he observed in a letter to a friend, written in December last, "which I have derived from all my efforts, from all my labours, and from all my fatigues, is, that I have learned, but too late, to know mankind." It was in the night between the 25th and the 26th of January that, in the delirium of a burning fever, he destroyed himself. On the preceding evening he wrote several letters, in one of which the wandering of his mind was very evident; he declared in it, that he was assailed on all sides by furious enemies; and that at that very moment a crowd of persons was assembled under his windows, conspiring his ruin.—*Le Globe*.

SKETCHES OF SOCIETY.

SCOTTISH NATIONAL FEELINGS.*

"While the loud torrent and the whirlwind's roar
But bind them to their native rocks thémore."
Goldsmith.

THE beautiful and pathetic song of *Lochaber*, is known to, and admired by, all who have an ear for music or a soul for poetry; but heard by a Highlander in a distant land, and amid other scenes, the effect is similar to that produced on the Swiss by their national air, the *Ranz des Vaches*—it inspires a sad and earnest longing to return to the place of their nativity, the early haunts of their youth. The following anecdote was related to me by the medical gentleman who witnessed the effect: and at the same time that it tends to corroborate my assertion, it also proves how powerful is the sympathy existing between this our "tenement of clay" and its celestial inmate, the soul.

It was the fate of Dr. C. to accompany a Highland regiment across the Atlantic, to "a far distant shore." The station where the troops were encamped was very healthy, the climate particularly good: judge, then, of the surprise of the good doctor to find his soldiers falling sick daily, and his hospital filled with invalids,—whilst, as he could not discover the disease, he could apply no remedy.

One evening the moon shone so unusually bright, the scene from his window was so lovely, as the beams played upon the rippling water, or gave light and shadow to the mag-

nificent forest-trees near his abode—that he was tempted to take a solitary ramble,

"Musing on days long past,
And pleasures gone for ever by:"—

the sound of the bagpipe struck upon his ear, and attracted him towards the barracks, where the piper was playing, in the most touching manner,

"Lochaber no more!

May be, to return to Lochaber no more!"

Dr. C. approached the large room unobserved, and, looking in, found all his men assembled, and all in deep emotion—some recombent on the floor, some reclined against the wall, many in tears, and one, burying his face in his hands, sobbed aloud. My friend retired to his quarters: on the following morning he sent for the piper, and, bribing him to secrecy, commanded him in future to play nothing but lively airs, reels, strathspeys, and marches; but never, on pain of his displeasure, to breathe *Lochaber* again. The piper obeyed: the effect was magical—the invalids revived, and in a very short time not one remained in hospital.

This anecdote, which I know to be true, inspired me with a most ardent desire to see *Lochaber*—scenes must be beautiful which produce such a powerful effect upon the mind. Last summer, passing through the magnificent scenery of the northern lakes of Scotland, I came upon *Lochaber*: Ben Nevis reared his crowned head—at his base stood a cluster of miserable hovels, in a swamp where every breeze that passes by whispers "ague"—each hut is formed of wood and turf gathered from the morass beneath their feet—a hole in the roof forms the chimney—a hole in the side is the window, and in some of the huts window and door in one—not a tree to be seen:—yet dear as life to the Highlander is the memory of *Lochaber*. M. S.

THE COQUILA-NUT ORNAMENTS, &c.

A FEW weeks since, we noticed the very pretty ornaments,—necklaces, bracelets, and brooches, as well as snuff-boxes, segar-tubes, &c.—made from the shell of the coquilla nut; and we are glad to find that our mention of these novelties has recommended Mr. Coniglio (the ingenious foreigner, to whose taste we are indebted for them) to a good deal of employment. The world of fashion is always pleased with what is new; and it is no drawback in these times, even among the richest, that the articles are also becoming cheap and permanent. Such qualities induce us again to speak of our unassuming and classic coquilla favourites.

DRAMA.

KING'S THEATRE.

ON Tuesday night, a medley composition, entitled *Il Messicani*, was represented for the first time at this theatre. The title, we think, is rather a misnomer; it should have been called *Mexicani*, for the opera is evidently fated "to go to the dogs." With the exception of a cavatina sung by Blasis, and a finale of Rossini's in the *Siege of Corinth*, the whole of the first act was one undeviating piece of dull consecutive declamation. M. Bochsa is said to be the compiler of this strange production, in which he has shewn very little operatic tact. An older stager would have introduced more part music; solos and duets will never support a piece. Pisaroni used all her endeavours in the second act to retrieve the first. But the *tout-ensemble* was "stale, flat," and, we fear, will turn out "unprofitable," though the house was crowded at an early hour.

* We thank our friendly correspondent for this touching little sketch.—Ed.

COVENT GARDEN.

A NEW musical after-piece by Mrs. Poebek, compounded of two French vaudevilles, *Le Mal du Pays* and *France et Savoie*, was produced here on Thursday, with complete success. The piece itself has nothing to boast of, either in dialogue or construction; and though the names of Madame Vestris, Miss Goward, and Miss Forde, Fawcett, Keeley, Wood, Wrench, Warde, and Meadows, figure in the bill, there is little for any of them to do. It is, however, a light, inoffensive affair, graced by some very sweet music, partly composed and partly arranged by Mr. Bishop, and half-a-dozen of the most picturesque and faithful views of Swiss scenery ever exhibited. So supported, we have little doubt that when Mr. Fawcett knows his part, *Homo, sweet Home, or the Ranz des Vaches*, may go off glibly enough, and take its turn for the season. Madame Vestris had two exceedingly pretty songs, and Wood one in which he was rapturously encored. Madame Vestris is a delightful, sprightly, lady-like little creature; but we wish she would take a lesson from Madame Jenny Colon Lafont,* and remember that when she is personating a simple Savoyard girl, her manner, tone, and language (for the latter, however, the writer was to blame) should, to make the deceit probable, be widely different from those of the dashing widow of a general officer, the character she first appears in. They are meant to be so in the French piece; and the picture is there heightened by the recollections of old times and customs infecting the fashionable lover, who also reassumes his national dress, and joins in the characteristic dance of his countrymen.

ORATORIOS.

On Wednesday, *Israel in Egypt* was grandly performed: the choruses this season are wonderfully fine. Blasius appeared for the first time; and Braham was, as usual, a tower of strength. Last night *Judas Maccabæus* was the leading performance.

VARIETIES.

Air-Balloons.—Some new experiments have lately been made at Florence, with a view to obtain the means of directing the course of air-balloons; but they do not appear to have had any satisfactory result.

Japan.—It has been proposed to the French Geographical Society to publish a map of Japan, by Titsing, which is now in manuscript at Paris.

Drury Lane Fund.—The anniversary of this valuable charity took place at the Freemasons' Tavern on Wednesday: H. R. H. the Duke of Clarence in the chair. The day passed off with great pleasantry, and above 1000*l.* was subscribed.

York Minister.—At a public meeting on Thursday, a subscription was opened for the rebuilding of this noble structure. Lord Fitzwilliam gave 3000*l.*, and other noblemen and gentlemen liberally followed this generous example.

Sir H. Davy.—A report has been circulated during the week of the death of Sir H. Davy, in Italy, which we rejoice to say is unfounded.

Perlet.—A fine compliment was paid to the acting of Perlet last week, by the gentleman from whom we received the report of the per-

formances at the English Opera House. So completely did this artist play the Niece in *Les Anglaises pour rire*, that he deceived our friend as to his identity, and he assured us that the part was as well acted as Perlet himself could have done it!!

Prussian Statistics.—A recent number of a German Magazine, edited by the celebrated Alexander von Humboldt, called "The Hertha," contains a long article on the statistics of the Prussian empire, from which we collect the following results:—In the year 1820 there were born 484,398 children, and the number of deaths within the same period was 296,909; making a difference of 187,489 in favour of the births, in a population of 11,101,601. In the year 1821, the number of births was 504,160, and the number of deaths 287,573, making an increase of 216,587. In 1822, the number of births amounted to 502,925, and of deaths to 314,513, the increase being no less than 188,412. In 1823, the number of births was 498,643, the number of deaths 318,878, the increase being 179,765. In 1824, the number of persons born was 505,335, and of deaths 318,535, being an increase of 186,800. In 1825, the number of births was 523,614, and the number of deaths 327,343, making an increase of 196,271. In 1826, the number of births was 525,585, and of deaths 355,114, giving a difference of 170,471 in favour of the former. In 1827, the number of births was 490,660, and the number of deaths 365,578, bearing an increase of 125,082 on the year. The population has increased no less than 1,450,877 during the eight years, and at the commencement of 1828 amounted to 12,552,276;—the number of births being to the entire population in the proportion of about 44 per cent, and the deaths rather more than 23 per cent. Of the 365,578 deaths in the year 1827, 16,726 were still-born; 130,735 died under the age of three; 34,504 under the age of ten; 14,914 between the ages of ten and twenty; 18,889 between twenty and thirty; 18,473 between thirty and forty; 22,606 between forty and fifty; 27,969 between fifty and sixty; 35,364 between sixty and seventy; 30,295 between seventy and eighty; 18,064 between eighty and ninety; and 2,019 above the age of ninety. It is not stated how many there were above the age of one hundred.

The late Earl of Bridgewater.—A Paris paper, the *Journal des Voyageurs*, states that this eccentric nobleman had, at the time of his death, his house nearly filled with dogs and cats, which he had picked up at different places. Of the fifteen dogs which he kept, two were admitted to the honours of his table, and the whole of them were frequently dressed up in clothes like human beings. In his last days, when so debilitated as to be unable to leave his own grounds, he is said to have adopted a strange substitute for the sports of the field, to which he had been addicted. Into the garden at the back of his house there were placed about 300 rabbits, and as many pigeons and partridges, whose wings had been cut. Provided with a gun, and supported by servants, the infirm earl would enter the garden and shoot two or three head of game, to be afterwards put upon the table as his sporting trophies!

Rights of Dramatic Authors in France.—The gross sum received by dramatic writers in France, as the tax upon the performance of their pieces at the different theatres (without reckoning the amount they were sold for in the first instance to the managers of the theatres in which they were originally produced), is

stated to be 600,000 francs annually; of which M. Scribe alone receives more than 100,000 francs. It is proposed by these gentlemen to put aside a per centage upon the gross amount for the relief of decayed and indigent authors. A general literary fund society, similar to that which exists in this country, is also projected.

Russia.—A junction of the Volga and the Moskva is about to be effected by means of a canal, which will unite the rivers Sestra and Istra; the first of which communicates by the Dounba with the Volga, and the second of which runs into the Moskva. The original idea of this junction was conceived by Peter I. The first stone of the first lock of the canal was laid in October 1827. The expense of the undertaking is estimated at 5,340,000 rubles. A plan is also under consideration for forming a junction between the Volga and the western Dvina.

Cuba.—A vase has been discovered at Cuba, with several figures upon it, one of which represents the Sagittarius of the zodiac.

LITERARY NOVELTIES.

A correspondent at Hanover writes to inform us that the Germans mentioned in Lord Londonderry's Narrative of the Peninsular War under the names of Crauchenburg, Taple, Smallkenon, J. Horse, Deliris, and Langhears, are no other than the distinguished officers of the late king's German Legion—Krauchenberg, Fahlé, Schmalhausen, A. Heise, Deliris, and Langhehr.

Tiflis.—In the month of June last a new journal was commenced in the capital of Georgia, under the title of Tifliski Vedomosti, or the Tiflis Gazette. It is published every Wednesday, in the Russian language, with a translation in Armenian; and is principally intended for the countries beyond the Caucasus, and for the Armenian provinces lately acquired by Russia.

A novel of the De Vate class is announced, entitled, *D'Erline, or the Cynic.*

The Poetical Sketch-Book, in one volume, by T. K. Hervey, including a third edition of his *Australis*, will shortly appear.

Schiller's *William Tell*, closely translated from the German, is just ready.

The Rev. William Kirby, M.A. F.R. and L.S., &c. &c., has in the press *Seven Sermons on the Temptation of Christ*, grounded on those upon the same subject by the learned Bishop Andrews.

The Author of *Private Education*, the *Poor Girl's Help*, *Early Education*, the *Youth's French Guide*, &c., has in the press *Leonora*, or the *Presentation at Court*; being the first of a series of narratives called *Young Lady's Tales*.

A new edition, with considerable additions, of Mrs. Coleridge's poetical works, is announced.

In the Press—Holstein's Bible Cuts, being Fac-Similes of the celebrated Icones Veteris Testamenti of Hans Holbein, engraved on wood, with descriptions in four modern languages.—The Philosophy of History.—An Essay on the Deaf and Dumb; shewing the necessity of medical treatment in Early Infancy; with observations on Congenital Deafness. By J. H. Curtis, Esq., Surgeon-Aurist to the King.

LIST OF NEW BOOKS.

Tales of Military Life, 3 vols. post 8vo. 1*l.* 1*l.* 6*d.* bds.—The Naval Officer, 3 vols. post 8vo. 1*l.* 8*d.* 6*d.* bds.—The Catholic Church Inevitable, 8vo. 6*s.* bds.—Smith's Catalogue Raisonné, royal 8vo. 1*l.* 1*l.* bds.—Watkins's Sacred Poetry, 8vo. 7*s.* 6*d.* bds.—Willis's Sermons for Servants, 18mo. 6*s.* bds.—Oervino on Diseases of Children, 8vo. 6*s.* 6*d.* bds.—Draper's Youth's Calendar, 2 vols. 2mo. 1*l.* 6*d.* hf. bds.—Thornton's Councils and Instructions for Youth, 18mo. 3*s.* bds.—Burder on Revivals in Religion, 18mo. 2*s.* bds.—Foot's Companion to the Testament, 18mo. 2*s.* 6*d.*

TO CORRESPONDENTS.

If T. J. M. read the *Literary Gazette*, the inquiry made would be superfluous. Look back.
We are afraid of letters sealed with thimbles

* We allude to this excellent actress's performance in the piece called *Halka aus Pommern*, where she supports a similar character, and contrived to puzzle the audience with the change nearly as much as the author has intended she should mystify her beholders.

PRICE 8d.

REVIEW OF NEW BOOKS.

The Present State of Van Diemen's Land; comprising an Account of its Agricultural Capabilities, with Observations on the Present State of Farming, &c. &c., in that Colony; and other important Matters connected with Emigration. With a Map. By Henry Widowsen, late Agent to the Van Diemen's Land Agricultural Establishment. London, 1829. Robinson.

THE Romans ever considered colonisation to be a subject of high state policy; and, remarkable as that great people were for their wisdom, in no part of their administration was that wisdom more apparent. Aristotle informs us, that systematic emigration was also common among the Carthaginians;—indeed, he attributes their duration as a republic chiefly to this cause, notwithstanding the vicious constitution of their government. But while Carthage appears to have sanctioned and conducted emigration only as the necessary and best mode of disposing of a surplus population, Rome, more sagaciously, made her surplus population instrumental in the territorial aggrandisement of the state; and the Roman system was, it may fairly be presumed, one of the primary causes of that nation's greatness. An ample development of that system would, in our opinion, throw much light on the history of civilisation, and fill up a chasm which conspicuously exists in political economy.

In examining the motives which determined the establishment of a large portion of the ancient colonies, we perceive, as has been remarked by a popular writer,—"That at the very time they were indispensable they were voluntary;" and that this idea especially predominates in them, viz. that governments should ever possess the means of placing to advantage, at a distance from their immediate seat, that redundancy of population which either disturbs or threatens their tranquillity. It remains, then, as a general principle, that states may occupy themselves wisely in the formation of establishments on an extensive scale, especially where they have it in their power to fix on those portions of the earth productive of what they need, and wanting that they possess;—places where men may find situations and labour suited to their various circumstances.

It has unfortunately been a very general maxim with bodies politic, in more modern times, to form such establishments with the very dregs of society, using some of the fairest regions of the globe principally as the means of punishment:—our own legislature has to a very considerable extent adopted and pursued this plan. The system of transportation now so common among us was totally unknown to the common law of England, though our ancient practice of abjuration of the realm bore a strong resemblance to the Roman institution, as explained by Cicero. Sir E. Coke says—"this was permitted when the felon chose *inter perire patriam quam vitam.*" During

the reign of Elizabeth it seems to have been first enacted, "that rogues should be banished beyond the seas;" and about the time of the Restoration, that they were first "sent beyond the sea to serve in the king's plantations," in a manner not very unlike the present. With us, as among the Russians, banishment is much more frequently inflicted directly as a mode of punishment, than allowed as an act of mercy. But in Russia it is so far made subservient to political utility, that the banished are for ever separated from all domestic connexions, sent to a severe climate, or consigned to destructive mines, in the place of better citizens. British legislation, however, and a singular train of circumstances, have unquestionably evinced the possibility of transportation being made alike beneficial to the parent state, to the infant colony, and to the criminals themselves. Agriculturists, veterans who have fought our battles, artisans of every description, indeed any respectable individuals possessing some property, have been encouraged to emigrate to our Australasian colonies, and entitled, under certain regulations, to the entire benefit of the criminals' labour. That much more might have been done, is as evident as that the plan, with all its defects, has produced very beneficial results. The workings of this system in Van Diemen's Land, under great disadvantages, we have exhibited in the work before us; and the astonishing effects already produced must deeply impress and animate every reflecting mind. But we may now properly recur to the author's introductory remarks; only observing, that from his occupation of agent he must be considered as one who has seen every thing with the most favourable eye; just as another writer, whom we lately reviewed, found nothing comparable to emigration to Canada.

"Of all our ultramarine possessions, vast and valuable as many of them are, no one excites so much interest, in the proper sense of the word, as our different settlements in New South Wales and Van Diemen's Land. They are not rich in mines, sugar-canes, cochineal, or cottons; but they are blessed with a climate which, though different in different places, is yet on the whole favourable to the health, comfort, and industry of Europeans; they exhibit an almost endless extent of surface, various as to aspect and capability, but, taken together, suited in an extraordinary degree to the numerous purposes of rural economy—the plough and spade, the dairy and sheep-walk. The emigrant has not to wage hopeless and ruinous war with interminable forests and impenetrable jungle; as he finds prepared by the hand of nature extensive plains ready for the ploughshare, and capable of repaying manifold in the first season. He is not poisoned by pestiferous swamps, nor frightened from his purpose by beasts of prey and loathsome reptiles; he is not chilled by hyperborean cold, nor scorched and enfeebled by tropical heat;—and he is not separated from his kind, nor hardened in his heart by the debasing in-

fluence of open or concealed slavery. It is true that he is surrounded by those who have the brand of crime and punishment upon them, and who are therefore to a certain extent infamous; but he has the satisfaction of knowing that it is his duty and interest to improve, not contribute to the farther degradation of these fallen beings.

"It is curious and consolatory to contemplate these our possessions on the opposite side of the globe, in the 'utmost parts of the earth,' as they are at present, and as they were only a few years ago. The first settlement was literally 'a den of thieves,' into which were thrown the outcasts of the earth—those who were the disgrace and bane of society. How many of them have been reclaimed, we have not the means of knowing.* Since that period, in spite of prejudice, mismanagement, and occasional misrule, especially at the beginning,—and notwithstanding the opposition which the bad habits of the convicts would naturally make to improvement, the advance of those settlements in skill, industry, and enterprise, towards future greatness, is really astonishing. It would be inconsistent with the place and the occasion to speculate regarding what they are destined to become; but they form a land which appears full of promise. The seed has been sown, sown upon, and watered, and in some measure cultivated; and if the cultivation be diligently and wisely continued, the produce will be great and beneficial to mankind."

A great deal has been published on New South Wales, but little, as yet, of Van Diemen's Land, and nothing lately. To supply the defect—bring down the condition of the settlement to the present time—and communicate the essential information requisite to the emigrant, is the aim of the author in this publication. But having, in these preliminary observations, gone as far as suits our general practice into the question of utility, we shall now consult the taste of our readers, by exhibiting some of the most interesting particulars which we can pick out relating to the present state of the population in Van Diemen's Land; and leaving it to those who contemplate emigration to seek for the best possible and clearest advice in the pages of the work before us, which will instruct them how to obtain grants of land, what to provide, and, in short, how to adopt the necessary measures for a comfortable voyage and settlement, and, above all, for a stock of patience, at least twelve months long, to accommodate themselves to the change. Mr. Widowsen estimates the inhabitants on the island at 20,000, including convicts; the increase in 1826 alone being from 1000 to 1200, of whom 602 were prisoners; i. e. 99 female

* We cannot agree with the author's deduction from this, when he adds—"if there were only one, whatever the political economist may think, in the opinion of the philanthropist and Christian the labour and cost were amply repaid." On the contrary, we are of opinion that the machinery of establishing two mighty colonies at our antipodes, is far too expensive and unwieldy a method for reclaiming a single criminal!! Absurd assertions of this sort impugn more sensible and valid reasoning.—*Ed.*

and 503 male convicts.* Up to this period, the atrocities of the bush-rangers operated strongly against this colony; but as these desperadoes were then suppressed, we are informed that respectable settlers have since regularly come in, though the scarcity of females is still severely felt. Excessive usury appears to be another of the evils which press most heavily upon the establishment.

Speaking of convicts and their treatment, we have many curious particulars, and regret our want of room to insert them.

"The regular hours of work are from sunrise to sun-set; but so few settlers get up to see that this time is kept, that a much shorter period is generally employed in labour. The expense of maintaining a convict is rather a difficult calculation: where there are many men, they are, of course, supported at much less per man than where there are but few, from being able to buy alop clothes, tea, and the other necessities, at wholesale prices, of the importing merchant. The waste, also, made by the convicts in their meat, &c. is a serious consideration: the head and entrails of animals slaughtered for their use, and which an English labourer would be glad of, are thrown away as only fit for the dogs; nothing but the body and legs are deemed sufficiently good for these dainty characters. Taking all expenses into consideration, I think that from 25*l.* to 30*l.* per man may be estimated as the annual cost."

But we must pass from these outcasts under coercion, to devote an extract to the fiercer banditti who escaped into the bush. Of these, persons named Whitehead and Howe were, in 1815, the leaders; and in attacking a house, a party of the 46th, who were, unknown to them, in the interior, "fired in return, and killed Whitehead, the leader, who, when he received the shot, ran directly into the woods towards Howe, exclaiming, 'Take my watch;' a phrase understood by Howe, who immediately decapitated him. This precaution was adopted to prevent the body being recognised, and also to deprive any one of the benefit of the reward for taking in the head, which, it appears, was subsequently found in the bush. The body of Whitehead was gibbeted on Hunter's Island. The soldiers continued their pursuit of the remainder of the gang, who effected their escape through the darkness of the night. Howe now became their leader: shortly after, two more of the gang were taken and executed by the side of the body of Whitehead. The party still continued their atrocious depredations, when three individuals who were detected in abetting them, by furnishing information and food, were apprehended, one of whom was executed, and the others were respited at the foot of the gallows. The gang, soon after this, was augmented to fourteen men and two native women (who were armed the same as the men); but three of these were shortly after killed by a party of the 46th. In March 1817, the gang had some suspicion that Howe meant to betray them; the latter became aware of this and left them, accompanied by the black girl. In April, whilst pursued near Jericho by a party of troops, being hard pressed, and in order to facilitate his own escape, he fired at the poor black girl, who from fatigue was unable to keep up with him. She, however, received but little injury; and, together with Howe's knapsack, gun, and dogs, fell into the hands of the pursuers. This girl afterwards became particularly useful as a guide to the military, from the sagacity peculiar to the blacks in tracing footsteps where Europeans

would not suspect them. After the loss of the girl and his accoutrements, Howe wrote a letter to the governor, offering to give himself up and to furnish important information respecting his old associates, who, to the number of twenty, under a man named Geary, were committing the most outrageous atrocities. The governor immediately promised him his personal safety; and on the 29th of April he was safely lodged in Hobart Town jail, where he underwent various examinations, but little information was obtained from him. Under the plea that confinement had impaired his health, Howe was allowed to go about with a constable,—an indulgence he took advantage of in the July following, by eluding the policeman's vigilance, and again took to the bush. He now felt that his treachery had too much incupated him in the opinion of his former associates to join them; and having so deceived the governor by his vague and false information, as to preclude the hope of ever expecting a pardon, he now, to the end of his career, went entirely by himself. The gang were, in the mean time, either through treachery amongst themselves, or their occasional capture by the military, gradually dispersed. A new one, however, was formed, with a man of the name of Watts at their head, and for the apprehension of whom a reward of eighty guineas was offered, and one hundred for that of Howe; it did not appear that there was any connexion between the two, though each knew the other's haunts. Watts, thinking to save his own life, entered into a plan with a stock-keeper named Drewe for the capture of Howe. The plan they adopted succeeded, and Howe became their prisoner. As they were proceeding to town to deliver him up to the authorities, Watts, with his gun loaded, walked before Howe, and Drewe followed him; on a sudden, Howe disengaged his hands from the cords which bound them, stabbed Watts in the back with a knife which he had concealed, and taking his gun, shot Drewe dead, promising Watts a similar fate as soon as he could load the gun. Upon hearing this, Watts, though badly wounded, ran into the bush; when he was able to walk, he repaired to the nearest house, and informed the people what had occurred, who went out and found poor Drewe's body. Watts, when he was able to be removed, was sent to Sydney for trial, but he died of his wound three days after his arrival. Howe was not heard of now for some time, but necessity at length compelled him to commit some robberies on distant stock-keepers for his support. Few, after his late exploit, dared to venture a personal attack with him, until a man named M'Gill, who had been emancipated for services against the bush-rangers, pursued him so closely, that Howe was obliged to leave behind him his pistols, guns, ammunition, dogs, and knapsack; in the latter was found a sort of journal of dreams, which shewed the mental infatuation of this wretched man. In a robbery soon after this last affair, he again got possession of a gun, but could not obtain any pistols. Towards the latter end of the year, a soldier named Pugh, of the 48th regiment, and Worrall, a stock-keeper, resolved to make an attempt to capture Howe, who, they learnt, was occasionally in the habit of meeting one Warburton, a kangaroo hunter, who also agreed to join them. The two first concealed themselves in the hunter's hut. Howe having met Warburton, was told that if he would come to his hut he would let him have some ammunition; which, after a great deal of hesitation, Howe agreed to. As soon as he entered, Howe cocked his loaded gun, upon

which Pugh immediately fired, but missed him. Howe exclaimed, 'Oh! that's your game, is it?' (a cant expression amongst the convicts), and instantly retreating a pace or two, returned the fire, but also missed. Worrall now fired, but with no better effect. Howe then rushed out, chased by the other two, who gained upon and at length overtook him, when a dreadful combat ensued with the but-end of their respective guns: at last, overpowered by repeated blows on the head, Howe fell, and expired without uttering a word;—the last of a lawless, sanguinary banditti. Howe was an astonishingly athletic man, and wore, at the time of his death, a dress made entirely of kangaroo skins; he had also an extraordinary long beard. After the affray, the men severed his head and buried the body upon the spot: the head they took to Hobart Town, in order to obtain the reward."

With respect to the aborigines of Van Diemen's Land, our author is unable to afford us any specific information; for he tells us: "So little is known of these children of nature, and still less has been done to gain any knowledge of them, that not much can be offered as to their present numbers or condition. From what I have seen and read, the natives of Van Diemen's Land are unlike any other Indians, either in features, their mode of living, hunting, &c. There are many hundreds of people who have lived for years in the colony, and yet have never seen a native.

The features of these people are any thing but pleasing: a large flat nose, with immense nostrils; lips particularly thick; a wide mouth, with a tolerably good set of teeth; the hair long and woolly, which, as if to confer additional beauty, is besmeared with red clay (similar to our red ochre) and grease. Their limbs are badly proportioned; the women appear to be generally better formed than the men. Their only covering is a few kangaroo skins, rudely stitched, and thrown over the shoulders, but more frequently they appear in a state of nudity; indeed, so little knowledge have they of decency or comfort, that they never avail themselves of the purposes for which apparel is given to them. Lieut. Collins, in his account of the natives of New South Wales, describes their marriage ceremonies as being most barbarous and brutal; and I have also heard from individuals who have visited New South Wales, that it is not uncommon to see a poor woman almost beaten to death by her lover, previous to his marrying her. From the shyness of the natives of Van Diemen's Land, and the constant warfare that has been carried on between them and the remote stock-keepers (which is not likely to render them more familiar), I have never been able to ascertain whether there is any trace of religion among them, or if they have the slightest idea of a Supreme Being. I believe, and it is generally supposed, they have not. It is but fair to remark, however, that nothing has been done for them; the few that can speak a little English, only curse and swear, and this they catch up very readily from the different convicts they meet with.

"There are but few instances of any native having entirely forsaken his tribe, however young he may have been taken away; they appear to dislike any thing in the shape of labour, although, if they take to cattle, they are, beyond any thing, quick in tracing and finding those lost. So acute is their power of discrimination, that they have been known to trace the foot-steps of bush-rangers over mountains and rocks; and, although the individual

* In 1827, of male prisoners 841 arrived, females 222.

they have been in pursuit of has walked into the sides of a river as if to cross it, to elude the vigilance of his pursuers, and have swam some distance down and crossed when convenient, yet nothing can deceive them. Indeed is remarkable is their discernment, that if but the slightest piece of moss on a rock has been disturbed by footsteps, they will instantly detect it. The aborigines of this island have no appointed place or situation to live in; they roam about at will, followed by a pack of dogs, of different sorts and sizes, but which are used principally for hunting the kangaroo, opossum, bandicoot, &c. They are passionately fond of their dogs; so much so, that the females are frequently known to suckle a favourite puppy instead of the child. They rarely ever move at night, but encircle themselves round a large fire, and sleep in a sitting posture, with their heads between their knees. So careless are they of their children, that it is not uncommon to see boys grown up with feet exhibiting the loss of a toe or two, having, when infants, been dropped into the fire by the mother. The children are generally carried (by the women) astride across the shoulders, in a careless manner. They live entirely by hunting, and do not fish so much, or use the canoe, as in New South Wales, although the women are tolerably expert divers; the craw-fish and oyster, if immediately on the coast, are their principal food. Opossums and kangaroos may be said to be their chief support; the latter is as delicious a treat to an epicure, as the former is the reverse. The manner of cooking their victuals is by throwing it on the fire, merely to singe off the hair; they eat voraciously, and are very little removed from the brute creation as to choice of food; entrails, &c. sharing the same chance as the choicest parts. They are extremely expert in climbing, and can reach the top of the largest forest-trees without the aid of branches; they effect this by means of a small sharp flint, which they clasp tightly in the ball of their four fingers, and having cut a notch out of the bark, they easily ascend, with the large toe of each foot in one notch, and their curiously manufactured hatchet in the other. Their weapons of defence are the spear and waddie; the former is about twelve feet long, and as thick as the little finger of a man; the tea-tree supplies them with this matchless weapon; they harden one end, which is very sharply pointed, by burning and filing it with a flint prepared for the purpose. In throwing the spear they are very expert; indeed, of late, their audacious atrocities have been lamentably great, although, at the same time, I have little hesitation in saying, they have arisen from the cruel treatment experienced by some of their women from the hands of the distant stock-keepers. Indeed, these poor mortals, I know, have been shot at merely to gratify a most barbarous cruelty.

"After killing a white man, the natives have a sort of dance and rejoicing, jumping, and singing, and sending forth the strangest noises ever heard. They do not molest the body when dead, nor have I ever heard of their stripping or robbing the deceased. Among themselves they have no funeral rites, and those who are aged or diseased are left in hollow trees, or under the ledges of rocks, to pine and die. These people are subject to a disease which causes the most loathsome ulcerated sores; two or three whom I saw were wretched-looking objects. I remember a very old man, who was thus affected, being tried and hung, for gazing on of Mr. Hart's men; the cul-

prit was so ill and infirm as to be obliged to be carried to the place of execution. I think the colonial surgeons call the disease the 'bush scab'; and that it is occasioned by a filthy mode of life. The population of natives is very small in proportion to the extent of the island: several causes may be alleged for their smallness of numbers; the principal one is their having been driven about from place to place, by settlers taking new locations; another cause is the great destruction of the kangaroo, which obliges the natives to labour hard to procure food sufficient for their sustenance; this, and their having no means of procuring vegetables, besides being constantly exposed to the weather, together with their offensive habits of living, produce the disease above mentioned, with its fatal consequences."

Here we take our leave of Mr. Widowsen's work, which is one that adds considerably to our stock of information respecting the localities and the cultivation of the settlement which he was employed to examine.

The Family Library. No. I.; being the First Volume of the Life of Napoleon Buonaparte (to be completed in 2 vols.), with Engravings on Steel and Wood. Small 8vo. pp. 307. London, 1829. Murray.

MR. MURRAY has at last produced the first volume of his long-announced *Family Library*: a good name, if it be worthily sustained, and we have much reason to be satisfied with the commencement. This *Life of Napoleon* is to be completed in two volumes, of which one is now before us; and if the second be, as we doubt not, as well executed as the first, there can be no question that the book will have supplied a marked and signal blank. Excepting Sir Walter Scott's work, in nine volumes, price four guineas and a half, there was in fact no *Life of Buonaparte* in the English language, either worthy of the smallest confidence for its statements, or in the smallest degree attractive in point of style and method. Except Thibaudau's work, in eight large octavos, the French themselves have hitherto produced no tolerable history of their hero. The want of some intelligible *Life of Napoleon*, written carefully and elegantly, within a moderate compass, and at a price suitable to the people, was then undeniable. We should like to know how many young, or poor, or busy people, ever read through either Sir Walter's book or Thibaudau's. And as for Mr. Haslett's metaphysical madnesses, in four 8vos, why we profess they seem to us as unreadable and as contemptible as even the dirty compilation of bulletin-scrapes and lackeys' tales, put forth in four 8vos of equal bulk by Mr. Ireland, of Shakespearian renown.

The present *Life* appears to us to be composed with great accuracy. We have examined several chapters, and find that though Sir W. Scott's flowing narrative may have suggested the general tenour, his (Sir Walter's) statements have been collated with their authorities; corrections made—omissions filled up—and above all (for we are sure every reader of Sir Walter Scott felt the want of this as an evil), the dates regularly filled in at the top or margin of every page. The effective manner in which all this has been accomplished, and that without overburdening the story, which is singularly light and energetic throughout, is deserving of high praise; and if in the second and more difficult part the task be as well accomplished, we shall have nothing to desiderate.

Such is the literary character of a volume

beautifully printed in small 8vo, pages 300 and odd, and sold for five shillings. Everybody will see at a glance that it contains double as much reading as any given volume of a modern novel, which, though printed in a far inferior style, is sold for half a guinea. But what will our readers say, when they are informed that Mr. Murray gives them, along with this marvellously cheap volume, seven engravings, two on steel and five on wood; one of the former of which cost seventy guineas, and each of the latter of them twenty-five guineas! This is really putting dear book-selling to the blush. A fac-simile in little, by Finden, of the famous print of Buonaparte passing the Mount St. Bernard, after David, is the costly frontispiece we have mentioned. The volume includes a portrait of Josephine, also on steel, by William Finden. The woodcuts, of which we consider the Bridge of Arcola and the Death of the Duke d'Enghien as the best, are chiefly by Thomson, after designs by G. Cruikshank. They will be looked on as reviving the best days of this art. We have seen some of the illustrations of the second volume also; and may mention, in particular, Finden's exquisite steel engraving (for frontispiece) of the return from Elba; a head of the Emperor; and the charge of Cosacks, after Cruikshank.

We are very sure that if the *Family Library* go on as it begins, it will soon do more to put down the trade of literary trashery than any arguments or reflections we could introduce here: and we therefore conclude with our most hearty commendation of a design, the first example of which merits the highest encomium we can bestow upon it.

The Transactions of the Royal Irish Academy. Vol. XV. Dublin. Published by Ebers and Co., London.

IN these times of angry political discussion on Ireland and Irish affairs, on Catholic emancipation and forty-shilling freeholders, we certainly could not have anticipated that a quarto volume of upwards of six hundred pages, filled with the calm inquiries of scientific minds, the patient research of the scholar, and the labour of the antiquary, should have issued from the Irish press. But so it is; and the fifteenth volume of the *Transactions of the Royal Irish Academy* proves, however the "agitation system" may have affected the popular mind, that there is another class of patriots who silently endeavour to advance the weal of their country, by appealing to the cool judgment of reflecting heads, rather than by stimulating the stormier passions of the heart.

Without farther preface, we shall proceed to our analysis. The Rev. Dr. Robinson, professor of astronomy at Armagh, has contributed two papers connected with his professorship: 1. On correcting observations made with equatorial instruments; 2. On correcting errors of the astronomical circle by opposite readings; and a third essay descriptive of a new air-pump, with an investigation of the limit of exhausting power in various constructions of that instrument. There is an essay of much ingenuity and learning on the theory of systems of rays, by Mr. Hamilton, Andrew's professor of astronomy in the University of Dublin; and Mr. Hamilton's predecessor, Brinkley, (now Lord Bishop of Cloyne),—a name pre-eminent for scientific reputation throughout Europe—has enriched the *Transactions of the Society* over which he so ably presides, by a communication "on the quantity of the precession of the equinoxes, as determined by certain stars

that appear to have no proper motion." A short account of a phenomenon of the rainbow, which his lordship observed on the 14th November, 1826, at the See House, Belfast, is given by the Bishop of Down and Connor (Mant)²; and the scientific portion of the volume closes with an interesting paper by Mr. Houston, on the structure and mechanism of the tongue of the chameleon.

In polite literature — (we follow the classification used by the Academy) — there is but one paper, entitled, "Remarks on the Irish Language, with a review of its Grammars, Glossaries, Vocabularies, and Dictionaries: to which is added, a model of a comprehensive Irish Dictionary; by James Scurry." What Mr. Scurry has done, has, in some measure, made converts of us to the facility of acquiring the Irish tongue; for he has clearly proved, by his able examination of the various grammars and dictionaries which exist, how much they are calculated to confuse and impede, rather than assist, the student. A dictionary on the plan proposed by Mr. Scurry would be a valuable acquisition not only to the Celtic scholar, but to the general etymologist and antiquary; and we have no doubt it would be gratefully received by the public.

"A dictionary is yet wanted," says Mr. Scurry: "1. To fix a standard of orthography from proved principles of analogy, and to decide which of the various modes wherein the same word is found in authors of former times should be adopted. 2. To point out the pronunciation of words according to the same principles, distinguishing provincial peculiarities. 3. To shew the genders of nouns, their genitive case singular and nominative plural; as also the masculine and feminine forms of adjectives, with their declensions, conformably with a grammar to be prefixed. 4. To mark the conjugation of verbs, and the case governed by each preposition. 5. To trace the etymologies of the words, to collate them with their correlates in the other Celtic dialects, and set forth their affinity to foreign tongues in orthography, sense, or sound. 6. Above all, to supply, as much as possible, the defects in preceding works of this nature with respect to numberless words not yet finding a place in any lexicon hitherto published. A grammar and dictionary formed upon this system would leave but little to be said or done by any future writers on the subject."

Mr. Scurry, in the specimen submitted by him to the Royal Irish Academy, has proved his qualifications for the task; and it would be, in our opinion, a proceeding worthy of that Institution, to support and encourage him to complete an Irish dictionary. Where ought the meritorious scholar to look for patronage but to those who have associated themselves for the object of promoting scientific inquiry, and investigations into national literature and antiquity?

The following are the grammatical treatises, glossaries, and dictionaries, critically examined by Mr. Scurry:—

Unalcept na n-Eigean.....	MS.
O'Molloy's Irish Grammar, printed at Rome, 1667	
Lloyd's ditto.....	Oxford, 1707
MacCurtin's ditto.....	Lovain, 1728
Vallancey's ditto.....	Dublin, 1773—1782
Halliday's ditto.....	Ditto, 1808
Nelson's ditto.....	Ditto, 1808
O'Brien's ditto.....	Ditto, 1809
O'Reilly's ditto.....	Ditto, 1821

Glossaries and Dictionaries.

Cormack's Glossary, MS.,..... 9th century.

* Mr. Scoresby has described some similar appearances seen by him in the North Sea; but these were much more imperfect than that observed by the Bishop of Down.

O'Dugan's ditto.....	14th ditto.
O'Clery's ditto, printed at Lovain, 1643	
Lloyd's Dictionary.....	Oxford, 1707
MacCurtin's ditto.....	Paris, 1732
O'Brien's ditto.....	Ditto, 1768
Shaw's ditto.....	London, 1778
Vallancey's Prospectus.....	Dublin, 1803
O'Reilly's Dictionary.....	Ditto, 1821

Although Mr. Scurry does justice to Mr. O'Reilly's Irish Dictionary, as the most copious published, yet he offers some severe remarks upon it, as well as upon Mr. O'Reilly's extensive resources, limited knowledge, and manifold inaccuracies. But of these, especially as they are made in a gentleman-like tone, we agree with Mr. Scurry in thinking that Mr. O'Reilly cannot fairly complain, as he has distinguished himself by his pedantic cavilling at the most trivial errors of others, both in his dictionary, and the volume which he compiled, under the title of "The Transactions of the Ibero-Celtic Society."

On antiquities there are four papers. 1. On ancient Irish deeds, chiefly relating to landed property, from the twelfth to the seventeenth century, with translations, notes, and a preliminary essay; by James Hardiman, Esq. 2. On a passage of Giovanni Leoni, commonly called Leo Africanus, mentioning a successful attack upon the coast of Africa by a powerful British fleet in the tenth century; by John Dunn, Esq. 3. An essay upon the state of architecture and antiquities previous to the landing of the Anglo-Normans in Ireland; by L. C. Beaufort, (a prize-essay.) And, 4. Some original letters from James VI. of Scotland and Chancellor Maitland to Robert Bruce, Minister of the Gospel; with prefatory remarks by William Bruce, D.D.

Mr. Hardiman's paper has considerable historical interest. The most ancient deeds given by him are without dates or signatures, "having been entered into before it became customary in these islands to affix either to written contracts. These belong to the 12th, 13th, and 14th centuries. The greater number, however, are dated. The earliest of the latter class occurs in the year 1419, and the latest in the year 1619, about which time the use of the Irish language in legal writings was discontinued."

We have only space to enable us to mention one or two points in these documents which appear curious to us as illustrative of Irish manners. In No. XXV. God with his angels are named as sureties that the rival chieftains O'Brien and Macnamara would not wage war against each other; and in No. XXXII. (1592) an award drawn up by Teige MacBrody, an Irish poet of considerable reputation, it is stated, in addition to other matters to which Loughlan Roe is entitled, that he is to have "a great cow which was killed for the funeral of John Mac Murrough O'Slaterry, together with all the wheat and liquor provided for the same."

Mr. Beaufort's dissertation on the early architecture of Ireland displays considerable research. After a short introduction, illustrative of the ancient state of the country, he proceeds to describe the cromlech, or stone altar,—the cairn, or heap of stones,—the Druidical circle, and the pillar stone. Then follows an account of the earthen works, which the writer classes under the barrow, lis, dun, rath, and moat. The perplexing subject of the round tower is managed with much skill. After an effort to prove that these buildings were erected before Christianity, Mr. Beaufort enters upon the analogy between them and the various pillar-towers described by Eastern travellers; and the conclusion at which he arrives is, that the

Irish round towers were built for the purpose of holding the sacred fire which the natives worshipped. In addition to this, he hints at the probability of these towers being used also as astronomical observatories, and the possibility of their being the gnomon to a huge sun-dial, like the obelisks at Thebes, and occasionally the station of trumpeters. The essayist adduces some strong arguments against the generally received opinion that the round towers were intended for belfries. But it would exceed our limits to enter into this discussion. The paper concludes with an account of the stone cells, or small chapels, which Mr. Beaufort calls fire-houses, and with some remarks on the earlier ecclesiastical and military edifices of Ireland.

From the general view which we have given of the contents of this volume, it is scarcely necessary for us to state, that its production is highly creditable to the Royal Irish Academy; and, on the whole, we are inclined to regard it as the most interesting in the series of their Transactions.

The Naval Officer.

VOL. II. of this professionally scandalous, and generally offensive, novel, commences with the Officer's amour with Eugenia (the Juliet spoken of in our last), which is the principal piece of romance introduced to diversify the real incidents of sea life. She is a well-drawn and interesting picture; and most of the touches about her are at once graphic and affecting. But she is left, with child, and our author sails again; and with the same ill luck as before with regard to the characters of his brother officers. A tyrannical lieutenant (p. 42) is succeeded by three examining captains (p. 135), all disagreeable and odious persons—a cruel, flogging, cowardly barbarian (p. 180), a Captain Whiffle (vol. iii. p. 92)—a Sir Hurricane Humbug (evidently Sir Isaac Coffin, p. 122)—and many others, none of them an honour to the profession of which the author is a member. Crossing the line, a natural history of the whale, a long account of a hurricane, passing examinations, dry journals of voyages to North America and the West Indies, &c. &c., all tedious and devoid of interest, fill up much of the remaining space, which is not very amusingly varied by a second version of the Red Rover, dissertations on impressment, and a sort of Robinson Crusoe adventure somewhere in the South Seas. To illustrate these parts we shall select a few of the traits of the officers so unceremoniously and coarsely handled by their meesmate.

The flogging Captain G.—"The brig was a most beautiful vessel. She mounted eighteen guns, and sat on the water like a duck. I perceived that the pendant was up for punishment, and this I thought rather an unusual sight at Spithead: I took it for granted that some aggravated offence, such as theft or mutiny, had been committed. Seeing I was an officer, I was admitted alongside; so I paid the waterman and sent him away. As I went up the side I saw a poor fellow spread-eagled up to the grating, 'according to the manners and customs of the natives,' while the captain, officers, and ship's company, stood round witnessing the athletic dexterity of a boatwain's mate, who, by the even, deep, and parallel marks of the cat on the white back and shoulders of the patient, seemed to be perfectly master of his business. All this did not surprise me: I was used to it; but after the address of my captain on the preceding day, I was very much surprised to hear language in

direct violation of the second article of war. Cursings and execrations poured out of his mouth with a volubility equal to any the most accomplished lady on the back of the Point. 'Boatswain's mate,' roared the captain, 'do your duty, or by G— I will have you up, and give you four dozen yourself. One would think, d—n your d—d, that you were brushing flies off a sleeping Venus, instead of punishing a scoundrel with a hide as thick as a buffalo's, and be d—d to him: do your duty, sir, d—n your soul.' During this elegant address the unhappy wretch had received four severe dozen, which the master-at-arms had counted aloud and reported to the captain. 'Another boatswain's mate,' said he. The poor creature turned his head over his shoulders with an imploring look, but it was in vain. I watched the countenance of the captain, and the peculiar expression which I could not decipher at my first interview I now read most plainly: it was malignant cruelty, and delight in torturing his own species; he seemed to take a diabolical pleasure in the hateful operation which we were compelled to witness. The second boatswain's mate commenced with a fresh cat, and gave a lash across the back of the prisoner that made me start. 'One,' said the master-at-arms, beginning to count. 'One!' roared the captain; 'do you call that one? not a quarter of a one. That fellow is only fit for fly-flapper at a pork-shop! I'll disrate you, by G—d, you d—d Molly Mop; is that the way you handle a cat; that's only wiping the dirt off his back. Where's the boatswain?' 'Here,' said a stout, gigantic, left-handed fellow, stepping forward, with a huge blue uniform coat and a plain anchor button, holding his hat in his left hand and stroking his hair down his forehead with his right. I surveyed this man as he turned himself about, and concluded that the tailor who worked for him had been threatened with a specimen of his art, if he stinted him in cloth; for the skirts of his coat were ample, terminating in an inclined plane, the corners in front being much lower than the middle of the robe behind; the buttons on the hips were nearly pistol-shot asunder. 'Give this man a dozen, sir,' said Captain G.; 'and if you favour him, I'll put you under arrest and stop your liquor.' This last part of the threat had more effect with Mr. Pipes than the first. He began to peel, as the boxers call it; off came his capacious coat; a red waistcoat, full-sized for a Smithfield ox, was next deposited; then he untied a black silk handkerchief and shewed a throat covered like that of a goat, with long brown hairs, thick as pack-thread. He next rolled up his shirt-sleeves above his elbows, and shewed an arm and a back very like the Farnese Hercules, which no doubt all my readers have seen at the foot of the staircase at Somerset House, when they have been to the exhibition. This hopeful commentator on articles of war seized his cat: the handle was two feet long, one inch and three quarters thick, and covered with red baize. The tails of this terrific weapon were three feet long, nine in number, and each of them about the size of that line which covers the springs of a travelling-carriage. Mr. Pipes, whose scientific display in this part of his art had no doubt procured for him the warrant of a boatswain, in virtue of which he now stood as the vindicator of the laws of his country, handled his cat like an adept, looked at it from top to bottom, cleared all the tails by the insertion of his delicate fingers, and combing them out, stretched out his left leg—for he was left-legged as well as left-handed—and

measuring his distance with the accurate eye of an engineer, raised his cat high in air with his left hand, his right still holding the tips of the tails, as if to restrain their impatience; when, giving his arm and body a full swing, embracing three-fourths of the circle, he inflicted a tremendous stroke on the back of the unfortunate culprit. This specimen seemed to satisfy the amateur captain, who nodded approbation to the inquiring look of the amateur boatswain. The poor man lost his respiration from the force of the blow; and the tails of the cat coming from an opposite direction to the first four dozen, cut the flesh diamond-wise, bringing the blood at every blow. I will not wound the feelings of my readers with a description of the poor wretch's situation. * * * * The last dozen being finished, the sum total was reported by the master-at-arms, 'five dozen.' 'Five dozen!' repeated Captain G.; 'that will do—cast him off. And now, sir,' said he to the fainting wretch, 'I hope this will be a warning to you, that the next time you wish to empty your beastly mouth, you will not spit on my quarter-deck.' 'Heavens!' thought I, 'is all this for spitting on the quarter-deck? and this from the moralist of yesterday, who allowed neither oaths nor execrations, and has uttered more blasphemy in the last ten minutes than I have heard for the last ten weeks?'

This captain is also a liar, superior to even Major Longbow. *Ex. gr.*

"Talking of broiling steaks—when I was in Egypt we used to broil our beef-steaks on the rocks—no occasion for fire—thermometer at 200—hot as h—l! I have seen four thousand men at a time cooking for the whole army as much as twenty or thirty thousand pounds of steaks at a time, all hissing and frying at a time—just about noon, of course, you know—not a spark of fire! Some of the soldiers who had been brought up as glass-blowers at Leith swore they never saw such heat. I used to go to leeward of them for a whiff, and think of old England! Ah! that's the country, after all, where a man may think and say what he pleases! But that sort of work did not last long, as you may suppose; their eyes were all fried out, d—n me, in three or four weeks! I had been ill in my bed, for I was attached to the 72d regiment, seventeen hundred strong. I had a party of seamen with me; but the ophthalmia made such ravages, that the whole regiment, colonel and all, went stone-blind—all, except one corporal! You may stare, gentlemen, but it's very true. Well, this corporal had a precious time of it: he was obliged to lead out the whole regiment to water—he led the way, and two or three took hold of the skirts of his jacket on each side; the skirts of these were seized again by as many more; and double the number to the last, and so all held on by one another, till they had all had a drink at the well; and, as the devil would have it, there was but one well among us all—so this corporal used to water the regiment just as a groom waters his horses; and all spreading out, you know, just like the tail of a peacock. 'Of which the corporal was the rump,' interrupted the doctor. The captain looked grave. 'You found it warm in that country?' inquired the surgeon. 'Warm!' exclaimed the captain; 'I'll tell you what, doctor, when you go where you have sent many a patient, and where, for that very reason, you certainly will go, I only hope, for your sake, and for that of your profession in general, that you will not find it quite so hot as we found it in Egypt. What do you think of nineteen of my men being

killed by the concentrated rays of light falling on the barrels of the sentinels' bright muskets and setting fire to the powder? I commanded a mortar battery at Acre, and I did the French infernal mischief with the shells. I used to pitch in among them when they had sat down to dinner; but how do you think the scoundrels weathered on me at last? D—n me, they trained a parcel of poodle-dogs to watch the shells when they fell, and then to run and pull the fuses out with their teeth. Did you ever hear of such d—d villains? By this means they saved hundreds of men, and only lost half-a-dozen dogs—fact, by G—; only ask Sir Sydney Smith, he'll tell you the same, and a d—d sight more.' * * * He continued his lies, and dragged in as usual the name of Sir Sydney Smith to support his assertions. 'If you doubt me, only ask Sir Sydney Smith; he'll talk to you about Acre for thirty-six hours on a stretch, without taking breath; his cockswain at last got so tired of it, that he nick-named him 'Long Acre.' * * * 'Capital salmon this,' said the captain; 'where does Billet get it from? By the by, talking of that, did you ever hear of the pickled salmon in Scotland?' We all replied in the affirmative. 'Oh, you don't take. D—n it, I don't mean dead pickled salmon; I mean live pickled salmon, swimming about in tanks, as merry as grigs, and as hungry as rats.' We all expressed our astonishment at this, and declared we never heard of it before. 'I thought not,' said he, 'for it has only lately been introduced into this country by a particular friend of mine, Dr. Mac—. I cannot just now remember his d—d jaw-breaking Scotch name; he was a great chemist and geologist, and all that sort of thing—a clever fellow; I can tell you, though you may laugh. Well, this fellow, sir, took Nature by the heels and capsize her, as we say. I have a strong idea that he had sold himself to the d—l. Well, what does he do, but he catches salmon and puts them into tanks, and every day added more and more salt, till the water was as thick as gruel, and the fish could hardly wag their tails in it. Then he threw in whole pepper-corns, half-a-dozen pounds at a time, till there was enough. Then he began to dilute with vinegar until his pickle was complete. The fish did not half like it at first; but habit is every thing; and when he shewed me his tank they were swimming about as merry as a shoal of dace: he fed them with fennel, chopped small, and black pepper-corns. 'Come, doctor,' says I, 'I trust no man upon tick; if I don't taste I won't believe my own eyes, though I can believe my tongue.' (We looked at each other.) 'That you shall do in a minute,' says he; so he whipped one of them out with a landing-net; and when I stuck my knife into him, the pickle ran out of his body like wine out of a claret-bottle, and I ate at least two pounds of the rascal, while he flapped his tail in my face. I never tasted such salmon as that. Worth your while to go to Scotland, if it's only for the sake of eating live pickled salmon. I'll give you a letter, any of you, to my friend. He'll be d—d glad to see you; and then you may convince yourselves. Take my word for it, if once you eat salmon that way, you will never eat it any other.'"

Our readers may laugh at this, though they may agree with us that it is rather overdone. And what may be thought of the following marvellous long shot?

"An event occurred here, so singular as scarcely to be credible; but the fact is well attested, as there were others who witnessed it!

beside myself. The water was smooth, and the day remarkably fine; we were distant from the shore more than a mile and a quarter, when the captain, wishing to try the range of the main-deck guns, which were long eighteen-pounders, ordered the gunner to elevate one of them and fire it towards the land. The gunner asked whether he should point the gun at any object. A man was seen walking on the white sandy beach, and as there did not appear to be the slightest chance of hitting him, for he only looked like a speck, the captain desired the gunner to fire at him; he did so, and the man fell. A herd of bullocks at this moment was seen coming out of the woods, and the boats were sent with a party to shoot some of them for the ship's company. When we landed we found that the ball had cut the poor man in two; and what made the circumstance more particularly interesting was, that he was evidently a man of consequence. He was well dressed, had on black breeches and silk stockings; he was reading Ovid's *Metamorphoses*, and still grasped the book, which I took out of his hand. We have often heard of the miraculous powers ascribed to a chance shot; but never could we have supposed that this devilish ball could have gone so far, or done so much mischief."

Another yarn:—"A very curious instance of muscular action occurred: a lad of eighteen years of age was on the fore-castle, when a shot cut away the whole of his bowels, which were scattered over another midshipman and myself, and nearly blinded us; he fell—and after lying a few seconds, sprang suddenly on his feet, stared us horribly in the face, and fell down dead. The spina had not been divided; but with that exception, the lower was separated from the upper part of the body."

Another, of the titled captain: "While he commanded a ship, he used to say, 'As sure as I shall sit in the House of Peers, I will flog you, my man;' and when this denunciation had passed his lips, the punishment was never remitted. With us, the reverse of this became our by-word; lieutenants, midshipmen, sailors, and marines, asserted their claim to veracity by saying, 'As sure as I shall not sit in the House of Peers.' This was the noble lord, who when in the command of one of his majesty's ships in China, employed a native of that country to take his portrait. The resemblance not having been flattering, the artist was sharply rebuked by his patron. The poor man replied, 'Al we, master, how can handsome face make if handsome face no have got?' This story has, like many other good stories, been pirated, and applied to other cases; but I claim it as the legitimate property of the navy, and can vouch for its origin as I have related."

"We sailed for the North American station, the pleasantest I could go to when away from Emily. Our passage was tedious, and we were put on short allowance of water. Those only who have known it will understand it. All felt it but the captain, who, claiming privilege, took a dozen gallons every day to bathe his feet in, and that water, when done with; was greedily sought for by the men. There was some murmuring about it, which came to the captain's ears, who only observed, with an apathy peculiar to Almack's, 'Well, you know, if a man has no privilege, what's the use of being a captain?' (We had always thought that on board a man-of-war the allowances were the same; and we must consider this tale to be another fling to deteriorate the navy.)

But we must now draw towards a close, and we do it with reluctance, as our gravest charges

must here be substantiated. Religious cant and self-accusations, followed up by incidents in the loosest of lives, form a medley most unpleasant to contemplate; and the juxtaposition of providential dispensations with the intemperate sins of a reckless sailor in every port, excite a degree of disgust irreconcilable with the idea of entertaining or instructive reading. When we add to this the frequent recurrence to indecorous topics, and to one matter in particular of the most odious filthiness, we must come to the conclusion that this is not a publication fit to be put into the hands of any decent female, nor even fit for general perusal. We can only refer to these sad errors in any gentleman who has taken up the pen of a public writer; and sincerely do we trust that no future production of our author's will be liable to the reproach which must justly fall upon him for his nasty allusions pp. 116, vol. ii.—67-8, 145, and 194, vol. iii.; and above all, the abominable, beastly story which occupies about a score of pages, 126, &c., in the same vol.* Independent of the offensive nature of these passages, one of them completely destroys the beauty of Eugenia's character; and the rest are at variance with every principle of delicacy professed by the author. With regard to the yet more objectionable parts in which religion is brought forward with, if possible, still worse taste, we must say, that the "special providence" which saved the hero from a shark (vol. ii. p. 59), and the other "singular dispensation" which rescued him from death (p. 299), are ill placed in a volume where the writer takes leave of a brother officer, shaking him by the hand, and "sincerely hoping that they might never meet again, either in this world or the next." But these sink into insignificance when compared with the shocking want of sense (to say the least of it) displayed in the *dénouement*. To make the Holy Sacrament of our Lord the machinery for giving a scenic effect to the end of a novel is monstrous and unpardonable;—we have some misgivings even about quoting it to justify our criticism. Mildmay has become repentant, and a bishop is described as his reformer.

"After a short conversation, he informed me that business would require his absence for two or three days, and that he would give me a task to employ me during the short time he should be gone. He then put into my hand a work on the sacrament. 'This,' said he, 'I am sure you will read with particular attention, so that on my return I may invite you to the feast.' I trembled as I opened the book. 'Fear not, Mr. Mildmay,' said he; 'I tell you, from what I see of your symptoms, that the cure will be complete.' Having said this, he gave me his blessing, and departed. He returned exactly at the end of three days, and, after a short examination, said he would allow me to receive the sacrament, and that the holy ceremony should take place in his own room privately, well knowing how much affected I should be. He brought in the bread and wine; and having consecrated and partaken of them himself, agreeably to the forms prescribed, he made a short extempore prayer in my behalf. When he had done this, he advanced towards me, and presented the bread. My blood curdled as I took it in my mouth; and when I had tasted the wine, the type of the blood of that Saviour whose wounds I had so often opened afresh in my guilty career, and yet upon the merits of which I now relied for par-

* We could not have believed that a subject so filthy and disgusting could ever have issued from the press in our day.

don, I felt a combined sensation of love, gratitude, and joy—a lightness and buoyancy of spirits, as if I could have left the earth below me, disburthened of a weight that had, till then, crushed me to the ground. I felt that I had faith—that I was a new man—and that my sins were forgiven; and, dropping my head on the side of the table, I remained some minutes in grateful and fervent prayer. The service being ended, I hastened to express my acknowledgments to my venerable friend. 'I am but the humble instrument, my dear young friend,' said the bishop; 'let us both give thanks to the Almighty Searcher of hearts. Let us hope that the work is perfect—for then, you will be the occasion of 'joy in heaven.' And now,' continued he, 'let me ask you one question. Do you feel in that state of mind that you could bear any affliction which might befall you, without repining?' 'I trust, sir,' answered I, 'that I could bear it, not only cheerfully, but thankfully; and I now acknowledge that it is good for me that I have been in trouble.' 'Then all is right,' said he; 'and with such feelings I may venture to give you this letter, which I promised the writer to deliver with my own hand.' As soon as my eyes caught the superscription, 'Gracious Heaven!' exclaimed I, 'it is from my Emily!'"

And this stage-trick of the bishop between the sacrament and the billet-doux concludes a novel as objectionable to decency, to morals, and to religion, as any of the vilest and less covert productions, disgraceful to that portion of the press which occasionally attracts prosecution for its crimes against society. In the present case, the offence is only rendered more heinous by the station of the parties, and the mode of publication, which are likely to thrust the work into quarters guarded against the more open inroads of the low, vicious, and demoralising.

Upham on Buddhism

In concluding our notice of this able book, we resume, where we left off, with extracts illustrative of the connexion between Buddhism and other religions, as well as with the early imaginative literature of other countries.

"The following exhibits the conformity in the doctrine of Islamism: 'The tree of happiness, or tuba, they fable, stands in the palace of Mahammed, though a branch of it will reach to the house of every true believer; and it will be laden with fruits of tastes unknown to mortals. So if a man desire to eat of any particular kind of fruit, it will immediately be presented to him; or if he choose flesh, birds ready dressed will be set before him, according to his wish. The boughs will spontaneously bend down to the person who would gather of its fruits, and will supply the blessed not only with garments,' &c. &c.—*Sale's Koran*, 127. From the roots of the tree flow rivers of water and milk, and honey and wine; also the river of life.

"The god Sekkrais resides in the great city Maha-soudassana, which has a square form; its gilded wall surrounding it being a perfect square. The gates are of gold and of silver, adorned with precious stones. Seven mounts surround the city, and beyond the last range a row of marble pillars studded with jewels; beyond which are seven rows of palm-trees, bearing rubies, pearls, gold, &c.; lakes, odoriferous flowers, and fragrant trees, with the palm-tree, are dispersed around. To the south of the city is the garden Parasa, and to the west that of Massata. To the north-east is a very large hall, extending every way 800

juzana; its circumference 900, its height 450 juzas. From its roof hang golden bells; and its walls, pillars, and stairs, shine with gold and precious stones. The pavement is of crystal, and each row of pillars contains 100 columns. The road to this hall is twenty juzana long and eighteen broad, bordered with trees bearing fruits and flowers. Whenever Sekkraia repairs to this hall, the winds shake off all the flowers (fresh ones instantly blooming on the trees), with which the presiding gods of the winds adorn the road in honour of his approach, and the flowers are so abundant that they reach up to the knees. In the centre stands the great imperial throne, surmounted by the white chettra, or umbrellas: it shines with gold, and pearls, and jewels. It is surrounded by the thirty-two shrines of the counsellors; and behind these the other Nat, each in his proper place: the four assistant gods also attend, while the inferior gods touch their musical instruments, and sing melodiously. The four assistant deities then command their inferior gods to go through this southern island, or the world, and inquire diligently into the actions of mankind; if they observe holy days, and laws (the Budha's precepts), and exercise charity. At this command, quicker than the winds, the messengers pass through this world, and having carefully noted in a golden book all the good and evil actions of men, they immediately return to the hall, and deliver the record* to the four presiding gods, who pass it to the lesser deities, and they onward until it reaches Sekkraia. He, opening the book, reads aloud; and if his voice be raised, it sounds over the whole heaven of Tavakeinza. If the Nat hear that men practise good works, and observe the Buddhist laws, they exclaim: "Oh! now the infernal regions will be empty, and our abode full of inhabitants!" If, on the contrary, there are few good men—"Oh! wretches," say they, *smiling*, "men and fiends, who, feasting for a short life, for a body four cubits in length, and a belly not longer than a span, have heaped on themselves sin, which will render them miserable in futurity!" Then the god Sekkraia, that he may induce men to live virtuously, charitably, and justly, speaks thus: "Truly, if men fulfilled the law (the Budha's precepts), they would be such as I am." After this he will, with all his train, to the number of 36,000,000 of Nat, return to the city with music.

"The doctrinal account of the Nagas, or snakes with human faces and the folds of the serpent; of the Asuras thrown into the ocean, and subsequently settling themselves in the regions of the air, intermediate between the earth and the heavens; of their *bon* or habitation being, in the doctrine, declaratory for a limited time;—all these are points of much interest; they are manifest transcripts of earlier records than the era of Gaudma. The action of the celebrated feast of the inebriating fruit, and of the rejoicings which followed the wavings of the Nat god, and preceded the fact of a Budha being about to appear on earth, has clearly been a doctrine in the East in the earliest ages, and throws back original Buddhism to a period of time long anterior to the commencement of the law of Gaudma. The historical details of the popular celebration of this

identical festival* held in honour of the Budha will demonstrate how deeply rooted its practice had become at a very early period of history, and what strong ground there is to infer that we have preserved a memento of it in many of our common games and old customs, practised in remote parts of our own island even to the present day. The third god, called Wiroe Pakshe, rules the North, and is, with his servants, as ruddy as the blood-red coral. He is supreme over the Naga-batteyo, or the Cobra-copiles, inhabiting the heavens. The upper part of the body of these snakes has the shape of a human being; and the lower part, from the middle, that of a snake. Himself and attendants can assume at will the shape of men and of birds, or of any animals; they can become the same as rocks or trees, or take any inanimate form. These Naga snakes are deemed Nat deities, and have the power of transforming themselves into all shapes, excepting in the four following cases: 1. in rest by sleep; 2. falling to death; 3. eating of terrestrial food; 4. intercourse with mankind. In these hints, we evidently trace out the serpent fables, forming the structure of the imagery and enchantments of Eastern fictions.† The connexion of

* "The Persians and Babylonians held a festival, which they denominated Saces, from their god Saca, or Budha Sacya. During his festival, men and women gave themselves up to the most unrestrained drunkenness and lasciviousness."—*Selden de Diis Syriæ*.

"It has been inquired, why this festival was called Saces; and some have imagined that it was instituted by Cyrus, in commemoration of a victory which he obtained over the Scythians, Saca; but there is nothing in it which resembles the commemoration of a victory. Berosus mentions the festival by its name Saces, as a Babylonian institution, and Ctesias, in those books which treat of times preceding Cyrus. Hecychius calls it a Scythian festival; he likewise tells us that the Babylonian Seches was the appellation of the planet Mercury or Budha. From the old Persico-gothic festival, our Christianised forefathers of the middle ages, whose ancestors emigrated out of the north of Iran and Hindostan, borrowed their ecclesiastical mummery of the Abbot of Miarule, and other singular practices."—*Faber*, li. 497.

"Among the Celtic nation, the new moon nearest to the winter solstice was peculiarly celebrated. The chief Druid went into the woods on that night, and cut with a golden sickle a branch of the mistletoe of the oak, called Gihah in the Celtic. The people also cut branches for themselves, and carried them home, after they had been blessed by the chief Druid, whence the usage of adorning our churches with evergreens. In France, at the Christmas gambols, as late as the reign of Louis XIV., when they were suppressed on account of their irregularities, traces of the Druidical usages were found. A man, personating a prince (*roi follet*, 'a mummer'), set out from the village into the woods, hawking out, *Au gui menes, le roi le veut*; the monks followed in the rear, with their begging-boxes, which they rattled, crying *fire-fire*, and the people put money in them, under the fiction that it was for a lady in labour. Persons in disguise (*guicards*) forced into dwelling-houses, playing antic tricks, and bullying the inmates for money and choice victuals, crying, *fire-fire, fire-fire, maint du diable et point du die (pie)*. Hence, says the late Professor Robison, of Edinburgh (from whose work on Natural Philosophy, p. 300, this note is taken), evidently was derived the guicarts of Edinburgh, and their cry 'Hog menay, troll lollay, Gie's your white bread, and none o' your gray.' The old French *au gui menes* and the Scottish *hog menay* are plainly corruptions of the Greek *áyin pávin*, 'holy moon,' which was *anciently supposed to be in labour at the time of the conjunction or new moon*. Perhaps *fire-fire* may be a corruption of *tirez*—draw forth, and 'put money for the king'; namely, *roi follet*, the mummer."—*Hale's Chronology*, l. 153.

"The season of the epagomene, or days of carousal, were celebrated at Babylon, similarly to the Saturnalia at Rome; and it was during their excess, and the consequent inebriety of the guards, that her gates of brass were opened, according to the word of prophecy, the river drawn off, and her empire for ever destroyed. Quintus Curcius represents the Babylonians as excessively addicted to wine and the consequences of ebriety. The season, character, and connexion, of the holy moon in the Christmas gambols in France mark it as an Eastern fragment, the moon being figured as labouring under the same eclipse as the planet Rahoo."

† "The Nagas, or dragons, thus invested with great power, and the capacity of assuming divers forms, as well as of conferring great benefits or signal injuries, throughout the whole detail of their caverns, their power of enchantments, and the restrictive penalties which accompany these rare gifts, form the basis of the wonder-working fictions of Arabia. Thus, the fairy who preserved Zobeide from her envious sisters, had been bound in her

the Nagas or Cobra-copile serpents with mountains is equally strong in Hindulism. In the Dherma Sastra both Nagas and Garudas are named as races of men descended from Atri; but in the language of mythology, the Nagas or Urugas are large serpents, and the Garudas immense birds, like the simorg of the mountain Caf. The king of the serpents formerly reigned in Chackra Giri; and his subjects were obliged, by the power of Garuda, to supply that enormous bird with a snake each day: their king, at length, refused to give the daily provision. This enraged Garuda, who threatened to devour the snakes and their king: nor would his menaces have been vain, if they had not all retired to Sancha Dwipa, where they settled between the Cali and the sea, near the station of Swami Carticeya, god of arms, where they are supposed to live still unmolested, because Garuda dares not approach that more formidable divinity. 'Then,' says the Indian writer, 'they who perform yearly and daily rites in honour of Sancha Naga will acquire immense riches.' The mountains of snakes are mentioned by the Nubian geographer, and are to this day called Hubab or Snake, and the same region was named Ophiusa by the Greeks, who sometimes extended the name to the whole African continent. The breath of the Naga king is believed to be a fiery poisonous wind; and by this hypothesis they account for the simoom, which blows from the mountains of Hubab through the whole extent of the desert. 'Astica, a rishi or saint, so overcame the royal Naga, and reduced his size, as to carry him about in an earthen vessel; and crowds of people are now said to worship him at the place of his residence, near the river Cali.' This legend resembles that of the snake, Haridi, of Upper Egypt; and so intimately is the scenery of mountains associated with these beings, that the same term applies to both. Thus 'Naga, or motionless, is a Sanscrit term for a mountain; and Naga, its regular derivative, signifies both a mountain snake and a wild elephant."

Imperfect as these extracts are, we must conclude with them. The extraordinary and important coincidences displayed in every page of this book, throw a wonderful light on all the religions of the world, on classic mythology, and, in short, on almost all questions, buried in the depths of antiquity, which interest the inquisitive mind of man. It is a work

natural form as a Naga, and for a time became liable to death; under the suspension of her privileges, she was preserved by Zobeide, and she amply rewarded her preserver for the aid which she generously lent her. The fairy Earl Banou, in the romantic and delightful tale of Prince Ahmed, is one of the very same class, an inhabitant of Jugandera, living in a Naga cavern, and drawn from these Buddhist representations; and such also are the acquired persons of the three brothers, the far-sighted telescope, the apple that gives life, and the self-conveying carpet: these have all their prototypes in different legends of the Budhas; but especially the beautiful story in the Arabian tales of the Prince Simoustapha and Setepedour, queen of Ginnistan, is entirely cast upon these Nat regions throughout its incidents. The supernatural mist which shrouds Simoustapha, and which nearly costs him his life, is a Naga power; as also the punishment of chaining the rebellious genius to a pillar, and then breathing scorching fumes on the desert to increase its sterility. Every portion of the narrative might be wrought out to meet its exact counterpart, in direct accordance with the feelings and sentiments of the followers of the Budha, which were never more prone to place reliance on the value and power of charms and talismans, than at the present period, as our late warfare evinced. Thus Dr. Buchanan relates—"The late Maymoon of Pegu was constantly occupied in digging and searching for a temple which he had dreamt of as containing treasure, and which had the power of rendering itself visible or invisible; and says, 'all good people were in consternation on account of certain robbers, who, by a power in magic, are supposed able to change themselves into tigers, or other wild beasts, and thus, without danger of detection, can commit their nocturnal spolia.'"—*Asiatic Researches*, v. 173.

* "Zachariah, l. Then said I, O my Lord, what are these? And the angel that talked with me said unto me, I will show thee what these be. And the man that stood among the myrtle-trees answered and said, These are they whom the Lord hath sent to walk to and fro upon the earth. So they walked to and fro upon the earth, and they said, We have walked to and fro through all the earth, and behold all the earth sitteth still and is at rest."

of sterling value, and must have a place in every good library.

SIGHTS OF BOOKS.

Ecarté; or, the Salons of Paris. Post 8vo. 3 vols. London, 1829. Colburn.

THIS is another of those detestable publications whose only tendency can be to deprave the minds of even the most superficial and thoughtless readers. It is not easy for us to describe it, certainly not to expose it, without polluting our pages with obscene extracts. Suffice it, therefore, to say, that if you suppose a coarse and vulgar writer attempting to paint with his utmost of warmth and vividness the vice, harlotry, and prostitution of the worst resorts of a dissolute city, you will have some idea of this noxious "fashionable novel." Unfit to be seen beyond the precincts of the stews, the profligate manners of which it describes, *Ecarté* is merely less pernicious in consequence of the contemptible talent of its would-be libertine and licentious author. The only public notice, indeed, that it deserves, is such as is bestowed by prosecution upon indecent prints, the class of productions of which it is the companion.

The Extractor. 8vo. pp. 642.

THIS is the first volume of an extremely entertaining miscellany, extracted from Reviews, Magazines, and Journals, from November to February 1828-9, and printed in the commodious method of double columns. It thus contains a vast quantity of matter, and the selections are made with much judgment, from the important and interesting field which our modern periodical literature offers to the choice, in every branch of intelligence which can divert and inform the public. It is a nice book to take up either for five minutes or an hour at a time.

The Divine Origin of Christianity, &c. By J. Sheppard, author of "Thoughts on Private Devotion." 2 vols. 12mo. Whittaker and Co.

THE arguments are deduced from some of those evidences which are not founded on the authenticity of Scripture, on miracles or prophecies, and depend chiefly on collateral proofs. The Abbé Bullet and Dr. Lardner are much referred to; but the writer has consulted many other authorities, and produced altogether a work of considerable ingenuity, skill, and ability.

Heaven Opened, or the Word of God: being the Twelve Visions of Nebuchadnezzar, Daniel, and St. John, explained. By Henry Addis, B.A. 8vo. pp. 453. London, 1829. J. Robins.

THE label on the back of this volume startled us not a little; for it is briefly, "*Heaven Opened, by H. Addis*;" and we were rather reconciled upon looking into the interior, to find that it was only another of those vain attempts to expound things far above the reach of human knowledge. The pride of learning, vanity, fanaticism, and insanity, have all, at times, led very clever and eccentric persons to set themselves up as interpreters of the prophetic writings: some have displayed piety, eloquence, and good intentions; but even the best have laid themselves open to the reproach of entertaining mistaken notions, and consequently of being blamed by the most wise, intelligent, and pious men of the age. Indeed, their labours are but too much calculated to bring the Scriptures into disrepute, and injure the best interests of Christianity. And Mr. Addis is one of these: he fancies he has dis-

covered "*the name and number of the name of the Apocalyptic sea-beast of St. John*, which we (it seems) completed last year;" and with this key he has opened the heavens, and developed the whole arcana of prophecy!!! Far be it from us to pretend to understand such matters: all that we can ascertain for the satisfaction of our readers is, that (if spared by the comet in 1832) they may see Rome pillaged by the Russians in 1843; and, should they live long enough, witness the millennium in 3178, about which period the number of the *Literary Gazette* will be somewhere about No. 59,520, the oldest and longest-continued periodical that ever was in existence!

Ulysses Homer; or, the Discovery of the true Author of the Iliad and Odyssey. By Constantine Koliades, Professor of the Ionian University. 12mo. pp. 67. London, 1829. Murray.

WHO Homer was, it would be very difficult to tell. Whether an individual, or a collection of wandering voices, is a matter in dispute. Our author has assumed, from the exactness of his details, that he must have been one of the heroes of the Iliad; and if one of these, Ulysses. He also contends, from the accuracy of the descriptions of Ithaca in the Odyssey, that the king of that island was the poet,—a further proof of his being also the bard of the Iliad. All the difficulties in the way of this hypothesis are overleapt in a summary manner; but still the essay is very curious, and not the less interesting, as being only the promise of a larger work on the same topic. M. Koliades considers himself to be a descendant, through Eumæus, of the kings of Scyros; and in his youth he traversed and examined every ~~thing~~ mentioned in these immortal poems, for the purpose of ascertaining their authenticity. This alone imparts much value to his labours; and though we cannot say that he identifies Ulysses with Homer, we can say that his labours are so interesting as to induce us to look with impatience for what is to follow.

ORIGINAL CORRESPONDENCE.

Paris, March 16.

PRAYERS in the morning, vespers at four o'clock, dinner at six, and *soirées* at ten—*voilà* the fashionable division of time, and the Parisian method of gaining Paradise. Last evening a magnificent *soirée* was given by his majesty, to which the select number of twelve hundred were invited. Neither the toilette of the guests, the splendour of the decorations, or the luxury of the refreshments, bespoke the season of Lent; but, thanks to the tutelar saints, and the privileged beings of this world who hold converse with angels, an amicable arrangement for indulgences may be made with the abodes above.

Amongst the anecdotes of the day, one which has caused considerable sensation in the scandalous circles, is a story concerning a lady of some rank and little penetration. It appears that, during the winter months, Madame la Comtesse de — met frequently, in the public walks and at the theatres, a very prince-like-looking personage: his stately carriage and *bonne tournure* proclaimed, as she supposed, his noble birth, and a pair of mustaches which overshadowed his upper lip appeared to be the pledge of battles won. This *beau chevalier*, perceiving that he had attracted the regards of the lady in question, ventured to address a letter to her, which epistle she imprudently answered: correspondence ensued, and

was only interrupted by the unfortunate dame perceiving him, whom she supposed to be a prince in disguise, behind an English nobleman's carriage, *en costume de chasseur*.

Were it not for the concerts at the Conservatoire, and some musical entertainments given by the virtuosos of the age, we should, I believe, forget that harmony still exists; for what with political differences, religious controversy, and the warfare between the *classique* and *romantique*, we live in a happy state of discord. The Parisians are beginning to discover the merits of Beethoven; therefore we have now two parties, the Rossinists and Beethovenites; each of whom try to depreciate the genius of one artist, to heighten that of the other. It would seem that merit in itself has no foundation, and can only rise by the fall of a rival.

In case that killing is proved to be no murder, and that the law for assassinating *gratis* takes place, I understand that an insurance-company for the safety of heads is to be established by a society of *mouchards*: by paying a hundred francs a year, the life of each individual is to be guaranteed from the blow of a poniard, from poison, and drowning; and should any of the subscribers fall a victim to malice, notwithstanding precautions, the said insurance society is to remit ten thousand francs to the heirs at law.

Yesterday, a man of ninety-nine was buried at Père-la-chaise, and was followed to his grave by twenty children, fifteen grand-children and great grand-children. Happily, such populations are not common! The deceased, it appears, had buried six wives, and married the seventh: he died in the full enjoyment of his senses, and assured his numerous progeny that he did not regret life, as he knew he was about to rejoin the ~~str~~ beloved partners of his days, who had gone before him. Few men, I fear, would be consoled by such an idea in their last moments, or at any moment of their existence!

The Duc d'Aumont, the King's *premier gentilhomme*, has presented Mlle. Noblet with a superb service of china, in his majesty's name, as a mark of his admiration for her talents. Actresses are on the rise; and they will soon be not only admitted generally into society, but will also be allowed entrance to paradise without letters of recommendation from the spiritual hierarchy!

Since the publication of "*Le dernier jour d'un Condamné*," we are inundated with "*last days*." Amongst the number, however, there is one worthy of notice—"Le dernier jour d'un Employé;" this volume contains a faithful picture of the sufferings of those who are suddenly deprived of the means of existence. But in vain authors write or draw misfortune in true colours; no one reads from any other view than that of *passer le temps*.

We have some new country dances, composed by M. Val Fleury, which are all the vogue here. "*Le valse au châlet*," by the author of "*Robin des Bois*," is converted into a rondo, *qui fait furie* in the musical salons.

ARTS AND SCIENCES.

ROYAL INSTITUTION.

MARCH 20.—Mr. Ainger delivered some observations "on the development of the origin and early history of the steam engine."

The first steam apparatus noticed by Mr. Ainger, was Hero's, 130 years B.C. It was very simple in its construction, and could not be applied on a large scale with success: Hero invented three varieties. The next noticed

was that of Porta, the translator of Hero, in 1606. Porta, it appears, was the first "practicable" steam engine ever made. De Caus' followed, in 1615: it was a mere siphon, acting either by compressed air, capillary attraction, the labour of animals, as well as by the use of fire. Branca's, in 1629, appears to have been the first steam engine applied with success to useful purposes; its precursors having been nothing else than experimental toys. Branca's was also exceedingly simple in its principle, the steam being made to discharge itself against the cogs of a wheel, thereby imparting to it a circular motion, which gave impulse to other parts of machinery, as in the present day. Mr. Ainger, in succession, noticed the various improvements, or perhaps, more properly speaking, the differences in the engines of the Marquess of Worcester, in 1663; Gue-ricke, in 1672; Papin, in 1690; Savery, in 1699; Newcomen, in 1705; and Papin, also in 1707. Amongst all these varieties, that of the Marquess of Worcester more nearly resembled the useful steam engine.

The lecturer then exposed the fallacy of M. Arago's theory and arguments, contained in one of the French almanacs for 1829, and gave notice, that if agreeable, the subject should be resumed and followed up at a subsequent meeting.

In the library was a printing-press, invented by Bramah, for the purpose of printing the date and numbers of the Bank of England note; also models of parabolic sounding-boards, invented by the Rev. John Blackburn, one of which was erected in Attercliffe Church, and an account of it contained in a former *Literary Gazette*. In addition to the above, there were on the library-table four voltaic troughs, being those with which Mr. Humphry Davy, in 1807, decomposed potash and soda, in the laboratory of the Royal Institution.

COLLEGE OF PHYSICIANS.

MARCH 23. Dr. Roberts in the chair. There were three papers read by Dr. Wilson at the assembly this evening: the first was on the efficacy of dashing cold water over the face of patients, particularly females, who labour under obstinate nervous and convulsive diseases; many cases were mentioned in which this remedy had been employed successfully, where all other medicines had failed: this paper was by Dr. Charles Mansfield Clarke.

The second paper embraced some curious and exceedingly interesting extracts, from a MS. left by the late eminent anatomist Mr. James Wilson. Among them was an account of the *post mortem* examination of the body of the celebrated Dr. Samuel Johnson: the details were related in the technical language of the profession. It appeared that the disease of which Dr. Johnson died was dropsy: on the morning of the day on which he expired, he became impatient for his medical attendants; rather than wait their arrival, he seized a lancet, and himself laid open both his legs; an immediate loss of about twelve ounces of blood was the consequence, which occasioned his death a few hours afterwards. Amongst other peculiarities, his heart was remarkably large and strong. Perhaps the most singular fact was, that the head of the great moralist and lexicographer was not opened! but Gall and Spurzheim were not in those days, for Johnson died in 1783.

The third paper was an account of the operation of lithotomy, performed on a horse, by Mr. Sewell, of the Veterinary College.

Some finely prepared skeletons of the bo-

constrictor and poisonous serpent, the ostrich and pelican, were placed in different parts of the hall: they were presents to the College; and their exquisite finish drew forth repeated observations. The conversazione was well attended.

SOCIETY OF ARTS.

MARCH 24.—The manufacture illustrated in the meeting of this evening was that of glass. The Secretary began by stating the general physical properties of glass, and next adverted to its chemical characters. He first mentioned those substances, such as boracic acid and oxide of lead, which are by themselves convertible into glass by heat; and then proceeded to the enumeration of those, such as silica and the fixed alkalies, which afford glass by fusion with other bodies, though not verifiable *per se*. He next entered on the history of glass—stated that it was probably first produced incidentally, as semi-vitreous slag, in the reduction of metallic ores—that the blue, brown, yellow, and purple opaque glass, of which are formed the eyes of the frets in the capitals of the tetrastyle Ionic portico of the triple temple in the Acropolis of Athens, are perhaps examples of such slags—that the manufacture of glass as such, seems to have commenced at Sidon; and that the glass spoken of by Aristophanes as having been common in the shops of the pharmacopoli-ists at Athens was probably of Phœnician fabric. He then traced the art of glass-making from Sidon to Alexandria, and thence to Rome—detailed at some length the many interesting particulars respecting glass to be found in the works of Lucretius and Strabo, of Virgil, Horace, and other writers of the Augustan age, of Martial and of Pliny; and illustrated this part of his subject by the exhibition of specimens of antique green Egyptian glass, in the form of heads and small figures and lachry-matories—of opaque, enamelled, and transparent coloured glass, in imitation of gems, found at Rome—and of bottles for wine, found at Pompeii. The lecturer concluded the history of this substance by some notices respecting the application of glass to windows by the Romans, and its subsequent introduction in the seventh and eighth centuries into France and England, chiefly for ecclesiastical buildings. He then proceeded to modern glasses, which he divided into three families; namely, those which have for their flux alkaline earths alone—those which have the alkalies, alone or mixed with alkaline earths, for their flux—and those of which the flux is a mixture of fixed alkali and of oxide of lead. He next described those processes of manufacture common to all the blown glasses; the preparation of the materials—the construction of the kiln—the process of fritting, fusing, and refining—the tools employed—and the general method of giving to glass the required form. He then explained, and illustrated by experiments, the difference between annealed and unannealed glass. The spontaneous decomposition of even the hardest glasses by the continued action of moisture, was next treated of, and illustrated by some very interesting specimens; and the lecture concluded by a description of the remarkable change in structure and other properties occasioned by exposing glass to the continued action of a heat somewhat less than that required for its fusion, by which it is converted into Reaumur's porcelain, of which a very fine specimen was exhibited. The Secretary announced that the subject would be resumed at the next meeting; when the different kinds of window glass, of plate glass, of flint glass, and of coloured glass, would be

described, and of which some very splendid specimens would be exhibited.

The other articles shown were, a very curious water-clock, belonging to H. R. H. the Duke of Sussex, President of the Society; some specimens of dyes fixed on silk by the ammoniacal liquor of coal, from Mr. Winsor; a model by Messrs. Cottam and Hallen, exhibiting their arrangement of the apparatus for warming rooms, conservatories, &c., by hot water; two models by J. Higgins, Esq., illustrating his three-wheel carriages; some Indian bronzes, and other articles, furnished by R. H. Solly, Esq.

MEDICO-BOTANICAL SOCIETY.

THE general meeting of this Society was held on Tuesday evening, at their rooms in Sackville Street, Earl Stanhope in the chair. The noble earl read letters from the King of Spain and the Archduke Anthony of Austria, expressing their desire to become members of the Society. His lordship observed, that the Society must feel highly gratified to hear the sentiments expressed by the Archduke Anthony, and the opinion he entertained of this highly useful Institution. Similar sentiments had been expressed by the King of Spain, who had, in the most prompt manner, consented to become a member; and as it was the first instance of a King of Spain becoming a fellow of any society out of his own dominions, it was esteemed an additional honour.

Mr. Frost then made some observations on the qualities of the several plants which had been placed on the table for the evening; amongst them were *Rosmarinus officinalis*, *Canella laurifolia*, *Myrtus pimenta*, *Daphne mezereum*, *Helleborus fatidus*, &c., most of which had been furnished by Mr. Campbell, a gentleman well known for his facility in "flowering" rare exotics.

Dr. Whiting next delivered a very interesting lecture on *materia medica*, and in which he made some observations on the obstacles thrown in the way of medical men in their pursuit of anatomical knowledge. To cramp the profession in the pursuit of acquaintance with the infirmities of the human body, was, he said, as irrational as to put out a man's eyes, and then reproach him with blindness. The services of the resurrectionist might, in a great measure, be dispensed with, if medical men who attended a patient in any dangerous or peculiar complaint, were allowed, after death, to examine the body. He was glad that the measure had been taken up by several distinguished individuals; and he hoped that the day would come, when medical men would have facilities afforded them for obtaining a good scientific education.

W. A. Mackinnon, Esq. F.R.S. was proposed as a member.

SCIENTIFIC EXPEDITION IN EGYPT.

Letter from M. Le Normand.

Island of Philæ, Dec. 6, 1838.

[AFTER describing the extraordinary impression made upon him by the grandeur of Thebes, the writer proceeds:]

In the evening of the day that we left Thebes (Nov. 26), we were at a short distance from Hermonthis, where we arrived the next day. The wind being unfavourable to our further progress, we stopped the whole day about a bad temple of the time of the Ptolemies. The examination of this edifice, which is truly wretched in comparison with others, acquainted us with some curious facts, and showed us the state of degradation to which

the Egyptian worship had fallen before the country came under the dominion of the Romans.

[M. Le Normand here gives an account of the paintings in the temple of Hermopolis, coinciding with that of M. Champollion.]

On the 29th we arrived at Ene. I had some purchases to make, and wanted to see the great temple, considered by Denon as the masterpiece of Egyptian architecture. M. Champollion immediately crossed to the other bank, where he hoped to find the temple of Contra-Lato: we therefore separated for this time. I went to convince myself anew, when looking for the columns of the temple amidst the bales of cotton belonging to his highness the viceroy, of the strange mistakes sometimes committed by Denon and the commissioners of the great expedition, in examining the Egyptian monuments,—taking the most recent edifices for the most ancient and the best. I hastened to join Champollion, whom I found much more disappointed than myself, because he had arrived just ten days after the complete destruction of the temple which he sought. A similar adventure awaited us the next morning at the temple of Eleuthia; and this was a more serious matter, since it was a monument of Sesostris, the loss of which we had to regret. Adding to these two temples the two at Elephantina, the largest of which was, perhaps, the most perfect monument of Egypt, and the little temple of Ombos, the greater part of which has been recently washed away by the Nile, we have a list of five temples destroyed, to be added to the five or six which I have mentioned in my former letters. We may therefore wager, that if the European powers do not interfere, in twenty years hence there will not be a monument remaining in Egypt.

When we left Eleuthia a violent wind arose, which carried us in a few hours to Silsilis, where are the quarries of free-stone which furnished the materials for the principal edifices of Thebes. These quarries are themselves monuments, on account of the inscriptions with which their sides are covered. There is also a temple excavated in the rock, like that at Beni-Hassan. We set out again in a hurry, and in the evening were moored at the foot of the ruins of Ombos, the capital of the last Nome of Egypt.

I perceive that in what precedes I have omitted a day, for between Eleuthia and Silsilis is Edfou, with the great temple of Apollinopolis Magna. The temple at Edfou has a striking appearance, on account of its size; but the caprices of the most fantastic Gothic are mingled with the lines of a style of architecture which pleases only by its austerity; and the sculpture of the Ptolemies, which is, at the most, tolerable in subjects of small dimensions, is at once insipid and stiff in those colossal figures, in imitation of the monuments at Thebes, with which the outer walls are covered. However, it is the best preserved of all the Egyptian temples, and furnishes means to facilitate the understanding of the others.

To return to Ombos. We found there a great temple of the time of the Ptolemies, but in a better style than that of Apollinopolis. The situation, besides, is extremely picturesque, and the tint of the stones admirable. The place chosen for the site of this great edifice is at a bending of the Nile, on the summit of an insulated hill, now entirely covered with ruins. The Egyptians seem to have been in general less careful in this respect than the other nations of antiquity. The sands of the desert, which now cover all the neighbouring

plain, have encroached upon the sacred enclosure, and hardly more than one third of the columns of the temple remains visible. On the rapid declivity towards the river are heaps of ruins, which appear ready every moment to roll into the abyss below.

We were lamenting that we so often met with edifices that were only two thousand years old, when, walking round the outer wall, I perceived a little door, which seemed to be inserted into the wall, like a relic. On approaching, I read the names of Morris, and of Queen Amesé, his mother; and I recognised in this preservation a religious care taken, by the builders of the new temple, of the little that remained untouched of the ancient edifice destroyed by the Persians. This first discovery having put me on the way, I found among the broken stones many fragments of the ancient building, which had been employed and turned in the more recent work, and I collected enough of them to enable Champollion to recompose the dedication of the original temple.

[Next morning a visit to an Arab village is described; picturesque, but not necessary for our epitome of this expedition.]

We remained two days at Assouan, to visit an indifferent little temple. On the evening of the second day we slept at Phike, where we have now been for three days. Its monuments, which are all of the Greek and Roman period, are, nevertheless, precious, from a perfection of preservation of which there is no other example in Egypt.

I regret that I shall not be able to acquaint you by letters of the sequel of my expedition in Nubia. I decidedly quit the expedition, which remains here for some days, for want of boats to proceed up the river. I have hired a bark, and laid in provisions as if for a sea voyage. Nothing is to be had fit Nubia but milk, mutton, and the leaves of a kind of French bean, which are dressed like spinach. There is something inconceivable in the construction of a Nubian bark. There is not a branch but what is crooked; the joints are stopped up with earth; and yet they serve. My crew consists of five men, including the rais, or captain, all black as coal. I shall be ten days in reaching the end of my voyage; that is to say, the temple of Semmé, one day's voyage beyond the second cataract. This last excursion interests me the more, as it may serve to explain the most important of the historical problems to which the expedition has yet given occasion. Thence I shall descend the river as rapidly as possible,—shall stop five or six days at Thebes, and then return to Europe.

CELESTIAL PHENOMENA FOR APRIL.

THE opportunities have been very few for astronomical observations during the preceding three months, arising from the turbid state of the atmosphere, which so frequently, in our fickle climate, renders unavailing long and laborious calculations. Some remarkable instances of disappointment arising from this cause are on record:—that of the transit of Venus across the sun's disc in 1761, to which the scientific world had directed their attention for 130 years; on the morning of its occurrence the clouds intercepted a view of its commencement in some places, and totally obscured it in others, to the great mortification of some of those who had undertaken expensive voyages to observe this rare phenomenon in distant countries. A Russian astronomer travelled over a considerable portion of the northern parts of Asia to obtain a view of a transit of Mercury, but was ultimately

disappointed by the state of the atmosphere. Captain Franklin, in one of his Northern Expeditions, looked forward with considerable interest to the occurrence of a solar eclipse; but when the period arrived, an impenetrable veil prevented the conjunction from being visible. In 1826, a French astronomer calculated that a comet would pass over the sun's disc; and expresses were sent to various scientific societies in Europe, to inform them of the circumstance; but in no instance was there a cloudless sky to afford an opportunity for observing so singular a spectacle.

3d day—the sun will be eclipsed in France, invisible to the British isles.

Lunar Phases and Conjunctions.

	D.	H.	M.
● New Moon in Pisces	3	10	27
○ First Quarter in Gemini	10	18	17
○ Full Moon in Virgo	18	18	22
○ Last Quarter in Capricornus	26	9	53

The moon will be in conjunction with

	D.	H.	M.
Mercury in Aquarius	1	11	39
Venus in Pisces	2	18	45
Mars in Taurus	6	13	45
Saturn in Cancer	11	9	15
Jupiter in Scorpio	22	8	7

Venus and Mercury will be too near the sun for satisfactory observation. Mars is moving between the Pleiades and Hyades. 9th day, 16 hrs.—in conjunction with a Tauri. Jupiter rises shortly before midnight in the south-east. 17th day, 13 hrs. 45 min.—Saturn in quadrature. 26th day, 8 hrs. 30 min.—Uranus in quadrature.

LITERARY AND LEARNED.

OXFORD, March 21.—On Thursday the following degrees were conferred:

Bachelor in Medicine (with license to practice).—J. W. Moss, M.A. of Magdalen Hall, and of Dudley, Worcester-shire.

Masters of Arts.—Rev. E. Strong, Exeter College; W. G. Meredith, Brasenose College; Rev. S. L. Pope, Trinity College.

Bachelor of Arts.—C. Kuper, Postmaster, Milton College.

CAMBRIDGE, March 21.—At a congregation on Wednesday last the following degrees were conferred:

Masters of Arts.—Rev. G. O. Townshend, Rev. W. G. Cookeley, Fellows of King's College; Rev. J. Jackson, St. John's College; Rev. J. Luxmoore, Pembroke College; Rev. E. Walford, Corpus Christi College.

Bachelors of Arts.—R. Hawthorn, St. Peter's College; W. J. Burford, Trinity College.

ROYAL SOCIETY.

MARCH 26. The President in the chair.—A paper was read, entitled, "on the effects of the respiration of oxygen gas," by S. D. Broughton, Esq. Dr. Wallich, Dr. Eliotson, and Mr. Hennell, were admitted fellows. A ballot took place on the certificate of Joseph Joplin, Esq., of Newcastle-upon-Tyne, and of Camden Town, Middlesex: at its close, an examination being made, it was found that Mr. Joplin was not elected; the number of negative balls being to the affirmative as about 2 to 1.

Among the presents, we noticed the Map of the vicinity of Cheltenham, published by the Board of Ordnance; Professor Franchini's work, *La Scienza del Calcolo Sublime*; and original MSS. Observations on the Rise and Fall of Tides, &c., made at St. Helena, and presented by the Rev. Fearon Fallows, Astronomer Royal at the Cape of Good Hope.

Dec. 18.—A paper was read, entitled, "an attempt to rectify the inaccuracy of two logarithmic formulae;" by J. T. Graves, Esq., communicated by J. F. W. Herschel, Esq., V.P., F.R.S.

The discovery made by Poisson and Poinso, during their recent researches on angular sections, of errors in trigonometrical formulae usually deemed complete, drew the attention of

the author to an analogous incorrectness in logarithmic series. He accordingly proposes, in the present paper, to exhibit, in an amended form, two fundamental developments; the principles employed in the establishment of which admit of application in expanding, by different methods, various similar functions, and tend also to elucidate other parts of the exponential theory. He then enters into an analytical investigation of the equation $a^x = y$; and exhibits correct developments, first of y , in terms of a and x ; and secondly, of x in terms of a and y ; the corresponding developments hitherto given being incomplete. He considers the principles employed in this inquiry as presenting a solution of many difficulties, and illustrating peculiarities appertaining to the theory of logarithms of negative quantities; and when applied to geometry, as furnishing the means of tracing the form and developing the properties of curves whose equations involve exponential quantities. He also states, that by their means various differential and other formulae, usually exhibited in treatises on logarithms, may be rendered complete. An appendix is subjoined, containing several examples of these applications of his principles. In the course of his investigations, the author endeavours to explain the remarkable anomaly which frequently presents itself to the analyst of developments, in which, upon substituting a particular value for the variable in each, there is no approximation to numerical identity between the several resulting series calculated to any number of terms, and the respective functions which they ought to represent. He combats the paradoxical opinion which has been advanced, that equations which in particular instances were numerically false, were yet analytically true; and explains the difficulty by reverting to the limitations inherent in the hypotheses upon which the development is founded. He maintains, in opposition to the opinions of Jean Bernoulli and D'Alembert, that the logarithms of negative numbers are not in general the same as their positives; and hence infers, that negative numbers have occasionally even real logarithms. The chief novelty of his system consists in shewing that any assigned quantity, relatively to a given base, has an infinite number of orders of logarithms, and an infinite number of logarithms in each order.

Another paper was read, entitled, "experiments on the modulus of torsion," by B. Devan, Esq.; communicated by the President.

The object of the author in this paper is to ascertain the modulus of torsion in different species of wood, and also of metals, deduced from experiments on a large scale, which he conceives will furnish many useful data applicable to practice by the mechanic and engineer. Care was taken that the specimens of wood which were the subjects of experiment were sound and dry, and free from any large knots; and their correct dimensions were ascertained by an improved kind of calipers. In every specimen two indexes were attached; one a few inches from the end fixed in the clamp, and the other at a small distance from the attachment of the lever to which the straining power was applied; and the length of the bar subjected to torsion was estimated by the distance of the points of attachment of the indexes. A pivot was fixed at the supported end of the bar, in the line of its axis. The author gives the following rule for finding the deflection of a prismatic shaft—namely, that it is equal to the product of the straining power into the square of the radius by which it acts, and into the length of the shaft divided

by the modulus of torsion into the fourth power of the side of the square shaft. He then gives a table of the modulus of torsion in different woods, which he finds to vary from about nine to thirty thousand pounds, and to follow nearly the order of the specific gravity. In the metals the modulus of torsion is one-sixteenth of the modulus of elasticity.

SOCIETY OF ANTIQUARIES.

MARCH 26. Hudson Gurney, Esq., V.P., in the chair.—The reading of the Rev. Mr. Webb's paper on the Abbey of Gloucester was concluded. A very interesting communication from William Hamper, Esq., of Birmingham, was read, relative to Stonehenge, with extracts from the Wilton chartulary, among the Harleian MSS., in the reign of King Athelstone, 937. Mr. Hamper proved that a passage from the Saxon chronicle, which was supposed to relate to Stonehenge, has been erroneously translated, and has been the cause of numerous mistakes relative to this celebrated monument of antiquity. A report from the auditors on the last year's accounts was read, by which it appeared that the total receipts were 1,527l. 4s. 8d., while the disbursements amounted to 1,796l. 2s. 5d., and that the capital of the Society was 8000l. stock three per cent consols.

A ballot took place for the Rev. John Breton and Robert Lanyon, jun., Esq., who were declared to be duly elected.

THE LITERARY FUND.

ON Wednesday, the 11th, the annual election of officers, &c. for this excellent Institution took place. Only one vacancy appeared in the list of vice-presidents, occasioned by the resignation of a great benefactor to the fund, Mr. Snodgrass; and the place was filled up by the election of Lord F. L. Gower, who had previously taken a warm interest in the prosperity of the Society. In the council, the Rev. W. Fallofield was chosen, *vice* the late Dr. George Pearson; and to supply places in the general committee of management, B. B. Cabell, Esq. T. Crofton Croker, Esq. and Dr. Arnott, were elected. The meeting had to regret the absence of its invaluable chairman, Sir B. Hobbouse, on account of indisposition. It was stated that a high and distinguished body of nobility and gentlemen had consented to act as stewards at the anniversary dinner in May, which consequently promises to be very beneficial to the interests of struggling literature, whose claims on public sympathy and compassion are so deeply involved in the administration of relief from this association.

FINE ARTS.

ROYAL ACADEMY.†

SIR THOMAS LAWRENCE in the chair.—Mr. Phillips began this discourse with some remarks on taste, enjoined a strict adherence on the part of the students to system, which he stated to be not only not injurious, but necessary, and was studied by Sir Joshua Reynolds, and many other eminent artists,—all of whom, by attention to it chiefly, became stronger as they

* Among these we find the names of Lords Shrewsbury and Goderich; the Presidents of the Royal Society and Royal Academy; Sir T. Duckett, Sir T. Phillips, R. H. Inglis and W. A. Mackinnon, esqrs. M.P., Dr. Sleath, Dr. Paris, and other distinguished literary characters; to whom we have no doubt some valuable additions will be made before the day of meeting.—Ed. L. G.

† A slip, containing two or three notes of a different lecture by the same professor, was blended, by oversight, with the report of the last lecture. The sentences relate to the Bolognese school of art; and, to use an artist's phrase, are so much in keeping with the outline of the lecture, that the mere reader of the report will not observe any discrepancy.—Reporter.

grew older. Again recurring to taste, the lecturer, in reference to those artists who, like the low Venetian masters, made the materials of their art subservient to the caprice of the day, observed, that taste of this order, when undirected by judgment, led to exaggeration; and those who preferred that mode of exciting interest must be content with the uncertain and unsubstantial praise to which it is entitled—uncertain, inasmuch as it depends upon a union of taste between the painter and observer; unsubstantial, because it is always associated with the fluctuating empire of fashion—truth and beauty alone being stable and unchangeable. Some correct and spirited remarks on invention followed. It is here, said the lecturer, that art becomes artifice without degradation; such artifice a painter is obliged to employ; his ingenuity is for ever put to the test to compensate deficiencies, to curtail redundancies, and to disguise and ameliorate unfavourable circumstances. Mr. Phillips next characterised expression as the soul of composition, the compass of the painter's imagination, the guiding-star which leads him most surely to the attainment of durable fame, by the sympathy which it excites in the minds of others. He then pointed out the great importance of a proper attention to perspective, so that each figure in a picture might have its proper station awarded to it with relation to others, and room for itself in accordance with the character of its own action. Raffaele, Poussin, Rubens, and other great masters, were here quoted as admirably attentive to this important point. In their works the figures did not interfere with each other: great attention was also paid to the position of the principal figure; it was always conspicuous as the centre from which the subordinate parts emanated. This was effected by a variety of means—by form, station, mass, light, dark; and at the same time, the less important parts evidently tending and conducting the eye of the spectator towards it. This part of the subject was illustrated by referring the students to the Cartoon of Raffaele—in the Delivery of the Keys to St. Peter—the Miracle at Lystra—the Elymas—and the Ananias. The lecture closed with a few remarks on proportion, which, although a mechanical mode of producing the beautiful in composition, was necessary, as rendering a picture more grateful to the eye, and consequently more attractive.

SUFFOLK STREET GALLERY.

BEFORE entering into any detail of this exhibition, we may observe that the alterations which have been made in the gallery since last year are highly advantageous; particularly as they regard the room set apart for sculpture, and that appropriated to miniatures, drawings, and prints. Of the sculpture-room we can truly say that it is better calculated for the exhibition of works in that class of art than any other in the metropolis. By a new arrangement, also, it is no longer the passage to the great room; so that it need not be visited by those whose fastidious delicacy finds offence in the display of the beautiful forms of the human figure, even when rendered in that cold material, marble.

In our last No. we stated that the exhibition contained many pictures highly honourable to our native school. We shall proceed to select a few of the most prominent and striking. In this class is undoubtedly—

No. 1. *The Departure of the Israelites out of the Land of Egypt.* D. Roberts.—The late venerable President of the Royal Academy,

when he first saw Mr. Martin's picture of "Joshua," said him the just compliment of remarking that he had broken fresh ground in the fields of art. That ground Mr. Martin has since cultivated with great industry and success; but we wish that Mr. Roberts had not plunged his ploughshare into the same soil. It would certainly be worse than the Egyptian bondage, the escape from which he has chosen for his subject, to confine him or any artist to a certain walk of the art; but Mr. Roberts has shewn a great deal too much original power not to induce us to regret seeing him condescend to be an imitator. It is probably, however, but a single freak of fancy; and, although we cannot flatter him by saying that he has imparted to his picture all that indistinct but stupendous sublimity which usually pervades Mr. Martin's canvases, we can truly assert that both in conception and in execution his performance is a magnificent work. His architectural forms are replete with grandeur; and the multitudinous mass of the departing people is admirably represented. By the by—we do not wish to be hypercritical—but, if we remember our Bible rightly, the departure of the Israelites was at midnight.

No. 132. *Borrowdale, Cumberland.* T. C. Holland. — A delightful combination of the sublime and the beautiful, the lowly and the elevated, the peaceful valley and the towering mountain: a scene fruitful in themes for the poet and subjects for the painter,—of the rich variety of which Mr. Holland has availed himself with his usual talents and taste. The incident of the clouds gathering among the lofty heights, ready to pour their liquid contents upon the plains below, is a striking feature; and upon the whole we consider this performance as one of the noblest and happiest efforts of the artist's pencil.

No. 188. *Erle Stoke Park, near Devizes, from the South-west; the seat of G. Watson Taylor, Esq. M.P.* C. Stanfield. — A gentleman's seat! How unpromising the title! and how agreeable the disappointment of the spectator, who is gratified with the view of an extensive and picturesque champaign, diversified by every beautiful variety of form, enriched by most pleasing tones of colour, illuminated by Rubens-like gleams of brilliant light, and relieved by judiciously-placed masses of profound shadow! Mr. Stanfield's performance is perfectly natural; neither exaggerated on the one hand, nor in the slightest degree commonplace on the other. It is a landscape which captivates at first sight, and yet on which the eye can long dwell without satiety. We may add, that it is as remarkable for its exact fidelity in every detail, as for its fine general effect as a painting.

No. 43. *Daphnis and Chloe, in an Italian Landscape, with the Palace of the Cæsars, the Temple of the Sun and Moon, the Campagna and Mountains in the neighbourhood of Tivoli.* J. Glover. — The figures which give it a name are by no means the best portion of this elegant and classic picture, which displays some of the finest qualities of art, and in which the serene and the dignified contribute to the production of a very noble and Claude-like composition.

No. 14. *Interior of a Cow-house.* T. Clater. — With enough of the Flemish character, in colouring and effect, to justify us in considering this very clever picture as, in some degree, an imitation both of Teniers and of Rembrandt, there is enough of English feeling in it to entitle it to the praise of originality. Mr. Cla-

ter's figures and his accessories are in perfect accordance. His dairy-maid has none of that minding prettiness which is too frequently the substitute on canvases for the unaffected personification of a rustic character; and the various accompaniments are executed in a masterly manner.

No. 20. *Far from Home.* W. Poole. — The name of this artist is new to us; but we predict that he will one of these days attain to a distinguished rank in the British school. His present picture represents a little Mulatto girl, sitting by the sea-shore, and gazing pensively at that mighty body of waters which separates her from those whom she loves, and whom she is probably destined never more to behold. Mr. Poole has treated his subject with much simplicity and pathos: perhaps if his model had possessed a little more refinement, the sentiment would have been more complete; but we are by no means sure of this. The picture is painted with great breadth and force; the colouring, however, is somewhat monotonous,—partaking too much throughout of a dingy olive.

[To be continued.]

ORIGINAL POETRY.

A SKETCH.

"THEY'RE passing now adown our vale;
Come, leave the old beech-tree,
And let that humming wheel be staid;
Come here and gaze with me.

Hark, hark, the gallant trumpet's note,
The war-drum rolls around;
The crimson banners seem to float
More proudly at the sound.

Those noble steeds, how each proud neck
Bends to its rider's hand,
Although the steel-wrought rein is held
As 't were a silken band!

How bold they ride!—as Victory sat
Beside each snow-white crest;
Battle is in each eager eye,
And I can dream the rest.

Each lance is gleaming in the sun,
War meteors, how they shine!
How glorious is the soldier's lot!
I would such lot were mine!"

She raised a sudden tearful glance
Upon his glowing brow:
Why should her cheek be so snow-pale,
For his is crimson now?

And her sweet face is wont to be
The shadow of his own,
Where every passing change of his
Is in a mirror shewn.

"Such, O my Ulric, would'st thou be
One of yon warrior band?
Why there is death in every heart,
And blood on every hand.

Bethink thee of how many tears
Must wash the stains away,
That dim bright armour and proud brow,
Before the close of day.

I think upon the lonely hearth,
The desolated home,
The fond hearts listening for the step
That never more will come.

I think on the linked love of years,
One moment hath undone;
I gaze on yonder happy child,
And weep the orphan one."

He met her sad eyes' sweet reproach,
He caught each gentle word;
The trumpet woke the winds again,
But it passed by unheard. L. E. L.

BIOGRAPHY.

ARCHDEACON NARES.

WE have this week to record and deplore the death of a highly esteemed friend, the Rev. and venerable Archdeacon Nares, who departed this life on Monday, at the age of seventy-six. His health had been for some months visibly declining; but he was only about a week confined to his chamber. It is out of our power, at present, to attempt any thing like even a biographical sketch of this eminent scholar and divine, of this truly amiable and excellent man. If ever an individual deserved pre-eminently the title of "literary," it was Archdeacon Nares; his habits had all reference to literature and its pursuits; his life was a life of letters and the cultivation of valuable knowledge. His writings consist chiefly of divinity, criticism, classics, and philology—commencing with 1782, and finishing (we think) with his admirable *Glossary* in 1822—a long and distinguished career of industry, talent, learning, usefulness, and virtue.

We have also this week to regret the death of William Stevenson, Esq., a gentleman of high literary attainments, of whom a short memoir shall appear in our ensuing *Gazette*.

SKETCHES OF SOCIETY.

THE LATE DUEL.

EVEN if our *Literary Gazette* did not possess the loop-hole of a division dedicated to "Sketches of Society," in which we can range matters that do not strictly come under the heads of science, the arts, or literature, still we should consider the recent duel between the Prime Minister of England and another distinguished nobleman, to be so much an event worthy of historical record, that we would offer no excuse for laying the particulars before our readers. They seem to us to be very interesting; and appearing in this paper, we need hardly say that they are accurate and genuine.

We confine ourselves to what actually took place on the ground, leaving all political question and all the correspondence (already given by the newspapers) out of our view; which is meant rather to supply the information most looked for by the public, and yet wanting to complete the account of this memorable transaction.

The Duke of Wellington and his second, Sir H. Hardinge, rode to the ground, one of the Battersea Fields; Dr. Hume (an old Peninsular and campaigning friend of his grace) having previously been directed to repair to the same spot. On the doctor's arrival with the pistols and munition of war, which of course the equestrians could not conveniently carry, he found the latter in waiting; and on getting out of his carriage was jocosely accosted by the Duke of Wellington, with, "Well, Hume! I suppose you are surprised to find me here;" for it seems the worthy physician was not aware who was the principal for whom his services had been required; but, having been hastily summoned from Earl Camden's by Sir H. Hardinge, supposed that gallant officer to be the combatant. In a short time the Earl of Winchelsea and the Earl of Falmouth drove up; and the former apologized for being late, in consequence of his coachman having gone to Putney instead of Battersea Bridge. The parties were now assembled; but there happened to be a person whetting

a sith* in the enclosure where they met; and, to escape observation, they leapt a ditch and sought a more retired situation. Here the ground, twelve paces, was measured; but, in consequence of the position of some trees, a remark was made by Lord Winchelsea, which led to an immediate change of place, where Sir H. Hardinge again measured off the same distance. The pistols were now produced and loaded; the duke's by Dr. Hume, as his second has lost an arm in battle; and we believe the learned doctor also gave his aid in this respect to Lord Falmouth, whose anxiety for his friend was evinced by considerable and honourable emotion. The preliminaries being thus far settled, and the parties placed on the ground, it was arranged that Sir H. Hardinge should simply ask, "Are you ready?" and being answered in the affirmative, give the word "Fire." Hardly a moment elapsed ere this was done. "Are you ready?" "Yes," distinctly from both. "Fire!" The duke instantly raised his pistol, and fired at his opponent, without doing him (or his clothes, as absurdly rumoured,) the slightest injury. The Earl of Winchelsea then raised his weapon upright, and discharged it in the air.

The Earl of Falmouth upon this approached Sir H. Hardinge, and presented a paper, with which that gentleman and the Duke of Wellington walked away a few paces; when his grace turning round quickly, said, "This is no apology! To be effectual, the word *apology* must be introduced into the body of the document." To this Lord Falmouth felt it to be his duty to assent, and the word was accordingly inserted in pencil by that noble lord.

The paper being then returned, the duke and his second immediately mounted their horses, and his grace slightly touching his hat, they rode from the ground.

Such were the circumstances attending this remarkable affair; and we have only to add, on authority not to be doubted, that nothing could exceed the gravity and intrepid bearing of the Earl of Winchelsea throughout the whole of the rencontre; and that his adversary also displayed the utmost sang-froid and self-possession.

Since writing the above, we have been informed that a sealed letter from Lord Winchelsea was in the possession of the seconds, to be opened in the event of his falling. A friend, on whom we can entirely rely, has since had an opportunity of reading this composition, and he assures us that it does the highest honour to the head and heart of the noble writer. From the same authority we learn, that when the illustrious Premier arrived at Windsor Castle, whither he went a few hours after the duel, he transacted his public business with the King before he mentioned what had taken place. On explaining the circumstances which led to the meeting, it was found that his Majesty had never read the letter of Lord Winchelsea in which the original offence was given. It was therefore necessary to send into the town for a newspaper containing this document, upon the receipt of which the minister thought it proper to leave his royal master for a while, to afford leisure for its uninfluenced perusal and consideration. On his return, it is stated, his Majesty expressed himself to the effect that it was a matter of personal honour and feeling; and that being a soldier, his grace might perhaps be more sensitive on such points than an individual of a different class in society. He there-

fore supposed that the course pursued had been unavoidable.

We give these latter circumstances as we have heard them; and have but a few words by way of apology to add from ourselves. The Athenians were great newsmongers; and Alcibiades wishing to carry an important point without their giving it too much consideration, had his favourite dog's tail cut off. On being asked why he did so, he replied, "Your very question answers itself: while the Athenians are wondering and asking each other why I have done this strange thing, I shall carry my measure unperceived and unimpeded by them." Last Saturday the Duke of Wellington challenged and fought a duel with Lord Winchelsea.

MUSIC.

PHILHARMONIC CONCERTS.

BEETHOVEN'S "Pastoral Symphony," with which the third Philharmonic Concert on Monday last commenced, was, in more than one sense of the word, the first piece of the evening. The spirit and animation of M. Mori, the leader, seemed to pervade the whole band. The variety of rural life which this musical idyl attempts to depict in four movements, viz. in the "Serene feelings on the arrival in the country;" in the "Scene am Bach;" in the almost bacchanalian mirth of the country people; and lastly, in the thunder-storm,—requires much more than a mere mechanical attention to crotchets and quavers. On this account, the symphony is perhaps the most difficult of any in our list, though the score shews it, if we except the bold modulations of the last movement, to be sufficiently easy. Leaving now the country people to recover from the thunder-storm fright, we journey in the agreeable society of M. Sapio "Through the forests," of C. M. von Weber, and find Mr. Willman enrapture an attentive audience by the warblings of his clarinet. Marschner is a German composer, who, only last year, gained a considerable reputation by the music to "Der Vampyr;" but the overture to this new opera, performed this evening for the first time, is quite unworthy of the Philharmonic, which the subscribers seemed much more aware of than the directors. The servile imitation of Weber's style, and the introduction of his ideas from the overtures to the "Ruler of Spirits" and "Euri-anthé," strikes one in the very beginning. Mozart's aria, "Qui sdegno non s'accende," by Mr. Phillips, after Haydn's Sinfonia No. 7, was deservedly encored. That praise was due to the steady, correct holding out of clear, low notes; and Mr. Phillips's tranquil and placid, if we must not say cold or inanimate, manner, suits no air better than this from the flauto magico. A French youth, M. Artôt, jun., performed, for his *début* in this country, a concerto on the violin, by Kreutzer, and was much applauded. What we should least expect in a young man of fourteen or fifteen, he played the singing passages with a great deal of expression; and in this he might have done still better, if his fiddle had been put in better tune for him. Rossini's duetto, "Ella oh! Ciel!" by Miss Paton and Mr. Phillips, and Romberg's Overture, Don Mendoza, were in every respect calculated to keep the company in the good humour to which the preceding pieces had disposed them.

DRAMA.

KING'S THEATRE.

On Tuesday a most superb ballet, founded on the story of Massianello, was produced at this theatre with prodigious effect. It is, indeed,

the most magnificent and striking thing of the kind ever seen in this or any other country; and does much honour to the genius of Deshayes and the profuse liberality of Laporte. We are prevented from saying more till next Saturday, but that the scenery by the two Grieves is beautiful and effective beyond description; the management of the ballet, in which three hundred performers are engaged, and the acting, far superior to the best we have ever witnessed; and that the cost was (we believe) fully £1,300. The success was, of course, triumphant; and there will be no more empty boxes, or benches, or stalls, this season.

DRURY LANE.

On Saturday an unfortunate farce by Mr. C. Dibdin, called *Sixes and Sevens* produced the effect of its name upon the audience, and was condemned. It wanted incident.—The *Provoked Husband* has been revived with a strong cast, though Miss Phillips in *Lady Townley* was not so successful as Miss Phillips in tragedy. Liston's *John Moody* is original and great; Young's *Lord Townley* a fine piece of genteel comedy; Cooper in *Manley*—Farren in *Sir F. Wronghead*—and Browne in *Count Basset*, all that could be wished. Harley is Suffolk instead of Yorkshire in his dialect, but always alive. Mrs. Faucit, Mrs. Jones, and the other ladies, acquitted themselves ably; only Mrs. Love Calcraft (as we hear the lady now called in the theatre) was rather a town romp than a country hoyden in *Miss Jenny*.

SURREY THEATRE.

It is not often that we can transport our critical selves to the remote regions of Surrey, where, in spite of the distance from civilisation, theatrical amusements are carried on with considerable spirit and corresponding success. Elliston, we hear with pleasure, is nightly displaying comic powers, little, if at all, inferior to his earlier efforts. *Mr. Sims*, a musical two-act piece, too, has become a popular favourite; and a "patter" song in it, sung by the lively Mrs. Fitzwilliam, we believe, one of the component parts of the publication so humorously announced among our Literary Novelties.

Mr. Henry at the Adelphi.—London, just now, swarms with anomalous exhibitions, to fill up the leisure of the listless on the off-play nights;—those blanks in the existence of hundreds who cannot think they live when there are no theatres open. To such persons, and, indeed, to every inquisitive mind, we would recommend a call at the Adelphi, to see Mr. Henry perform his wonders. If you wish to find thirty sovereigns in your hand, when only twenty were paid into it, go to Mr. Henry, and he will shew you that such things can be. If you have a difficult conundrum, ask Mr. Henry to guess it, and he will cut a lemon into halves, then into quarters, and out of the quarter which you select shall fly the solution, tied to the leg of a little living canary-bird. Besides these things, and a thousand others equally amazing, you shall see a lovely landscape, which, while you are gazing upon it, changes into a different picture, and so strangely, that you cannot tell at what point it, has changed: all you know is, you were looking at one, and are looking at another. Mr. Henry plays the musical glasses too,—raises ghosts of the dead, and fetches (as our Hibernian friends call them) of the living: he does all these various feats equally well,—and, if we may judge from the house we saw, with no trifling profit to himself, and certainly a profit which his skill richly merits.

* A part of Emblem of old Time: and not the most pleasant monster on such an occasion.—Ed. L. G.

VARIETIES.

Napoleon.—M. Hereau, a French surgeon, has published a work to prove that Buonaparte did not die of any hereditary disorder, but that the cause of his decease was "une gastrite chronique avec perforation," exacerbated by bad treatment.

Sciatica.—Oil of turpentine has been employed lately in France in the treatment of sciatica with great benefit to the patient.

The Pinchague.—The Indian inhabitants of several villages in the neighbourhood of Popayan, in New Granada, frequently talk of an enormous animal, which, according to them, exists in the mountains by which their valley is bounded to the east. This animal, which they call the pinchague, is to them at once an object of alarm and of respect. Mixing with the Christian religion, which they profess, remnants of their old superstitions, they believe in a kind of metempsychosis; and they think that the soul of one of their ancient chiefs has passed into the pinchague; and that when this mysterious animal makes its appearance, it is to give warning to the descendants of that chief of some evil by which they are menaced. The animal is in all probability a tapir.

Fossil Humerus.—A fossil humerus has lately been found in a shelf of sulphur, discovered four years ago near Narbonne, which there is some reason to believe is human. This bark of sulphur is about two leagues from the cave in which some human bones have lately been picked up, which are believed to be fossil. It is a geological question of great importance. No positive fact has hitherto demonstrated the existence of human fossils, and the subject is undergoing a strict investigation by the French Academy.

Astronomy.—M. Plans, an astronomer attached to the observatory at Turin, in a paper inserted in the Transactions of the Royal Society of London, in 1826, threw out some doubts with respect to certain difficult points in the *Mécanique Céleste*. The most important referred to the great inequalities of Jupiter and Saturn, depending on the square of the perturbing power; and long calculations led him to a result opposite to that of the celebrated work in question. The Academy of Berlin lately offered a prize for an investigation of the cause of the discrepancy between the inferences of M. Laplace and of M. Plans. M. de Pontécoulant, a French staff-officer, has in consequence produced a paper, in which he enters into all the details of the subject, and endeavours to shew that the *Mécanique Céleste* is right, and that M. Plans's calculations are erroneous.

Earthquakes.—Earthquakes have been very rare in the Netherlands; not above a dozen, at most, are upon record: it is therefore rather remarkable, that no fewer than three occurred in that country in the course of the last year; the first, which was also the most violent, on the 23d of February, the second on the 21st of March, and the third on the 3d of December. It is a very singular fact, that at the time of the last shock the barometer at Brussels rose considerably.

A meeting of the Philosophical Society was held on Monday evening, the 16th, the Rev. Temple Chevallier in the chair. The reading of Professor Whewell's paper was concluded, "on the application of mathematical reasoning to certain theories of political economy;" in the course of which the author maintained, that a tax on agricultural produce does not fall entirely upon consumers, as has

been asserted by some writers, but mainly upon rent. A paper was also read by Mr. Willis, "on the theory of the sounds produced by combining pipes and reeds, as regards their vowel quality." After the meeting Mr. Willis exhibited experiments in support of this theory, shewing the constancy of the same vowel for the same length of tube, in whatever situation the reed be applied; and some also illustrating the influence of the length of the pipe upon the vibrations of the reed.—*Cambridge Chronicle*.

Volcanoes.—The smallest known volcano on the face of the globe, in a state of activity, is the little island of Coosima. A Russian naturalist thus describes it in the Memoirs of the Academy of St. Petersburg:—"In the month of May, 1806, returning from Japan, and passing the island of Jesso, and Cape Sangar, to cross the Kourile Islands, and go thence to Kamtschatka, we fell in with the two little volcanic islands of Coosima and Coosima. It is well known that the greater part of the rocks and mountains of this archipelago are more or less of a volcanic character. The pointed summit of Coosima, which forms the smallest known volcano on our globe, and which continually emits smoke, is only a hundred and fifty feet above the level of the sea. It is naked, barren, and of a bluish colour. Not a single plant, not even a blade of grass, is to be seen on this volcanic rock. The island of Coosima, which is only six leagues distant, is somewhat longer, and appears to be equally sterile. The coasts of these little islands are a favourite resort of whales."

Russian Foundlings.—As a proof of the condition of Russia in the memorable year 1812—a year so injurious to that country, and so fatal to France,—it is stated, on good authority, that of 417 children received that year into an asylum for foundlings at Archangel, 317 perished for want of sustenance!

LITERARY NOVELTIES.

Mr. Washington Irving's interesting account of the romantic war of the Moors in Grenada is to be published in little more than a fortnight.

A new edition of Mr. Sadler's work on Ireland will be ready about the same time. It is a curious anecdote in the publishing world, that the whole of the remaining copies of the former edition were sold the day after he had delivered his eloquent speech against Catholic concession, in the House of Commons.

Mr. Southey's Dialogues on the Progress and Prospects of Society will, we understand, appear before Easter.

The Biography of Captain Beaver, a work of a similar nature to the Memoirs of Lord Colingwood, is announced for early publication.

The Pilgrim of Compostella is the name of Mr. Southey's new poem: and it will be ready in a few days. The story, we are told, is founded on a very curious old Spanish legend.

Elements of Natural History, or an Introduction to Systematic Zoology, chiefly according to the Classification of Linnaeus; with Illustrations of every Order, by John Howard Hinton, A.M.—will shortly appear.

Mr. Mantell, F.R.S., author of Illustrations of the Geology of Sussex, the Fossils of Tilgate Forest, &c. &c., is preparing for publication a Popular Sketch of the Geology of Sussex.

A second edition of Willmot Warwick is announced; and also another volume.

Mr. Sharpe, the proprietor of the Anniversary, announces a new periodical at Midsummer next, combining engravings from the finest works of British art that can be procured, with contributions from the pens of the most distinguished writers of the day.

Nearly ready, The British Preserve; comprising accurate representations of Animals and Birds peculiarly the object of the Sportsman; drawn and etched in characteristic style by S. Howitt; with concise and familiar descriptions of the subjects, illustrative of their habits, manners, &c., by Charles Armiger.

The following "Announcement" is so characteristic and amusing, that we offer no excuse for copying it verbatim of *literatim* into our literary news:—"The author of Whims and Oddities has the honour of informing the public that, encouraged by the popularity of the Ballads in the first and second series of that work, he intends to communicate a succession of similar vocal crotchets, to

run alone without the help of an octavo. Sally Brown, Faithless Nelly Gray, and Mary's Ghost, have been patronised by many public and private singers; but unfortunately they were adapted to as many airs—sometimes even to jigs; and the natural result was an occasional falling-out between the words and the melodies. Judging that it would be better for those verses to be regularly married to music, than that they should form temporary connexions with any rambling tunes about town, Mr. J. Blewit has at last kindly provided them with airs that are airy of character, and made their alliance with music of the correct and permanent kind. The same gentleman has undertaken the same good office for the forthcoming Comic Ballads; and his well-known skill and talent will insure that all unhappy differences between Sound and Sense will be amicably composed. In fact, the words and the airs will be intended for each other from the cradle—like Paul and Virginia. It is intended that the new Ballads shall start in couples. Two to make a Number, and a number of Numbers may be bound to the library, as a volume, for a term of years. The work will be set with variations. Occasionally there will be a duet or trio, to accommodate those timid vocalists who do not choose to make themselves particular in a solo, or those whose singers of sociable habits who prefer giving tongue in a pack. One word about the words. They will be merry and wise. Not a jest will be admitted that might be liable to misconstruction by the Council of Negs. The Comic Muse has been too apt to mistake liberty for license, and has been proportionately licentious; the Comic Ballads will be as particular as *Sonnet* or *Allegro* in their regard for good morals. Nothing, in short, will be inserted but what is out for the female ear. To conclude—the said Melodies will be issued by Messrs. Clementi and Co., of Cheapside. Be sure to ask for 'Comic Melodies,' as all others are counterfeits, and not benefits, to the proprietors. The first Number is expected to commence, like Blue Bonnets, with 'March,' and the work will be continued regularly through every other month in the calendar."

Nearly ready for publication, Gabrielle, a Tale of Switzerland, in which an attempt is made to vary a little from the prevailing style in poetry. The story is an endeavour to delineate mental aberration of the mildest kind in union with singular and romantic scenery, without the interest of stirring events.

In the Press.—Ein Deutsches Lesebuch; or, Lessons in German Literature; being a Collection in Prose and Verse with Interlinear and other Translations, by J. Rowland botham.

CHARLES H. ADAMS.

TO CORRESPONDENTS.

A. C. will find a letter at our office.

Antipompus accuses us of lending ourselves to puffing the Medico-Botanical Society, because we have published the names of sovereigns, princes, ambassadors, &c., who have been admitted members; while, on the other hand, we are charged by other correspondents with being unfavourable to this institution. Such is the fate of impartiality and independence: but would Antipompus think we gave a fair report of these meetings if we suppressed the names in question?

M. R. N. is mistaken, and Mr. Hough is guilty of no bull in calling a number of husbands (among the *Neg* geries) polygamy:—"many marriages" is as applicable to male as to female unions of this kind.

ERRATUM.—In our notice of Covent Garden last week, for Foebalk read Fococh.

THE LONDON LITERARY GAZETTE;

AND

Journal of Belles Lettres, Arts, Sciences, &c.

REVIEW OF NEW BOOKS.

Colloquies on the Progress and Prospects of Society, &c. By R. Southey, Esq. LL.D. Post Laureate. 2 vols. 8vo. with Plates. London, 1829. J. Murray.

As these volumes are not yet published, and we have only hastily glanced over an early copy, we are now in no condition to do more with them than simply to state their character, and gratify the curiosity of the literary world with an example of their style and spirit. They consist of dialogues between Sir T. More and Melancthon (a stranger from "a distant country"), on various interesting and important topics, such as the improvement of the world; Druidical stones; feudal slavery; growth of pauperism; Owen of Lanark and the manufacturing system; national wealth; war; the prospects of Europe; Methodists; infidelity; the United States; Catholic emancipation; Ireland, &c. &c.; and as the last two are the most prominent subjects of the day, our extracts shall be given to them, and to the author's prose and verse. The following will shew how Mr. S. satirises the Romish creed and superstitions.

"The church was built in an age when durability was regarded as an important consideration in such structures. It is a large, ornamented, substantial edifice, with buttresses, battlements, and a square tower; and having stood for centuries, by God's blessing it may stand for centuries to come. On a nearer view, you perceive that it has suffered something by the substitution of slates for lead upon the roof, an alteration which was made some few years ago, when the building underwent a repair. Alice de Romley, heiress of Egmout and Skipton, who, in the reign of Stephen, or of his successor, married the Lord of Allderda, gave it to Fountains Abbey, and is supposed to have been the person by whom it was founded and endowed. It was soon afterwards appropriated to that monastery, the cultivation being reserved to the bishops of Gurk. William Fitz Duncan, the husband of this Alice, was son to the Earl of Murray, and brother to David, king of Scotland; and this may perhaps explain why the church was dedicated to the Scotch St. Kentigern, bishop of Glasgow, and patron saint of that cathedral,—a personage now utterly forgotten here, in the parish where, during so many generations, his festival used to be celebrated on the 18th of January. Here followeth his legend,—it is a better word than history for such tales. Hagiologists have related it without scruple, and during many ages it was believed without hesitation. The saint in question was, as the romance says of Merlin, son of the devil, a gentleman on his mother's side; his mother Thameles, or Thenis, being the daughter of King Lot of Lowthean and Ormesy, (a personage well known in the *romance of the Round Table*), by Anna, daughter to Uther Pendragon, and half sister to King Arthur. A more illustrious stock could hardly be traced in chivalrous genealogy. The

time of his birth has been fixed in the year 514; and his nativity, 'admirable for the strangeness of it,' says Father Cressy, has been celebrated by many ancient writers. King Lot, it seems, was at that time a pagan, and his queen little better, for their daughter grew up in idolatry; she had opportunity, however, of hearing frequent sermons, and, becoming a convert, observed the precepts of Christianity as diligently as if she had been baptised. The young princess was a person of singular beauty, and more singular devotion. Of all that she heard from her religious teacher, there was nothing which so strongly impressed her imagination as the maternity of the blessed Virgin; insomuch that, (in the words of the legend,) with a presumptuous boldness and a womanish temerity, she desired and longed to resemble her in this, and even made it the object of her prayers. After a while she found unequivocal symptoms that her desire had been accomplished. How, or when, or by whom she had conceived, was what, according to her solemn and constant asseveration, she knew not. That it must have been by a man, John of Tynmouth, whom Capgrave quotes, has not scrupled to affirm; but he says it is folly to inquire who ploughed and sowed the land, seeing that through God's blessing on the increase such excellent fruit was brought forth. Scandal, however, (for scandal there was even in the days of the saints,) fixed upon Eugenius III., king of the Scots, for the father. But even scandal did not impeach the sincerity of her declarations, which was proved beyond all doubt by the miracles that ensued. There was a severe law among the Picts, that any damsel who was convicted of committing folly in her father's house, should be thrown from the summit of Dunselder, one of the highest mountains in that country, and that the seducer should lose his head. To that summit Thameles was carried, protesting her innocence, and with prayers and tears lifting up her hands to heaven for deliverance. Her protestations were in vain; not so her prayers: for by miraculous interposition, when she was thrown over the precipice, she descended upon the wings of the wind, like the Tuscan virgin Clusia, or Psyche in the most beautiful of classic fables, and alighted unhurt, having neither experienced fear nor danger in the descent. Your true pagan in ecclesiastical romance cares as little for miracles as pantaloon in a pantomime. King Lot and his people agreed that she had been saved from death by Christian enchantments; and at the command of this relentless father she was taken out several miles to sea, put into a leathern coracle, and set adrift. But the winds and waves were more merciful than man: He who rules them was her protector; in shorter time than the passage could have been performed by any art of navigation, she came to land at a place called Collenros or Culros, and there, without human help, she brought forth a son. A remarkable personage was at that time dwelling in a monastery at Collenros, Servan was his name: his mother

Alpia was daughter to a king of Arabia, and Obeth his father was king of the land of Canaan. This holy Philistine was a saint of approved prowess and great good nature; had slain a dragon in single combat, turned water into wine, and once, when a hospitable poor man killed his only pig to entertain him and his religious companions, he slept upon the pork, and restored the pig to life next morning; a paligenesia this which the eternal and unfortunate boar Serimner undergoes every day in Valhalla, and which the saints of St. Servan's age, particularly the Scotch, British, and Irish saints, frequently exhibited, to the great profit and edification of their hosts. At the hour when Thameles was driven on shore, and safely delivered on the beach, this holy personage heard the song of angels rejoicing in the air, and thereby understood what had happened. So he hastened to the sea-side, and finding there the mother and new-born babe, saluted the infant with these words: 'Blessed art thou, my beloved, who comest in the name of the Lord!' Without delay he took them home to his convent, and baptised them both, naming the boy Ksentiern, which is, being interpreted, Chief Lord, and which, by a slight alteration, has become Kentigern. But because the child as he grew up excelled his fellow-scholars in learning, docility, and all good qualities, St. Servan used to call him Mungo, being a term of endearment in what was then the language of that country; and by this name he was afterwards more frequently invoked than by that which he received in baptism. In the age to which this legend relates, and in that also in which it was written, monasteries were the only schools. The other boys, seeing that Kentigern was a favourite, hated him for that reason, and endeavoured by many malicious tricks to bring him into disgrace. St. Servan had a tame robin, who used to feed from his hand, perch upon his head or shoulder while he was reading or praying, and flutter his wings and sing as if bearing part in his devotions. The young villains one day twisted its head off, and accused Kentigern of having killed it. To prove his innocence, he made a cross upon the head and put it on again, and the bird was nothing the worse for what it had undergone. It was a rule in the monastery that every boy should take his turn for a week to attend the fires at night before they retired to rest, lest the nocturnal service should at any time be left unperformed for want of light. One night in Kentigern's week, after he had as usual duly performed this duty, the envious boys put out all the fires. At the proper hour he awoke, and perceiving what had been done, gathered a hazel bough, breathed upon it, set it on fire, and then lit the candles. One more attempt was made to bring shame upon him. The cook of the convent died and was buried, and the day after the burial the malicious scholars so far prevailed upon St. Servan that he ordered Kentigern upon his obedience to raise him from the dead; which, as so discreet a person consented to require it, seems to have

been thought not an unreasonable exercise for one who was preparing to graduate as a saint. The obedient cook came out of his grave at the call, and edified all the convent by an account of what he had seen in the other world."

Of St. Kentigern *catera desunt* for the present.

Our second extract explains itself, and is, besides, a striking poetical production.

"The following Ode was written in the winter of 1821-2, a few months after his majesty's visit to Ireland, and some years before that religious movement had manifested itself there, which may in its consequences, through God's blessing, produce more benefit to that country than could be effected by any act of human legislation.

"How long, O Ireland, from thy guilty ground

Shall innocent blood

Arraign the inefficient arm of power?

How long shall Murder there,

Leading his banded ruffians through the land,

Range unrepres'd?

How long shall night

Bring to thy harmless dwellers, in the stead

Of natural rest, the feverish sleep of fear,

Midnight alarms,

Horrible dreams, and worse realities?

How long shall darkness cover, and the eye

Of morning open upon deeds of death?

In vain art thou by liberal Nature's dower

Exuberantly blest;

The seasons in their course

Shed o'er thy hills and vales

The bounties of a genial clime in vain;

Heaven hath in vain bestowed

Well-temper'd liberty,

(Its last and largest boon to social man,)

If the brute multitude from age to age,

Wild as their savage ancestors,

Go irreluctant the while,

From sire to son transmitting still,

In undisturbed descent,

(A sad inheritance!)

Their errors and their crimes.

Green Island of the West!

Thy alter kingdom fear'd not this

When thine exultant shores

Rang far and wide of late,

And grateful Dublin first beheld her king,

First of thy sovereigns he

Who visited thy shores in peace and joy.

Oh what a joy was there!

In loud huzzas prolonged,

Surge after surge the tide

Of popular welcome rose;

And in the intervals alone

Of that tumultuous sound of glad acclaim,

Could the deep cannon's voice

Of dutious gratulation, though it spake

In thunder, reach the ear.

From every tower the merry bells rung round,

Peal hurrying upon peal,

Till with the still reverberating din

The walls and solid pavement seem'd to shake,

And every bosom with the tremulous air

Inhaled a dizzy joy.

Age that came forth to gaze,

That memorable day

Felt in its quicken'd veins a pulse like youth;

And lisping babes were taught to bless their king,

And grandaunts bade the children treasure up

The precious sight; for it would be a tale

The which in their old age

Would make their children's children gather round

Intent, all ears to hear.

Were, then, the feelings of that generous time

Ephemeral as the joy?

Past'd they away like summer clouds,

Like dreams of infancy,

Like glories of the evening firmament,

Which fade, and leave no trace?

Merciful Heaven! oh! let not thou the hope

Be frustrate, that our Sister Isle may reap

From the good seed then sown

Full harvests of prosperity and peace;

That perfect union may derive its date

From that auspicious day,

And equitable ages thence

Their lasting course begin!

Green Island of the West,

While frantic violence delays

That happier order, still must thou remain

In thine own baleful darkness wrapt;

As if the Eye divine

That which babethe all, from thee alone

In wrath had turn'd away!

But not for ever thou shalt thou endure,

To thy reproach and ours,

Thy misery and our shame!

For mercy shall go forth

To establish order, with an arm'd right hand;

And firm authority

With its all-present strength control the bad,

And with its all-sufficient shield

Protect the innocent:

The first great duty this of lawful power

Which holds its delegated right from Heaven.

The first great duty this; but this not all—

For more than comes within the scope

Of power is needed here;

More than to watch invidious discontent,

Curb, and keep curb'd, the reasonable tongue,

And quell the madden'd multitude:

Labours of love remain;—

To weed out noxious customs rooted deep

In a rank soil, and long left seedling there;

Pour balm into old wounds, and bind them up;

Remove remediable ills,

Improve the willing mind,

And win the generous heart.

Afflicted country, from thyself

Must this redemption come,—

And thou hast children able to perform

This work of faith and hope.

O for a voice which might recall

To their deserted hearths

Thy truant sons! a voice

Whose virtuous cogeny

Might with the strength of duty reach their souls;

A strength that should compel entire consent,

And to their glad obedience give

The impulse and the force of free good-will!

For who but they can knit

The severed links of that appointed chain,

Which when in just cohesion it unites

Order to order, rank to rank,

In mutual benefit,

So binding heart to heart,

It then connecteth earth with heaven, from whence

The golden links depend.

Nor when the war is waged

With error and the brood

Of darkness, will your aid

Be wanting in the cause of light and love,

Ye ministers of that most holy church

Whose firm foundations on the rock

Of Scripture rest secure!

What though the Romanist, in numbers strong,

In misdirected zeal

And bigotry's blind force,

Assail your fortress; though the sons of schism

Join in insane alliance with that old

Inveritate enemy,

Weening thereby to wreak

Their covenant'd hatred, and effect

Your utter overthrow:

What though the unbelieving crew

For fouler purpose aid the unnatural league;

And Faction's wolfish pack

Set up their fiercest yell, to augment

The uproar of assault:

Clad in your panoply will ye be found,

Wielding the spear of Reason; with the sword

Of Scripture girt; and from your shield of Truth

Such radiance shall go forth,

As when, unable to sustain its beams

On Arthur's arm unveil'd,

Earth-born Orgoglio'd, as if with wine;

And from her many-headed beast cast down,

Duessa fell, her cup of sorcery split,

Her three-crown'd mitre in the dust devoted,

And all her secret filthiness exposed.

O thou fair Island, with thy Sister Isle

Indissolubly link'd for weal and woe;

Partaker of her present power,

Her everlasting fame!

Dear pledges hast thou rendered and received

Of that stern union! Bedell's grave

Is in thy keeping; and with these

Deposited doth Taylor's holy dust

Await the archangel's call.

O land profuse of genius and of worth,

Largely hast thou received and largely given!

Green Island of the West,

The example of unspotted Ormond's faith

To thee we owe; to thee

Boyle's venerable name;

Berkley the wise, the good;

And that great orator who first

Unmask'd the harlot sorceress Anarchy,

What time, in Freedom's borrowed form profaned,

She to the nations round

Her draught of witchcraft gave:

And hñ who in the field

O'erthrew her giant offspring in his strength,

And broke the iron rod.

Proud of such debt,

Rich to be thus indebted, these,

Fair Island, Sister Queen

Of Ocean, Ireland, these to thee we owe.

Shall I then imprecate

A curse on them that would divide

Our union?—Far be this from me, O Lord!

Far be it! What is man,

That he should scatter curses?—King of kings,

Father of all, Almighty, Governor

Of all things, unto Thee

Humbly I offer up our bolier prayer!

I pray Thee, not in wrath,

But in thy mercy, to confound

These men's devices! Lord,

Lighten their darkness with thy Gospel light,

And thus abate their pride—

Assuage their malice thus!"

We can only add, that the author displays great ability and extensive information on the subjects to which these essays refer.

The Library of Entertaining Knowledge.

Vol. I. Part I. *The Menageries: Quad-*

rupeds, described and drawn from Living

Subjects. 18mo. pp. 216. London, 1829,

Knight; Longman and Co.

It was only last week that we noticed with deserved panegyric the first No. of the Family Library; and we have now the satisfaction to speak in terms not less encomiastic of the first Part of the Library of Entertaining Knowledge. This is certainly the age of diffused intelligence, as it regards the mass of mankind in civilised countries; and it is good to see it also the age of concentration as it regards the condensing of agreeable and useful reading in books of moderate price, and well suited to gratify every popular appetite. Such a work is the present: cheap, *entertaining*, and calculated to improve the general mind as well as to induce a thirst for farther intelligence.

This new design has judiciously commenced with natural history—for it is a branch of science of which every one is fond, and with which every one is more or less acquainted. It abounds, too, with anecdotes of a curious and interesting character; and its study, even though only partial, tends to engender humanity towards the animal creation.

In this Part, after a brief and easy Introduction, we have a mingled scientific and familiar account of the dog, the wolf, the jackal, the hyena, the lion, the tiger, the leopard, the puma, and the cat; all excellent in their way, and affording fair promise of excellence in ensuing Parts. Of this a few miscellaneous extracts may serve to convince the public and to amuse our readers; we therefore insert them from those statements which appear to possess the greatest degree of novelty. Speaking of the associations of animals of opposite natures, the Editor tells us—"There is a little menagerie in London where such odd associations may be witnessed upon a more extensive scale, and more systematically conducted, than in any other collection of animals with which we are acquainted. Upon the Surrey side of Waterloo Bridge, or sometimes, though not so often, on the same side of Southwark Bridge, may be daily seen a cage about five feet square, containing the quadrupeds and birds which are represented in the annexed cut. The keeper of this collection, John Austin, states that he has employed seventeen years in this business of training creatures of opposite natures to live together in content and affection. And those years have not been unprofitably employed! It is not too much to believe, that many a person who has given his halfpenny to look upon this show, may have had his mind awakened to the extraordinary effects of habit and of gentle discipline, when he has thus seen the cat, the rat, the mouse, the hawk, the rabbit, the guinea-pig, the owl, the pigeon, the starling, and the sparrow, each enjoying, as far as can be enjoyed in confinement, its respective modes of life in the company of the others,—the weak without fear, and the strong without the desire to injure. It is impossible to imagine any prettier exhibition of kindness than is here shown.

The rabbit and the pigeon playfully contending for a lock of hay to make up their nests; the sparrow sometimes perched on the head of the cat, and sometimes on that of the owl,—each its natural enemy; and the mice playing about with perfect indifference to the presence either of cat, or hawk, or owl. The modes by which this man has effected this, are, first, by keeping all the creatures well fed; and, secondly, by accustoming one species to the society of the

other at a very early period of their lives. The ferocious instincts of those who prey on the weaker are never called into action; their nature is subdued to a systematic gentleness; the circumstances by which they are surrounded are favourable to the cultivation of their kindlier dispositions; all their desires and pleasures are bounded by their little cage; and though the old cat sometimes takes a stately walk on the parapet of the bridge, he

duly returns to his companions, with whom he has so long been happy, without at all thinking that he was born to devour any of them. This is an example, and a powerful one, of what may be accomplished by a proper education, which rightly estimates the force of habit, and confirms, by judicious management, that habit which is most desirable to be made a rule of conduct. The principle is the same, whether it be applied to children or to brutes."

On the subject of menageries, the remarks are also extremely pertinent.

"The value of menageries (the writer observes), not only for popular but for scientific study, depends, however, very much upon the arrangements which determine their construction and regulation. The great object should be, as far as possible, to exhibit the animals in their natural state. It has been a favourite plan with many naturalists to establish a garden, in which the animal should find himself surrounded by his natural food—where the beaver should live amidst a rivulet and a bank of poplars, and the rein-deer browse upon his native lichen. Great difficulties, of course, present themselves to the completion of such a project; and though its execution were compatible with any reasonable expense, the difficulty of adjusting the temperature of our climate to the plant and the animal would be very considerable. Yet, in a *national menagerie* much ought to be attempted, gradually but systematically to realise such a desirable object as the exhibition of animals in their natural habits. If the cat tribe are pent up in close dens, what idea can be formed of the crouch and the spring which characterise both their sport and their seizure of prey? With every regard to their security, they might have a sufficient range to exhibit this peculiar property. We can acquire no adequate notion of the kangaroo in a cage, but in a paddock its remarkable bound at once fixes our attention and curiosity. In a very interesting book, *Waterton's Wanderings in South America*, there is an account of the sloth, which shews that we can know nothing of some animals unless we see them in their natural condition. This traveller delights in wonderful stories, which he tells in a style approaching to exaggeration; but there is no reason to doubt the general accuracy of his descriptions of natural objects. The sloth is usually described as slow in his movements, and, as in a perpetual state

of pain; and from his supposed inaction his name is derived. And why is this? He had not been seen in his native woods by those who described him: he was resting upon the floor of some place of confinement. His feet are not formed for walking on the ground; they cannot act in a perpendicular direction; and his sharp and long claws are curved. He can only move on the ground by pulling himself along by some inequalities on the surface, and therefore on a smooth floor he is perfectly wretched. He is intended to pass his life in trees; he does not move or rest upon the branches, but under them; he is constantly suspended by his four legs, and he thus travels from branch to branch, eating his way, and sleeping when he is satisfied. To put such a creature in a den is to torture him, and to give false notions of his habits. If the sloth be placed in a menagerie, he should have a tree for his abode; and then we should find that he is neither habitually indolent nor constantly suffering. The delight of observing wild animals in their natural state is great in proportion to its rarity. This delight is one reason that enterprising travellers,—such as Waterton, whom crocodiles and serpents could not deter from pursuing his researches, and as Wilson, the historian of American birds, who spent his life in the woods,—describe with a freshness and truth which can only proceed from a thorough love of their subject. We can understand how this desire to observe the natural, unrestrained habits of animal life should grow almost into a passion. The difference between the same animal under confinement and when enjoying its native liberty, is striking enough to make an enthusiastic man willing to devote his life to those diligent observations of 'the free denizens of the woods,' which are so valuable to those who have to write on natural history with less favourable means of observation. We lately saw this difference exemplified in a striking manner. At the residence of a private

gentleman at Limehouse there are three monkeys in a state of remarkable freedom. We went to see them, with but few anticipations of pleasure; for a monkey, as monkeys are ordinarily seen, confined to a box, shews little but the cunning and rapacity of his race. The monkeys at Limehouse were let loose into an orchard, in which there were some high and spreading elms. Their gambols were the most diverting that could be imagined. They pursued each other to the top of the highest branch, where they sat fearlessly chattering; and in an instant they would throw themselves down, with unerring aim, some twenty feet, and, resting upon the bough which they had selected to leap at, would swing to and fro with manifest delight. We shall not be satisfied again with a menagerie which has not trees for its monkeys to sport in. The menagerie of the Zoological Society will doubtless become the national menagerie, and in the course of a few years it may rival that of Paris. Our opportunities for forming the finest collection in the world are unbounded; and the taste for natural history which distinguishes the public mind, in itself will create ample funds for its gratification."

Many stories of the sagacity, &c. of dogs are new, and illustrative of the extraordinary character of that animal, improved as it has been by its companionship with man. We copy two or three examples.

"In London, within these few years, the use of dogs in dragging light vehicles has become very general; and though their strength is rarely employed in combination, as is the case with the Esquimaux sledge-dogs, their energy makes them capable of moving very considerable weights. There is scarcely a baker, in the more populous parts of London, who has not his travelling shop upon wheels, drawn by one or two stout mastiffs or bull-dogs. But the venders of cats' meat appear to have derived the largest benefit from this application

of animal power. The passenger through the narrow streets and lanes of London is often amused by the scenes between the consumers of the commodity and those who bring it to the houses. At the well-known cry of the dealer, the cats of a whole district are in activity, anxiously peeping out of the doors for the expected meal, and sometimes fearlessly approaching the little cart, without apprehension of their supposed enemy who draws it. The dogs attached to these carts appear to have no disposition to molest the impatient groups of cats who gather around them. The habit of considering dogs and cats as natural enemies has tended to the production of a great deal of cruelty. It is true that dogs will, by instinct, pursue any thing which flies from them; and puppies will thus run after, and frequently kill, chickens. But dogs, by chastisement, may be made to comprehend that nothing domestic must be molested. Beckford, a writer on hunting, alludes to the circumstance of buck-hounds playing with deer on a lawn, within an hour or two after a chase of the same species. There is at present a tame doe in the streets of London, belonging to some person near St. Clement's Churchyard, which the passing dogs never affront; and we have seen, some years ago, at Goodwood, the seat of the Duke of Richmond, a pack of fox-hounds, on their way to cover, go close to a fox chained at the outer gate of their kennel, without taking the slightest notice of him. This, at any rate, shews that dogs have their instincts under subjection to the commands of their friend and master, man.

"All dogs can swim, although some dislike the water, and take to it with difficulty, at the bidding of their masters. The bull-dog would appear the least likely to combat with a heavy sea, as the Newfoundland dogs often do; and yet the following circumstance is well authenticated:—On board a ship, which struck upon a rock near the shore during a gale, there were three dogs, two of the Newfoundland variety, and an English bull-dog, rather small in growth, but very firmly built and strong. It was important to have a rope carried ashore; and as no boat could live for an instant in the breakers towards the land, it was thought that one of the Newfoundland dogs might succeed; but he was not able to struggle with the waves, and perished. The other Newfoundland dog, upon being thrown overboard with the rope, shared a similar fate. But the bull-dog, though not habituated to the water, swam triumphantly to land, and thus saved the lives of the persons on board. Among them was his master, a military officer, who still has the dog in his possession.

"Many of the inferior animals have a distinct knowledge of time. The sun appears to regulate the motions of those which leave their homes in the morning, to return at particular hours of the evening. The Kamtschatka dogs are probably influenced in their autumnal return to their homes by a change of temperature. But in those animals possessing the readiest conceptions, as in the case of dogs in a highly civilised country, the exercise of this faculty is strikingly remarkable. Mr. Southey, in his *Omniara*, relates two instances of dogs who had acquired such a knowledge of time as would enable them to count the days of the week. He says: 'My grandfather had one which trudged two miles every Saturday to cater for himself in the shambles. I know another more extraordinary and well-authenticated example. A dog which had belonged to an Irishman, and was sold by him in England, would never touch a morsel of food upon Friday.' The same

faculty of recollecting intervals of time exists, though in a more limited extent, in the horse. We knew a horse (and have witnessed the circumstance) which, being accustomed to be employed once a week on a journey with the newsmen of a provincial paper, always stopped at the houses of the several customers, although they were sixty or seventy in number. But, further, there were two persons on the route who took one paper between them, and each claimed the privilege of having it first on the alternate Sunday. The horse soon became accustomed to this regulation; and although the parties lived two miles distant, he stopped once a fortnight at the door of the half-customer at Thorpe, and once a fortnight at that of the other half-customer at Chertsey, and never did he forget this arrangement, which lasted several years, or stop unnecessarily, when he once thoroughly understood the rule.

"Dr. Gall says that dogs 'learn to understand not merely separate words or articulate sounds, but whole sentences expressing many ideas.' Dr. Elliotson, the learned translator of Blumenbach's *Physiology*, quotes the following passage from Gall's *Traité sur les Fonctions du Cerveau*, without expressing any doubt of the circumstance:—'I have often spoken intentionally of objects which might interest my dog, taking care not to mention his name, or make any intonation or gesture which might awaken his attention. He, however, shewed no less pleasure or sorrow, as it might be; and, indeed, manifested by his behaviour that he had perfectly understood the conversation which concerned him. I had taken a bitch from Vienna to Paris;—in a very short time she comprehended French as well as German, of which I satisfied myself by repeating before her whole sentences in both languages.' We have heard an instance of this quickness in the comprehension of language which is very remarkable. A mongrel, between the shepherd's dog and terrier, a great favourite in a farmhouse, was standing by while his mistress was washing some of her children. Upon asking a boy, whom she had just dressed, to bring his sister's clothes from the next room, he pouted and hesitated. 'Oh, then,' said the mother, 'Mungo will fetch them.' She said this by way of reproach to the boy, for Mungo had not been accustomed to fetch and carry. But Mungo was intelligent and obedient; and without further command he brought the child's frock to his astonished mistress. This was an effort of imagination in Mungo, which dogs certainly possess in a considerable degree. He had often observed, doubtless, the business of dressing the children; and the instant he was appealed to, he imagined what his mistress wanted. Every one knows the anxiety which dogs feel to go out with their masters, if they have been accustomed so to do. A dog will often anticipate the journey of his owner; and, guessing the road he means to take, steal away to a considerable distance on that road to avoid being detained at home. We have repeatedly seen this circumstance. It is distinctly an effort of the imagination, if, indeed, it be not an inference of reasoning.

"Linnaeus has made it a characteristic of dogs that 'they bark at beggars;' but beggars are ragged, and sometimes have that look of wildness which squalid poverty produces; and then the imagination of the dog sees, in the poor mendicant, a robber of his master's house, or one who will be cruel to himself—and he expresses his own fears by a bark. A dog is thus valuable for watching property in proportion to the ease with which he is alarmed.

One of the greatest terrors of a domesticated dog is a naked man, because this is an unaccustomed object. The sense of fear is said to be so great in this situation, that the fiercest dog will not even bark. A ten-yard at Kilmarnock in Ayrshire was a few years ago extensively robbed by a thief, who took this method to overcome the courage of a powerful Newfoundland dog, who had long protected a considerable property. The terror which the dog felt at the naked thief was altogether imaginary—for the naked man was less capable of resisting the attack of the dog than if he had been clothed. But then the dog had no support in his experience. His memory of the past did not come to the aid of that faculty which saw an unknown danger in the future. The faculties of quadrupeds, like those of men, are of course mixed in their operation. The dog, who watches by his master's grave, and is not tempted away by the caresses of the living, employs both his memory and his imagination in this act of affection. In the year 1827 there was a dog constantly to be seen in St. Bride's churchyard, Fleet Street, which for two years had refused to leave the place where his master was buried. He did not appear miserable; he evidently recollected their old companionship, and he imagined that their friendship would again be renewed. The inhabitants of the houses round the church daily fed the poor creature, and the sexton built him a little kennel. But he would never quit the spot;—and there he died."

There are some philosophical and curious observations on the subject of albinos, common to the animal and human races.

"The peculiar whiteness of the hair or feathers to which albinos are subject, and which occurs not only in quadrupeds and birds, but in the human race, is occasioned by a defect in the colouring matter of these coverings of the skin, and is always connected with a defect in sight, which arises from the deficiency in the eye of what is called the mucus pigment. Blumenbach thinks that this deficiency is hereditary in some of the mammalia, so as to form a constant breed of white animals, as in the rabbit, mouse, and horse; and that, in the same way, the ferret, whose white skin and red glassy eyes are well known, is descended from the pole-cat. The subject of albinos is intimately connected with some curious facts which have been recently investigated; and which completely prove the intimate connexion between, or rather identity of, that substance which gives colour to the skin and hair, and that which regulates the ability of the animal to endure a greater or less degree of light. From a series of experiments instituted to ascertain the power of the sun's rays, it has been established by Sir Howard Home, that although the absolute heat, in consequence of the absorption of the rays, is greater from a black surface, yet the power of the rays to search the skin is thus destroyed,—according to Sir Humphry Davy, by being converted into sensible heat by the absorption. It is thus that the negro has a provision for the defence of his skin, while living within the tropics; and in the same manner, his eye, which is exposed to strong light, has the mucus pigment darker than that of the Europeans. In all quadrupeds which look upwards, as the monkey; in birds exposed to the sun's rays; and in fishes which lie upon the surface of the ocean,—this pigment is dark. In nocturnal animals, which look downwards, and in nocturnal animals, such as the cat, it is light; in the owl it is entirely absent. In the

recently published to his Lectures on Comparative Anatomy, Sir Everard Home has presented some further facts on this interesting subject. He says that the 'rete mucosum,' a kind of pigment which lines the outside upon the surface of the body, and constitutes the tubular cavity that forms hair, is precisely the same substance as that upon which the retina of the eye is spread (which we have called the mucous pigment); and thus, being acted upon by the same circumstances, when the hair becomes gray the person can only see with a weak light. Baron Larrey mentioned to Sir Everard Home the case of a man who had been confined at Brest thirty-three years in a subterranean prison. During the day he was completely blind, and only saw objects in the dark. His hair was absolutely blanched; and when it first became white, the pigment of his eyes had undergone the same change. With regard to the subject which led us to these curious facts—the white animals of the most northern climates—Sir Everard Home unhesitatingly says, that the shedding of the hair and feathers in the Arctic regions, during the six months in which they are not visited by the sun, is accompanied by the absence of the 'nigrum pigmentum' (the black pigment), by which the animals and birds are fitted to see with the weak light afforded them. With these facts before us, it may reasonably be believed that many of the 'white animals of the Arctic regions are, during a portion of the year, when the cold is intense and the days are dark, what are called albinos—that is, that with the change of the colour of their hair the mucous pigment of the eye also changes colour; or, in other words, that the black pigment is absent when the hair periodically becomes white. We have already seen how this whiteness of the fur enables the animal to bear the diminished temperature without such a diminution of the warmth of his body as would deprive him of his physical powers; and upon the same beautiful principle of arrangement by an all-wise Providence, which so nicely adjusts the senses and faculties of animals to the situations in which they are placed, the deficiency of the black pigment of the eye enables some quadrupeds to see distinctly in the faint light of the long Arctic winter. Upon this principle M. Desmarest's description of the white wolf, 'an animal affected with the albinos disease,' is an incorrect one. He is an animal the colour of whose fur, as well as the pigment of whose eye, undergoes a change to fit him for the very extraordinary changes of heat and light he is exposed to, and which change of the fur and the eye prevents him utterly perishing during that incapacity to procure his food which extreme cold and darkness would otherwise bring upon him. It is remarkable that these extraordinary adaptations of the body to climate are confined to the inferior animals. Man is not affected by them to any thing like the same extent; for the colour of the negro's skin is unvarying in certain latitudes, and the albinos of the human race are so from the effect of disease. We may conclude, from this circumstance, that man, in the cases of adaptation to climate, as in all other cases, is left to derive his protection against physical evils from the exercise of his own reason. The poor Esquimaux, during their intense winters, clothe themselves with thick furs, shut themselves up in a snow hut, (the warmest of coverings from the external air,) make fires, and receive light from oil. Man, therefore, has a defence, in his superior intelligence, against

the rigours of climate, even in the most exposed situations. He is left to the unaided care of this intelligence, without that special intervention of Providence which makes such arrangements for the preservation of the inferior animals as shall come to the aid of their instinct, and stand in the place of those comforts which may be obtained by the higher faculties of the human race. Man, for instance, is the only animal that can produce artificial light and heat. He makes a fire in the woods, and the monkeys will warm themselves at it; but no monkey ever yet succeeded in kindling a fire himself. As man advances in civilisation these broad distinctions may be overlooked in the elaborate contrivances by which he heaps up every comfort and luxury around him,—by manufactures and commerce ensuring the possession of them, in various degrees, to all of the human race. But the ability to construct a steam-engine, and the knowledge which shews how to kindle the fuel which sets that machine in motion, are equally results of the superior intellect of man, as distinguished from the faculties of the creatures beneath him."

With this we must conclude, and again warmly recommend this excellent publication as another of those valuable works which do credit to the present time, and will produce important results on future generations.

Repentance; and other Poems. By Mary Ann Browne; Authoress of "Mont Blanc," "Ada," &c. London, 1829. Longman and Co.; Hatchard and Son; and Saunders and Benning.

WE like this little volume, and we like the spirit from which it has emanated: there is somewhat even touching in a young, ardent mind thus impressed with the worthlessness and vanity of this world, devoting its energies to the cause of religion, and filled with the high inspiration of our pure and holy faith; alive to the beautiful, but remembering whence that beauty comes; enthusiastic in its affections, and strengthening them by its consciousness of immortality. We feel an interest in those pages, which give ourselves a pleasure in the praise we bestow. The following is, we think, very beautiful:—

Who loves me best?—my mother sweet,
Whose every look with love is replete:
Who held me, an infant, on her knee,—
Who hath ever watched me tenderly:
And yet I have heard my mother say,
That she some time must pass away:
Who then shall shield me from earthly ill?—
Some one must love me better still!

Who loves me best?—my father dear,
Who loveth to have me always near:
He whom I fly each eve to meet,
When past away is the noontide heat:
Who from the bank where the sunbeam lies
Brings me the wild-wood strawberries:
Oh! he is dear as my mother to me,—
But he will perish, even as she.

Who loves me best?—the gentle dove,
That I have tamed with my childish love,
That every one save myself doth fear,
Whose soft coo soundeth when I come near:
Yet perhaps it but loves me because I bring
To its cage the drops from the clearest spring,
And hang green branches around the door:—
Something, surely, must love me more!

Who loves me best?—my sister fair,
With her laughing eyes and clustering hair:
Who flows around my head doth twine,
Who preseth her rosy lips to mine,
Who singeth me songs in her artless glee,—
Can any love me better than she?
Yet when I asked, that sister confest,
Of all, she did not love me the best!

Who loves me best?—my brother young,
With his healthy cheek and his lisping tongue;
Who delighteth to lead me in merry play
Far down the green-wood's busy way!

Who sheweth me where the hard-ants grow,
And where the fairest field-flowers blow:
Yet perhaps he loves me no more than the rest,—
How shall I find who loves me best?
My mother loves me,—but she may die;
My white dove loves me,—but that may fly;
My father loves me,—he may be changed;
I have heard of brothers and sisters estranged;
If they should forsake me, what should I do?
Where should I bear my sad heart to?
Some one surely would be my stay—
Some one must love me better than they.
Yes, fair child! there is One above,
Who loves thee with an unchangeable love;
He who formed those frail, dear things,
To which thy young heart fondly clings,—
Even though all should forsake thee, still
He would protect thee through every ill.
Oh, is not such love worth all the rest?—
Child! it is God who loves thee best!"

And this:

"My mother! now the gladsome spring
Is smiling o'er the earth;
And butterflies on painted wing
In sunny light go forth.
Though all spring days most lovely be,
All fair and full of mirth,
One, one is dearest far to me,
The day that gave thee birth:
It was a day with joyance fraught,—
It is a day for deepened thought.
My mother! I remember well,
When thou wast not so now;
Remember when Time's shadow fell
Less darkly on thy brow:
I can remind me of the time,
When in life's summer glow,
Thy years had hardly passed their prime,
And scarce one flower lay low;
But clouds thy heaven have overcast,
Since those bright days of pleasure past.
Mother! thy step is not so firm
As it was wont to be,
For secret blight and open storm
Have done their work on thee;
Thy hair turns gray, and I can see
Thy hand more tremulous,
And thy dark eye hath lost its glee,
Save when it turns on us,
Thy children—then it hath a joy
And light, that nothing can destroy.
Yet weep not, mother! for the days
Passed by we'll not regret;
The star of Hope, with all its rays,
Is only dimmed, not set.
Fixed over thy path it shall remain;
And never more deceive,
And it shall sparkle out again,
To light thy quiet eve!
Flinging a radiance o'er past years,
And brightening all thy fallen tears.
Mother! perhaps the poet's wreath
May ne'er be twined for me;
Perhaps I was not made to breathe
In lofty poetry:—
Yet still I know thy tender love
Will think it melody:
Thy partial ear will still approve,
However weak it be;
And thou wilt love the words that start
Thus from the fulness of the heart."

So late in the week, our limits forbid further extract; but as two or three verses will tell the sweetness of the wreath, so may our quotations speak of their companions: there is a true poetic feeling, delighting in "sweet flowers and all fair things;" a gentle feminine strain of piety, the faith of hope and love, clothed in harmonious language;—and for these we are indebted to a young creature not seventeen.

Traits of Travel; or, Tales of Man and Cities.
By the Author of "Highways and Byways." 3 vols. 12mo. London, 1829. Colburn.

To quote an old French song, "*Il se sent plus*"—or if they still are, it is in that state of disregarded existence tantamount to no existence at all—that race of six-week tourists, who saw a certain number of palaces, churches, plays, and pictures; who went at the rate of so many miles a page; who decided on the character of a nation by its costume; who faithfully recorded what they ate and what they drank; and who finally published their journal, at the instigation of admiring friends,

—and the light, hot-pressed volume emulated the rapidity of its composition in the rapidity of its oblivion. A kind of forgetful memory recalls their numbers rather than themselves; and a tour on the Continent is something like the Catholic question—can any thing new be said about it?—But Mr. Grattan belongs not to this class: to the materials of the traveller he has brought the imagination of the novelist, —he has looked upon men and things with the acuteness of observation, yet with that poetical spirit which gives but the more actual likeness of truth to the after narration,—he has sat down, by the hearth—he knows the home, the habits of the people he describes. He modestly speaks, in his neatly written preface, of his works as those of mere light entertainment; but if knowledge—that knowledge of all others the most useful, in proportion as it expands liberality by destroying prejudice—consists in an intimate acquaintance with foreign lands, our readers (i. e. if they set the same value on it as we do,) and we shall agree in thinking that Mr. Grattan's works have a value equal to their amusement. Among the tales, the “Maison de Santé” is of terrible, as that of “Laura Pemegia” is of touching interest; and the “Begging Brother of the Trappists” is a very well-told melancholy tale. These, however, our limits will not allow us to do more than introduce by name: but there are a multitude of entertaining sketches; and the “Carnival,” which we select, has at least a very attractive title.

“We have been told, from high authority, that there is a step between the sublime and the ridiculous. It is, however, a mistake—there is no such thing. Sublime and ridiculous are one and the same—co-existent qualities, of different complexions perhaps, as looked at in different lights, but blending and blooming together, like the green and pink shades in a shot poplin. I was quite convinced of this, a day or two ago, by witnessing the carnival, to see which I came on purpose to Paris. My lone wanderings in the provinces had left my wardrobe not quite suited to the display I expected to witness on this occasion; so my first business, after I had shaken off the dust of the Diligence, was to look out for a tailor, knowing the importance of appearances as well as old Quarles himself, who tells us in his Enchiridion, that ‘the body is the shell of the soul; apparel is the husk of that shell; the husk often tells you what the kernel is.’ Acting on this principle, I was resolved to decorate myself in French costume. Decked out, then, at a day's notice, in a Polish frock, black velvet vest, with a white, a pink, and a blue one, respectively of silk, inside, hussar pantaloons, boots à la Wellington, and brazen spurs—French every bit of me, brass from head to foot, as a body might say—I sallied forth to present my recommendatory credentials to the friend of a friend of mine, M. Le Vicomte de Vaurien, who had been represented to me as one of a family wonderfully well known in France, a man of fashion, literature, science, taste, and talent—a sort of second Crichton, in short, who had spent many years in England during the emigration, and was attached à la fois to all that was British, and to the ancient régime at home. ‘A pleasant sort of person this,’ thought I, as I approached his residence, ‘to lead a young fellow like me through the labyrinth of learning and pleasure:’ for I intended to be at all in the ring, as we say familiarly at the club. Arrived at the street to which my friend the proprietor's hand-writing on the back of the letter pointed like a finger-post, I was not very favourably struck by its

appearance. It was in the heart of the town, narrow, dark, and dirty; but, knowing the ways of Paris, I did not much mind all that. ‘No. 18, le voilà!’ said I, entering the port-cochère of a gloomy but good-looking house. Then, pulling up my shirt-collar and adjusting my hair, I marched up to the landing-place of the premier étage, cast an inquisitive glance at the coat of arms on the panels of a huge old family coach standing in the remise, and was in the act of seizing the bell-cord, when a withered old hag shot forth her visage from a dismal little den in the entresol below, screaming—‘Diable, donc! où allez-vous?’ ‘Qui, moi?’ I replied, rather indignantly; ‘je vais chez M. le Vicomte, Madame.’ ‘Monsieur le Vicomte! qui est cela?’ An odd question that, thought I. I cannot surely be wrong. ‘Le Vicomte de Vaurien, Madame!’ ‘Viconte! Bah! et c'est là que vous le cherchez! montez au sixième.’ ‘Au sixième!’ sighed I, looking up the dismal staircase, so high, that it seemed, like Jacob's ladder, to lead to a glimpse of heaven, which twinkled through a sky-light at top. I drew a long breath of preparation for the ascent, and heard the old wench mutter below—‘Diable l'emporte! c'est toujours comme cela vous passez partout à gauche et à droite, sans rien demander à la portière, vous autres Anglais.’ ‘Vous autres Anglais!’ echoed I. ‘Rat it, that's too bad, though—she has found me out, in spite of my frock, waistcoats, and pantaloons. But never mind. Au sixième! Courage!’ Landed at length at the summit, breathless and panting, my head dizzy by a glance over the banisters into the interminable chasm below me, I leaned for a moment against the wall, and pulled a greasy bit of faded pink ribbon that hung dangling beside a filthy little door. ‘Qui est là?’ demanded a feeble voice. ‘Moi,’ replied I. ‘Aha! an Englishman! wait, wait for one second bit, saer,’ answered the voice, in a tone of gaiety. I waited as desired, confounded beyond measure to find that the very pronunciation of one syllable had betrayed me a second time. While I pondered on this, the door opened, and a black silk night-cap popped itself out. A sallow-wizened face was under it, and the head it covered was borne upon a narrow pair of shoulders, clothed in a short brown woollen jacket, appended to pantaloons of the same, forming stockings as well, and ending at the feet in a shabby pair of morocco leather slippers. ‘Walk in, saer; walk in, saer;’ said the wearer of this strange costume and still stranger phiz. He would have measured about five feet and an inch or so, and looked a good half-century old. His upper lip was horribly embrowned with snuff, and he seemed to have but two or three straggling teeth in his head. ‘Is your master at home?’ asked I. ‘My Got, saer! vat you take me for?’ cried my master. ‘I beg your pardon, sir,’ said I; ‘I wish to see the Vicomte de Vaurien.’ ‘Why dat is me, my dear saer. Walk in, saer.’ As he did not seem to wince at my mistake, my ‘withers were unwrung;’ but any one may imagine my mortification while I contemplated the figure and abode of my anticipated cicerone. I shall not touch my readers' sensibility on my account, by detailing the appearance of Vaurien's garret. A truckle-bed, two tottering chairs, a broken deal-table, a tarnished mahogany basin-stand, with gilded porcelain basin and water-jug cracked and chipped, and standing for show, like Goldsmith's celebrated row of broken tea-cups. These, and such like commodities, are not matters to enter into a description meant

for the brightest eyes of England. I therefore draw the blanket (there being neither veil nor curtain at hand) over the mysteries of the vicomte's abode. A few minutes made us quite known to each other. He read my letter with attention, shook my hand with warmth, professed himself my most faithful friend and devoted servant, and finished many pleasant sayings by begging me, with an air of great nonchalance, to sit down while he took his breakfast. That was soon despatched; for it consisted only of a little cup of coffee without cream, which had stood simmering in a pipkin by the fire, and a small roll, of about the length and consistency of a dried herring, which lay on a shelf with the vicomte's dressing apparatus. His repast required none of the usual appurtenances of a breakfast-table; and being quietly finished, he begged me to excuse his then making his toilette. Delighted at an opportunity of being initiated into the manoeuvres of a petit maître de Paris, I willingly accorded his pardon. He began by throwing off his black cap, and displayed a head completely covered with *pepillotes*, which he, without shame or ceremony, pulled coolly from their respective curls, and folded up in readiness for the service of the night. At first sight of him I thought he had been bald, for not a straggling hair wandered on his temples. Now he had a profusion of dark brown ringlets; and had I not seen the progress of de-cap-itation, I would have sworn he had put on a wig, so that he was just as far from natural appearance one way as the other. ‘Pardon, for two little moments,’ cried he, squeezing my hand in both of his, as he popped into a closet close by the head of his bed. In two minutes he was back; but no more like what he was before he entered, than I like Hercules. His transformation was magical—it was ‘Hyperion to a satyr.’ A rosy flush spread over his face, and seemed faintly fading on the tips of his nose and chin, like setting sunbeams on the peaks of a mountain. A pair of false whiskers, of the same pattern as his side-locks, curled upon his cheeks; and his mouth displayed a regular row of well-set teeth; while his head, in its whole ensemble, might be really supposed to have just glided gently off the shoulders of a good-looking fellow of thirty, or thereabouts. I started back. He laughed. ‘Ha, ha! vous ne me connaissez pas,’ said he, slapping me on the shoulder; ‘my dear saer, you must not vonder at all dis. Ve Frenchmen are enough philosophers to care ver little for appearances in de house, and to know dat ‘tis ever ting in de street.’ I was so amazed at the metamorphosis, and so pleased with the aphorism, which put me so much in mind of myself and old Quarles, that I did not closely observe the process of his dressing, which I should otherwise have faithfully reported. I followed him with my eyes as he went on, but saw him indistinctly, and heard him chatter without minding what he said. When I recovered from my reverie, I observed him full-dressed, all but his coat, wiping the cracked gilt basin with a towel, and placing it carefully in its proper stand. ‘Allons!’ cried he, as he finally settled his collar before the looking-glass, and stood revealed in all the perfumed bloom of a dashing dandy. ‘Now, saer, shall we go out see de masks on de Boulevards?’ ‘Masks!’ exclaimed I; ‘why, it isn't carnival time, is it?’ ‘To be sure ‘tis,’ replied he; ‘dis is Mardi gras, de gayest of de gay days. Nothing but pleasure, and fun, and hoah-poh.’ I may be allowed to mention here, that the vicomte is very proud of his English, and loses no occasion for

displaying his familiarity with the niceties of the language, among which 'hoah-posh' is a particular favourite.—I was electrified at hearing that the carnival was really going on; for the whole appearance of Paris was so *sombre*, so muddy, and misty, that I could not imagine any approximation to gaiety in the place or the people. '*Ah, vous verrez, vous verrez bientôt*,' said the vicomte, as we descended the stone staircase, picking our steps in its perpetual twilight, and directing our course by the iron banisters. Once fairly on the Boulevard, my friend seemed quite in his element; and though I looked down on him from an elevation of half-a-dozen inches, and thought my dress exhibited a tolerable specimen of style, I confess there was something in his swaggering air, fine complexion, floating curls, and the red riband at his button-hole, that seemed to throw me into the shade. He talked English loudly all the time, proud of displaying his accomplishment to the ears of his countrymen; and his observations were amusing enough. The day was gloomy, cold, and comfortable—yet the world was out. During the hour and a half which I had spent in the vicomte's garret, all Paris seemed to have been suddenly infected with the wish for a walk, ride, or drive. The pathway was thronged with pedestrians; many a mounted exquisite was cantering on the centre of the pavement, between the rows of carriages going in opposite directions, in horizontal analogy to the movements of two buckets in a well. These carriages, of all sorts and descriptions, open and close, cut a poor figure to a man accustomed to the equipages of the *Perk*. There was scarcely one from Long Acre to be seen. They were almost all French, gaudy, shabby, and flimsy. It appeared that though all Paris was there, yet the confounded weather kept all the decent horses at home; for such a sorry collection of jaded hacks was never before exhibited in a Christian country. The masks were few and vile. Now and then a barouche chove in sight, crammed with clumsy harlequins, miserable mountebanks without a joke, or two or three stupid caricatures of old women, in 'feathery furs and studded stomachers, tippets, cardinals, hoods, and ruffles.' A pretended peasant, here and there, rode silently along; but there was nothing like frolic, or humour, or happiness. The vicomte pointed out to me some well-known characters in the carriages which passed; among others, in his sky-blue chariot, his brother vicomte, the romance writer, who has described in the heroine of his last work, a better masquerade figure than the whole carnival could produce. 'Chargée de plumes, de fourrures, de fleurs, de pierreries, et de gaze, enveloppée d'un mantel à triple collet, et sa robe bordée d'images.' I, in my turn, told my companion the names of a few of my countrymen; but I saw none who combined notoriety with the ludicrous, except the celebrated Squire Hold'emtight, who, mounted on the dicky of a calèche, covered with a huge box-coat, whipped along a pair of pitiful hacks, and (puffing his red and bloated cheeks against the wind) gave occasion to a group near me to halloo out, '*Voilà! voilà le bœuf gras*!'—and I certainly never saw a finer specimen of John Bullism. While the file of carriages was thus dragging, like a wounded snake, or an alexandrine, 'its slow length along,' and every face seemed the index of a melancholy or a dissatisfied mind, the sound of martial music struck upon my ear, and presently several regiments of infantry, in full order of march, moved along the Boulevards from the direction of the Tuileries,

where they had been just passed in review, preparatory to their departure for the invasion of Spain. A train of artillery followed—the heavy rolling of the guns over the pavement mixing with the clash of the military bands, bringing to the mind a rush of awful combinations touching the tremendous probabilities in which these troops were going to be actors. There they were, mingled with the fantastic fooleries of the crowd—the motley crew of masks and mockeries, heavy hearts, and dreary apprehensions. I gazed at the scene with a sarcastic smile and an involuntary shudder; and exclaimed, as we turned down the Rue de la Paix (Napoleon's triumphal pillar staring me in the face), 'No, no, there is no step between the sublime and the ridiculous!'

We bid a kindly farewell to our pleasant companion; and only wish to have set out on his travels again one who is quite the *beau idéal* of tourists.

SIGHTS OF BOOKS.

Sermons on Various Subjects. By the late Rev. Archibald Gracie. Edinburgh, 1829, Adam Black, T. Ireland, jun. and T. M. Shiells: London, Longman and Co.

WE take shame to ourselves for not having before recommended this most admirable volume to our readers. Full of mild and enlightened piety, that piety which shews itself by gentleness and humility in theory, and by moral excellence in practice,—few could turn over these pages without deriving somewhat of benefit, some practical rule of conduct, some striking view of the great advantages of religion, somewhat of either hope or consolation, from their perusal. We would particularly point attention to the sermons on resignation; on the influence of religious principle upon happiness; and on undue respect for the opinions of others: but we begin to find selection a very difficult task. A passage in the discourse treating on the love of God, illustrates our own sentiments on the subject so admirably, that we cannot resist supporting our opinion by such high authority.

"Some look upon the love of God as a disposition of mind producing devotion, and ending there. They have excited in themselves a high zeal and affection for God, and firm persuasion that they are his favourites; and having done this, they think they have arrived at Christian perfection; whilst, at the same time, they are under the dominion of covetousness, malice, and pride. This detestable mixture of vice and enthusiasm has been common in all ages. But, to preserve us from such delusions, Christ has told us that we must either keep his commandments, or not pretend to love him. This is the only kind of love to God that is mentioned in the Scriptures. They never recommend that spiritual fever, those warm transports, and that bold familiarity, which some zealots affect; nor that cold, refined, and mysterious piety which another sort of religionists require. For love to God is reason, and not passion—reverence, and not presumption. It may be proper also to remark, that love to God is inconsistent with that superstitious fear with which too many affect to worship him. Of a gloomy and unhappy disposition of mind, and insensible of the beauty so profusely lavished upon the works of creation, they ascribe a character of malevolence to the Deity. They trace his power in the thunder and in the earthquake, in war and in pestilence. Inexorable severity and a vengeful spirit compose their idea of the Supreme Being. Dark and superstitious terror forms the character of their religion, and is expressed

in modes of worship black as their creed, and portentous as the demon they acknowledge for their lord. But genuine love to God is inconsistent with this gloomy fear. It is impossible to regard him at the same time with affections so opposite. 'There is no fear,' says an apostle, 'in love; but perfect love casteth out fear, because fear hath torment; he that feareth is not made perfect in love.'

These discourses are arranged and edited by Mr. Gracie, brother of the pious and excellent man now no more; and we owe him our thanks for a very valuable addition to our devotional literature.

Scripture History for Youth. By Esther Hewlett. 2 vols. Fisher and Son.

THE first and part of the second of these volumes contain the Old and the rest the New Testament arranged in an historical form, and illustrated with many pictures. The intention seems to be very meritorious, and the execution of the work in a familiar manner, to fit it for popular reading and instruction.

A Plain and Short History of England for Children, in Letters from a Father to a Son. By the Editor of the "Cottager's Monthly Visitor." 18mo. pp. 262. Rivingtons.

ONE of the many forms in which useful knowledge is now presented to the youthful mind. The good plan of appending questions to every portion of the history related is followed in this volume.

Leigh's New Pocket Road-Book of Scotland, &c. &c. With a Map, and a Plan of Edinburgh. 18mo. pp. 284. London, Leigh.

SIMILAR to Mr. Leigh's useful and convenient Road-books of England and Ireland, this little volume recommends itself strongly to public favour by the accuracy of its details and the excellent arrangement of its materials. It is very small and portable; very neat and well printed; and, in short, exactly what such a publication should be, as many a tourist to Scotland during ensuing summers will be ready to acknowledge, while they thank us for making its merits known to them.

Synopsis of Practical Perspective, Linear and Aerial. By T. H. Fielding, Teacher of Drawing to the Senior Classes of the Hon. East India Company's Military Seminary. London, 1829. Carpenter and Son.

OF the various works on perspective which have recently come under our notice, Mr. Fielding's seems to us to be one of the most simple and perspicuous. The linear portion of it, without entering into details which are curious rather than practically useful, will communicate to the student who masters it, a sufficient knowledge of an art which, as Mr. Fielding justly observes, is as necessary to drawing or painting, as an acquaintance with orthography or grammar is to the production of a literary composition. Among other things, we are much pleased with Mr. Fielding's exposure of the absurdity of Kirby's strange and, in so able a man, unaccountable admission, that under some circumstances it is necessary to swerve from the strictness of mathematical exactness! We confess, however, that we are rather disappointed with that part of Mr. Fielding's work which treats of aerial perspective; and the more so, as he himself allows, that although it has hitherto been neglected by most of the writers on perspective generally, yet that it is the most interesting

division of the sciences. A great number of Mr. Fielding's remarks under the head of Aerial Perspective relate in fact to Linear Perspective. The one subject, we acknowledge, is not so strictly reducible to rule as the other; but still we think that something more might be said (and, with a little assistance perhaps from his highly gifted brother, who could say it better than Mr. Fielding?) on the laws which influence diminution of tone and indistinctness of form in objects, in proportion to their distance from the eye of the spectator.

ORIGINAL CORRESPONDENCE.

Paris, March 30.

In consequence of the sudden change in the atmosphere, the *merveilleux* and the *merveilleuses de Paris* have ventured to throw aside their furs, and we are now gratified by the sight of the lower half of their visages, which lay concealed beneath high collars and tippets during the frosty season. Perfumed elegants have also commenced honouring the public walks by their presence, as well as to administer *des coups de coude* to the fair sex. The inflictors of these impromptu knocks are enchanted with the idea of asking "pardon," as they thus secure to themselves an opportunity of exhibiting to advantage the graces of their person; and a bow or a smile, and a *demie-piroquette*, are supposed to more than indemnify the wounded lady, however forcible the blow she may have received.

The ball which took place at Vauxhall for the benefit of the Portuguese refugees was numerously attended. The receipts amounted to 35,000 francs; so that dancing seems the best mode of putting the springs of benevolence in motion.

The reform which has taken place in the price of lottery tickets has much displeased the labouring classes, who love gambling better than even their patron saints; neither will the increase of price prevent the poor from playing—they will only starve the oftener. The lower orders place an unbounded faith in dreams; and sooner than not purchase the number which they have seen in their sleep, they would sell to the last article they possess.

Mr. Dietz, *fabricant de piano*, is to give a grand concert the first week in April, at which a celebrated artist is to perform on the polyplectron. Musical connoisseurs speak in high terms of this new-invented instrument; but as there is a tacit convention between artists and fabricators to mutually praise each other's performances, one can place no reliance on hearsay.

Les grands esprits of the age being in despair at not finding it possible to elevate themselves by means of their wits, have abandoned their heads for their heels: a three-inch *tailon* is now *à-la-mode*; so that men of pigmy stature are raised to the ordinary size, whilst others again are become giants. Ladies are not permitted to add to their height; so that short wives contemplate their husbands as the Lilliputians did the Brobdingnagians. The *modes*, I presume, do not interest you; still I cannot resist announcing, that *des gilets à la Walter Scott* are to be worn this spring.

ARTS AND SCIENCES.

THE ASTEROIDS.—Ceres, one of these small bodies, has been for some time past in a favourable position for observation to the west of Cas-

tor in Gemini; but, from the cloudy state of the atmosphere, few opportunities have occurred for examining it: in the early part of April it will be near ϵ Geminorum; yet, owing to the recession of this telescopic planet from the earth, and the approach of the constellation in which it is moving to the evening twilight, it will not be distinctly seen.

Ceres is 163 miles in diameter, and appears of a ruddy colour (which is also the prevailing hue of the others), and shines with the brilliancy of a star of the eighth magnitude: it is surrounded with an atmosphere 675 miles in height, which gives it very much the semblance of a small comet or nebulous star. Pallas, another of the asteroids (eighty miles in diameter), has a similar nebulosity surrounding it, 468 miles in height. Juno and Vesta are destitute of this nebulous atmosphere, though the latter—which is the smallest of the four (diameter forty-nine miles), and subtending an angle not greater than one of the Saturnian satellites, or half a second—shines with a light so pure and distinct as to be visible to the naked eye, as a star of the fifth magnitude.*

The form and position of the orbits of the asteroids, and the physical changes observed in them, suggests the idea of their being a sort of connecting link, uniting the planetary and cometary bodies. The orbits of the old planets vary but slightly from circles; those of the new planets are considerably eccentric, though not so much as those of comets. The aphelion of Juno is double the distance of its perihelion; and the distance of the centre from the foci of its ellipse 68,588,433 miles. It passes over that half of its orbit nearest the sun in half the time occupied in traversing the other half; the major axis of its orbit little exceeding in length that of the comet of Encke—the former being 450,800,000 miles in length, and the latter 420,000,000 miles.

The orbits of the asteroids make greater angles with the ecliptic than the planets, and in this respect resemble comets, some of which have their paths considerably inclined, and ascend or descend at right angles to the earth's path. The least inclination of a planet's orbit to the ecliptic is that of Uranus, which is 46 min. 20 sec.; and the greatest that of Mercury, which is 7 deg. The inclination of the orbit of Vesta is 7 deg. 8 min. 9 sec.; and that of Pallas 34 deg. 50 min. 40 sec. The inclination of the orbits of the comets of Encke and Gambart are, respectively, 13 deg. 20 min. and 13 deg. 33 min.; and of one that appeared in 1818, the position of its path relative to the ecliptic was 89 deg. 47 min.

More considerable and sudden changes are also observed in these small bodies than in the planets. Venus, it is supposed, has had an atmosphere generated about its orb since the commencement of the past century, which conceals those irregularities on the surface formerly so distinctly seen. Mars has a periodical change about its poles, supposed to arise from the melting of the snows when the planet is in certain parts of its orbit. Jupiter also has sudden changes in its belts, which are supposed to arise from its swift rotation. These changes in the planets are different to those observed in the visible hemispheres of Ceres and Pallas, which are sometimes pale, overclouded, or as if surrounded with a dense mist, and, at other

seasons, suddenly shine forth and display well-defined discs. Variations of a similar nature are also observed in the brilliancy of the others two.

To account for these phenomena, so anomalous in the planetary system, some have supposed the asteroids to be fragments of an exploded planet, formerly moving between the orbits of Mars and Jupiter. Some curious coincidences occur to render such a theory plausible; for, on the supposition of such an explosion, the fragments ought to have two common points of reunion, through which they would all pass; and it is remarkable that the positions of the nodes of the asteroids favour the idea of their having diverged from the same place. The smallest parts also would be thrown to the greatest distance from the original orbit, while the larger would, on account of their greater quantity of matter, deviate less from the path of the primitive planet. This is supposed to account for the orbit of Pallas and Juno (the smallest of the four) being more eccentric than Ceres and Vesta.

The immense atmospheres of Ceres and Pallas have furnished materials for another theory relative to "the lost comet of 1770," which ought, by computation, to have returned ten times since that year, but which has not been since seen. It has been supposed that this comet, passing near these two asteroids, communicated to them those immense nebulous atmospheres by which they are surrounded; but, unfortunately for this theory, the comet is not lost, but is revolving in a new orbit, into which it has been directed by the powerful attraction of Jupiter. It is rather surprising that some bold theorist has not identified in these asteroids the comet of 1770 itself, having the following data: That the explosion of a comet is a more probable event than that of a planet; that the asteroids were discovered not long after the comet was missing; that the form and inclination of their paths, together with considerable physical changes in their orbits, assimilate them to the nature of comets; and that, supposing the comet disrupted at right angles to its tail, there would be an unequal distribution of its atmosphere among the fragments, which would account for two having these atmospheres, and the others being destitute.

But there is no necessity for adopting such violent hypotheses. These small bodies are neither the wreck of a ruined world, nor are they wrapped in the newly acquired train of a comet wandering from its course. In the whole of creation, wherever the power of the Divine Being is evinced, there is also displayed harmony, and an arrangement for the general preservation; a beautiful connexion may be traced, uniting bodies apparently opposite in their natures, gliding through the various links, which ascends from the minute to the stupendous—from the grain of sand that fetters the proud ocean, to the rolling world, and all the vast orbs that move through immensity.

It is singular that the existence of these bodies, or at least of a planet moving near the courses which they pursue, was indicated by a very curious law, discovered by Prof. Bode,—that the excesses of the distances of the planets above Mercury form a geometrical series, of which the common ratio is 2: the mean distances at which the asteroids revolve are nearly equal, and complete the relation, which was before wanting. By assuming 10 as the mean distance of the earth from the sun, the following will be the result of this remarkable analogy:—

* Very considerable differences occur in the results obtained by Schroeter and Herschel in measuring the diameters of the asteroids. It is highly probable that the former included portions of their atmospheres in his measurements, while the latter (who is generally considered to be the most accurate) measured only the nucleus or disc.

	Distance in round numbers.
Mercury	4
Venus	4 + (3 × 1) = 7
Earth	4 + (3 × 2) = 10
Mars	4 + (3 × 3) = 13
Asteroids	4 + (3 × 29) = 86
Jupiter	4 + (3 × 21) = 67
Saturn	4 + (3 × 23) = 70
Uranus	4 + (3 × 24) = 76
A planet next beyond Uranus, if any exist	4 + (3 × 27) = 88

which latter is a little greater than the proportional distance of the aphelion of the comet of Halley. It is not easy to see the reason of this law, which is also lately found to prevail among the satellites of the system, relative to their mean distances from the centres of their respective primaries. Though hitherto unexplained, it is worthy of observation, that a similar law, relative to the periodic times and distances of the planets, remained veiled in obscurity until the connexion was discovered to be a necessary consequence of the laws of gravity. The explanation of this singular law may be reserved to some future period, when it will doubtless be found to be an important part of that grand scheme, every particular of which indicates design and perfect harmony." J. T. B.

Dexford.

ROYAL INSTITUTION.

MARCH 27. His Grace the Duke of Somerset in the chair.—The subject brought before the meeting was, "on the motion of the sap in plants." Mr. Burnett dwelt principally upon the experiments lately made by M. Dutrochet on the effects of influx and efflux of fluids through membranous substances, which he denominates *endosmosis* and *exosmosis*. In the laboratory of the Institution, the lecturer, in conjunction with Mr. Faraday, used very thin membranes, bladders, &c.; and, trying them in different ways, found them to succeed perfectly: in one experiment a cylinder was separated into two cells by a diaphragm of thin membrane, and then putting a solution of gum on one side, and water on the other, the water passed through the membrane to the gum, and increased the quantity on that side; whilst on the other side the quantity was diminished. Mr. Burnett proved the insufficiency of M. Dutrochet's views relative to the motion of sap, by simply cutting off the root and leaf of a celery stalk, in which it was found that the sap still ascended. The correction of error in the case of supposed animalcules was illustrated by a curious experiment, which it was understood would be repeated in the library: much gratification no doubt would have been thus afforded. Mr. Burnett frequently relieved his

* The Nautical Almanac, published under the direction of the British Government, and which professes to point out the motions of the planets, has never noticed the asteroids since their discovery, any more than if they never existed. Those who cultivate the science of astronomy, if they wish to know in what part of the heavens to look for them, must either have recourse to laborious calculations, or refer to foreign almanacs for the desired information. Not only in this particular is the Nautical Almanac defective, but it is generally inferior to some published on the continent. The new astronomical Ephemeris, by Professor Roche, is decidedly superior, and contains information interesting to the astronomer and important to the seaman; which is the more remarkable, as France, whence this Ephemeris emanates, is perhaps the least engaged in maritime affairs of any European nation. The Nautical Almanac also yields in utility and accuracy to some that appear in a humbler guise in this country. White's Ephemeris contains many important particulars not introduced in the other, which is, indeed, altogether a national disgrace. It is a singular fact, that while this work was edited by females (the widow and daughters of Dr. Maskelyne) it was infinitely superior to what it has since been in the hands of men of science, but who are violently regardless of the trust reposed in them. We are sorry to speak in these severe terms; but the evil to a naval and mercantile country is a crying one, and ought to be remedied without slackness, since the safety of ships and the lives of seamen often depend upon these faulty and erroneous tables.

subject by introducing other curious physiological facts and experiments. On the table before him stood a variety of plants, which, though their roots were immersed in laudanum, belladonna, and other poisons, still lived; immediate decay followed, however, when the flower of the plant was submitted to the action of the poisons. By means of a neatly executed model, he also pointed out the mode of action of the Venus fly-trap, a plant of the sensitive kind. In the library were placed a great variety of curiosities brought to this country by Captain Dillon: amongst them were several yards of white cloth resembling linen, but not so tough, manufactured by natives from the bark of the bread-fruit tree. A "matrimonial pillow" also attracted considerable attention: it is only a piece of wood, raised four inches from the ground, about five feet in length, and two inches in circumference: at each end a semicircle is formed, into which the head or neck of the parties reposing is placed;—a punishment equal to the stocks! A variety of literary presents were also made.

LINNEAN SOCIETY.

At the last meeting, A. B. Lambert, Esq., V. P., in the chair, the Rev. Dr. Lardner, Professor of Natural Philosophy and Astronomy in the London University, and six other gentlemen, were elected fellows of the Society. A paper was read, entitled, "An account of the different species of the genus *Ficus*, or fig-tree, found wild in Jamaica;" the paper was from the pen of James Macfadyen, Esq., colonial botanist. There was also read, the continuation of an interesting paper by the Secretary, entitled, "Remarks on the Flora of Great Britain, in connexion with geography and geology." The head and horns of a remarkable species of the buffalo (*Bos Arus*), from India, and also of a variety of the fallow-deer (*Cervus dama*), were presented to the Society's museum. The meeting then adjourned for a month.

INSTITUTION OF CIVIL ENGINEERS.

MARCH 17.—Mr. Simpson, in reference to the question, "What is the best method of filtering water for the supply of a city?" reported his recent operations at the Chelsea Water-works. The river-water is there cleansed from mechanical impurities by filtration through undulated layers of sand and gravel, and is rendered fresh and limpid by the action of water-falls. This plan is the result of Mr. Simpson's professional survey of the filter-beds at present worked in various parts of the kingdom. From the Chelsea filter-bed, thirteen thousand services are abundantly supplied with the purest water,—a proof that deficiency of engineering skill is not the sole obstacle to the comfort and health of one-fifteenth of our population.

March 24.—Lieut.-Col. Paisley, an honorary member, and a zealous supporter of the Institution, communicated several facts deduced from experiments on the formation of artificial cements. In proof of the inefficiency of chalk-lime mortar, he cited various examples of decay in docks and river walls. He then stated the effects produced by mixtures of pure clay, in various proportions, with common lime; and inferred the possibility of obtaining, at a comparatively moderate cost, all the essential qualities of water cements.

Mr. Frost, who has carefully investigated the properties of artificial compounds of lime, with alumine and silica, exhibited several specimens of artificial cement; and particularly remarked on the gradual but perfect solidification of lime

and silica. Mr. Turrel, in conclusion, recapitulated the heads of Mr. Faraday's lecture on the test for the durability of building-stone.

LONDON PHRENOLOGICAL SOCIETY.

At the anniversary meeting of this Society, held last Monday, Dr. Moore was elected president; Dr. Wright, T. Alcock, Esq., C. A. Tulk, Esq. F.R.S., and Dr. Poole, vice-presidents; J. Hayes, Esq. treasurer; J. B. Sedgwick, Esq. secretary; T. R. Fearnside, Esq. librarian; F. D. Bennett, Esq. curator. The other members elected on the council were—Dr. Elliotson, F.R.S.; D. Pollock, Esq.; C. Wheatstone, Esq.; H. H. Holme, Esq.; G. Lewis, Esq.; R. Maughan, Esq.; H. B. Churchill, Esq.; A. Epps; J. Deare, Esq.; R. Cooper, Esq.; E. Lance, Esq.; and G. Taylor, Esq.

LITERARY AND LEARNED.

OXFORD, March 28.—In a convocation holden on day last, the degree of Doctor in Divinity, by diploma, was conferred upon the Rev. J. M. Turner, M.A. of Christ Church, who has been recently nominated to the see of Calcutta, vacant by the death of the late bishop, Doctor James.

On the same day the following degrees were conferred: Masters of Arts.—Rev. A. E. Sketchley, Rev. J. Downall, Magdalen Hall. Bachelor of Arts.—C. B. Trye, Brasenose College.

CAMBRIDGE, March 27.—The subject of the Seatonian prize poem for the present year is "The Finding of Moses."

The Vice-Chancellor and other official electors of Tyndall's Hebrew scholarship, have announced that a premium of 50*l.* will be given for the best dissertation on "The nature and extent of the Hebrews found in the writings of St. Paul, including the Epistle to the Hebrews."

ROYAL SOCIETY.

APRIL 2. The President in the chair.—A paper was read, entitled, "on the physiology of the nervous system;" by Dr. Wilson Philip, F.R.S. In conformity with the new resolution of council relative to the election of peers of the realm, the President gave notice, that he would on that day week propose for immediate ballot the Right Hon. Francis Lord De Dunstanville. Dr. John Fabes was admitted, and took his seat as a fellow. William Cavendish, Esq., of Trinity College Cambridge, was proposed.

On the table we noticed a copy of the first Bible translated into the language of the Mohawk Indians: it was done by John Elliot, a Puritan of Charles the First's time, and published at Cambridge, New England, in 1663; and is in remarkably fine condition. Mr. Curtis's Lecture, delivered at the Royal Institution, on the Physiology and Zoology of the Ear, and other works, formed the presents.

KING'S COLLEGE.

We have heard, with no little satisfaction, that within the last fourteen days very considerable additions have been made to the subscriptions in behalf of King's College. The clamour which has been attempted to be raised against this noble Institution, could not fail, we felt assured, to call forth increased zeal on the part of its excellent committee, and a firmer determination to support it on the part of those who are sincerely attached to the established faith of this country, and anxious to promote the advancement of Christian morals and the cause of learning and science.

FINE ARTS.

ROYAL ACADEMY.

MARCH 26. Sir Thomas Lawrence, the President, in the chair.—Mr. Phillips in this lecture treated of *chiaro-scuro* and colouring. These combined, he observed, produce upon a plane

surface the resemblance of space, and give to the outline of forms the character of solidity and projection, causing them to advance or recede at the will of the painter, with all the pleasing or painful influence of natural appearances. *Chiaro-scuro* relates to light and shade, and to light and dark colour—is producible by either, but generally most effective when combined. These remarks led to a few observations on light, natural and artificial. In nature light causes shade: in art, however paradoxical it may appear, shade is the cause of light; or, rather, light and shade reciprocally generate each other. The lecturer then pointed out the management of contrast, and observed that light introduced sideways in various degrees is more available than a front light, creating not only a greater breadth of light and shade upon a figure, but giving, more completely than any other scheme, the power of separating figures, or of uniting part with part, and figure with figure; thereby adding great grace and beauty to composition. The lecturer ranked *chiaro-scuro* next in quality among the principles of the art to design and tone. A just sense of the importance of variety in a picture was next inculcated: no two masses of light or dark ought to be equal in size, nor alike in shape, nor parallel in position; the never-ending research after variety, which nature teaches to desire, not permitting satisfaction with monotony. Mr. Phillips then quoted the St. Peter in Prison, the Miracle at Bolsena, and the Heliodorus of Raffaele, as illustrations of the management of *chiaro-scuro*. Poussin followed the principles of Raffaele in that respect; and Mr. West, the late venerated President of the Academy, pursuing the same track, improved upon both, as might be seen in his *Regulus*, *Pyrrhus* at the foot of *Glaucias*, his *Lea*, and many others of his works. The lecturer, after touching upon various masters eminent for an accurate regard to *chiaro-scuro*, proceeded to consider the principles of colouring. He illustrated this part of his subject by a prismatic diagram; and observed, that colouring, though multifarious in its qualities, extensive in its unions and effects, and difficult in its application, was simple in its theoretical principles;—truth of imitation of an actual colour, and unity of shade, he conceived to be the firm, though simple basis of fine colouring in its primitive purity. In closing the lecture, Mr. Phillips dwelt upon the application of colouring in different schools, particularly the Venetian, and examined the question relative to the propriety of uniting the beauties of the different schools of painting. This being Mr. Phillips's last lecture, he took a sessional adieu of the students, earnestly recommending the private cultivation of their profession, as the best addition to public instruction.

SUFFOLK STREET GALLERY.

(Second Notice.)

No. 68. *Fruit*. G. Stevens.—Of this delicious composition we can only say, that in arrangement and execution it equals the finest examples of the kind that we have ever seen. The greens strike us as being rather ultra in brightness; but probably Mr. Stevens allowed a little for the effect of time on his work.

No. 71. *The Lady's Favour*. W. M'Call.—If our artists cannot always equal the power of tone and colour of the old masters, they almost always communicate a more exalted sentiment to their subjects. "The Lady's Favour" reminds us of Giorgione's "Gaston de Foix," which simply represents an attendant adjusting a part of the knight's armour; but Mr.

M'Call has imparted to his production an air of gallantry, in which the great Venetian's work is deficient. All that it wants is a little more depth and force.

No. 66. *The Cottage Juggler*. J. Knight.—Beautifully and harmoniously painted. A greater concentration of effect would perhaps be advantageous to it. We will not enter into the controversy how far objects in motion are fit subjects for painting: it is certain that Mr. Knight's young Juggler is perfect in his vocation; for he will never let one of his oranges fall to the ground.

No. 69. *The Danes*. W. Gill.—Like every thing we have seen from Mr. Gill's pencil; full of nature and feeling. A remark opposite to that which we have just made on Mr. Knight's picture suggests itself to us: we think the introduction of a little more light would be beneficial. The quotation which Mr. Gill has added to the title in the Catalogue is not a happy one. Cold-blooded indeed must he be who would "mock" the innocent pastime so ably depicted.

No. 113. *Fox-hounds just found, and getting together*. R. B. Davis.—We said, a short time ago, that we would not enter into the question how far objects in motion were fit subjects for painting. Sorry, however, should we be, had its decision in the negative prevented the production of this remarkably fine performance. To the lovers of the sports of the field it will be peculiarly interesting; for the character of the dogs and their rushing speed are admirably expressed. The localities of the scene are also painted with great spirit and truth. It is a picture which does Mr. Davis the highest credit.

No. 126. *Burns and Highland Mary*. R. Edmonstone.—There are few incidents in the life or writings of Burns which will not admit of illustration by the pencil; and yet, so powerful were the poet's feelings and expressions, that perfectly to embody them, whether they resulted from the fatal fancies of his mirth, the uncontrollable violence of his passions, or the deep pathos of his melancholy, is no easy task. The subject which Mr. Edmonstone has selected is simple and pleasing. He has imparted a delightful character of feminine delicacy and timidity to Mary, who is gently turning from the ardent gaze of her lover. The execution of the picture has been very carefully attended to; and the colouring is chaste and harmonious.

No. 149. *The wrecked Fisherman restored*. J. Tennant.—This performance is executed in a bright and vigorous style, and reminds us of some of the paintings of Louthembourg. The group which gives it its title is well put together; with the exception of the child, which seems too small, and may be said to be out of place, as far as regards the character of the composition.

No. 154. *Landscape, with Birch Trees*. F. R. Lee.—"Quite correct."

No. 175. *Amiens*. C. R. Stanley.—Dear to the lovers of art are those old buildings and fragments of buildings, from which the ordinary eye turns with indifference. When the representation of them is invested, as in the present instance, with all the glowing animation of the palette, there are few objects, the contemplation of which is attended with more amusement and pleasure.

No. 180. *The Narration*. J. Inskipp.—Beautifully and harmoniously coloured; of a very mellow tone; and calculated to excite the curiosity of the spectator, to know what so pretty a girl can have to do with an old book,

the size of which is, we should think, sufficient to alarm any but a deep blue.

No. 179. *The Rebuff*. H. Pidding.—We do not like rebuffs ourselves; nor, as it appears, does the poor dog who receives a whiff of tobacco in his face, in return for his playful caresses. Without much admiring Mr. Pidding's choice of a subject, we are bound to admit that his picture is well painted.

No. 237. *Danger*. No. 291. *Destruction*. G. Lance.—The story of an unhappy heron. We own that we wish Mr. Lance had remained satisfied with his former exquisitely fine picture of this subject. "Let well alone," is an adage replete with wisdom.

No. 165. *Don Juan*. C. F. Tomkins.—This performance has considerable merit; although, as far as the effect of light and colour is concerned, it is only an imitation of what has been already very ably accomplished.

No. 107. *The Shannon and the Chesapeake; second edition*. H. Pidding.—There is something so animating in good news, that we are not surprised at its throwing an old man-of-war's man into an ecstasy, an incident which Mr. Pidding has portrayed with his usual skill. The projected stump of the veteran, his firm grasp of the crumpled newspaper, and his eager perusal of the inspiring narrative, all shew the ardour of one who is quite ready, however crippled, to "fight his battles o'er again."

No. 106. *Landscape, with an Aqueduct; Evening*. T. W. Dagnall.—Great truth, and unaffected simplicity; shewing how little *matériel* will suffice for a picture, when viewed by the eye of taste.

No. 204. *A Girl peeling Turnips*. A. Fraser.—We were exceedingly charmed with the "Old Woman peeling Turnips," by Teniers, that was exhibited in the British Gallery some time ago; though then it was principally with the pots and pans by which she was surrounded; but here the female herself is charming; and the accessories are almost as ably executed as those by the famous Dutch master. Is not the balance, therefore, in favour of our artist?

No. 203. *The Preparation*. R. Farrier.—Very pretty, but a little too artificial.

[To be continued.]

MODERN SCULPTURE.

THREE groups in marble, of no ordinary merit, the subjects of which are "Venus and Vulcan," "Adonis and the Boar," and "Aretusa, a nymph of Diana" are at present exhibiting, in a temporary room in the King's Mews, by an artist of the name of Carew; who has hitherto "pursued the noiseless tenor of his way" unaided by patronage, except from one noble individual, the Earl of Egremont, who stands foremost in the list of the fosterers of native genius, and for whom these groups have been executed.

In their production it is evident that Mr. Carew has sought to avoid the severity of the Roman school, and to rely for his effect on a selection and combination of natural forms. The group of "Venus and Vulcan" is his largest, and, in our opinion, decidedly his best performance. The queen of love is represented as gently approaching her injured and angry lord, and endeavouring, by the usual female blandishments, to win him to forgiveness of her infidelities. Her figure is finely proportioned, and full of beauty; and the expression of her countenance, as well as the delicacy of her action, deserve high praise. The character of Vulcan is also well conceived.

Seated on his anvil, firmly grasping his hammer, and turning away from the fair supplicant, there is nevertheless an expression in his rugged features which shews that she has only to persevere in order to be triumphant. The anatomy of Vulcan's trunk and limbs is strongly marked, without being overcharged, and one of his legs in particular is admirable.—The action of the "Adonis" strikes us as being somewhat constrained, especially considering the perilous situation in which he is placed.—The character of the "Arethusa" is chaste and nymph-like.

Upon the whole, there is a style in these compositions which proves that Mr. Carew has not submitted his own natural feeling to the slavery of scholastic rules; and, if he steadily perseveres in the course upon which he has entered, we are convinced that he will afford us future opportunities of speaking still more highly of his talents.

LATEST NEWS FROM POMPEII.

Munich, March 30.

OUR last accounts from Rome of the 12th of March inform us that his Majesty the King of Bavaria had returned to that city. On the 27th of February his majesty and suite visited Herculaneum and Pompeii, to view the new discoveries. As the frescoes are now suffered to remain upon the walls, and several pieces of furniture are left in the places where they served the former owners, one appears to be in the midst of the ancients. A bath, which has been lately excavated, was particularly remarkable: the decorations of the walls, which are very fine, are in perfect preservation; and the bronze seats remain in the places where they were used by the inhabitants of Pompeii 1,800 years ago. In honour of his majesty, the workmen were directed to continue their researches in a house, the excavation of which was already begun. The result was very fortunate. It seems that they came to a glass-shop—for they found in one spot above 500 glass vessels of the most various descriptions. Near the spot were several bronze vessels and many glass beads, probably part of a necklace. The King of Naples made a present to the King of Bavaria of all that was found on this occasion. The newly discovered paintings are far superior to those previously found, and prove that painting among the ancients was not below the other arts. The fresco paintings on the walls of a very pretty house, representing Ganymede carried off by the eagle, and Bacchantes, are not unworthy of a Julio Romano or Giovanni di Udine. Others, with architecture, entirely refute the notion which some persons entertain, that the ancients were ignorant of perspective; for the perspective drawing of the buildings is perfect. In a house at Herculaneum, which has been but just opened, a very large stock of all kinds of fruit was discovered, which are indeed carbonised, but in other respects well preserved and very interesting. His majesty has received a complete collection of the several kinds.

NEW PUBLICATIONS.

The King.—A fine mezzotinto of the King, from Lawrence, has just been engraved by Mr. Hodgetts. It represents his Majesty at full length, in his garter robes, standing up somewhat in the position of Hoppner's engraved portrait. The present work is very brilliantly executed, and enrols the name of the artist high among those of older eminence, and consequently better known to the public.

(Published by Colnaghi, Cockspur Street.)

The Duke of Wellington.—A very striking likeness of the Duke of Wellington has just been produced on stone by W. Sharp, from a drawing by John Hayter. Taken altogether, we think this resemblance, though done as a simple sketch, one of the strongest we have seen. The eagle nose and penetrating eye are cleverly delineated; and the lower part of his Grace's sharp countenance, which has rarely been faithfully represented, is given with much of truth and character.

(Published by J. Dickinson.)

Portrait of Goartius. Drawn and engraved by T. Woolnoth, from the Picture by Vanduyke. Ackermann.

AN exquisitely beautiful print (in stipple) from the well-known picture in the National Gallery, generally acknowledged to be in several respects the finest head by Vanduyke existing. This is, we believe, the third of an intended series of heads from the old masters, which appears to us to be richly deserving of public encouragement.

The Day before Marriage. A Year after Marriage. Composed by Deveria, and drawn on Stone by H. Humphreys. Tilt.

How fortunate it is for the male sex that a lovely girl of eighteen is not always disposed to reflect before she passes, as she is represented to do in these characteristic little sketches, from the gay buoyancy of virgin expectation to the painful vigils of maternal anxiety!

The Honourable Mrs. Barrington. Engraved by Thomson, from a Miniature by Mrs. Jas. Robertson. M. Colnaghi.

A GRACEFUL and interesting portrait of Lord Ravensworth's lovely daughter, forming the fifty-second of the series of the portraits of the female nobility, published in La Belle Assemblée.

Pictas Oxoniensis; or, Records of Oxford Founders. By Joseph Skelton, F.S.A. Part the Second.

THE plates which ornament the present Part of Mr. Skelton's interesting publication are, "Bernard Castle, Durham, the birth-place of John Balliol, the founder of Balliol College, Oxford;" "Nave of Lincoln Cathedral, the burial-place of Bishop Smith, the co-founder of Brasenose College, Oxford;" and "the Shrine of Bishop Waynflete, in Winchester Cathedral, founder of Magdalen College, Oxford." The letter-press contains the completion of the account of Merton College, an account of University College, and the commencement of an account of Balliol College.

Portraits of Illustrious Personages of Great Britain, with Biographical and Historical Memoirs. By Edmund Lodge, esq. Norroy King of Arms, F.S.A. &c. Part XXXVI. Harding and Lepard.

THIS Part contains the portraits of Henrietta Maria, queen of Charles the First; Prince Rupert; Henry Howard, Earl of Surrey; Thomas Howard, fourth Duke of Norfolk; and Sir Matthew Hale. They are very pleasingly executed; and the following summary of the character of that great judge Sir Matthew Hale, will shew the elegance of Mr. Lodge's composition:—

"Of the powers of this eminent person's mind, and of his application of those powers to the duties of his profession, it is needless to speak. While the law of England shall subsist, they will be broadly and splendidly traced in the education of the student, the skill of the

advocate, and the decisions of the bench. Let those who so profit by the dictates of his wisdom, and the results of his labour, dedicate to his memory that incense which will be most grateful to his venerable shade. Let them imitate the intenseness and patience of his application; the candour as well as the acuteness of his argument; and the minute justice of his judgments: for all these he was equally celebrated. His conduct in all the relations of life was as pure as that which he displayed to public admiration; and the sweetness of his temper, the benevolence and simplicity of his heart, endeared him to the utmost to his family and dependants, and to his private intimates; yet, however excellent his nature, piety was indeed the vital principle of his character; a piety not recluse and contemplative, but so directing every action, as to consecrate the most ordinary offices of his life. If to some the strictness of his religious observances should seem too severe, let it be remembered that this severity regarded himself alone, while with respect to others he was invariably charitable in opinion, and gentle in correction."

Engraved Illustrations of Ancient Arms and Armour. After the Drawings, and with the Descriptions, of Dr. Meyrick. By Joseph Skelton, F.S.A. Part XVI.

THE plates which ornament the sixteenth Part of Mr. Skelton's fine work, are—"Weapons from the isles and shores of the Pacific;" "Demi-Launcer's Armour, A.D. 1555;" "Italian and Highland Targets, A.D. 1655;" "Spurs;" "Brigandine Armour, A.D. 1590;" and Target of Francis I., A.D. 1566." Of the last it is said: "This astonishingly fine specimen of art was executed when Italy was in the zenith of her unrivalled talents. It was exhumated in France, and has suffered greatly from the pick-axe which was struck through it, and from the hole thus made was broken into three parts. The gold which once profusely adorned it has been almost entirely removed, to gratify the avarice of the finder, and the steel itself, in one place, is somewhat corroded. It has been rescued from entire destruction by the Count Vassali, who, after directing the several pieces to be cautiously and skilfully united, brought it with great care to this country. The design is by Giulio Romano, or his contemporary Primaticcio, and it was probably executed by Filippo Negroli, a celebrated Milanese armourer, known to have worked for Francis I. The completely convex form of the target, and the military costume, demonstrate, in addition to its superior execution, that its fabrication took place immediately after the event it was intended to commemorate. This was the disgraceful retreat of Charles Brandon, Duke of Suffolk, who, to the terror of the Parisians, had advanced within eleven leagues of the capital, burning and plundering on the whole line of his march, in order, at the instigation of the Duc de Bourbon, to place the crown of France on the head of his sovereign. Relieved from their terror by the government opportunely calling out the levy en masse in aid of the army under Tremouille, their gratitude was expressed by the present of this target to their gallant king."

BIOGRAPHY.

WILLIAM STEVENSON, ESQ.

AMONG other losses which the literary and scientific world has recently sustained, is that of William Stevenson, Esq., of the Records' Office in the Treasury;—a man remarkable for the stores of knowledge which he possessed,

and for the modesty and simplicity by which those rare attainments were concealed. Mr. Stevenson was the author of a valuable work entitled, "Historical Sketch of the Progress of Discovery, Navigation, and Commerce," published in 1824; containing, besides much curious and interesting information in the body of the volume, an admirable Catalogue Raisonné of the best books of travels and voyages, omitting those which the ingenious and learned compiler of the catalogue had proved from his researches to be inaccurate, or considered to be frivolous. In his literary, as well as in his private dealings, Mr. Stevenson was so rigidly conscientious, that he gave considerable offence in the arrangement of this list to an eminent literary character and an intimate friend of his own, by omitting the mention of a book of travels which that gentleman had written, and which Mr. Stevenson deemed unworthy of insertion. The article on Chivalry in Dr. Brewster's Encyclopedia was written by Mr. Stevenson; and he was the author of the Agricultural Survey of Surrey. Few men were more calculated for works of an agricultural and topographical nature than himself. Early in life he had devoted considerable attention to agricultural pursuits, with no better success than to fix the theory indelibly in his mind. It was during the last few months of his life that the results of his industry and research became more extensive, beneficial to the public, from his contributions to the treatises published by the Society for the Diffusion of Knowledge. The *Life of Caxton*, written by him, will always be perused with instruction and interest, as a full, elaborate, and accurate account of the labours of that great promoter of knowledge. In this and in his other works, Mr. Stevenson, contrary to the practice too prevalent in these days, dived into original sources of information; and, with the true spirit of a faithful historian, consulted the interests of truth, rather than the object of amusement to his readers. Until the commencement of a severe indisposition, Mr. Stevenson was occupied in preparing for the press a series of treatises intended for the edification of the agricultural classes, projected by that eminent friend to intellectual improvement, Mr. Brougham, and under the auspices of the Diffusion Society. These Essays, which, we are informed, will still shortly be published, were a source of the most interesting occupation to Mr. Stevenson, until repeated attacks of illness obliged him to relinquish all mental exertion. On Friday the 20th of March, he appeared, however, so much recovered, as to afford considerable hopes to his anxious friends that he would soon be enabled to resume his studies. These expectations were suddenly blighted: While sitting at tea with his family the same evening, he became unable to lift the cup to his mouth, sunk back, and never spoke afterwards. He died on Sunday, the 22d ult., aged fifty-seven. Few men in the course of their worldly career encounter less personal enmity, or conciliate more sincere and steady friendships, than the subject of this brief notice. In deportment he was not only mild and inoffensive, but, where opportunity afforded him, a zealous and active friend. He had little of the pride of authorship; and so much of the disinterestedness which belongs to a philosophic mind, that it was difficult for public attention to find him out. Retired and moderate in his habits, and loving knowledge for her own sake, Mr. Stevenson resembled a literary character of the last century, when display fol-

lowed not so fast in the footsteps of exertion. Such men cannot be sufficiently appreciated: it is they who give the stamp of sterling value to the literature of this country.

SKETCHES OF SOCIETY.

THE LATE DUEL.

THE Earl of Winchelsea has authorised a statement in the *Morning Journal*, in the following words:—"It is incorrect that Dr. Hume loaded or assisted in loading Lord Winchelsea's pistols; of course, Lord Falmouth did so,—and to his conduct, indeed, which was marked by calmness and self-possession, as well as by judgment and strict courtesy, Lord Winchelsea has no hesitation in declaring he considers the fortunate termination of the affair to be mainly owing. In regard to the acknowledgment, it was quite a voluntary one; and indeed it could not well be otherwise under the circumstances." We copy this correction of a very slight error into which it seems we were led in our account of this transaction, not only because it is due to the parties concerned and to truth, but because it proves the accuracy of our statement in all other particulars. Lord W. also mentions that he went to the ground privately, in a chariot and pair, and not in a chaise and four, as absurdly asserted in the newspapers, but with which the *Literary Gazette* has had nothing to do.

MUSIC.

THE MELODISTS' CLUB.

AT the third meeting of the season, on Thursday, the 26th ult., Lord Saltoun, one of the Vice Presidents, was in the chair, and about fifty members sat down to dinner. We need not detail the usual loyal and convivial toasts, nor the brief observations with which they were introduced; especially as in a society where so much musical enjoyment is expected, the latter are always as concise as could be desired,—and the noble lord at the head of the table was no trespasser. The novelties of the evening, however, deserve our notice. "Would you know why this England?" an animated song, the words by Mr. Gasepy, and the music by Mr. Watson, was sung with great spirit and a stirring effect by Mr. Braham, whose gusto and glorious organ made the chamber ring again. To contrast with this, there was a charming ballad by the same composer, sung by Mr. Gould (an amateur), and sung very sweetly; the words, by Mr. C. H. Freeman, are as follow:—

Think of me, Mary, think of me,
When at eventide you roam
To gaze upon the boundless sea,
And think of distant home;
Think of me when the day is done—
I cannot claim a tear;
I only ask a sigh for one
Whose heart is breaking here, Mary,
Whose heart is breaking here.
Weep for me, Mary, weep for me,
'Tis the lowly boon I crave;
My only joys are thoughts of thee,
My only hope the grave.
He who thy wav'ring heart has won—
He whom thou holdest dear,
Will not refuse a sigh for one
Whose heart is breaking here, Mary,
Whose heart is breaking here.

This melody is very simple, and it does credit to the Club. The other entertainments of the evening were all in good keeping.

ORATORIOS.

ON Wednesday the *Messiah*—and Camporese's first appearance since her return to England. At first she seemed to be a little flat; but in "Vedrai Carino" gave all Mozart's beauties,

was full of effect, and justly obtained a unanimous encore. We know no singer, indeed, who does Mozart's music greater justice. Miss Love ought, after all, to be a male; for even her counter-tenor is too weak for so large a theatre. Miss Betts sang admirably in tune, and both in "Rejoice greatly," and the recitative "There were shepherds," entitled herself to the highest praise. Miss Farrar also acquitted herself very satisfactorily. With regard to the gentlemen, we thought Braham a little unwell with a cold; but when he gave us "Thy rebuke" in his own superb manner, the indisposition was forgotten both by him and us. J. O. Atkins should be named as a very efficient singer on this occasion; and young Seguin was admirable for an extraordinary base and finished execution. A touch of energy is all he wants. The choruses were magnificent: "And the glory of the Lord," and "For unto us," could not be surpassed.

While on musical themes, we ought to notice the delight we experienced on Saturday by hearing Miss Grant sing from the gallery in Freemason's Hall to the company assembled at the Scottish Hospital Anniversary. On this occasion Miss Grant gave the Scottish airs with great *sweetness*, and displayed powers of voice and taste which caused us to wonder why she has been kept so entirely in the background since she made her theatrical debut. We have certainly few female vocalists capable of affording greater pleasure to the public.

DRAMA.

DRURY LANE.

WE have the pleasure of recording this week the deserved success of a farce by Mr. Poole, entitled, *My Wife! what Wife!* The plot is perhaps not the most probable in the world; but who cares for probability in a farce, particularly when the situations are striking, and the dialogue lively? Farren, as a steady old naval captain, and Jones as his extravagant waggish nephew, assuming the wig and uniform of his uncle, marrying a young lady in his name, and mystifying thereby the old gentleman till he doubts his own identity, were, of course, both in their elements; and Harley, as *Simon Pym*, a sentimental sponge, whose system is to sup where he dines, and sleep where he sups, &c. contributed his full share to the mirth of the evening. Mr. W. Bennett deserves honourable mention for his very natural acting the part of *Blunt*, the old servant of the uncle. The scene between him and Farren at the end of the first act was quite perfect. Mrs. C. Jones had but little to do,—a circumstance we always regret, as we consider her one of the cleverest actresses in her line. Miss Curtis agreeably surprised us by her performance of *Louise*;—and, altogether, with a little pruning of the first two scenes, and a few less "last words," this farce bids fair to be a standing dish at Old Drury.

King Lear was revived on Monday, when Young in *Lear*, Farren in *Kent*, Cooper in *Edgar*, and Miss Phillips in *Cordelia*, were all excellent.

COVENT GARDEN.

THE play of the *Padlock*, which is announced at this theatre next Tuesday, in aid of the fund for the Diddin Monument, bids fair to be more than usually attractive, from the united talents of Miss Paton and Madame Vestris. The latter, we hear, is to sport a *wooden leg* on the occasion; which novelty will amuse more, though it may not please so much as her own smart pair of limbs.

ADVERTISEMENTS

Connected with Literature and the Arts.

BRITISH INSTITUTION, PALL MALL.

The Gallery for the Exhibition and Sale of the Works of British Artists, including the Pictures of His late Majesty presenting the Sword to Earl Howe, on board the Queen Charlotte, after the Victory of the First of June, 1794; and Lord Nelson boarding the San Joseph, off Cape St. Vincent, presented by the British Institution to the Royal Hospital of Greenwich, is open daily, from Ten in the Morning until Five in the Evening.

The Popular Airs sung by Les Trois Troubadours, for the Harp and Piano, by Bochsa, &c. Also, the same Airs for the Harp alone, by ditto. Nos. 1, 2, 3, each 2s.

BOOKS PUBLISHED THIS DAY.

The Strasbourg Controversy.

A REPLY TO FABER'S SUPPLEMENT to his DIFFICULTIES of ROMANISM.

By the Rev. F. C. HUSENBETH.

"Diligite homines: interficite eos."—St. Aug. In 1 vol. 8vo. price 10s.

Published by Hurst, Chance, and Co.; Keating and Brown; and

* In this work the controversial conduct of the Rector of Long Newton is fully exposed; particularly his stratagem of reviling the Bishop of Strasbourg, as if he had charged Mr. Faber with suppressing a passage of St. Cyril, when the Bishop had actually acknowledged the Rector's citation of that passage; also, Mr. Faber's false translation of St. Augustine; false accounts of the Works of Julius; misrepresentation of Theodoret; and unfair quotation from St. Jerome and Origen.

NOVELS and TALES of the AUTHOR of

WAVERLEY. A few Copies of this Work may still be had at the reduced price of 3s. 15s. 6d. (published at 15s. 6d.) in extra boards. Complete in 25 vols. 18mo. beautifully printed, and embellished with 80 Plates and Vignettes, engraved by Charles Heath, from designs by Leslie, Cooper, Howard, Stothard, &c. Contents: Waverley—Guy Rannoch—Antiquary—Rob Roy—Tales of my Landlord, 1st, 2d, and 3d Series—Vivian—The Monastery—the Abbot—Kenilworth—Pirate—Fortunes of Nigel—Peveril of the Peak—and Quentin Durward.

A few Copies of the

Historical Romances, and Novels and Romances, may be had separately, to complete Sets of the first Twelve Volumes.

London: Hurst, Chance, and Co. 65, St. Paul's Churchyard; and to be had of all Booksellers in Town and Country.

Price 2l. 10s. in cloth boards, illustrated with 100 Engravings of curious, rare, and interesting Subjects,

LONDINIANA; or, Anecdotes, Tracts, and Memorials of the Streets, Buildings, and Personages connected with the History of London in all Ages.

By E. W. BRAYLEY, Esq.

This Work, like St. Foix's on Paris, will prove to the Literary World as amusing and instructing in the English language, as St. Foix's is in the French language; and it may be added, that its contents are not compiled from other books, but chiefly from original documents in the British Museum, the Guildhall Library, &c. &c.

Printed for Hurst, Chance, and Co. 65, St. Paul's Churchyard.

Of whom may be had, just published,

The Operative Chemist, price 31s. 6d. By Samuel F. Gray, Esq., Author of the Supplement to the London Pharmacopoeia, &c.

Library of Useful Knowledge.—Price 6d.

Price Seven Shillings and Sixpence, No. VI. of the

FOREIGN QUARTERLY REVIEW.

Contents.—I. Arts and Manufactures in France.—III. Humboldt's Political and Statistical Account of Cuba.—III. Meyer on the Judicial Institutions of the Principal Countries of Europe.—IV. Oginsky's Memoirs on Poland.—V. Derode's New Theory of Harmony.—VI. Memoirs of Voltaire.—VII. Hauser's History of the Hohenstauffens.—VIII. Louis Buonaparte's Answer to Sir Walter Scott's History of Napoleon.—IX. Language and Literature of Friesland.—X. Duke Bernard's Travels in North America.—XI. Wine Trade of France. Critical Sketches of French Writers. XII. Cousin, Cours de Philosophie.—XIII. Histoire de la Peinture et de Sculpture.—XIV. Histoire de l'Ecole Polytechnique.—XV. Biographie Universelle, Ancienne et Moderne.—XVI. Bausset, Mémoires Anecdotes, Tom. III. et IV.—XVII. Almanach Français pour 1829. Italian Works: XVIII. Gamba Serie di Testi.—XIX. La Fidanza Ligure. German Works: XX. Büttcher's Geschichte der Carthager, nach Quellen.—XXI. Fallmayer's Geschichte des Kayserthums von Traupern.—XXII. German Almanachs for 1829.—Eighty-two Miscellaneous Literary Notices from Denmark, France, Germany, Italy, Netherlands, Russia and Poland, Sweden, Switzerland, and concerning Oriental Literature.—A List of Four Hundred and Sixty-nine of the principal New Works published on the Continent, from September to December 1828.

"The 'Foreign Quarterly Review' deserves the first place in our notice, because the idea of this class of works originated with its founders. It seems to us the best edited periodical in the country; and we should think no Review, monthly, quarterly, or weekly, can cost so much labour to its conductor. The mixture of subjects is admirable. Not only is there no preference shown for one country above another,—no French, Italian, German, or Swiss ascendancy visible at all there,—but what is much more difficult, the books selected from each of those languages, are those which are best calculated to illustrate the spirit of the different nations from which they have issued. This end seems never to be lost sight of, and it is very skilfully combined with the other, less considered by a philosophical reader, but highly important with a view to the pleasure of the 'general,' giving of the work an English and a present interest."—*Athenaeum*, Jan. 7.

"The opinion we lately expressed, that this periodical was decidedly the best edited, and one of the best written Reviews in this country, has not been changed by a perusal of the present number."—*Ibid.* March 4.

"We wish to point out to our readers an article in the 'Foreign Quarterly Review,' No. VI. on the Arts and Manufactures of France. All real lovers of information—all persons interested in the true sources of national happiness—will be obliged to us for referring them to this, the first article of the new number. The quantity of the instruction to be derived from it, is only to be equalled by the benevolence of the spirit in which it is written. The characteristics of this Review are, the utility of its objects, and the care and steadiness with which they are followed up: every thing is weighed, finished, and serious."—*Spectator*, Jan. 7.

"The articles in the present number of the 'Foreign Quarterly Review,' we think, well selected, and written with good taste and judgment; they have a fitting and proportionate length to the subject; and in most of them that learning is displayed which is the only true one, i. e. an accurate information of the matter of which they treat. The fact is, we can recommend every article in this number. If the editor brings out many such numbers, his journal will vindicate to its very eminent rank among European literary journals."—*Edinburgh Evening Post*, Feb. 7.

"If the attitude of utility be the standard by which we ought to decide the merits of a work of this nature, it will not admit of a moment's question that the present number of the 'Foreign Quarterly Review' is the best which has yet appeared. A majority of its articles are written on subjects of great practical utility; and in almost every instance the writer displays an intimate acquaintance with all the details of his subject, and discusses it in a masterly manner."—*Edinburgh Courier*, Feb. 20.

"The present number of this most promising Patagonian periodical, is the most useful number we have yet seen."—*Sun*, Feb. 2.

The opinion which has been already formed of this work, the present specimen is calculated not only to sustain, but to elevate. It is a pleasing peculiarity in it, that while it is distinguished by the possession of one or two great and pervading characteristics, every number that has yet appeared is remarkable for a distinctness and prominent feature, the value of which increases the value of the whole. The present one may, we believe, be named the Number of utility and facts."—*Glasgow Free Press*, Feb. 11.

No. VII. will appear early in next month.

Published by Treuttel and Wirtz, Treuttel, Jun., and Richter, Foreign Booksellers to the King, 30, Soho Square.

In royal 8vo. with 24 Plates, No. I. price 10s. 6d.

BOTANICAL MISCELLANY, intended to comprise Figures and Descriptions of new, rare, or little-known Plants, from various Parts of the World, particularly of such as are useful in Commerce, in the Arts, in Medicine, or in Domestic Economy.

By W. I. HOOKER, LL.D. F.R.S. and L.S. &c. &c. And Regius Professor of Botany in the University of Glasgow. A few Copies with the Cryptogamous Plates coloured, 15s. John Murray, Albemarle Street.

In 1 thick vol. 8vo. price 7s. 6d.

REFLECTIONS on the PRESENT STATE of BRITISH INDIA. Dedicated to Woolryche Whitmore, Esq. M.P.

"We strongly recommend this excellent work, as one of the best that has been published on India for a very long period."—*Oriental Herald*.

London: Hurst, Chance, and Co. 65, St. Paul's Churchyard.

Handsomely printed, bound and gilt, price 25s.

THE ANNUAL PEERAGE of the BRI-

TISH EMPIRE for 1829, with the Family Histories, Direct and Collateral, printed under the sanction and from the Communications of the Nobility; to which is added, the Baronetage, and new Plates of the Arms, beautifully engraved: those of the Peers of England revised and corrected by Edmund Lodge, Esq. Norroy King of Arms, &c.

Journal of Belles Lettres, Arts, Sciences, &c.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen, throughout the Kingdom; but to those who may desire its immediate transmission, by post, we recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 634.

SATURDAY, APRIL 11, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

All for Love; or, the Spanner well Served; and The Pilgrim to Compostella; or, a Legend of a Cook and a Hen. By Robert Southey, Esq. LL.D. Foot Laureate, &c. 12mo. pp. 224. London, 1829. Murray.

It is told in the Laureate to publish two poems on the old head of superstitious tradition occluded at this particular time of this particular year: yet we must confess that "old Robin Gray" (as he calls himself in his introduction to the *Pilgrim to Compostella*) has

"Lament his youth and wasted a song,
A ballad of the best."

not, indeed, in the *Pilgrim* afterwards, but in the *All for Love*, or a *Spanner well Served*. This ballad is founded on an old legend of the (Irish) South, which may be then summed up. A youth, by name Elstan, fell in love with his neighbor's daughter, (Cye, and long essayed to win the consent of the father to certain promise which was disagreeable in the view of the mother herself. Elstan prayed to virgin, and child, and martyr, and in vain: he then turned to the heathen authorities, not as usual to the heathen authorities, and with equal ill success brought the aid of what one of our Country Poets calls "Apollo, and Mars, and the rest." There remained one desperate resource, the old superstition, as he is generally designated in polite society, after

"And thence, from North, or South,
Who is your avenger, and your
Who is your avenger, and your
Who is your avenger, and your."

Elstan accordingly goes to the devil; and the old customs to play the devil with all the old customs of the country, and to manage also that (as shall forthwith be seen), provided the old Elstan consents to have a little red mark put on his breast, over against his heart, bring the damned and visible sign of his having sold to evil, the world's goods past and gone, to his eternal company. The bargain is struck, and is stamped. Cye is married to Elstan, and to all outward view they are a most happy couple. But Elstan, the honeymoon was over, cannot away with the "damned spot." Much of the conduct of the story is bound up in this. His secret is discovered from him by his affectionate wife, after a second marriage dinner, and by her revealed to the city Bishop Beak, who resolves the confusion of the marriage of the dinner who has sacrificed *All for Love*. He gives gaily assent; and we come a beautiful touch of domestic imagination—the spot is washed out by the tears of Elstan and his Cye.

We have promised ourselves to discuss rather lightly. This is, nevertheless, a very elegant, and, in our feelings, a very touching little poem. We possess a few extracts only. The first describes Elstan's visit to Beak, when he has spent himself to the confusion of the diabolical

"The night stars gave out in heaven
As that night light,
And all the stars that shined then
Shook their heads at light."

And a shuddering in the room was heard,
Though winds were still that night.

He called the spirits of the air,
He called them in the name
(Of Athos) and at the call
The attendant spirits came—

A strong hand which he could not see
Took his spirit hand;
He felt a strong arm drive him,
And left him from his stand:

A whirl of unseen wings he heard
About him every where,
Which onward, with a mighty force,
Impelled him through the air.

Fast through the middle sky and far
It hurried him along:
The hurricane he could not resist,
The instant he was strong.

The lightning struck not so fast,
The lightning not so fast,
And now behind him he had left
The mists and every star.

And still swift as on the tomb
In implicit art he stood,
He felt a strong arm drive him,
And left him from his stand:

But as he from the living world
Approached where spirits dwell,
He began there to be aware
Were they visible:

Shadows, and spears to be desired
In darkness where they flew;
But still as they advanced, the more
And more distinct they grew:

And when their way fast quivering they
Through their own region went,
Then were they in their element seen,
The magic form, the diabolic men,
Faint, dark, and distant.

Behind where darkness lay they came,
For off, the lightning—
This daylight of that dark men,
The kind of their way.

In that dark realm of evil night,
Like the shadow, or the ghost of light,
It moved in the narrow aisle,
And went and came, like a subtle flame
That flickers before it dies.

There the fallen angels ranged around
And the other things:
There on the over-riding sea
His darkness theme was played.

Sum of the morning's light it then
For this that then had given
They met, pre-ordained among
The hierarchies of heaven:

As if a sudden light could joy
To meet the fallen spirit:
Or this could begin to the fire
(Of hell) within the heart.

Thither the evil angels came
The youth, and wondering whence there
Their service they gave;
And in the north of Athos
Present him to light prison:

Just as they came together he made
The secret's magic power,
In that same art and attitude
They sat him before the throne.

The fallen angels sat on him
A dark diabolical look,
And from his silent head suddenly
The power's light shone out.

"Ay, — love," he cried, "it serves me well,
There was the Virgin boy, —
His love brought forth a new year's eve,
And thus the power of Troy.

And when my own Mark Antony
Laid young Cypar down,
And Rome's whole world was set in arms,
The cause was, — all for love

Some for ambition all themselves,
By virtue some the driven,
Pride, envy, hatred, but all move
Some ends, and some for only love
Remember their hopes of heaven.

Yes, of all human follies, love,
Methinks, hath served me best.
The apple had done but little for me
If I had not done the rest.

Well then, young courtier, whom love
Hath brought into this pass,
I am willing to perform the deed
Of my utmost Athos.

Thy master's daughter shall be thine,
And with her shall be content;
And not more to thy heart's desire
Than to her own content.

Yes, master, — I give thee with the girl,
Thine after days to love,
Health, wealth, long life, and other joys
The world calls happiness.

But, mark me! — on condition, youth,
No parting here we have;
Dare thou have, instantly, this time
Thy hope of heaven change?

Dare thou remember thy baptism,
And hand thyself to me,
My usual portion to partake
Through all eternity?

No lurking purpose shall evade,
When youth may fall and courage cease,
To cheat me by resistance!
I will have thee written down among
The children of perdition.

Fear Elstan encounters the dead ascending; and this, we think, will satisfy our readers that the hand which wrote *Queen Anne* has had nothing of its cunning. Elstan's marriage and consequent happiness is fully described, and with many peculiar touches both of quaint satire and poetry: witness the following: —

"In prison joy to wait his hour,
And suddenly out
Adieu strength leads him,
Of the devil or the past."

At length comes the hour of retribution.

"Alas was Elstan left
For money on Heaven to call,
Deep and unending were his pains,
But not a word would fall.

His lips were parted, his head was bent,
His eyelids shuddered with heat,
And in that other silence
He could hear his temple beat.

But could he feel, and could he hear,
And at his heart there lay
An iron rod, and a sword,
While he played the loving day."

Scenes, in spite of his repentance, chains over here; and there is a grand trial of strength in the cathedral before the bishop (who is the chief antagonist) and the assembled people. Here the author indulges in some wit and pleasantries, which contrast with the pathetic traits of his preceding description. We say nothing of what opinion may be entertained of their taste; but they are very amusing, and we quote a few passages of the legal argument touching the case of the penitent. It is exceedingly like special pleading in our modern law courts. Scen says: —

"Woe to be by a hand
Which hands him first in law
I show it myself by statute;
And show that the case the law is
Who is it can find a law?"

Before the congregation,
And in the face of day,
Whichever way goes and whither goes,
I will challenge it to be found,
And carry law quick away."

"No, Scen! — but there is 'by public,
With righteous eyes, shall read,
Duly the sacred pages!"

New in the course of publication, in monthly Parts, price 2s. 6d. 12s. in an early new Work, to be continued on the 1st of every Month, until completed, in Fourteen Parts, Nine of which are published.

THE PRACTICAL GARDENER and MODERN HORTICULTURIST, containing the latest and most approved Methods for the Management of the Kitchen, Fruit, and Flower Garden, the Green-house, Hot-house, &c. &c. for every Month in the Year; each Department being distinctly and separately arranged. Also,
Key to the Psalms, Proverbs, Ecclesiastes, and Song of Solomon, price 16s. Dissertations and Index prefixed to both Works, and the Explanations given in English.

Handicrafts published in 1 vol. 8vo. price 10s. 6d. boards. **HISTORY of RUSSIA and of PETER the GREAT.**

By GENERAL COUNT PHILIP DE SEBUE.
Printed for Trevel and Watts, Trevel, Jan. and Richter, 30, Becho Square, London.

Of whom may be had,
The French edition, 1 vol. 8vo. price 8s.

Also, lately published, the 6th edition, in 2 vols. post 8vo. 10s.; or in 4 vols. demy 8vo. price 11s. boards.

Count Segur's History of Napoleon's Expedition to Russia, in 1812.

BOOKS IN THE PRESS.

In April will appear, the First Number of **THE EDINBURGH LITERARY GAZETTE.**

To be published every Saturday Morning. The purpose and value of a Journal conducted on the excellent plan of the "London Literary Gazette," containing critical notices of new works, and forming a compend of general literature, are so universally understood, as to render exposition superfluous. For a periodical of this description, Edinburgh affords peculiar facilities. At the seat of a flourishing University, and of one of the great European Libraries, it has long held an eminent rank in the republic of letters; and with reference to the trade of literature, it is the second publishing market in the British empire. It is the residence, or at least the occasional resort, of all the nobility, learning, and wealth of the country; and it forms the common centre of attraction for connoisseurs, artists, and men of science: the national mart where alone their genius and their works can be adequately appreciated and rewarded. With all these advantages, it must be considered rather extraordinary, that in a city so distinguished, the work of the kind now projected should hitherto have existed. At this moment it is the subject both of surprise and reproach, that Edinburgh possesses nothing in the shape of an exclusively literary paper at all corresponding with her resources, or worthy of her literary fame. A register or journal of this kind, uniting with politics, containing an ample review of the current literature of the country, with an account of the progress and improvements in science and art, must be regarded as a desideratum which the Scottish press has yet to supply.

Amidst the advantages of local advantages, and to furnish the British public with a work that shall unite the copious and solid information of the more elaborate reviews, with the interest and amusing varieties of a literary newspaper, the Projectors of the Edinburgh Literary Gazette have determined to commence their labours, fully convinced, that with the resources at their command, nothing but industry and perseverance can wanting to crown their efforts with success. With regard to the practical part of the work, they pledge themselves that neither exertion nor expense shall be spared. As for the nature and arrangement of the contents, a very few words will suffice. It were easy to frame a prospectus, and to propose, which too frequently amounts to nothing more than an abstract theory of good intentions; a mere anticipation of ideal excellence, rather than a true index of the intended performance. Avoiding all such ostentatious display, the Conductors of the Edinburgh Literary Gazette will make no promises on their part, and excite no expectations in the public which they are not amply prepared to realize.

The Projectors have only farther to add, that the most ample and efficient assistance has been secured. Each department will be its own appropriate contributor, on whose judgment and abilities the public may rely with confidence. Without affecting any boastful pretensions of ways and means, or making an empty parade of names, they may be permitted to state, that in their list of auxiliaries will be found names which already have done honour to modern literature; and when the Author of the "Gleanings of an Optum Exer," Deuts of "Blackwood's Magazine," and Mr. Crichton, the Translator of Koch's "Revolutions of Europe," are mentioned, it will be some guarantee of what the public have to expect. Finally, though the Projectors may not perhaps be able to at once develop their plan fully, and in all its parts, they feel assured that any primary obstacles will speedily be overcome. They will be content to parry the character and success of the whole undertaking on the first Six Numbers of the work.

The Edinburgh Literary Gazette will be printed on a sheet equal in size to the largest literary paper in Britain, and will be published at No. 19, Prince's Street, (the premises occupied by the late Mr. Constable), where Subscriptions and Advertisements will be received. A list of Agents will be given in a future Advertisement. In the meantime, Orders, &c. will be received and transmitted by all respectable Newsmen and Booksellers throughout the United Kingdom.

Price of each Number, 6d. unstamp'd, or 1s. stamp'd, sent free by post.
Edinburgh, No. 19, Prince's Street, March 2, 1829.

In the press, 2d edition, 8vo.

IRELAND; its EVILS and their REMEDIES; being a Refutation of the Errors of the Emigration Commission, and an attempt to show that the country, which is professedly a synopsis of an original Treatise, sheet to be published on the Law of Population; developing the real Principle on which it is universally regulated.

By MICHAEL THOMAS SADLER, M.P.
"Dwell in the land, and verily thou shalt be fed."

John Murray, Albemarle Street.

To be published in the course of the next six weeks, by Mr. Murray.

A CHRONICLE of the CONQUEST of GRANADA.

By the Author of the "Sketch Book."

2 vols. 8vo.

2. **Colloques on the Progress and Prospects of Society.** By Robert Southey. 2 vols. 8vo. with Engravings.

3. **All for Love, and the Pilgrim of Com.** postilla. By Robert Southey. Poetical 8vo.

4. **The Life and Services of Captain Philip Beavers, late of H. M. Ship Naut.** By Captain Smyth, R.N. 8vo.

5. **Life of Buonaparte, 2 vols.**

6. **Life of Heber.**

7. **Forest Scenes and Incidents in the Woods of North America.** Post 8vo.

8. **Ireland, its Evils and their Remedies, by M. T. Sadler; M.P. 2d edition, 8vo.**

In Easter week will be published, in 1 vol. 8vo.

SEVEN SERMONS on the TEMPTATION of CHRIST, grounded on those upon the same Subject by the learned BISHOP ANDREW.

By the Rev. WILLIAM KIRBY, M.A. F.R. and L.S. &c. &c.
Printed for Longman, Rees, Orme, Brown, and Green, London; and J. May, Ipswich.

Nearly ready, the new edition, corrected to the present period, in 1 large vol. 8vo. elegantly printed in double Columns, inscribed, by permission, to His Most Gracious Majesty,

BURKE'S DICTIONARY of the PREJUDICE and REASONING of the BRITISH EMPIRE.

This work has undergone a very laborious revision, and alterations to a considerable extent have been adopted. In every instance where the slightest obscurity appeared in tracing lines of descent, the whole matter has been remodelled, and a plan entirely new pursued generally, which it is hoped will satisfactorily obviate the hitherto universal complaint against books of genealogy, large and small, in regard to perspicuity. To render this department as interesting as possible, accounts will be given of many celebrated names, (Courtiers, Earls of Devonshire—the Carrs, favourites of King James the First—Kilbride, Marj, Marj, &c. &c.), branches from which still exist.

A very large addition has likewise been made to Collaterals, so that all within the remotest remembrance to honour, appear in their proper places; and a description of the armorial bearings of each house is given in the body of the work, independently of the engraving.

Printed for Henry Colburn, 5, New Burlington Street.

In the middle of next week will be published, in 8vo. 10s. boards. **DE LA NECESSITE de SOUMETTRE le CATHOLICISME ROMAIN en IRLANDE a des REGLEMENTS CIVILS SPECIAUX.**

By the Hon. M. J. DEL POZZO, Ancient and Hon. Member of the Parlement Français de la Cour Impériale de l'Autriche de "Catholisme en Autriche."

Published by F. Schmitt, 20, Berners Street; and may be had at Aldgate; W. Trevel, Writs, and Co.; and C. J. G. and F. Barington.

In a few days, in small 8vo. **MARY QUEEN OF SCOTS; and other Poems.**

By JOHN HENRIAGE JESSE, Esq.
Sold by John Murray, Albemarle Street.

Nearly ready in 3 vols. **THE KING'S PAGE.**

"If you would know whether virtue or vice keep a man farthest from a court, go to court and learn."—*Winter's Tale*.

2. **The Life of Francis the First, King of France, embellished with a Portrait of Francis, from Titian's Painting in the Louvre, in 4 thick vols. 8vo. price 30s.**

3. **The Romance of History, illustrative of the Romantic Age of England.** Third edition, in 3 vols. is now ready.

Printed for Edward Bull, New Public Subscription Library, 20, Holles Street, Cavendish Square.

Nearly ready, **MEMOIRS of LADY FANSHAW.**

Wife of the Right Hon. Sir Richard Fanshawe, Bart. Ambassador from Charles II. to the Court of Madrid. Written by herself. Now first published from the original MS.

Which are added, Extracts from the Correspondence of Sir Richard Fanshawe. Manuscript printed in 1 vol. 8vo. with a Portrait.

2. **A History of the late Catholic Association of Ireland, from its Institution in 1790, to its final dissolution in 1800.** By a Member of that Body. To which are added, the Opinions of a distinguished Traveller on the actual State of Ireland, and on the Condition of England.

Printed for Henry Colburn, 5, New Burlington Street.

LONDON: Published every Saturday, by W. A. SCRIPPS, at the LITERARY GAZETTE, 19, Prince's Street, Cavendish Square, and 7, South Molton Street, Oxford Street; and also by J. Chapman, at Royal Exchange; R. Marshall, at New Maria Lane, Ludgate Hill; A. Black, at New Bond Street; and J. G. and F. Barington, at 20, Berners Street, and 20, Holles Street, Cavendish Square.

Journal of Belles Lettres, Arts, Sciences, &c.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen, throughout the Kingdom; but to those who may desire to subscribe, by post, we recommend the LITERARY GAZETTE, printed on stamped paper, price (One Shilling).

No. 638.

SATURDAY, APRIL 11, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

All for Love; or, the Sinner well Punish'd; and The Pilgrim to Compustella; or, a Legend of a Monk and a Hermit. By Robert Southey, Esq. LL.D. Foot Laureate, &c. 12mo. pp. 228. London, 1829. Murray.

It is told in the Laureate to publish two poems on the old head of superstitious tradition ecclesiastical at this particular time of this particular year: yet we must confess that "old Robin Gray" (as he calls himself in his introduction to the *Pilgrim to Compustella*) has

"Lament his youth and wasted a song,
A ballad of the best."

not, indeed, in the *Pilgrim* scenario, but in the *All for Love, or a Sinner well Punish'd*. This ballad is founded on an old legend of the Greek Church, which may be thus summed up. A monk, by name Klutman, fell in love with his mother's daughter, (Yra, and long essayed to win the consent of the father to certain proceedings never disapproved in the view of the law deemed lawful. Klutman prayed to virgin, and when, and where, and in vain: he then turned to the heathen authorities, not as yet quite exploded in Cappadocia, and with equal ill success brought the aid of what one of our Country poets calls "Apollon, and Marsyas, and the rest." There remained one desperate measure—namely, the old custom, as he is generally denominated in public society, alias

"Aunt Thomas, Sister, Nephew, or Cousin,
Who in you dreamt gain and death,
How under hatchmen," &c.

Klutman accordingly goes to the devil; and the devil consents to play the devil with all the old diabolical corruptions, and to manage also that (as shall forthwith be Mrs. R., provided the old Klutman consents to have a little red mark put on his breast, over against his heart, bring the sacred and virginal sign of his having said he said, this world's goods past and gone, to his eternal company. The bargain is struck, the seal is stamped, Cyra is married to Klutman, and to all outward view they are a most happy couple. But Klutman, the honeymoon over, cannot away with the "damned spot." Much of the conduct of the story is beautiful and pathetic. His secret is entered from him by his affectionate wife, after a second nervous dream, and by her revealed to the holy Bishop Basil, who resolves the confusion and confusion of the dinner who has carried off *All for Love*. He gives gaily consent; and we witness a beautiful touch of domestic imagination—the spot is washed out by the tears of Klutman and his Cyra.

We have permitted ourselves to foster rather lightly. This is, nevertheless, a very elegant, and, to our feeling, a very touching little poem. We present a few extracts only. The first denotes Klutman's visit to Helen, when he has opened himself to the suspicion of the diabolical charge.

"The stars above gave light to heaven
At that midnight light,
And all the blessed stars around them
Shed their celestial light;

And a shuddering in the stars was heard,
Though winds were still that night.

He called the spirits of the air,
He called them in the name
Of spirits; and at the call
The attendant spirits came.

A strong hand which he could not see
Took his uplifted hand;
He felt a strong arm circle him,
And lift him from his stand;

A whirl of atoms wings he heard
About him every where,
Which, ever, with a mighty force,
Impelled him through the air.

Fast through the middle sky and far
It hurried him along;
The hurricane is not so swift,
The torrent not so strong.

The lightning travels not so fast,
The earthquake not so far,
And now lifted him to high left
The mists and every star.

And still e'er as on the tomb
He looked at his dead,
In his heart he was aware,
In that fixed attitude.

But as he from the living world
Approached where spirits dwell,
His senses were in chaos,
Were darkly visible;

Shadows, and shapes to be desired
In darkness where they dwell;
But still as they all vanished, the more
And more distinct they grew;

And when their way first opening they
Through their own region went,
Then were they in their darkness seen,
The angel form, the female shape,
Form, look, and features.

Behold where down below them now,
Far off, the landscape—
This daylight of that dark scene,
The limit of their way.

In that dark realm of outer night,
Like the shadow, or the ghost of light,
It moved in the eastern skies,
And went and came, like a shadowy form,
That Klutman before him.

There the fallen angel ranged supreme
Among the other stars;
There on the overhanging ice
His delicious throne was placed.

San of the Morning 't is then
For this that thou hast given
Thy seat, pre-eminence among
The hierarchies of heaven.

As if dominion here could give
To mortal pride report,
Or this cold region stir the fire
Of hell within the heart.

Thither the evil spirits bent
The youth, and countless hordes of men
Their evil day to spend,
And in the morning light
Present him to high prize;

Just as they came together he made
The cavern's midnight hours,
In that same old still attitude
They sat him before the throne.

The fallen angel sat on him
A dark, dark look,
And from his naked head sprang
The prodigious vision sent.

"Ay,—love," he cried, "it gives me well,
There was the Virgin lay,—
His love brought forth a new year's eve,
And shed the beams of Troy.

And when my own Mark Antony
Against young Cleopatra came,
And Rome's whole world was set in arms,
The cross was,—all for love.

Some for ambition, all themselves,
By various ways are driven,
Pride, envy, hatred, but all these
Have ends, and ends for only love
Have none; their hopes of heaven.

Yes, of all human follies, love,
Mankind, hath served no best.
The apple had done but little for me
If I had not done the rest.

Yes, of all human follies, love,
Mankind, hath served no best.
The apple had done but little for me
If I had not done the rest.

Well then, young courtier, whose love
Hath brought me into this pass,
I am willing to perform the vow
Of my ancient Adam.

Thy mother's daughter shall be thine,
And with thy dear consent;
And not unto thy heart's desire
Than to her own content.

Yes, mother,—I give thee with the girl,
Thine after days to love,
Health, wealth, long life, and what thou'st wish
The world can happiness.

But, mark me! on condition, youth!
No parting have we leave;
Dost thou have, solemnly, this hour
Thy hope of heaven forgot?

Dost thou remember thy baptism,
And bend thyself to me,
My woe's portion to partake
Through all eternity?

No lurking purpose shall avail,
When youth may fall and courage quail,
To cheat me by resistance!
I will have thee certain down among
The children of perdition.

For Klutman consents the deed accordingly; and this, we think, will satisfy our readers that the hand which wrote *Queen Heaven* has lost nothing of its cunning. Klutman's marriage and consequent happiness is fully described, and with many particular touches both of quaint satire and poetry; witness the following:—

"In prison pay thy wages his hour,
And constantly call
Admission through lonely life,
Of the future or the past."

At length comes the hour of retribution.

"Alas was Klutman left
For many an hour to call,
Sleep and unconscious were his powers,
But not a hair would fall.

His lips were numb, his hand was hot,
His eyelids closed with heat;
And in that other state
He could hear his temple beat.

But could he feel, and could his hands;
And at his heart those lay
As by ruthless unrelenting,
While he prayed the living day."

Scarcely, in spite of his repentance, claims our hero; and there is a grand trial of strength in the cathedral before the bishop (who is indeed the chief antagonist) and the assembled people. Here the author indulges in some whim and phantasmagoria, which contrast with the pathetic traits of his preceding description. We say nothing of what opinion may be entertained of their taste; but they are very amusing, and we quote a few passages of the legal argument touching the seal of the penitent. It is exceedingly like spectral pleading in our modern law courts. Scarcely says—

"If it is to be by a hand
Which binds him that is free;
I dare it myself by authority,
And charge that the seal of the penitent be
Who in it can find a law

Before the marriage bed,
And to the seal of day,
Whichever may pray and whom
I will challenge to be for my witness,
And carry him quite away."

"No, then, dost thou in thy path,
With righteous eyes, dost thou,
Duty the blessed grapes!"

In the face of the church wilt thou brave it?
Why then we will meet thee there!"

"There" they do meet, and the black gentleman enforces his claim as if he were a chancery barrister, and is answered by the bishop as if he were another.

"The writing is confessed:—
No plea against it shown:—
The forfeiture is mine,
And now I take my own!"

'Hold there!' cried Basil, with a voice
That arrested him on his way,
When from the screen he would have swooped
To pounce upon his prey:

'Hold there, I say! Thou canst not sue
Upon this bond by law!
A sorry legalist were he
Who could not in thy boasted plea
Detect its fatal flaw.

The deed is null, for it was framed
With fraudulent intent:
A thing unlawful in itself;
A wicked instrument,—
Not to be pleaded in the courts—
Sir Friend, thy cause is shent!

This were enough; but, more than this,
A maxims, as thou knowest, it is
Whereof all laws partake,
That no one may of his own wrong
His own advantage make.

The man, thou sayest, thy bondsman is:
Mark now, how stands the fact!
Thou hast allowed,—nay, aided him
As a freedman to contract
A marriage with this Christian woman here,
And by a public act.

That act being publicly performed
With thy full cognizance,
Claim to him as thy bondsman thou
Canst never more advance.

For when they solemnly were then
United, in sight of angels and men,
The matrimonial band
Gave to the wife a right in him;
And we on this might stand.

Thy claim upon the man was by
Thy silence then forsaken;
A marriage thus by thee procured
May not by thee be shaken;
And thou, O Satan, as thou seest,
In thine own snare art taken!"

So Basil said, and paused awhile;
The arch-fiend answered not;

But he heaved in vexation
A sulphurous sigh for the bishop's vocation,
And thus to himself he thought:—

'The law thy calling ought to have been,
With thy wit so ready, and tongue so free!
To prove by reason in reason's despite,
That right is wrong, and wrong is right,
And white is black, and black is white,—
What a loss have I had in thee?'

The *Pilgrim to Compostella* is a humorous production, but not so much to our liking, though it is a very John Gilpin-ish piece of drollery. The notes to both ballads are full of curiosities "rich and rare"—excellent scraps of *omniana*: we subjoin one:—

"The most remarkable instance of St. Basil's power in prayer is to be found, not in either of his lives, the veracious or the apocryphal one, but in a very curious account of the opinions held by the Armenian Christians, as drawn up for the information of Pope Benedict XII., and inserted by Domenico Bernino in his *Historia di tutte l' Heresie* (Secolo xiv. cap. iv. t. iii. pp. 508—536). It is there related, that on the sixth day of the creation, when the rebellious angels fell from heaven through that opening in the firmament which the Armenians call Arocea, and we the Galaxy, one unlucky angel, who had no participation in their sin, but seems to have been caught in the crowd, fell with them; and many others would in like manner have fallen by no fault of their own, if the Lord had not said unto them *Par vobis*. But this unfortunate angel was not restored, till he obtained, it is not said how, the prayers of St. Basil: his condition meantime, from the sixth day of the creation to the fourth century of the Christian era, must have been

even more uncomfortable than that of Klopstock's repentant devil."

The volume is dedicated to Caroline Bowles, as follows:—

"Could I look forward to a distant day
With hope of building some elaborate lay,
Then would I wait thy worthier strains of praise
Might bear inscribed thy name, O Caroline!
For I would, while my voice is heard on earth,
Bear witness to thy genius and thy worth.
But we have both been taught to feel with fear
How frail the tenure of existence here,
What unforeseen calamities prevent,
Alas, how oft! the best resolved intent;
And therefore this poor volume I address
To thee, dear friend, and sister Poetess."

The History of the Huguenots during the Sixteenth Century. By W. S. Browning, Esq. 2 vols. 8vo. London, 1829. Pickering.

A BOOK more apposite to the time at which it is published, could not have been presented to the English reader than this History of the religious wars of France, which desolated a fine country during the whole of a century. At a period when the spirit of polemical opposition and controversy runs so high amongst ourselves, it is well to take a leaf and a lesson out of the records of a former age, and, if it be "philosophy teaching by example," suffer ourselves to be taught by these memorials of experience. Of all the strange phenomena which the folly of man has presented to man, since the earliest days of which the recollection is preserved even to our own era, are the perpetual struggles for worldly power and dominion which have been carried on in the name of Heaven; the murders, the wars, and the massacres, which have been perpetrated for the establishment of charity, good-will, and humanity!! But if these were remarkable anomalies when pagan, polytheist, infidel, or idolater, fought for mastery, and the barbarous rites of cruel systems in dark and ignorant ages ruled the actions of mankind,—what can they be called after the Christian creed of peace, benevolence, and love; that pure doctrine which bids us do unto others as we would that others should do unto us; which bids us to worship in brotherly unity and faith one father in one God;—what, we repeat, can these persecutions and butcheries be considered by the rational mind, after the dispensation of Christianity enlightened the earth? Must it not be confessed, that we are not what we profess,—that religion is but too universally the mask under which we pursue temporal aims,—and that selfishness and a disregard of the restraints imposed by the Divine laws are far more operative upon our conduct than either a moral sense or a guiding conscience?—And what have been the consequences? a very general disregard of all religion, the diffusion of doubt and disbelief, and the prevalence of an apathy which looks on unmoved, while the pretenders of every sect set themselves up as the only beings who are in the right, and therefore have a right to dictate to and domineer over their fellow-creatures, in the name of a faith which declares that they are all equal.

These points are strikingly enforced in the perusal of the History of the Huguenots, as well as the results of every attempt to enchain and fetter the independent soul. Oppression begets resistance, resistance rises into strength, and in turn oppresses; fanaticism dissolves the ties of nature, the battle rages, and the world weeps in tears of agony and blood. Of such feelings and of such scenes this work is full;—a revolting but instructive picture for the use of England in the year 1829. The author, whose first production it is, has done his judgment great honour by abstaining from

discussions on controversial points, and, while recording the wild rage of persecution and the frightful excesses of excited zeal, confining himself to a narration of the best-established facts, without making himself a partisan to distort the truth on one side, or colour falsehood on the other. Neither has he attempted declamation and fine writing: his History is a plain, accurate, and unvarnished tale, as far as it could be rendered so by consulting the ablest writers of the time and those of the succeeding century, during which all that had passed before was question of endless statements and conflicting disputes. In short, this is as honest and impartial an account as it seems possible to have gathered from the mass of contradictory opinions.

At the present moment there is perhaps one distinct and great consolation to be drawn from a general view of the subject: it is, that no important measure of government or policy ever produced half the good or half the evil that was predicted of it, at the period when its prospective effects were agitated. It seems as if time and circumstances always prevailed, so as to check the good, and modify the bad. Man proposes, but God disposes; and never have events followed as the arrogance of man predicted. What has been contemplated as a whole, in the process of years breaks itself into many parts; and each part is susceptible of alteration and regulation, as the necessities of the case require. Thus we fit affairs to our wants,—we repeal what is practically found to hurt us,—we amend what we feel to be defective and inconvenient,—and we improve and invigorate the useful and the beneficial. As in the gold there will on fusion appear alloy and trash; as in the poison there will on chemical separation appear innocuous agents and medicine;—so in all that ever was devised by human wisdom or human error, there will appear, as time unfolds the details, anticipated ills shaped into blessings, and promises of seeming blessings converted into insignificance and nonentity. In short, we can only make for the present: the future, too, will make for itself.

Having offered these remarks, suggested by the existing state of our country and the work before us, we shall not need to go at any length into the particulars of Mr. Browning's labours. The period embraced by his researches is one of uncommon interest, and it is fairly treated and well explained. With access to the liberal literary institutions of France (for which he justly acknowledges his obligations to the Marquis de Fortia, and to M. Van Praet of the Bibliothèque du Roi), our countryman has frequently shed a true, if not an altogether new light over matters that have been bitterly controverted; and his entire narrative is of a character to deserve the utmost public approbation. It sets out with a brief preliminary outline of the early steps which led to the Reformation—a sketch of the Panlicians, Vaudois, Lollards, Hussites, &c., and of the infant Protestant church persecuted by Francis I. and Henry II. Soon the court of France became divided; and the various parties discovered that religion was a potent engine in the contests for political sway. The country was torn to pieces; and executions, massacres, civil wars, faithless treaties, edicts marking the alternate rise and fall of the different factions, crowd the sanguinary pages of these eventful volumes, from the first edict of Francis, June 1523, to the famous edict of Nantes, on the 30th of April, 1598.

Any portion which we may select will serve

to shew the praiseworthy manner in which this History is written; and we shall only be influenced by the immediate interest of the subjects alluded to in the two extracts we shall now add for the purpose of illustration. After some remarks on the writings of Lapopelinieri, Caveyrac, and others, Mr. Browning gives the following opinion respecting a recent controversy which has attracted much public attention.

"Great importance has been attached to the recent publication of Dr. Lingard. His History of England has been held up as an antidote to the incorrect and prejudiced writers of preceding times. The persecution of the French Protestants being so interwoven with the events of Elizabeth's reign, he could not avoid discussing the subject; and a short notice of this work will therefore be useful. His account is founded on the Duke of Anjou's confession. In the body of the work his remarks are short, but the subject is treated more at length in a note at the end of the volume. The assertions which are there made, excited considerable attention on their publication, and some observations in the reviews became the cause of a treatise in vindication of the original remarks. In the history, the notes, and the vindication, there are many inaccuracies, which will immediately strike every one acquainted with the French history of this period; and without insinuating that the reverend gentleman has intentionally misrepresented any point, there is fair ground for inferring that he has in some cases taken a quotation on the authority of a partial writer, and that his acquaintance with the French authors is very superficial. The following are a few of the cases alluded to. 'Coligny and his counsellors perished; the populace joined in the work of blood, and every Huguenot, or reputed Huguenot, who fell in their way, was murdered.' Justice to the population of Paris demanded a statement of the methods used to excite their feelings; but that is passed in silence, because the detail would be fatal to the sentiment meant to be impressed. 'Several hours elapsed before order could be restored in the capital.' Certainly several days elapsed before any real attempt was made to put an end to the carnage. In the afternoon of the twenty-fourth, public proclamation was made to desist from the massacre; and Dr. L. has given a quotation from Lapopelinieri to shew that the king gave orders by sound of trumpet for every one to return home, under pain of death for those who continued the murders; but, in common fairness, the extract from that writer should have been given more at length; it would then appear that the last day of the week was but little less remarkable for murders than the others. The work contains some errors which deserve notice, although they are unimportant in point of historical argument. 'So powerful a nobleman, who had twice led his army against that of the crown, was naturally an object of jealousy.' 'They reminded him (the king) of the two rebellions of the Huguenots, &c.' It is certainly of no real consequence that Coligny had been engaged against the king's troops more than twice, and that there had been three civil wars or rebellions, instead of two; but the assertion shews how much this writer's reputation for research and accuracy have been overrated. Two other remarks are unaccountable: in one, the admiral's assassin is placed in an upper window, a thing impossible in a narrow street; the other mentions the ringing of the bell of the parliament house. The doctor's remarks respecting the number of killed are

curious. 'Among the Huguenot writers, Perefex reckons 100,000, Sully 70,000, Thuanus 30,000, Lapopelinieri 20,000, the reformed Martyrologist 15,000, and Masson 10,000. But the Martyrologist adopted a measure which may enable us to form a tolerable conjecture; he procured from the ministers in the different towns where massacres had taken place, lists of the names of persons who had suffered, or were supposed to have suffered. He published the result in 1582; and the reader will be surprised to learn that, in all France, he could discover the names of no more than 786 persons: perhaps if we double that number, we shall not be far from the real amount.' Of the above six Huguenot writers, three were well-known Catholics, viz. Perefex, archbishop of Paris, Thuanus or De Thou, and Masson. Lapopelinieri abjured protestantism; and the only Huguenot of them all is Sully, with the exception of the anonymous Martyrologist, respecting whom it is a fair subject for inquiry who he was, and whether his work was not one of the artifices of the League, to diminish the odium which even at that time was entertained for these effects of Popish bigotry. Dr. L. himself seems aware that his position is untenable, for in his Vindication he changes his ground, represents his printer to have inserted the word *Huguenot* instead of *National*, and afterwards declares how little importance he attaches to the contradictory conjectures of historians; adding, that as he had taken Caveyrac for his guide, he refers the reader to him as his sole authority. Such a reference renders comment unnecessary: it must, however, be observed, that more than seven hundred persons of distinction were killed; and supposing the Martyrologist to have been what is pretended, his researches must have been for persons of a particular class, or he could easily have found more names than he did. But the list contains chiefly the names of persons of the lowest condition; and when the period of its publication is considered, there is very great appearance of its being intended to discredit the then prevailing opinions, if not in France, at least in foreign parts. In replying to the reviewers, Dr. L. goes more deeply into the subject; but with no better success, for errors are often discernible. 'The ceremony (the marriage) had been fixed for the 18th of August, but he (Coligny) went to court in June,' &c. It was, however, the death of the Queen of Navarre, in June, which caused it to be delayed till August. To shew how unlikely it was that the king should be so great a dissembler, he is stated to have been no more than twenty years of age, whereas he was in his twenty-third year. Respecting the league of Bayonne, in 1565, there are some observations worthy of attention. Dr. L. shews that there is no proof of it beyond the suspicions of the Huguenots, and which suspicions had not much effect even on them—for they placed themselves without hesitation at the mercy of the court, at the assembly of Moulins, in 1566. So far, however, from trusting to the court, the fact was, that they went so well accompanied, that the queen did not dare attempt any thing. It is moreover singular, that to prove there was nothing in contemplation against the Huguenots, a letter should be produced from Strada, written by Philip the Second to his sister in the Netherlands. It states, 'that the Queen of Spain having entreated her brother and her mother to remedy the perilous state of religion in France, found them perfectly disposed to follow the counsels which were discussed; that several marriages, and an alliance against the

Turks, were proposed; but that nothing was decided, because the queen turned aside every subject but that of religion, which she recommended anew to her brother and mother at the suggestion of the Duke of Alva, and that the meeting broke up.' It has been said that Strada did not believe that any idea of the massacre was entertained at this meeting; but the substance of the letter which he has preserved, shews that measures were then canvassed for suppressing the Huguenot party; and the argument, as to whether or not he did believe that the massacre was then discussed, rests altogether upon a difference in the punctuation of a paragraph."

To this we shall do nothing more than add the candid conclusion at which the author arrives at the end of his work.

"History does not afford an example of a more desolating war than that which raged in France, almost without intermission, for the remainder of the sixteenth century: by its conclusion, a new era seemed to dawn upon the nation. Very sanguine hopes were entertained of the happy results of the edict of Nantes, which, it is too well known, were cruelly disappointed; but the circumstances which led to, and accompanied its revocation, form the subject of a distinct history, and are of sufficient importance to be discussed in a separate work. Although connected with this history in many respects, the events of the seventeenth century, as a whole, are quite distinct, whether we consider the parties who were concerned, or the ostensible reasons of their conduct. The Protestants of the sixteenth century were chiefly anxious to see the Catholic religion purified and freed from a multitude of superstitions and errors: they wished to restore the practices of primitive Christianity. But the principal aim of their descendants was to preserve the privileges already obtained; they desired to continue separated from the Romish church, which, by proclaiming the decrees of the council of Trent, had publicly sanctioned the gross errors of the dark ages. A difference equally great is to be traced in the objects and motives of their persecutors of each period. During the former, we remark a hatred of innovation upon religious affairs; in the latter, a malignant spirit of ambition, that could not brook the existence of a body of men whose opinions were not to be chained by the declarations of any other authority than the Holy Scriptures. Bigotry was the passion which the court of France developed at both periods; but fanaticism called it into action under the princes of the house of Valois, while state policy was its strongest impulse under Louis XIV.—a prince whose annals shine with military trophies, yet who, by a strange contradiction, became the tool of a Jesuit confessor. He inflamed the king's zeal for the Romish religion, and his recommendations have completely tarnished that otherwise brilliant reign: *sed cedunt arma togæ*."

Ude's French Cook. 10th edition.

J. Ebers and Co.

OUR affection for Louis Eustache Ude is notorious,—so we will not deny the fact, that we rejoice in his tenth edition, as if increase of appetite did grow by what it fed on. Indeed, a Cookery-book is one of the very few publications which could secure readers and attention during the agitation of the Catholic question; for however much immersed in politics and polemics, still folks must dine; and amidst the most arduous occupations, there must be a time afforded for eating. And who can teach

us to eat like the immortal Eustache? with his new Appendix of observations "on the meals of the day—new method of giving fashionable suppers at routs and soirées, as practised by the author when with Lord Sefton—history of cookery—rules for carving—on the choice of meat, &c."—who investigates (as he does in this single volume) a hundred and forty-four soups, sauces, and broths; forty-eight farces (not dramas, nor yet quadrilles, but forced-meat balls); forty-seven modes of dressing lamb and mutton; sixty-one ways of cooking veal; six fashions for ham and pork; three for venison; thirty-seven dishes of fowls; forty-seven chickens; six turkeys; twenty-two partridges; forty-three pheasants, woodcocks, snipes, &c.; thirty rabbits; eight hares; thirty-nine freshwater, and seventy-one salt-water fish, besides eleven of shell-fish; and twenty of eggs;—and then entremets, creams, soufflés, jellies, fromages, nouilles, patés, pies, so as to exalt the number of dishes, all courting the taste of the accomplished gourmand, to no fewer than *eight hundred and sixty-one recipes* for the dinner-table of the true Amphitryon. Breakfasts, luncheons, and suppers, one might suppose to be unnecessary after this; but our mighty master has stomach for them all, and he delivers his oracles accordingly, upon such matters as coffee, sandwiches, salads, and other small deer.

The work sets out with a history of the rise and progress of the sublime art of cookery; its origin as a science being, as it ought, attributed to France, though it had very important effects among earlier nations, and in the remote ages of the world. For instance, when Esau sold his birth-right for a *pottage*, he only set an example to later gastronomers, by eating away his substance and worldly property; and we regret to learn that El Bassum, the learned commentator on the Talmud, has been unable (though he spent fifteen years in the inquiry) to ascertain who was the Ude upon this interesting occasion, that cooked the supper so expensive to Esau. Passing rapidly from this period, our author shews how much the Reformation was aided by cookery, and comes at length to the renowned Gonthier.

"What Bacon," says he, "was to philosophy, Dante and Petrarch to poetry, Michael Angelo and Raphael to painting, Columbus and Gama to geography, Copernicus and Galileo to astronomy, Gonthier was in France to the art of cookery. Before him, their code of eating was formed only of loose scraps, picked up here and there; the names of dishes were strange and barbarous, like the dishes themselves. At length Gonthier" (he continues, in a strain of fine enthusiasm), "appeared, to raise the culinary edifice, as Descartes, a century after him, raised that of philosophy. Both introduced doubt,—the one in the moral, the other in the physical world. Descartes, considering our conscience as the point from which every philosophical inquiry ought to begin, regenerated the understanding, and destroyed that unintelligible empiricism which was the bane of human reason. Gonthier, establishing the nervous glands as the sovereign judges at table, overturned the whole scaffolding of *bromatological* traditions,—the sad inheritance of past ages. Gonthier is the father of cookery, as Descartes of French philosophy. If the latter has given rise to geniuses, like Spinoza, Mallebranche, and Locke, the former has been followed by a posterity of artists, whose names and talents will never be forgotten. Who has not heard of d'Aligre, Souvent, Richant, and Mézelier? It is said that Gonthier, in less than ten years,

invented seven cullies, nine ragoûts, thirty-one sauces, and twenty-one soups; but who can assert that Descartes has discovered as many facts? In the history of Gonthier, every page should be read; but could we say as much for an historian or a novelist? We know nothing of Gonthier's last moments; whether he was burnt at the stake for having conformed to the doctrines of the Reformation, or whether he died a natural death; whether poor or rich, in exile, or in his own country."

In a glorious spirit of transcendent philosophy the Ude proceeds: "Motion was created; nothing was able to stop it henceforth; the world could not return to its original chaos!!! A woman opened the gates of an enlightened age; it was Catherine, the daughter of the celebrated Lorenzo de Medici, niece of Leo the Tenth, then in all the bloom of beauty: accompanied by a troop of perfumers, painters, astrologers, poets, and cooks, she crosses the Alps, and whilst Bullian planned the Tulleries, Berini recovered from oblivion those sauces which for many ages had been lost."

He bestows a high encomium upon this queen for her revival of cookery, and strenuously denies that any of her cooks ever administered poison to those whom she wished to be removed. On the contrary, with a true feeling for the honour of his profession, he asserts that physicians and apothecaries were more likely to do such jobs than the "constellations of the kitchen." Henry of Valois was a great prince—*i. e.* a "prince of good appetite," "a lover of good cheer," and one who "spent whole days at table;" and it is memorable that the fricandeau was invented in his reign. Henry IV., on the contrary, was an indifferent sovereign, though praised on other grounds by certain historians. That monarch, as Ude relates, did nothing for his cooks: "Either nature had not endowed him with a good appetite (for what prince ever was perfect?), or he looked upon them—as in the last century we looked upon soups—as things of hardly any use; but in return they also did nothing for him."

But we must leave the history, only stating that sauces* date from the age of Louis XIV., to quote the general eulogium upon this delightful and delightful art.

"Cookery refines the coarser part of food, deprives the compound substances employed in it of the terrestrial juices therein contained; it improves, purifies, and in some measure spiritualises them. The dishes, thus prepared, must then amass in the blood an abundance of purer and finer spirits. Thence arise more agility and vigour of body, more vivacity and fire of imagination, more extent and force of genius, and more delicacy and refinement of taste. It is not, then, so strangely paradoxical to rank the improvements in modern cookery amongst the physical causes which have recalled us from the extremity of barbarity to the bosom of refinement, talents, wit, arts, and sciences."

It is very amusing to trace our author and his account of the effects of cooking during the French Revolution. He tells us—"A man who, for these five-and-twenty years, has held in their legislative assemblies the place which Copernicus assigned to the sun in the firmament, has traced a picture of it in one volume octavo, under the title of *Histoire de la Gueule*

* "Amongst the proofs of the immateriality of the soul, at the very first line, we place the prodigy of a perfectly well-made sauce." Perhaps the wisdom and fertility of nature are not displayed with more splendour in the works of the creation, than is the genius of the cook in the composition of a sauce.—Ude proceeds.

en France depuis la Revolution en 1789, jusqu'à nos jours. We have seen some portions of the work, in which we have discovered many happy conceptions, new ideas, profound thought, and a concise and nervous style. One of the chapters bears this title—*Nomination of M.A. due to a pie of goose-liver*; another, *the turkey with truffles and the censure*; a third, *the eighteenth of Brumaire explained by the larks of Pithiviers*; and another, *the liberty of the press repulsed with considerable loss by a fat chicken of Strasbourg*."

The next chapter is a defence of cookery from the alleged ill effects that it produces on the health:—a triumphant refutation. We have then an excellent chapter on carving; another portion directing the choice of meat; and a third, a vocabulary of terms. But what we consider the most valuable part of the novelties in this edition is, an Appendix on the meals of the day. It opens with the following picture of London fashionable life:—

"*Breakfast*.—As it is customary for people of fashion when in town to meet their friends in the morning in the parks, and other places of polite resort, and in the evening at the Opera, sometimes in the private boxes at the theatres, and at the different routs, it will not be necessary to shew how they commence the day. They may be pictured at the breakfast-table yawning over the newspaper, half asleep, half awake; the lady experiencing the headache of a late party, and the gentleman musing on the supper, and the events of the club-house."

Luncheons are thus sketched: "The repeat itself is insignificant, and is only taken by certain young ladies, who wish to preserve the elegance of their figures, the beauty of their complexions, and above all the becoming manners of good society, which interdict, as vulgar, eating at table like gluttons; for unless frequent meals are taken, too much must be eaten at once. The true art in the economy of refection is to partake at one meal only of as much as will leave the eater free to do honour to the next."

But we have quoted enough to demonstrate that this is really a work of great general merit as well as originality. What will most recommend it, however, at this season, is its admirable directions for routs and supper-parties: in this respect it is quite an oracle; and there are few persons of or above the middle ranks of life who may not consult it with much advantage in giving these parties, so prevalent at this period of the year, and the pleasures of which depend so entirely on good arrangements. Here Ude is Ude *per se*; and far above the Nabob of O-ude, who has given that name to a sauce—a curious case of coincidence in ever-to-be-honoured names.

Clouds and Sunshine. London, 1829.

12mo. pp. 324. S. Maunier.

ONE of those valuable volumes which, while we cordially recommend to our readers, we feel we are doing something beyond advancing their amusement, or even increasing their information. Filled with that pure morality which is founded on religion, and the cause of our faith advocated with equal reason and fervour, it is a book which, if taken up for entertainment, will not be laid down without serious thought. "Rashness," and "De Lawrence," are both interesting tales; but a quotation from that entitled "Enthusiasm," we prefer, as a useful lesson, setting forth the danger of imagination acting on ignorance, of human impotency and human vanity ingrafting on religion their own wild fantasies.

We take the conversation between the young man and his clergyman, on the subject of his intended marriage.

"Yes, sir," replied the young man, "a father's dying words are solemn, but the faith required by a dying Saviour is more important; and, as I think, I have followed the guidance and the direction of that Saviour, and made a choice by his spirit, which I ought to follow in spite of all other things. 'For whose loveth father or mother more than me, is not worthy of me.' I have wrestled in prayer many a day and night, and begged the Lord to guide me in this choice, and he gave me a sign which I cannot, if I would, disobey." "How? Gave you a sign! Surely you do not mean"—"Yes, I do mean a sign. I know it all, it's quite scriptural. He favours his chosen with the knowledge of his will; he directs all their paths. He has given me this innocent, but persecuted woman, and what He has joined, no man may put asunder, no, not even a dying father's wishes." "And pray what is the sign you received?" inquired Forbes, at a loss to know or conjecture what he could possibly mean. "Why, sir, after I had wrestled, like Jacob, all night in prayer, and begged for a sign,—for you know David says, 'The meek he will guide in judgment, and the meek he will teach his way,'—so I took up the Bible, which is God's own book, and contains the revelation of his will to us, and I felt sure that a sign would be given me. I opened the Bible, and the first words I cast my eyes upon were, 'Sarah shall be her name.' This could mean nobody else than Sarah Baker. 'Whether, then (as Peter and John said), it be right in the sight of God to hearken unto you, or unto God, judge ye,' for 'the lot is cast in the lap, but the whole disposing thereof is the Lord's.' 'May you not have misinterpreted this sign, as you call it, like the lying spirit which was sent to Ahab?' 'Impossible, quite impossible; for I had prayed and waited, and as the Lord told Ahab to 'ask for a sign,' so did I; and one was given me, which I must obey. I feel assured, as if it had been revealed to me, that I am right." "I would wish to remind you, however," replied Forbes, "what St. Paul says,—'Let him that thinketh he standeth, take heed, lest he fall.' Your assurance and revelation are things quite at variance with the present state of man and the perfection of the gospel. There are no such things as those you speak of in the way you pretend to." "Do not blaspheme," hurriedly exclaimed the shoemaker. "O, sir! how profanely you talk; and yet you call yourself a minister of God. You deny the Holy Ghost, you are guilty of that sin for which there is no repentance and no pardon." Mr. Forbes smiled, and calmly proceeded. "Before you talk of blasphemy and the sin against the Holy Ghost, learn to know what they are, and impute not to others that which you do not understand. I know you are in the habit of heaping together a jargon of words, which your self-vanity leads you to suppose to be truth and inspiration. You talk of conscience, and feelings, and assurance, as if they were plain and manifest revelations of God, not to be mistaken; and in doing this, you quite forget both who and what you are, and of whom and what you speak. You employ language more strong, and make assertions more lofty, than the apostles ever did, with all their higher advantages and extraordinary inspiration. St. Paul seems to have had no such assurance, that every thing he did was either a revelation to him from God, or was

indeed so fully and strictly right, that he was confident, in spite of all that might come, of his salvation. Else, why should he have hinted even at the possibility of his being cast away?" "But my conscience assures me that my judgment is right in this matter, and the spirit"—"Your conscience assures you! A conscience void of offence towards God and towards man is a most enviable possession; it is, indeed, a blessing which evidences that our sincere endeavours to walk humbly before God are accepted, and blessed by Him who alone can give peace and comfort to our souls. Conscience, too, may, in its ordinary operation, suggest to us whether we are acting right or wrong; but to say that it gives us assurance of salvation, or even testifies exclusively of the correctness of things depending upon our judgment, is to assign it a power it does not possess. You elevate it to an equality with the power of the Holy Spirit of God, which is given to us, not only to teach and guide our hearts, but to 'bear witness with our spirits that we are sons of God.' This witness is conveyed in a way so gentle and incomprehensible, that we may not talk of or presume upon it, as a thing palpable and common. God makes known to us no revelation now. The inspiration which filled prophets and apostles in times past is no longer vouchsafed unto us, for there is no longer a necessity for it. That was only granted for wise and particular purposes, involving the everlasting interests of the souls of men, and the mighty glory of God. When you talk of a revelation, what is it, but that you, a simple individual, for private purposes, put yourself on a level with St. Peter and St. Paul, who were inspired for public and general purposes, interesting not only to themselves, but to the world at large. Even on the subject of marriage, St. Paul states what he advanced by permission, what by revelation; what from his own judgment. Exalt not yourself, therefore, above this apostle, who 'was not taught of men, but of God.'"

The elopement of his intended bride somewhat opens the enthusiast's eyes; but "the several facts, as they were afterwards manifested, wrought a deep effect upon the mistaken youth's mind; they conjured up, in no pleasing array, like an upbraiding ghost, the recollection of his poor old father's oft-repeated caution and dying words. That he, who deemed himself wise above measure, could have been deceived,—deceived, too, in spite of the infallibility of grace, of Bible-signs, Sarah's zealous professions, and his own caution and ability, as a teacher ordained not by men, but, as he pretended, by a special call,—all this preyed upon his spirits; he could not bear 'the world's dread laugh.' His light was eclipsed. He was discovered one morning suspended from a beam in his bed-room. There were found, after his death, some papers, on which were written straggling and undigested thoughts, as a supplement to his spiritual journal; and in these, so deeply had he been possessed by notions of infallible grace and infallible conversion, he had attempted to justify his self-murder, applying literally to himself the language of Job,—'My soul chooseth strangling and death rather than life,'—in a long rhapsody, which evinced that his mind must have been in as pitiable a situation as a ship driven before tempestuous winds through a dangerous sea, with no rudder to steer, no compass to direct its goings. He was followed to the grave by his broken-hearted mother, who soon joined him 'in the narrow house' of death."

The paper on "Religious Offices" is one well

worthy of attention, though it would be too much to assert that we entirely coincide with the writer. But we must say, especially at the hour of our writing, we cannot do better than advise an attentive perusal of many parts of this volume, as a fitting study for the approaching Easter.

The American Annual Register for the Years 1826-27. 8vo. pp. 860. New York, 1828. E. and G. W. Blunt.

ACCUSTOMED to speak our sentiments without circumlocution, frankly, whether for or against, it affords us much pleasure to notice this volume, which is just imported, with very high eulogy. It is an able performance, and does credit to the American mind and literature. But why should we say American, since the sterling and best works of that country are so entirely English and worthy of the intellect of the mother-land? It is only when presumptuous egotists take it into their heads to imagine that they are new and sublimer creations of a new and sublimer world, that the good sense and genius of the United States are turned into folly and scoff. The work before us is a plain, sound, and sensible production, full of information, and (though national enough) of much historical value. We make a small miscellany of its domestic *Register*, by way of exemplifying the volume.

"*Shoes at Lynn (Massachusetts).*—The population of Lynn is over 5000, nearly all of whom are supported by the shoe-business. From 1,200,000 to 1,400,000 pairs of shoes are made annually in the town, of an average value of 75 cents per pair, making nearly 1,000,000 dollars. The females of the town earn more than 60,000 dollars annually by binding and ornamenting shoes. Millions of low-priced fancy shoes have been sent to South America, and sold at a profit. There is a chocolate manufactory in Lynn, which makes sixty tons of chocolate in a year. The Lynn fishermen at this time bring in 6,000 pounds of fish daily."

"(*Connecticut, July*)—*Extraordinaries.*—A Newhaven paper, of the 3d of July, mentions, that on a haul of fish made there on the 2d, there were 25,000 white fish (bass), a large quantity of blue and weak fish (suckermogs), and seventeen large sharks, from seven to ten feet in length. The latter made destructive work with the net; and, although not able to escape themselves, gave opportunity for the escape of at least 50,000 white fish."

"*Sheep.*—A destructive malady appeared among the sheep in the town of Waterville, N. Y.; hundreds died off very strangely: considerable pains were taken to ascertain the cause, which terminated very satisfactorily. A kind of grub worm was discovered in the head, a little above the eye. The largest was about three-fourths of an inch long, and as large as a pipe-stem; and many others were found in the same sheep's head, some but little smaller, and others quite small. They were alive after the sheep was dead. They were put in spirits of turpentine, but this did not kill them."

"The culture of cotton has but of late been commenced in Maryland, and it has succeeded beyond expectation. Dr. Muse had last season thirty acres sown with this article in Dorchester county. It was all uplands, and yielded one-third clean cotton, whereas one-fourth is the usual proportion in the southern states. The culture has also been successfully commenced in Northampton county, Virginia."

"(*Virginia.*)—Particles of gold have been picked up, perfectly free of alloy, on the land

of Colonel Lewis, near Lynchburg. It is a common occurrence, after a rain, to see it scattered over the soil. * * * A new gold mine, ten miles higher up the Yadkin, has been discovered in North Carolina. One lump, weighing ten pennyweights, has been found; and twelve to fifteen pennyweights a hand, it is said, have been sometimes found per day. The 'gold region' in North Carolina appears to extend over a large tract of country, and the desire to hunt the precious metal to be increasing. It is found in small particles, embedded in ferruginous clay; and a bushel of earth yields an average of about a grain and a half of gold; but the washing and other labour to separate it is tedious and toilsome. A new system is proposed for working the gold-mines by steam. An engine has been procured, and is to be put in operation at Chisholm's mine. * * * New veins of gold ore have been discovered in Mecklinburgh county, which are said to be very rich. Those who have worked them have been well compensated, one company having obtained 600 pennyweights in three weeks. * * * A gold mine has been discovered in Union district, on the waters of Tyger river. The ore is said to be of such extent as to afford employment to 500 hands, at good wages. A specimen of the gold has been pronounced by Dr. Cooper equal in purity to any he ever saw. A company is expected to be formed to work the dust."

"Three men, named Grace, Whipple, and Henderson, having suspicion that a negro man, named Isaac Reed, had stolen money from the former, inflicted upon him a severe flogging with a cow-hide, and having suspended him to the beams of the house, suffering his toes only to touch the floor, left him to remain in that situation. Returning some time after, to discover what effect their cruelty had wrought upon him, they found Isaac dead. A coroner's inquest inspected the body, and rendered a verdict that the deceased had come to his death by the hands of Grace, Whipple, and Henderson, who were apprehended with some difficulty and lodged in gaol, all bail being very properly refused, to await their trial before a called court of the county of Henrico. The suspicion of the culprits was directed against Isaac in consequence of the responses of an old beldame in the neighbourhood, who has set up as conjuror, and who was consulted by Grace on the occasion. The money was afterwards found, and the innocence of the unhappy victim established.—A Captain Carter, of Richmond, ordered a servant to take a negro boy, who had done something that displeased him, put a rope loosely round his neck, and suspend him to the ceiling of a smoke-house, seating him in a chair, and tying his hands and feet: this the servant performed. Some time after, the smoke-house was visited by Capt. Carter, with an intention of releasing the offender, but he was beyond release, as he had been dead several minutes."

"Mr. McCall, of Georgia, is cultivating the vine pretty extensively; and it is stated, he has proved the fact, that one acre of land will yield as many grapes as will produce 400 gallons of wine, the clear profit of which is estimated at 160 dollars."

"(Mississippi).—A duel was lately fought by two citizens of Mississippi with muskets, loaded each with fifteen buck-shot, standing at the distance of thirty paces: both were wounded, one severely."

"The salaries of public officers are higher in Louisiana than in any other state in the Union. That of the governor is 7,500 dollars; that of

the judges of the supreme court, 5,000 dollars."

"(Kentucky).—Desha.*—Another attempt was made, during this month (October), for the trial of I. B. Desha, for the murder of Mr. Baker, and failed, many of the principal witnesses being absent, and the prisoner himself not able to attend at the bar."

"November.—The Choctaw academy is in a flourishing state. The second examination of the pupils lately took place, in the presence of 500 people, and the boys acquitted themselves much to the satisfaction of all parties. There are fifty-three Choctaw students at the establishment, which is under the patronage of the Baptist general convention: the funds are supplied by the nation, out of the annuities payable by the United States."

"(Ohio). Indians.—The head chief of the Shawanese Indians, being at a tavern at Piqua, under the excitement of liquor, quarrelled with several persons and stabbed them; among others the editor of the Piqua paper, who was wounded in nine places. The next day, on Perry's arrival at Wapaukonnetta, the Shawanese were holding a council, at which he should have been present, and which had adjourned from the day previous in consequence of his absence. They had assembled for the purpose of prohibiting and abjuring the use of spirituous liquors among their nation from and after that day; and when they had been made acquainted with the effects this same curse had on their chief, and the disgraceful actions he had committed while under its influence, a general feeling and expression of sorrow ensued. The council immediately sent delegates to Piqua, to hold a talk with the citizens. Their orator, Wee-will-a-pee, then expressed the wishes of his people in the following characteristic speech:—"We have been deputed by our nation to wait on the citizens of Piqua, and express to them, and particularly to those who were injured, our deep sorrow for the accident which has lately happened. We know strong drink was made for white men, as they know how to use it; but it makes Indians crazy: we therefore held an assembly of all our people to abolish the use of it among us. It was the wish of our people that our chief, Perry, should be present at our late council; he did not come, and we were disappointed. Perry arrived before the council broke up, and what he told us made us very sorry. We always wish to live in friendship with our white brethren, and especially with the people of this town, as we have so much communication and trade with them. We are very willing to pay all expenses, on condition that the white people will not put the law in force against our chief." The speech was answered by several citizens, assuring them of a reciprocation of a friendly feeling, and advising them to discontinue the use of whisky; and that the outrage of this man should be forgiven in consideration of his repentance, and the peaceable disposition and assurances of regret expressed by the deputation in behalf of their nation."

"(Indiana). November.—Numerous emigrants are pouring into Indiana, from Pennsylvania, Virginia, Ohio, and Kentucky. Many are of the respectable classes, with large droves of cattle and flocks of sheep, &c. In 1800, Indiana had less than 5,000 inhabitants; the present amount is not short of 200,000. The establishment of Robert Owen, at New Harmony, is spoken of as in a flourishing condition, but unable to provide for all those who apply to

* His father is governor, and he has since, it appears, pardoned him.

become members of the society. Its present condition is thus described. The society has apparently assumed a more settled form; the lectures are better attended, and temperance and industry are enforced by precept and example. All sorts of dissipation are discouraged, but amusements abound. Swearing and the use of hard words seem as if abolished among the older members of the community."

"April.—The people of New Harmony have divided themselves into three communities, independent of each other and of Mr. Owen; and, in these new formations, the experiment will be continued for the present. The town of New Harmony is very full of people, and comfortable accommodations for additional colonists cannot be furnished. The elements of which the society is composed seem to be peculiarly discordant."

"June.—A horrid murder was committed in the vicinity of Brookville, by John Young, for whose daughter John Points had conceived an attachment. Young was a man of standing, and was opposed to Points, and refused his consent to their marriage. The lovers, however, had entered into a matrimonial engagement, and were on their way on a moonlight evening to be married, accompanied by several friends, when they were waylaid by Young, who shot Points through the head in the midst of his laughing companions, and while his intended bride was mounted behind him on the same horse. On the fall of his victim, Young dragged his daughter to his dwelling, and on the following day delivered himself up to the proper authorities, who admitted him to bail, on the plea that he had demanded his daughter of Points before he shot him. The daughter was aged eighteen years, and marriageable, by the laws of the state, without the consent of parents."

This cento, selected without reference to connexion, is yet characteristic enough of the country. Great improvements appear generally to be in progress; and, we must add, there is still great room for them, both in physics and morals, if we may judge from a multitude of the indications developed in these pages.

The Opening of the Sixth Seal: a Sacred Poem.

Second edition. 8vo. and 12mo. pp. 179. London, 1829, Longman and Co.; Oxford, Vincent; Cambridge, Deighton.

WE object to the subject of this poem for two reasons—first, because it has already been exhausted by Messrs. Pollok and Montgomery, and the undiscovered lands of poetry have a fate the very reverse of America—it is the first adventurers who stamp their names and memory upon them: secondly, we dislike the subject itself; we can enter no protest too strong against this "dealing damnation round the land." It is a most mistaken idea of religion which would thus enlist in its service the very worst feelings of our nature: "judgment is mine, saith the Lord;" and the man who, blinded and erring himself, presumes to pronounce on his fellow-sinners, only enthrones his hatred on his ignorance. Moreover, in thus anticipating the decrees of Providence, in making such inscrutable mysteries matter for fictitious narrative, there is a profanity quite out of keeping with aught of strict religious profession. Many and many are the passages, in Pollok especially, so profanely absurd, that had they been written by any one who came not steeped to the lip in all the bitter exclusiveness of Calvinism, three parts of his present admirers would have been the first to cry out, and with most entire justice, on the injury

done to religion. When we look round on the present age of hypocrisy and indifference, we would be doubly guarded against yielding one spot to the step of the scoffer, or of allowing man's evil passions and prejudices to pervert or even mingle with the pure and holy spirit of Christianity. The importance of the subject must excuse our having somewhat gone beyond our usual limits, and we return to our criticism, which has now a more gracious office—that of praise; for there is much in this little volume that amply deserves it. Its chief poetical fault is the common failing of inexperienced writers—allowing a favourite author to become their inspiration, and thus letting admiration interfere with originality. Thus we are continually reminded of Montgomery, while we are at the same time convinced that his follower has resources enough of his own, would he but trust to them. These pages, indeed, display harmonious versification, some admirable descriptions, and some sweet sketches, like favourite groups in a large picture. For example, a desert place:—

"Thus, on the desert sands,
A few and solitary columns lay,
And huge rocks, hewn to be the eternal base
Of some immeasurable temple dome—
All prostrate now; and a few pillared aisles
That faintly pictured to the pensive eye
The might and majesty that once were there.
Such monstrous columns, such huge walls, and towers,
And gorgeous temples, never fancy framed,
When, gazing on the firmament at even,
We mark the mountainous clouds, piled heaps on heaps,
Saffron upon the horizon, and the rays,
Departing, kiss their craggy sides, till glow
The grim, dark-waving banners of the storm
With a new beauty, far unlike the glare
Of their own fire-flash: then the eye doth frame,
As we look on them in the sky, tall towers,
And gilded palaces, and pillared vaults,
And a huge city's vast embattled walls,
Seen in the heaven-clouds. But such vanished might
Shadow not forth the mountains of the sky,
As the half-shrouded pillars, and the domes,
And columned aisles, and rock-hewn stones, reclined
Prone on the desert waste would whisper there
To the heart smiting on their loneliness;
For not a green-hued herb its lowly head
Those cities lifted aigh, nor tree nor flower
Sighed its sweet breath upon the ruinous spot;
The very ivy-wreaths had died away,
And the grass scorned the once proud place of man,
Nor would wave over it; the wolf alone,
Spurned from the living, and the slimy snake,
Dwelt there, the monarchs of the blasted plain!"

The following coming of darkness is fine:—

"The ever-beauteous moon,
Friend of the poet and the lover—orb
That did the sad night hours with golden ray
Cheer from her heaven path, on their sullen robe
Her mellow beams, like music to the breast
Of melancholy Sord, that soothed his soul,
Silently shodding, all the things of earth
Flooding with a new beauty, till they seemed
As spectres conjured by her dreamy spells:
She too, alas! when swelled the trumpet cry,
Quivered, like lamp flame in the fitful breeze,
And then went out, and Darkness over all
His pall rejoining flung, that not a ray
Was on the earth, the straining eye of man
To gladden with its gentleness—all gloom,
Save when a wandering star rushed wildly by,
More swift than sun ray spending on its flight,
Shocking the frail world as it swept the heaven
Tracing its heedless way. So dim at first,
A blush upon the firmament it seemed;
Brighter, and yet more bright, it came—it flew—
And as more nearly to the trembling earth
It made its flight, more vast, more dread it was,
Till all the heavens were shrouded from the eye
Of gazing man; yet not with golden rays,
As when it watched the dull night hours away,
Twinkling upon the far off firmament;
Not in its beautiful indistinctness now,
As when the lover looked upon its lamp,
Charming his melancholy lay, or priest
Of old did homage to its shadowy sphere,
And basked its minister of the Most High;
When, seen so dimly by the musing eye,
As like a visionary dream it hung
Upon its heaven path, that a doubt would come
Whether it were not of the spirit race
Who round the throne of the Invisible
Their never-wearying watch keep ceaselessly.
But lower now looked out upon its orb,
Something soft, vague—nor musing eye beheld
Its terrible coming, and of spirit forms

Pondered—nor priest sent up to it a prayer,—
For all its golden glories now were gone,
And with a dull red glare, such as may be
Upon the black-browed vault of sullen night,
When storm clouds are upon it, and beneath,
Etna from out her many mouths of flame
Flings up her torches to the lurid sky,
In fearful sport."

We would point out the third part as containing characters, &c. very poetical, though we again protest most strongly against the manner in which they are introduced. We shall take one instance, and only one, out of the, we doubt not unintentional, profaneness to which writers of this class are liable. Perhaps the crucifixion is one of the most solemn and awful subjects on which a Christian can meditate: what can we say to a description where the dying Saviour is likened to "another flower"—"a blushing rose, while the envious wind has blasted its budding charms;" while around the place "flowers and fruits kiss to perfection?" Were it on no other grounds than those of taste, how decidedly objectionable!

But enough both of praise and censure. Had we not thought highly of the author's talents, we would not have entered into such detailed criticism: as it is, we look upon *The Opening of the Sixth Seal* to be a volume containing much poetry, and still more promise.

A Catalogue Raisonné of the Works of Dutch, French, and Flemish Painters. By John Smith, Dealer in Pictures, late of Great Marlborough Street. Part I. 8vo. pp. 412. London, 1829. Smith and Son.

To all persons fond of, or connected with, the fine arts, and especially to the collector, whether amateur or professional, Mr. Smith's book must be highly acceptable. Besides a copious description of the principal works of the artists to whom it refers, it contains short biographical notices of the artists themselves, a statement of the prices at which their pictures have been sold at public sales on the Continent and in England, a reference to the galleries and private collections in which a large portion of those pictures are at present, and the names of the artists by whom they have been engraved. Mr. Smith states, that the materials from which his work is composed are the results of the observations of many years employed in collecting, in France, Germany, Holland, and England; and that he has derived much information from the Dutch and French catalogues of pictures; to the writers of whom he pays a high tribute of praise for their talents, as well as for their correctness and veracity.

Mr. Smith has very judiciously published at present only one part of his work. The remainder, which will be comprised in five vols., he intends to publish by subscription. The present Part comprehends a description of nearly twelve hundred of the principal pictures of Gerard Dow, Peter Van Slingelandt, Francis Van Mieris, William Van Mieris, Adrian Ostade, Isaac Ostade, and Philip Wouwermans. With the descriptions are occasionally mingled critical remarks; but Mr. Smith, with great propriety, says, "he has scrupulously abstained from observations upon pictures which might tend to injure their value, and thereby occasion a loss to the individual holders of them; but he does not feel that the same forbearance is necessary with respect to pictures in public galleries: the latter are open to fair criticism, and the writer has not hesitated to make remarks upon them whenever he thought they would conduce to the information of the amateur."

The passage which we have just quoted is from the Introduction to the volume. That

Introduction also contains a statement of some of the dangers to which collectors of pictures are exposed from the tricks of fraudulent dealers; and as the statement may put some of our readers on their guard against being taken in by similar practices, we will extract it.

"In exhibiting the various deceptions and manoeuvres of designing dealers, it will be proper to commence with that which is most common; namely, placing the name of a first-rate master upon a picture by an imitator, or on a copy, which is frequently disguised by dirt and varnish, &c.; but a copy (if modern) may be easily detected by its newness, as, on being pressed by the nail, the colour will be found to be still soft. These fabricators disguise a copy by dirt and varnish, using especial care to have it painted upon an old canvass or panel, to which seals and other documents are attached at the back, so that unguarded purchasers are often deceived by apparently the most authentic evidences of originality. Amateurs are frequently invited to look at cases of pictures, which are said to be just arrived from the Continent. This invitation is accompanied by a plausible history of the collection, from whence they are said to be derived; perhaps that of 'some ancient family in Italy or Holland.' Their assurances are occasionally strengthened by invoices, letters, and other corroborative documents: thus suspicion is so lulled, that the gentleman intended to be duped readily accompanies the agent (for principals are rarely seen in these matters) to the custom-house, or warehouse, where he sees the foreign case opened; is full of confidence, and buys a *Van Strij* for a *Cuyp*; a *Begyn* for a *Borghem* or *Both*; and a *Camphuyzen* for a *Paul Potter*; or the works of any other imitator, or analogous painter, for those of the first-rate masters! Another artful method, which frequently misleads amateurs, is a plausible tale or history of a picture, accompanied by high encomiums of its excellence and value; this is followed by the demand of an enormous price, which is lowered gradually, until the wary dealer catches at an offer, which he, with some specious excuse and apparent difficulty, accepts, although it be but a third, or even a quarter, of the sum asked; and the purchaser ultimately discovers that he has bought a copy, or an imitation, instead of an original picture; and that a painting for which he has given five or six hundred pounds is barely worth one hundred. Another scheme is to place pictures in an auction, and to run them up to large sums, in order to give them a fictitious value, with the hope of entrapping some unwary bidder: should this fail, the picture is afterwards put up at some other auction, with an observation that it was formerly sold for the sum at which it had been knocked down at a previous sale, and the sacrifice of half, or two-thirds, of that apparent purchase-money, is perhaps an inducement to an unsuspecting spectator to bid, and to become the unfortunate buyer. Gentlemen are frequently beguiled to purchase a picture which is stated to be by some first-rate master, and is partly confirmed as such, by having been in some distinguished collection, and as having been exhibited in the British Gallery—nay, more, engraved: still the picture is a mere copy, or a good imitation, at best. The writer could point out pictures of this sort, which, having passed through his hands with the name of the artist upon them, have afterwards been sold and exhibited under a different appellation; of course, one of higher request in the market. Another plan, very extensively practised by certain dealers, and by which one

or two apparently knowing ones have been duped, as well as less cautious gentlemen who do not buy with a view to profit, is, the placing of old, or purposely dirtied pictures, at *brokers'* or old clothes' and other shops, where the vendors appear to know nothing whatever about them; but they tell some simple story of having bought them at an 'old mansion in the country;' or, of 'an antiquated lady, in whose family they are said to have been for the last two centuries.' A tale of this description, related in a plain, and seemingly artless, manner, is listened to with avidity by many, who would shew less credulity if treating with one whom they supposed conversant with the value of pictures. The purchaser imagines that he is buying a great bargain of a poor ignorant man, but ultimately discovers which has been the dupe; but those who are so duped have scarcely a right to complain, for it is well known, that some that have bought sad trash in this way, will not buy of one whom they know to be well acquainted with the value of works of art, as supposing that they cannot obtain a bargain. To guard against the above impositions, and others equally mortifying, the writer would recommend amateurs, previously to purchasing pictures of value, to obtain the opinion of some one conversant with works of art, whom they may safely consult, or to apply to a dealer of acknowledged respectability. The writer strongly recommends these precautions, as the best means of avoiding imposition, and of preventing that disgust which gentlemen invariably feel on discovering that they have been duped, by the purchase of copies instead of the originals: a disgust so powerful, that many, in the warmth of their just displeasure, have sold off their pictures, and turned away for ever from the delightful pursuits of collecting works of art. To prevent such results in future, to rescue the respectable part of the profession from the disgrace of being classed with fraudulent *charlatans*, and to prevent, as much as possible, the loss which the arts must suffer when amateurs cease to purchase, the writer has ventured to point out some of the most prominent tricks of those who disgrace the commerce of pictures. Before closing this unpleasant subject, it may not be considered altogether inappropriate to glance at a system of dealing, in which a certain class of pictures is found to be a most convenient medium, on account of their indefinite value: the writer alludes to the traffic of bill discounting, and the purchase of post-obits. The necessitous applicants to these unmerciful and ruinous accommodators are usually compelled to take a third, and sometimes one half, the amount of their bonds, or bills, in pictures, which, of course, are ascribed to the best masters, and valued accordingly at enormous prices. By this nefarious practice some have enriched themselves, and are now living in affluence. An instance of this sort of dealing occurred very lately, in which a collection of pictures, valued to the needy gentleman at £5000, did not net at auction £500!"

We hope that Mr. Smith may be induced to proceed with the publication of his work. If he should obtain a number of subscribers sufficiently large to justify him in doing so, he announces that his second volume will contain the works of Rubens and Vandyke.

SIGHTS OF BOOKS.

The Catholic Church Invulnerable and Invincible. 12mo. pp. 263. London. J. Flint. As this volume has reached us, with "the author's Christian regards," we should be

worse than heathens not to notice it with our critical regards. It is an explication of the creed of Pius IV., and a zealous denunciation of the Church of Rome, its infidel principles, and temporal ambition.

Christianity, Protestantism, and Popery, compared and contrasted. 8vo. pp. 254. London, 1829. S. Maunder.

THIS is a volume which will find great favour in the eyes of all true church-going Protestants. It is indeed a strong anti-Romish production, and displays very considerable popular abilities.

Hints originally intended for the Small Farmers of the County of Wexford, but suited to the circumstances of many parts of Ireland. By Martin Doyle. 2d edition. Dublin, 1829. Curry and Co.

THESE Hints, or comments, upon agriculture, originally appeared in a Wexford newspaper. They are generally attributed to a gentleman named Hickie, who, in the homely guise, or rather disguise, of Martin Doyle, lectures his poorer countrymen on the various points of rural economy; and most excellent is the advice he gives them. We should wish to see this pamphlet in the hands of every Irish farmer; for we have seldom met with any book more convincing in argument, or in style so well adapted to the class to which it is addressed.

From the Recommendations respecting Cottage Cleanliness we are tempted to extract an illustration, as it affords at once an admirable picture of Irish life and of the patriotic Martin Doyle's mode of writing.

"I would not throw away lime and sand upon those who are satisfied with the outward look (of their cottages), like Jenny Dempsey, who lives near me. But probably you don't know who Jenny Dempsey is: so it is but civil of me to inform you. She is a tenant's daughter of mine, who was married about four years ago to a man called 'the hurler.' I gave them four acres of land at one pound an acre, with a snug well-thatched cabin, besides a small cow-house, dairy, and pig-sty—(quite enough for the size of the farm)—lime and sand for dashing, bricks for a chimney, cottage windows that open and shut upon hinges, and paint for them and the two doors;—back and front, every thing was as nice as you please. When the judges came to decide the premiums, the windows were bright, the gravel-walk without a weed, the cabbages fresh earthed in the little garden, the pig snug and clean in her sty, and the bees (which every one of you should have) swarming that very day; Jenny, herself, and the children, as tidy as you can imagine; and the 'hurler' himself had the knees of his small clothes actually buttoned and tied. Thinks I to myself, what a fine example to the rest of my tenants this family will be! But I am very sorry to tell you, that Jenny disappointed me after all. I went there about six weeks afterwards, and found the pig splashing and dashing the potato-wash about the floor of the kitchen; six couple of young chickens were picking up what he threw about; a goat was tearing the woodbine and roses that I had myself nailed on the front wall; and what was worse, three panes of glass were knocked out (I believe by that same rascally goat), and 'the hurler's' old breeches and his father's wig were clapped into their place just to keep out the wind; and Jenny herself, instead of a tight bed-gown, had a dirty night-cap, and a long dragged-tailed gown, as black as the pot—to say nothing of the children, who

looked as if they hadn't been troubled with comb or soap since the judges had paid them a visit. 'Oh, Jenny Dempsey!' says I; 'what a sample of house-keeping you are after shewing me this blessed day!' Well, what was her excuse, do you think, for all this slovenliness and neglect?—*She didn't expect me that day! if she knew that I was coming*, the dirty cap and the dirty long-tailed gown would have been off, and the children washed, and the pig in the sty, and the floor swept, and the windows mended, and the wig and the breeches decently hung upon the peg in the bed-room. This is precisely the kind of excuse which one-half of you would offer for every-day filthiness; but, believe me, tidiness will cost very little—method will keep all things together as they should be, if once properly set going."

ORIGINAL CORRESPONDENCE.

Paris, 5th April.

PUBLIC improvements are still the order of the day here, but most of the speculators complain that they do not get a common interest of five per cent for the employment of their capital. This will, it is said, be the case with the splendid improvements making in the Palais Royal by the Duke of Orleans. The increased rent of the shops in the New Gallery will be very inadequate to the sums laid out: the embellishment, however, is one which does the duke much credit—the new gallery, when complete, will be one of the handsomest in Europe.

Literature seems to flourish: new literary journals appear daily, and all that are well executed succeed. In addition to the numerous literary and scientific papers of the ordinary size, there is one, called *Le Voleur*, which is almost as large as the *Times*: it is rather a clever paper, and is becoming a favourite.

At the theatres there is little to notice. *The Muette de Portici* fait fureur, as the French call it, at the Académie de Musique; and the *Sept Heures*, of the Porte St. Martin, is so attractive, that a crowd assemble at the doors two or three hours before the regular time for opening them. The Italian Theatre is closed for the season; but Laurent has announced a re-opening for the performance of German operas. Madame Malibran Garcia took her benefit on Thursday last, when she had a crowded house at doubled prices. The *marchands de billets*, who had, on the first announcement, purchased tickets upon speculation, were able to dispose of them at an enormous profit. Twenty francs were paid for a seat in the pit, and thirty-five francs for a stall. There is no prospect of another English company appearing in Paris: the indifferent actors who composed the majority of the last company disappointed the French; and the rage for English plays seems to be gone by. Even Miss Smithson has in some degree lost her popularity. Abbott has left Paris, after attempting to amuse the Parisians à la Mathews.

A curious little book, called "*Appel aux Français*," has made its appearance here: it is a proposal for reforming the orthography of the French language, by spelling it in most cases as it is pronounced. The book had a prodigious sale—some say 30,000 copies were disposed of. The third volume of Vidocq has sold very well: it gives a correct picture of French manners in low society, and is *piquant*. The fourth volume is expected in a few days.

Some interesting discoveries were lately made at Rouen. The workmen employed at the cathedral, found, at twenty feet below the surface of the earth, the remains of Roman ma-

soury, and near it the soil of a meadow. It would appear that at the time when this manure was erected, the bed of the river, now more than twenty feet below the level of the earth upon which this portion of the cathedral stands, was only four feet lower than the soil of this meadow.

The mania for horse-racing in France seems to have subsided a little; but great attention is still paid to the breed of horses for hunting, and for the better kind of carriage-horses. The exportation of horses from France, from 1823 to 1827 inclusively, was 16,000, of which nearly one third were sent to Spain, and about one sixth to England. The importation during the same period was 108,500, of which more than one half were from the Netherlands and Switzerland, and one twentieth from England. Among the latter, however, there were several horses of great value. The importation has fallen off nearly one half since 1823—the breeders and others being now well supplied.

An engraving is being made here of the colossal block of granite which has been cut for the new museum at Berlin. When entire, this block weighed nearly 6,000 quintals; and it is now said to weigh 1,600 quintals. It is sixty-eight feet in circumference, and in diameter twenty-two feet.

One of the most favourite pieces now playing in Paris is the *Henri III* of the *Français*. This, although deprived of the attraction of novelty, continues to bring crowded audiences. It is indeed a very clever production, and its defects serve but to set off the brilliancy of its beauties. The author of this piece, which approaches nearer to the style and freedom of Shakespeare than any thing else on the French stage, is a young man who held an appointment in the household of the Duke of Orleans, of about 1800 francs per annum (less than 70*l*). In this situation he was far from giving satisfaction, as he neglected its duties for the study of literature. The duke, after repeated complaints, at length addressed M. Dumar on the subject, in nearly the following language. "Sad complaints are made of you, but I overlook them. You are fond of literature; apply to it: relinquish all other pursuits, and retain your salary. If within two years you produce any work of merit, rely upon my proving your friend; if you cannot do so, abandon your penchant, and return steadily to business." The duke's liberal offer was accepted; and in less than six months, two pieces, *Henri III* and *Christine* were read with acclamation by the committee of the Théâtre Français. Christine has not yet been acted; but it is said to be superior to *Henri III*, for the copyright of which the author has received 10,000 francs. This anecdote, which I have from a very respectable source, and which is generally credited, has added much to the popularity of the Duke of Orleans. As to the young author, his fortune is made. Should Christine succeed, of which there is little doubt, the tax upon the performance of the two plays throughout the country will produce him a very handsome income. It must be confessed, that the encouragement which dramatic authors receive here is very superior to that which they meet with in England.

The vacancy in the French Academy, occasioned by the death of M. Auger, has been filled by the election of M. Etienne.

The cultivation of maize is likely to become general in France. At the sitting of the Academy of Sciences in Paris on the 31st ult., it was proposed to give a prize of

1500 francs value to the author of the best essay on the cultivation of Indian corn in the four departments surrounding Paris, with a view to render this grain useful for the nourishment of the human species, particularly children. Hitherto it has been grown chiefly in the south of France, as food for cattle and fowls. It is a singular fact, that fowls fed exclusively upon this food have a yellow appearance.

ARTS AND SCIENCES.

ROYAL INSTITUTION.

APRIL 3d.—Mr. Faraday this evening delivered a lecture "On Mr. Wheatstone's illustrations of the resonance or reciprocated vibrations of volumes of air." The reciprocation of simple columns of air and other gases to the vibrations of a tuning fork, the tongue of a Jew's harp and that of the *Æolina*, were first considered by Mr. Faraday; after this, the important effect of reciprocation in augmenting the sound of the *Æolina*, either when applied to the mouth or to other cavities, was shewn, the instrument being without such additional effect almost inaudible at a few feet distance: it was likewise shewn, that an important influence is often produced by multiple resonances upon a first sound, where what is frequently imagined to be due to a change in the quality, is in reality dependent upon the existence of other and simultaneous sounds with that supposed to be altered. When illustrating the resonance of the irregular volume of air in the mouth, &c., Mr. Faraday stated that it was possible to divide the mouth by the tongue into two cavities, the air in each of which could be made either by resonance or immediate vibration to yield its own particular sound. At this period of Mr. Faraday's observations, a gentleman (Mr. Morrison) came forward and demonstrated the possibility of producing two simultaneous sounds from the mouth, by whistling first a simple air, and then performing in two parts; and that with such clearness and effect, that no one who heard it could doubt the existence of two sounds at once,—the effect being in no degree like that of a rapid transition from one sound to another. The resonance of the air in the cavities of the ears was then considered, and explained with great perspicuity. The lecturer next pointed out the construction and mode of application of Mr. Wheatstone's single and double microphones: the latter consists of two plates of metal of one inch in size, so as to cover the cavities of the ears; each plate has a wire about one-eighth of an inch in diameter rivetted at one end at right angles into its centre: the wires being about eighteen inches long, are bent round a little distance from the plates, and brought together side by side at the extremities, where they are united by brazing, and jointly filed to a point. When this instrument is used, the plates are put over the ears, the spring of the wires holding them with sufficient force against the head; the point or apex of the microphone is then to be brought into contact with any part the phonic vibrations of which are to be ascertained. The vibrations are conducted along the wire, and being communicated to the plates which close the ears, these vibrations are reciprocated by the enclosed volumes of air, and the nerves of the ears powerfully affected. By the use of this instrument the vibrating parts of the sounding-board of a guitar, harp, or other instrument, can be at once ascertained, and the irregular sources of noise and mechanical action

in machinery discovered, when every other trial has failed. So powerful is the effect of the microphone upon the ear, that by it the most uninitiated can at once be made to perceive the effect of chord and discord.

In connexion with the subject of phonics, discussed in the theatre of the Institution, Mr. Curtis, whose acoustic labours are well known, exhibited a newly invented hearing-trumpet having two apertures, one directed to the ear, and the other to the mouth,—an improvement which promises great advantage in cases which do not admit of cure: it was stated that the idea originated with Sir Edward Stracey, Bart.; and its decided utility over other acoustic tubes, in affections of the ear in all the different stages of disease, is affirmed by Mr. Curtis. Several donations connected with literature and the arts were also on the library-table.

COLLEGE OF PHYSICIANS.

APRIL 6. The most numerously attended assembly of the present season took place at the Hall of the College this evening; Sir Henry Hallford, bart. the President, in the chair.

Dr. Macmichael read a paper by Sir Anthony Carlisle, President of the College of Surgeons, on the use of the spleen and thyroid gland,—subjects hitherto considered extremely obscure: the communication was full of ingenious and, to a certain degree, original observations. In consequence of the unavoidable technicalities employed in the details, the paper was perhaps chiefly interesting to the members of the profession who heard it read. The author concludes, that the office of the two organs whose functions were considered, was, of the first, to impart heat to the stomach; and of the second, to the organ of voice. Several curious physiological remarks were brought forward in the course of the details; perhaps the most original of which was the notion, that what has hitherto been considered a disease—on the Continent termed the *goitre*, and in this country the "Derbyshire neck"—is, in fact, neither more nor less than a provision of nature to counteract the effects of extreme and sudden cold applied to the throat. Hence it is, that the inhabitants of whole districts in the mountainous parts of Switzerland, who are in the constant habit of drinking snow-water, as is well known, have such an enlargement. Full justice, however, cannot be done to the paper without introducing terms of art which would mystify the subject to all but professional readers.

LONDON PHRENOLOGICAL SOCIETY.

APRIL 6. Joseph Moore, M.D. President, in the chair.—A paper "on Phrenological pathology" was read by Dr. Epps; in which he reviewed the controversial opinions respecting the injuries and diseases of the brain, and endeavoured to prove that the peculiar function of the part or organ so injured or diseased is always morbidly affected. In confirmation of the fact, Dr. Epps cited several cases, many of which had come under his own inspection. He then proceeded to state the benefits likely to result to society from the extension of the science of phrenology amongst medical men, and considered that it would form a new epoch in the annals of medicine. Several cases in support of these opinions were mentioned by Dr. Elliotson, Dr. Wright, and Dr. Moore. Mr. Cooper furnished a brief history of the character of William Pearce, in whom the organs of wit and imitation were pre-eminently developed. A mask of the late Judge Heath, and a cast of the head of Mr. Thomas

Taylor the Platonist, were presented by Dr. Wright.

NEW SOUTH WALES.

LETTERS from Sydney to the 7th of October, and journals to the 4th of the same month, announce the arrival of his majesty's ship the *Rainbow*, Captain Rous, from a voyage of discovery. The captain has discovered two large rivers to the north of Sydney, in which there is safe and convenient anchorage. He proceeded a considerable way up these rivers, and found the country well wooded, the climate fine, and the soil, as he judged, very rich. He called one of these rivers "Clarence," and the other "Richmond" River: they are between Sydney Bay and Moreton Bay. Clarence River, the mouth of which is in lat. 28°, is presumed to issue from the great lake lately discovered in the interior of the country.

EXPERIMENTS WITH PRUSSIC ACID.

A GREAT number of experiments with prussic acid was made in the early part of the last month by Mr. Henderson, a medical student at New York. This gentleman states, that having great doubts on the subject of the reports which had been given of the power of hydrocyanic (prussic) acid, he procured a quantity of two sorts—the pure, as it is made in its greatest possible strength, and the medicinal acid, as made by Garden, of London, which is of about one-seventh the strength of the pure acid. Mr. Henderson first rubbed three drops of the pure acid upon his naked arm, the effect of which was to make him stagger considerably, so as to keep with great difficulty from falling. An intense pain of the head succeeded, with a difficulty of sight; but this was not of long duration, and a strong taste of bitter almonds remained in the mouth for two hours. At the end of that time he recovered, and was as well as if nothing had happened. On the following day he swallowed eight drops of the acid as it is used in medicine, and increased the dose within the space of three days to sixteen drops at each dose, twice a-day; but his head and sight became so violently affected, that he relinquished his experiments, &c. upon himself, and was several days before he completely recovered. He then tried the effect of the pure acid upon animals. A cat upon whose nose he had rubbed four drops, walked a distance of eight or ten yards without the slightest appearance of being at all affected; but it then suddenly stopped, leaped into the air, and fell again dead. He then held a pen, the feather of which had been dipped into the acid, in an iron cage in which two rats were confined, so as to irritate them, and cause them to snap at the feather; they had no sooner done so, than they fell as if they had been shot. A large dog of the Newfoundland species was killed within three minutes by four drops of the acid being poured into its nostrils; whilst another dog of similar size and breed had a drachm of the common acid, such as is used in medicine, and with which several persons have recently destroyed themselves in this country, poured down its throat without effect. Whether this difference was to be attributed to the change which the acid undergoes by dilution, or to a difference of nervous sensibility in the animals, Mr. Henderson does not state,—probably to both. He mentions, indeed, that whilst he has seen one man take six drops of the medicinal acid four times a-day without apparent effect, another from merely smelling at the bottle in which it was contained, has been compelled to keep his bed for

several hours. Upon frogs and other cold-blooded animals the acid had very little effect. Two frogs, upon the soft parts of which he had rubbed a considerable quantity of the pure acid, suffered for a time as if from intoxication, and then recovered and hopped away. Upon insects of different kinds the effects were very curious. On the first application of the acid they curled up their legs, and were to all appearance dead; but in the course of a few hours, many of them, after exuding a black fluid, recovered life and strength. Mr. Henderson, in the paper from which this account is taken, gives several cases of remarkable cures in stomach complaints, and in indigestion generally, from the use of the prussic acid; but he states that its effects are so different in different persons, that it can never be prescribed with safety by the physician who has not been well acquainted with the constitution and previous habits of his patient:—to use his own words, "it is a medicine to be prescribed only to a physician by a physician."

LITERARY AND LEARNED.

OXFORD, April 4.—On Thursday the following degree was conferred:
Master of Arts.—Rev. J. Sayer, Merton College.

CAMBRIDGE, April 3.—The Chancellor's gold medals for the two best proficient in classical learning among the Commencing Bachelors of Arts, were on Saturday last adjudged to Mr. W. A. Soames, of Trinity College, and Mr. W. Martin, of St. John's College.

ROYAL SOCIETY.

APRIL 9th. The President in the chair.—Dr. Wilson Phillips' paper on the physiology of the nervous system was resumed and concluded. Lord De Dunstanville, on being proposed by the president, was, by an immediate ballot, elected a fellow of the Society: William Pole, esq., and David Pollock, esq. both of Lincoln's Inn, were also elected fellows.

The new volume of *Memoirs* published by the Società Italiana, at Modena, and the last three parts of Professor Cauchy's *Exercices de Mathématiques*, were among the presents.

March 26. The President in the chair.—A paper was read, entitled, "An experimental inquiry into the physiological effects of oxygen gas upon the animal system," by S. D. Broughton, Esq., F.G.S.; communicated by B. C. Brodie, Esq.

Although it has long been known that the respiration of pure oxygen gas is destructive to life, some differences of opinion have existed with respect to the physiological conditions of the animals subjected to its influence; and also with regard to the quantity of oxygen consumed under these circumstances, compared with that consumed by the respiration of atmospheric air. With a view to elucidate some of these points, the author confined rabbits, guinea-pigs, and sparrows, in glass jars inverted over water, containing oxygen gas, obtained from black oxide of magnesium by a red heat. The animals at first appeared to suffer no inconvenience from the respiration of the gas; but after some time, generally in about an hour, their breathing became hurried, and their circulation accelerated. This state of excitement was followed by an opposite one of debility; the respirations became feeble, and were more slowly performed; loss of sensibility and of the power of voluntary motion gradually supervened, till the only remaining visible action was a slight one of the diaphragm, occurring at distant intervals. On opening the body, under these circumstances, and also after the entire cessation of the movements of the diaphragm, the breast was found

to be still in vigorous action; the blood in every part of the vascular system, both venous and arterial, was of a bright scarlet hue; it was remarkably thin, and rapidly coagulated; and the temperature of the body continued undiminished. If before the diaphragm has ceased to act, the animal is removed from the vessel to the open air, it generally either recovers spontaneously, or its animation may be restored by artificially inflating the lungs with atmospheric air. The author found that the gas in which animals had thus been confined till they died, retains its power of rekindling a blown-out taper, and of sustaining for a time the life of another animal introduced into it; and he hence deduces the inference, that it does not contain so great an excess of carbonic acid as the gas left when animals have perished by confinement in atmospheric air. He considers the train of symptoms induced by the respiration of pure oxygen gas as analogous to those which follow the absorption of certain poisons into the system.

ROYAL SOCIETY OF LITERATURE.

ON Wednesday, at a meeting of the council, the President, the Lord Bishop of Salisbury, in the chair, the two gold medals (of the value of fifty guineas each), which his Majesty graciously places every year at the disposal of the Society, were adjudged to Baron Silvestre de Sacy and to Mr. Roscoe, the former so eminent in the literature of France, and the latter so distinguished in that of our own country. Though hardly becoming in us, as public journalists, to express an opinion on this subject, we cannot help pointing to this award as a manifest proof of the liberality and impartial judgment with which the affairs of the Royal Society of Literature continue to be administered. Nothing of party or exclusive feeling has ever crept into its councils; and it is not, therefore, surprising, that it should proceed, doing honour to literary merit, and fulfilling the objects of its illustrious and munificent founder, George IV.

ASIATIC SOCIETY.

APRIL 4. Colonel Tod in the chair.—A paper was read, entitled, "On the diplomatic relations between the courts of Constantinople and Delhi in the sixteenth and seventeenth centuries," by the Chevalier de Hammer, F.M.R.A.S. A list of very interesting and valuable donations to the Society were enumerated: amongst them was a splendid copy of Roxburgh's *Coromandel Plants*, presented by T. Snodgrass, Esq.; a curious portrait of Chang-kih-urh, the late unsuccessful rebel in Chinese Tartary; together with a Translation of a Manifesto of the Triad Society,* lately found in the English burial-ground at Macao, presented by Dr. Morrison. Colonel Briggs presented a copy of his Translation of Ferishta's *Mahommedan History*; Colonel d'Arcy a very beautiful Persian MS., the *Makhzan al Asrar* of Sheikh Nizami; Professor Schmidt a copy of his *History of the Eastern Mongols*: several other presents were also made.

KING'S COLLEGE.

IT is said, and we shall be glad to hear it confirmed, that the committee of this Institution, finding that the present state of their funds will not allow of any considerable number of scholars being accommodated within its walls, have the intention of recommending that boarders shall be received by the professors, tutors, and others connected with the College,

* Canton, &c.

upon certain terms, and under strict regulations as to discipline, to be laid down and sanctioned hereafter by its council. We really conceive that this measure will be far more conducive to the moral and intellectual well-being, and to the health, of its pupils, than if they were congregated in a dense mass within the precincts of the College itself.

Much has been said respecting the intended site at Somerset House; but we have heard nothing yet which points at any situation so eligible and so convenient for the purposes of such an establishment, when it is considered that the College is designed to diffuse its benefits as universally as possible among the widely-spread population of this metropolis. Had it been erected at Brompton, under what circumstances would these benefits have been placed within the reach of youth domiciliated with their parents in the northern, eastern, or southern quarters of London? Or, even could the site in the Regent's Park have been obtained (which it could not), hundreds of the rising generation of the city, of the Surrey suburbs, and of Westminster and its vicinity, would have been excluded from the participation of its means and advantages. We are convinced, therefore, that the proprietors will feel that the committee have deserved well of them, and of their fellow-citizens at large, by the selection of the site near Somerset House; and if it be objected, that the Strand and its vicinity are the open resort of vice, we answer, that his Majesty's present government do not intend that the most public thoroughfare in London should continue to exhibit a scene which would not be permitted to disgrace those capitals in Europe which are, intrinsically, far more depraved in the state of their morals, and far less adorned by the exercise of the active virtues of Christianity.

THE LITERARY FUND.

PREPARING for their anniversary on the 13th of May, we were glad to find, at the last monthly meeting of the Society, on Wednesday, that the list of stewards has been much enriched since our former notice, and that many distinguished visitors are expected. To the noble and literary names we formerly mentioned (March 28, *L. G.*) have been added those of Mr. H. N. Coleridge, Dr. Lardner, the Rev. Mr. Stebbing, Mr. Children, Mr. Gooden, and others: the Duke of Somerset (president) invites many individuals of celebrity, both foreign and native: and, altogether, we anticipate a brilliant meeting in support of this admirable charity.

FRENCH ACADEMY.

AT a recent sitting of the French Academy, the vacancy among the foreign members, occasioned by the death of Dr. Wollaston, was filled up. The names offered were Messrs. Beasel, of Königsberg; Blumenbach, of Göttingen; Robert Brown, of London; De Bucha, of Berlin; Dalton, of Manchester; Leslie, of Edinburgh; Ersted, of Copenhagen; Olbers, of Bremen; Plana, of Turin; and Sommering, of Frankfort. Of fifty-four votes, M. Olbers obtained thirty-nine, Mr. Dalton fourteen, and M. Plana one. In consequence, M. Olbers was elected, subject to the approbation of the King. M. Olbers is the learned astronomer to whom science is indebted for the discovery of two planets.

FINE ARTS.

SUFFOLK STREET GALLERY.

(Third Notice.)

THE portrait department of the Suffolk Street Exhibition can boast of many examples in which the highest qualities of the art are finely displayed. First in rank and station is No. 131. *Portrait of his Royal Highness the Duke of Clarence.* H. E. Dawe. Distinguished for talent is No. 8, *Portrait of James Montgomery, Esq., author of the World before the Flood, &c.* W. Poole. In No. 185, *Portrait of a Gentleman.* J. Simpson, we have a picture uniting all the best properties of portraiture: the features are beautifully drawn, and nothing can exceed the solidity and harmony of the colouring. No. 192, *Portrait of G. H. Rodwell, Esq.* J. Knight, shews a great advance in this promising artist. No. 54, *Portrait of R. Mott, Esq.,* and No. 85, *Portrait of the Hon. C. A. Murray, J. Lonsdale,* are admirable specimens of this artist's clear and fluent pencil. No. 42, *Corinne, Mrs. Pearson,* is evidently a portrait, and is a very pleasing proof of Mrs. Pearson's taste and talent. In the same point of view we consider No. 29, *Emmeline, F. Howard;* although its character and expression answer well to the quotation annexed to it in the Catalogue. With the last two we rank No. 187, *An Eastern Girl feeding Kids,* J. Y. Hurlstone, a very clever composition. In the Entrance-room, No. 290, *Portrait of John Adolphus, Esq.,* G. O. Nash, is ably executed, and is a striking resemblance of the celebrated barrister.

No. 89. *The Profligate's Return from the Ale-house.* E. Prentis.—The artist must have well studied the chief character in this scene of domestic misery: a face of more intense and revolting brutality we have never seen upon canvas; and it loses nothing of its force by the contrast which it exhibits to the half-hidden countenance of the suffering wife. The various indications of want in the apartment are ingeniously conceived and exceedingly well executed.

No. 99. *A View of the Town of Berkhampstead, with a rustic wedding party, escorted by old Youthful, who for the last sixty years has been the celebrated Fiddler of the neighbourhood.* H. Hawkins.—Localities of this kind are always amusing to those who are acquainted with the places and characters represented; but the vicinity of this performance to that last mentioned gives it a more general interest. If the young and gay couple who are following their musical guide were to be presented by some benevolent hand with a print from Mr. Prentis's picture, might it not have a most salutary influence on their future lives? Why do not our Societies for the improvement of the people avail themselves of the fine arts, as at least a powerful auxiliary in the attainment of their laudable object? They may depend upon it that "the ocular proof" of the miserable consequences of vice hanging on the walls of a cottage, would have more effect than a hundred moral essays hidden in the cupboard. With the facilities which lithography and steel plates afford, infinite good might be accomplished in this way at a very moderate expense.

No. 423. *Gold Fish.* Miss Wroughton.—In the march of art, as of intellect, our female contemporaries keep pace with the other sex. This performance, under its unassuming title, presents qualities in composition, effect, colouring, and execution, that would do credit to any painter, ancient or modern. The objects are principally those of still life; there is, however,

a figure introduced which is in perfect keeping with the rest of this powerful and admirable work.

No. 430. *Composition of Fruit.* J. Holland.—This, and No. 283, *Fruit,* by the same artist, are beautiful performances; and have a truth and simplicity, as well as a harmony of colour and a mellow depth of tone, which gives them an interest beyond that usually attaching to subjects of this class.

No. 417. *Cattle Piece.* J. Dearman.—Mr. Dearman has already distinguished himself in compositions of this kind; but it behoves him to look attentively at what has been done in ancient and modern art in the path he has chosen. Although rather too hardly marked, the drawing and character of the head of his bull are exceedingly well expressed; but the leg and hind quarters of the animal appear as if cut out, instead of possessing the roundness of a limb. Nor do we think that Mr. Dearman has been quite successful in the pencilling of the coat. Time and observation, however, will, we have no doubt, enable this promising artist to realise all the expectations which his various performances have excited.

No. 429. *Sauve qui peut!* J. J. Audubon.—This whimsical title is admirably borne out by a representation of the confusion and flight of pheasant and partridge, on which a canine enemy has suddenly rushed, and on which he is inflicting sad havoc. All is feathery fright and bustle; and we admire the ingenuity of the artist in contriving to give an additional interest to a careful and well-understood study of individual nature.

No. 397. *The Falls of Machno, and the Pandw Mill, North Wales.* E. Goodall.—Niagara, and other stupendous natural exhibitions of a similar kind, might fill the mind with more of awe and wonder; but we doubt whether the eye of the amateur or the artist would not receive more gratification from this picturesque little splash of water, springing from crag to crag, breaking into white spray, and sparkling in the sun. With a little more sacrifice to concentration of effect, Mr. Goodall's clever performance might vie with the works of Ruysdael.

No. 369. *The Sibyl.* J. Inskipp.—This picture claims our applause, as far as regards power and mellowness of tone, and free and efficient execution: but was there no ugly old woman to be found to bring in contrast with the fair and youthful dupe of gipsy art? As it is, we hardly know whether to present the golden apple, the prize of superior beauty, to the fortune-teller or to the fortune-tellee. The dog is admirably painted, and its introduction conveys a pleasing idea of guardianship and safety.

No. 434. *The Pear.* W. Kidd.—We would recommend to this artist a little more care in the colouring of his flesh, and a little more attention to the concentration of his light. The effect of his pictures is frequently impaired by the number and the scattering of his objects.

No. 392. *Hampstead Heath, painted on the spot.* T. C. Holland.—It is unnecessary to repeat our commendations of Mr. Holland's performances. His studies from nature, especially, have always attracted the attention of both the artist and the amateur. The scene which he has here chosen must daily increase in interest, from the probability of its soon sharing the fate of other picturesque beauties in the immediate neighbourhood of the metropolis. Our speculating capitalists are constantly driving the cattle to distant pastures; brick and lime are spread over green meadows; high walls

have succeeded to hedge-rows; and, if the rage goes on,

"From the centre all round to the sea,
We scarcely shall meet with a tree."

No. 380. *A Scene near the Source of the Medway*. F. R. Lee.—Another of those familiar scenes which come recommended to our notice by their truth and simplicity, though in a different manner from the last-mentioned performance. In fact, the diversity of landscape is perhaps more extensive than that of any other department of art. If to the two pictures to which we have just adverted, we add No. 171, *The Broken Bridge*, by J. O'Connor, that diversity will be rendered still more obvious. The style and character of Mr. O'Connor's works have always struck us as eminently original; uniting much of the poetry of art to the most picturesque forms of nature.

[To be continued.]

SOCIETY OF BRITISH ARTISTS.

ON Wednesday this Society observed its sixth anniversary, with a dinner at the Freemasons' Tavern, the Hon. Douglas Kinnaird in the chair, supported by Lords Durham and Glenorchy, and other lovers of the fine arts. In returning thanks for the toast of "Prosperity to the Association," Mr. Hoffman, the Secretary, stated that above 2500*l.* had already been paid for pictures in the present Exhibition in Suffolk Street. Persevering and increased exertions were recommended, to enable the Society to surmount the difficulties yet attached to it, though it has heretofore done as much as its early friends and patrons could fairly anticipate.

MR. HAYDON'S EUCLES.

THIS classic picture is now exhibiting in Bond Street, in an unfinished state, courting the criticisms of the connoisseurs;—rather a novel experiment in the art; if we do not refer to the well-known story of ancient times, of the painter who pleased every body and nobody. For ourselves, we shall only say at present that Eucles is a noble and spirited composition of a very high class.

THE MONTGOMERY GALLERY.

THIS newly opened and interesting gallery (in Regent Street) consists, principally, of ten pictures, (of considerable size, painted by Mr. J. Rawson Walker, to illustrate as many passages in Mr. James Montgomery's fine poem of "the World before the Flood." Although a little too artificial, and occasionally reminding the spectator too much of the palette, some of these works exhibit beautiful, and others sublime, conceptions, which are highly creditable both to the young artist by whom they have been executed, and to the veteran poet to whom they owe their birth. Mr. Walker is evidently a man of no ordinary powers; and if, after this unrestrained indulgence of his imagination, he can return for a while to the severe labour of a close study of nature, and especially of all those various and characteristic details which she delights to develop as she approaches the eye, we have no doubt that he may place himself in the foremost ranks of the art.

NEW PUBLICATIONS.

Portraits and Memoirs of the most Illustrious Personages of British History. By Edmund Lodge, Esq., Norroy King of Arms, F.S.A. Monthly edition. No. IV. Harding and Lepad.

THE brave, but weak and vain Robert Devereux, Earl of Essex, the learned and discreet Queen Catharine Par, and the wealthy and

sagacious Sir Thomas Gresham, are the subjects of the Memoirs and Illustrations in the fourth Number of the third edition of this beautiful and national work.

The Spirit of the Plays of Shakspeare. By F. Howard. No. XII. Cadell and Co.

THIS Number of Mr. Howard's clever work contains twelve plates from the *Two Gentlemen of Verona*, and eight from *Love's Labour's Lost*. Among the former, the detection of Valentine by the Duke, and among the latter, the King and his Nobles signing their agreement to study, pleased us the most. We wish more had been made of that entertaining personage and prime favourite of ours, Lance.

ORIGINAL POETRY.

MAJOR-GENERAL HIGGINS

(Of 173, Tooly Street, Borough.—N.B. An Apprentice wanted)

TO HIS REGIMENT.

FLY, my brave Britons,—fly, fly!

Why lazily linger and stay?

Your duty forbids ye to die,—

'Tis your country that calls ye—away!

What, men! would you stop—would you stoop—

To fight—when it is not your fancy—

Those mounseers, who live on frog-soup,

And talk about "parly-voosfrancy?"

Such rogues I have ne'er come a-near—

It's enough to put Job in a pet!—

This is no place for us, gemmen, here,

With such an uncommon low set!

What can the French fellows be at?

They're putting their guns to their eyes!

Bobs! Britons! and shall we stand that?

No, never! then follow, and fly!

Let 'em eat all the frogs that they may,

The English will soon beat 'em hollow;

For he, as we're marching away,

How we've forced the poor creatures to follow!

See, see! what a smoking they make

Whenever they shoot for our ruin!

Dirty cowards! it's all for the sake

That we may not see what they're doing!

Bobs! I han't seen that cannon before,

They'll blow us to bits with "that ere,"—

No, patience! I won't fight no more

If those shabby dogs don't play fair!

Do you say we should charge, just to show

That we can if we choose?—horrid stuff!

Our good London customers know

We know how to charge well enough.

Let them dawdle here that think fit,

Or feel any wish to be slain;

But would you those Frenchies permit

To "cut" you, and then "come again?"

Then fly, my brave Britons,—fly, fly!

Why foolishly linger and stay?

It's quite time enough, sirs, to die

When you know that you can't run away!

SIMKINS SIMKINS.

SKETCHES OF SOCIETY.

REMARKABLE PRECOCITY OF TALENT.

Sigismund Baron Von Praun.

THIS youth, who is distinguished for his early and very extraordinary proficiency in the arts and sciences, was born at Tyrnau, in Hungary, on the first of June, 1811, where his father resided, as colonel in the Austrian service. In his second year he was able not only to read with fluency, but to give a connected sketch of the history of the world. On the 11th of

Nov. 1813, (being then twenty-nine months old), he was admitted into the second class of the Gymnasium at that place; and at the examination on the 26th August, 1814, he received the first prize for German reading and writing, the Hungarian language, the catechism and drawing, in preference to seventy scholars, who were much older than himself. At the public examination, on the 17th March, 1815, (being three years and nine months old), he received the same honours for the Latin and arithmetic. But the most extraordinary was his astonishing proficiency in music. In his third year he had made himself perfectly master of the violin; and at the last-mentioned examination he performed on this most difficult instrument a composition by Pleyel, with universal applause; a year after, he gave his second concert before Prince Schwartzenburg and the principal Hungarian nobility; and from this moment the fame of this prodigy spread itself over Europe. In the summer of 1816 he gave several concerts at Vienna, and presented a great part of his receipts to the Invalid Fund, for which the Emperor honoured him with the order of civil merit. In 1817, the commencement of his sixth year, he began his professional tour, passed through Italy in a kind of triumph, and received from the Duchess of Parma the order of Constantine, from the Pope the golden spurs and the order of St. John Lateran, was created Palgrave, and rewarded with a golden medal and a very flattering diploma by the Roman Academy, before which he had exhibited with much éclat his proficiency in the sciences. In his thirteenth year he completed his legal studies, and received eighteen royal honorary diplomas from Italy, Austria, France, and the Netherlands. He had scarcely attained his fifteenth year, when he had already acquired the reputation of one of the first violin-players, and was the author of several works, among which a beautiful manuscript in seven languages excited great attention. His high reputation increased with his subsequent tours through Italy, Austria, Holland, France, and Germany, of which a longer detail would be superfluous here, as the accounts published in the journals of the countries which he visited, cannot be forgotten by the public. He is at present at Nuremberg, and will next visit Berlin.—*German Journals.*

A JOURNAL entirely devoted to musical intelligence, and in particular to the opera, is published at Milan, under the title of *I Teatri, Giornale drammatico, musicale, coreografico*. In a late Number of this journal there is, under the head of Florence, an article relative to the musical compositions of our ambassador at that court, in which it is said, that, "For the performance of Lord Burghersh's opera, *Il Torneo*, which was suspended during the carnival, there have been substituted evening parties and balls of the most splendid description, in which the high rank of the company, the elegance of the decorations, and the superb style of the entertainments, were equally conspicuous.

"With regard to the able work of Lord Burghersh, the distribution of the parts and the score afford unquestionable proofs of the taste, judgment, and musical skill of the illustrious composer. The greatest encomiums have been justly bestowed on the introduction and the choruses. The latter were admirably sustained by thirty distinguished individuals of both sexes. The principal characters of the opera were performed by Signora Williams, Signora Festa, and the Signor Franceschini, all of

whom had excellent opportunities afforded them for displaying the qualities of their voices and knowledge of music." To this Florence paragraph, the editor of the Milan journal (Dr. Giulio Ferrario,) adds the following note:—"It is not only in the opera of *Il Torneo*, that Lord Burghersh has shewn that he possesses eminent musical talent. Many of his compositions which are printed and published, prove that the praises bestowed on this Mecenas of the fine arts, are not in the slightest degree the offspring of adulation."

AN IRISH INNKEEPER: A RECENT SKETCH.

English Gentleman. Holla—House.

Landlord. I don't know any one of that name hereabouts.

Gent. Are you the master of this inn?

Land. Yes, sir, please your honour—when my wife's from home.

Gent. Have you a bill of fare?

Land. Yes, sir, surely—the fair of Kildorery is next week, and Ballyspugmolane the week after.

Gent. Tut—how are your beds?

Land. Very well, I thank you, sir.

Gent. Is your cellar good?

Land. Oh, never fear that, sir—I only want the buyers to make me the seller.

Gent. Is your port fine?

Land. Never a finer port in the three kingdoms, sir, than Cork harbour—and sure I'm quite convenient to it.

Gent. Have you any mountain?

Land. Yes, sir, plenty—the whole country is full of mountains.

Gent. Have you any porter?

Land. Have I, is it?—I'll engage Pat is an excellent porter; he'll make out any place at all.

Gent. But I mean porter to drink.

Land. Oh, sir, he'd drink the ocean—not a doubt of that.

Gent. Have you any fish?

Land. They call myself an odd fish.

Gent. I think so. I hope you're no shark?

Land. No, sir, indeed—I'm not a lawyer.

Gent. Have you any sole?

Land. For your boots and shoes, sir.

Gent. Paha!—have you any plaice?

Land. I have not, sir; but I was promised one, if I'd only vote the way I did not at the last election.

Gent. Have you any wild-fowl?

Land. They're tame enough now, for that matter—for they have been killed these ten days.

Gent. I must see myself.

Land. And welcome, sir—I'll fetch you a looking-glass in a minute.

MUSIC.

PHILHARMONIC CONCERTS.

THE fourth Philharmonic Concert, though not quite so brilliant as the first and third, afforded, nevertheless, ample amusement; and if not entitled to particular praise, precludes at least severity of censure. The opening piece was again a *sinfonia* of Beethoven's, the one in A, or his seventh. The *andante*, which, as on former occasions, was loudly encored, and the *scherzo*, are the pillars on which the reputation of this composition rests; the first and last movement could not have preserved it from falling. We wish to say nothing against Rossini's duetto, "All' idea di quel metallo," from the *Barbiere*, except that Donzelli and De Bagnis did not appear to be well matched, the former having too little of a *buffo* either for De Bagnis or the song. Then followed, as

per bill, "Concerto Corno, Signor Puzzi," by Belloli; and no great grief would have been felt if it had not followed, there being certainly not more than a dozen or so of the subscribers who care at all for concertos on the horn, even if played by a Puzzi. Concerted pieces, but not concertos, are the things that please in these rooms. After Mlle. Blasis' *Scena*, "Salvo alfin," by Pacini, sung in her well-known style again, a new overture of Spohr's, "Pietro von Albano," was performed, but with no greater effect than his others. The second act commenced with Mozart's *sinfonia* in C, commonly called the *Jupiter*. The last movement, a most beautiful but also extremely difficult fugue, was taken a great deal too fast; and only an orchestra like this could go through it in that time without confusion. "Il mio tesoro," that delightful air from Don Giovanni, Signor Donzelli seemed to find much more to his taste than Rossini's "All' idea di quel metallo;" and so did the audience, as they made him sing it over a second time. His voice, which appears to want nothing but flexibility for greater execution, is as magnificent in the concert-room as on the stage. A quartetto of Beethoven's, by Messrs. Spagnoletti, Watts, Moralt, and Lindley; a *terzetto*, "Quel sembiante," from Rossini; "L'inganno Felice," by Mlle. Blasis, Donzelli, and De Bagnis; and lastly, Cherubini's overture to *Lodoiska*, fell short very little, if at all, of any preceding performance, and abundantly contributed their share to the pleasure of the evening. Mr. Weisshel led, and Mr. Attwood conducted.

ORATORIOS.

Wednesday night, *Drury Lane Theatre*.—With the exception of a *début* or two, the oratorios of the week may be said to be—the same to the same. A Mrs. Evans, a pupil of that inestimable master, *Croft*, as also a Miss Lloyd, the announced *elève* of Mr. Harris, made their first appearance in public.

Always unwilling to pronounce upon a "first appearance," we think it right to premise, that the *débutantes* were brought out so late in the performance of the night, that they laboured under no little disadvantage. An oratorio, at best, is always monotonous;—unlike an opera, it possesses none of the adventitious auxiliaries of scenic illusion or dramatic incident, to dissipate that intolerable *ennui* with which the most musical auditor is invariably afflicted long before the *entertainment* is half at an end. As for ourselves, we constantly suffer from repletion; and, notwithstanding the many violent shocks and desperate *shakes* with which we are sometimes wont to be assailed, we, nevertheless, drop back in our box, ready to die of the fatiguing pleasure. But, to return to our fair *débutantes*,—Mrs. Evans was the earliest to attract our attention. Her first duet with Braham, "Fair Aurora, prithee, stay," was admirably given, and elicited much applause from the boxes. Mrs. E.'s voice is soprano, of considerable power both as to flexibility and compass. She appears to be one of those very few vocalists, sometimes to be found, who cannot by possibility sing out of tune. Let her but study her art, for she has yet a good deal to learn in the "colouring of tones," and we hesitate not to predict she will become a successful singer, though, on this occasion, perhaps, she did not make the great hit expected by her friends. Of the other lady we cannot altogether say as much; her voice, we fear, is some-

* This admirable professor, we are glad to find, has been invited to return to the Royal Academy of Music.

what too feeble to be effective. Like Mrs. Evans, however, she sung perfectly in tune. We must not omit to mention the extraordinary performance of Master Artot on the violin. This young artist almost makes himself a second Kiewetter; he has much of the manner of that late eminent musician. In some things, particularly in touching the "harmonics" in tune, he excels any performer that we have ever yet heard. A Mr. Schmidt evinced extraordinary power of execution on the trombone; but, like all other *tumbling* of that description, the performance was more wonderful than pleasing. We think Blasis completely eclipsed Camporese: the latter lady is beginning to sing too loud, and has lost much of her wonted truth of intonation and facility in the execution of difficult passages. In conclusion, we have to advise Miss Byfield to pay more attention to the better taste of the boxes, and to worship less the "gods in the gallery."

A CAPITAL bill of fare has been put into our hands for Mr. Jolley's Annual Concert next Monday evening, at Freemasons' Hall. Some famous glees by our best singers promise to diversify the pleasures of the entertainment in an eminent degree; and we have no doubt there will be a bumper hall.

DRAMA.

KING'S THEATRE.

ON Thursday a crowded house attended *La Gassa Ladra*, and experienced one of the greatest treats which the Italian Opera could afford. Blasis in *Ninetta* eclipsed herself, and far exceeded all our expectations both in singing and acting. The latter, indeed, was most admirable, and the last scene as fine a piece of nature as we ever witnessed on any stage—equal, in its kind, we really think, to the *Medea* of Pasta. She was loudly cheered and called for when the curtain dropt. Zucchelli in *Fernando* appeared to be a little hoarse; but in every other respect as delightful as ever. A new tenor, of the name of Bordogni, played *Giannetta*. His voice seems to be weak for so large a theatre, and about the quality of Tori's; but he is a charming and very superior singer, of exquisite taste, and his person is good. Pellegrini was the *Podesta*, and Mlle. Bartolozzi *Pippo*,—of which part, except the shape of the limbs, the less that is said the better.

MISS PHILLIPS's performance of *Belvidera* is the only novelty of the week, and one on which we decline to expatiate, as we should only repeat what we have already said a thousand and one times respecting this young lady. Stony-hearted critics as we are, we cannot resist the soft blue eyes, the rich voice, and the gentle manners of this fair young creature; and with true pleasure shall we seize the first, the slightest, opportunity she affords us of honestly announcing a progressive step in her arduous career; but till then, we shall restrict ourselves to silent observation; and while we abstain from writing one word that may wound or discourage, we shall, with equal care, avoid swelling the number of those injudicious friends whose extravagant panegyrics are more mischievous than all the abuse ever showered upon true merit by the unprincipled portion of the British press. Mr. Young's *Pierre* has been long and justly acknowledged to be one of his best efforts. The tragedy went off with considerable applause, and was announced for repetition on Easter Monday. For that

momentous period, too, the rival establishments are straining the sinews of honourable war. At Drury Lane, a fairy tale, illustrative of the most popular superstitions of the South of Ireland—a compound of fun and fancy, music, dancing, and pageantry—has been prepared by Mr. Planché, and will be produced by Mr. Barrymore. Worlds under the water are rapidly creating by the magic pencil of Stanfield; and Lephreacanes, Cluricanes, and Pookas, are, as the market-gardeners say, “in a forward state for the season.” At Covent Garden, horrors are the order of the day; dungeons and chains—gray gentlemen and shadowless heroes—devilry and witchcraft enough to wake King James I. from his “coffined sleep,” and furnish another Glanville with matter for a new dissertation—are the ingredients of the cauldron now rigorously stirred by Messrs. Farley and Ball, who do go “about, about, about,” for the benefit of the holiday makers. May success attend both! Indeed, so much expense is annually lavished upon such spectacles for the entertainment of the public, who positively exact these formidable “Easter offerings” from the managers, that they are bound in common honesty to be pleased with them—whatever may be the demerits of the gingerbread on which the gold is so thickly plastered.

MR. KEAN has been performing with considerable success at Cork. An Irish paper (the *Constitution*) states, in what appears to us rather a carelessly written paragraph, that “his recovered health and strength fortunately enabled him to appear with his wonted advantage. The house, every night he appears, is filled with fashion and beauty. Mr. Kean appears in *Othello* to-night: already, the anxiety to secure places is very great. He will, it is said, only appear three or four nights more.”

VELLUTI.—Among the recent musical arrivals from the Continent, we observe the celebrated Velluti, who appears to be in high health: we have not heard that he has any theatrical engagement.

VARIETIES.

Silk-worms.—At a recent sitting of the Academy of Sciences in Paris, a favourable report was given of the work of M. Bonnafous, who has made some experiments upon the leaves of the wild and grafted mulberry-tree, and has found them to be of great service in feeding silk-worms.

Sir Humphrey Davy.—We see the death of Sir H. Davy announced (officially) at a meeting of the French Institute; but have the satisfaction to state, that later intelligence has reached us from his brother, Dr. Davy, (who is with him at Rome,) and who not only mentions his being still in the land of the living, but adds that his health is improving so much as to afford fair hopes of his recovery.

Dr. Young.—We regret to hear that this other distinguished literary and scientific character is severely indisposed.

Egypt.—A Mr. Robert Hay, of Linplum, who has already spent a considerable time in Egypt, expresses a strong desire to return thither, in order to pursue the excavations about the magnificent temple of Absemlal, or Ab'oo Simbal. To effect this object he has written circular letters to various scientific bodies, &c. for subscription to the amount of 700*l.* (himself furnishing 50*l.*); in return for which, he offers to each subscriber a report of his operations and two large lithographic drawings of the temple.

Natural History.—A very favourable report has been made to the French Academy by M. Cuvier, on the collections of natural history brought to Europe from the East Indies by the officers of the French sloop of war, *La Chevette*. They have been made in places little known. With the exception of Pondicherry and Bourbon, the parts of India visited by *La Chevette* have been seldom explored by navigators, and no scientific expedition has heretofore examined them. Among the specimens submitted to the Academy are many new species.

Earthquake.—On the 21st of March an earthquake, consisting of three several shocks, took place about six o'clock in the evening, and continued on the 22d, producing very afflicting consequences throughout Murcia. The tower of Orihuella, the towns of Torrevieja, Almoradi, San Fulgencio, Guardamar, and Benexuar, have been wholly or partially destroyed, and several hundred persons perished.

Pegwell Cliff.—A sort of avalanche having taken place at Pegwell, where many thousand tons of the cliff have fallen into the sea, it is mentioned, that not only pyrites, but considerable masses of gold have been found among the debris.

A meeting of the Cambridge Philosophical Society was held on Monday week, the Rev. Professor Cumming, V.P., being in the chair. A memoir was read by J. Challis, Esq., of Trinity College, “On the vibrations of an elastic fluid;” in which the author maintained that the discontinuous functions introduced into the investigations on this subject by Lagrange were inconsistent with the analogies of mathematical reasoning, and unnecessary for the solution of the problem. A paper by J. W. Lubbock, Esq., of Trinity College, was also read, “On the comparative probabilities of life, as obtained from the recorded observations of London, Northampton, Carlisle, Chester, France, Paris, Montpellier, Holland, Amsterdam, Brussels, Breslau; and on various other points in the calculation of such probabilities, and of annuities depending upon them.” After the meeting, Professor Henalow gave an account, illustrated by coloured drawings, of the organisation and classification of ferns.—*Cambridge Chronicle*.

Natural Phenomenon.—In the Memoirs of the Imperial Academy of St. Petersburg it is stated that in the district of Gori, in Russia, at the foot of the Osetin mountains, there is a hill, on the stony surface of which the humidity that exudes from the rock, in summer and in fine weather, is converted into ice of a thickness proportionate to the heat of the sun! This ice disappears in the night, or during cloudy weather, so completely, that the rock is scarcely damp. The water obtained from this ice when melted, appears upon analysis to contain only a very small quantity of lime, and not any other foreign matter.

Infantile Courage and Generosity.—Two bulls, of equal bravery, although by no means equally matched in size and strength, happening to meet near the front of a laird's house, in the Highlands of Scotland, began a fierce battle, the noise of which soon drew to one of the windows the lady of the mansion. To her infinite terror, she beheld her only son, a boy between five and six years of age, belabouring with a stiff cudgel the stouter of the belligerents. “Dugald! Dugald! what are you about?” exclaimed the affrighted mother. “Helping the little bull,” was the gallant young hero's reply.

• Quare—belligerents!—Printer's Devil.

LITERARY NOVELTIES.

Among several trophies which the Russians gained in Persia during the last war, there is a very valuable literary treasure, the Library of Arbedil, the city where the Persian kings are crowned. This acquisition was made by Count Suchtelen, at the taking of Arbedil. The library was founded in 1018 of the Hegira; the then reigning King Abbas I. having deposited the manuscripts collected by him in a mosque; and it is now being conveyed, at the command of the emperor, to Petersburg, under a military escort.—*Leipzig Literarur Zeitung*.

To the Editor, &c.

SIR,—The New Bath Guide, by the late Mr. Anstey, has passed through several editions, perhaps twenty; and a new one is now printing by the skilful typographer of your paper, with etchings by Cruikshank. Having devoted much time and care in preparing some elucidatory Notes, and a Biographical, Topographical, and Descriptive Preface to this edition, I should be pleased to give some account of the first impression, which, I believe, was printed in 4to., at Trumpington, adjoining Cambridge, in 1766 or 1767. I should also be glad to ascertain the number of editions that have gone through the press. It contains some local allusions to persons and events which must have been readily recognised at the time, but which are now become obsolete for want of a key. Perhaps some of your numerous readers may remember Bath at that time, its parties, the customs of the place, &c.; and may be able to furnish elucidatory hints on these points. Prior Park and Bath-Easton Villa were about these places of great attraction and resort to the wits and literati. Fielding, Smollett, Pope, Warburton, Sheridan, Graves, Pratt, &c., with the noted Beau Nash, were among the mental stars of the western hemisphere.

Who was the author of *Stinkin's Letters*? written during the trial of Warren Hastings, &c. the first Catholic Magazine, with the motto, “Happy homes and altars free,” has been published in Cork. It contains, among other papers, an able article on the State of Knowledge in Ireland, and an agreeable essay on Irish Legends and Romances, in which Mr. Lockhart is more than once complimented on his translation of the Spanish Ballads.

The library of Mr. Jefferson, the ex-President, has been selling, says our Correspondent at Washington (March 8), for these some days past.

Literary Request.—We observe from the Cambridge Chronicle, that the University is about to receive 5,000*l.* left to it by the late Rev. J. Manistie, Fellow of King's College, to purchase books for the public library.

A. J. Kempe, Esq. has edited and just ready for publication, a collection of interesting Ancient Manuscripts of the Sixteenth and early part of the Seventeenth centuries, pertaining to the family of Loely, in Surrey, which succeeded to the seat of the Mose family. The Gentleman's Magazine describes these treasures as being replete with historical matters, and throwing great light on the manners of the times.

In the *Subaltern's* forthcoming volume of Tales of a Chelsea Pensioner; we are informed there are six Tales: the Gentle Recruit, a Day on the Neutral Ground, Saratoga, Marda, a Pyrenean Adventure, and the Rivals: we look for the publication very shortly.

Mr. Oliver has nearly ready for publication the *History and Antiquities of Beverley*.

LIST OF NEW BOOKS.

Heber's Sermons preached in India, 8vo. 8s. 6d. bds.—*Natural History of Eastbourne*, 8vo. 8s. bds.—Wright on Friendly Societies, 12mo. 6s. bds.—*African Museum*, or Table of the Table, fcp. 8vo. 8s. bds.—Edmondson's Short Sermons, Vol. II. 8vo. 8s. bds.—*Chapters on the Physical Sciences*, 12mo. 6s. bds.—Leigh's Road Book of Scotland, 18mo. 8s. sheep.—Marriott's (Hervey) Fourth Course of Sermons, 8vo. 10s. 6d. bds.—*The Philosophy of History*, 8vo. 15s. bds.—*Parkes on Practice of King's Bench and Common Pleas*, 12mo. 8s. bds.

TO CORRESPONDENTS.

London Bills of Mortality.—We perfectly coincide with our intelligent correspondent (L.), that nothing can be more careless and disgraceful than the manner in which our Bills of Mortality are kept. We rather think that such bills are printed at Glasgow, as well as at Northampton, and that the machinery at the former city has been greatly improved. Still it is strange, that, with all our boasting of our advances in science, we are behind every civilised nation in Europe in this important respect, and in the knowledge of our actual population.

Connected with Literature and the Arts.

BRITISH INSTITUTION, PALL MALL.

The Gallery for the Exhibition and Sale of the Works of British Artists, including the Pictures of His late Majesty presenting the Sword to Earl Howe, on board the Queen Charlotte, after the Victory of the First of June, 1794; and Lord Nelson bearing the San Joseph, off Cape St. Vincent, presented by the British Institution to the Royal Hospital of Greenwich, is open daily, from Ten in the Morning until Five in the Evening.

Admission, 1s.—Catalogue, 1s.

WILLIAM BARNARD, Keeper.

SUFFOLK STREET GALLERY.

SOCIETY OF BRITISH ARTISTS. The Sixth Annual Exhibition for the Sale of Works of Art by Living British Artists, is open to the Public every day, from Nine to Six.

Admission, 1s.—Catalogue, 1s.

T. C. HOLLAND, Secretary.

Suffolk Street, Pall Mall East.

DEVELOPEMENT of a NEW PRINCIPLE of HISTORICAL STUDY, under the graciously encouraging Approval of His Royal Highness the Duke of Sussex.

MAJOR BELL will endeavour, in a Single Lecture, (occupying about Three Quarters of an hour), to enforce the unimpaired Rapidity with which, by the simplest possible Arrangement, a masterly Knowledge of the great Outlines of Universal History may be acquired.

To be delivered at White's Rooms, King Street, St. James's, on Wednesday, the 15th instant, commencing precisely at Three o'clock.

Admission, to Gentlemen, 3s. 6d.; to Ladies, 2s. 6d.

VACANCY. In a Classical Academy,

where only Twelve Young Gentlemen are received, there will be a few Vacancies after the ensuing Holidays. An early Application, addressed (post-paid) to the Rev. S. H. Farther, Henley in Arden, Warwickshire, will be attended to, and a Prospectus will be forwarded, free of expense.

FRENCH LANGUAGE TAUGHT by a

FRENCH LADY, who wishes to be engaged at the West End of the Town, from Ten o'clock in the Morning till Three or Four, in giving Lessons, either by Conversation or Grammar. She will be happy to meet with two or three Pupilles, to whom she can give the best Testimonials of her Talents, Merits, &c. &c.; or she would be glad to go abroad with a Family as a Friend, or for three or four months in the Country, to converse or teach the Younger Branches of the Family.

Address, post-paid, to M. P., at Messrs. Trevellick and Co. Booksellers, No. 20, Becho Square.

Dedicated, by permission, to His Majesty, the 4th. edition of

PORTRAITS after HANS HOLBEIN, consisting of 66 Portraits of illustrious Persons of the Court of Henry VIII., with Biographical Tracts, by EDMUND LOGGE, Esq.

Coloured and plain Proofs, also coloured and plain Prints, are now to be had on applying to Messrs. Colnaghi, Pall Mall East; Mr. White, Broadview Street; and Mr. G. Wickens, 4, Russell Court, Covent Garden, (last with Mr. Nicol, of Pall Mall).

Of whom may also be had,

Plain Prints and Proofs of the folio edition of the Holbein Portraits.

Collectors who are desirous of completing their Sets, may now apply to above, where also may be had, the Volume from the Royal Collection, consisting of 60 Engravings, after Leonardo da Vinci, Claude, Raphael, Poussin, &c. &c. Also a very fine Kose Home, after Guido.

Price 8s. 6d.

A VINDICATION of NIEBUHR'S HISTORY of ROME from the CHARGES of the QUARTERLY REVIEW.

By JULIUS CHARLES HARE, M.A.

Fellow of Trinity College, Cambridge.

Printed for John Taylor, Bookseller and Publisher to the University of London, 20, Upper Gower Street; and sold by James Dracum, Paternoster Row; Henry, Fleet Street; Hatchard and Son, Piccadilly; and all Booksellers.

Mr. Colburn has just published the following Popular Novels: **TRAITS OF TRAVEL; or, Tales of Men and Cities.** By the Author of "Highways and Byways." In 3 vols. post 8vo. 31s. 6d.

2. **Corramahon, and the Northerners of 1798.** A Series of Tales, by the Author of "To-day in Ireland." Dedicated to the Marquess of Lansdowne. In 3 vols. post 8vo. price 11. 11s. 6d.

3. **Ecarté; or, The Salons of Paris.** In 3 vols. post 8vo.

4. **The Carbonaro; a Piedmontese Tale, by the Duke de Levis.** In 2 vols. post 8vo. 18s.

Also, nearly ready,

5. **The School of Fashion.** In 3 vols. post 8vo.

6. **The Sectarian; or, the Church and the Meeting-House.** In 2 vols. post 8vo.

7. **Stratton Hill; a Tale of the Civil Wars.** By the Author of "Letters from the East," "Tales of the West of England," &c. In 3 vols. post 8vo.

8. **Romances of Real Life.** By the Author of "Hungarian Tales." 3 vols.

Mr. Colburn has just published the following: **THE NAVAL OFFICER; or, Scenes and Adventures in the Life of Frank Midway.** In 3 vols. post 8vo.

2. **Tales of Military Life.** Containing Vandeleur and Gentleman Gray. By the Author of the "Military Sketch Book." In 3 vols. post 8vo.

3. **Memoirs of the War in Spain, by Marshal Suchet, Duke d'Alberca.** In 2 vols. 8vo. 54s.; French, 31s.; embellished with a striking Likeness of the Author.

4. **Twelve Years' Military Adventure in Three Quarters of the Globe, or Memoirs of an Officer.** Among other distinguished Persons who have a prominent place in this work are, the Duke of Wellington—Lord Minto—Sir Thomas Pakenham—Sir Rowland Hill—Sir Samuel Auchmuty—Sir John Hope—Sir Lowry Cole—Sir Thomas Graham—Sir William Beresford, &c. In 3 vols. 8vo. 54s.

Mr. Colburn has just published the following: **THE ELLIS CORRESPONDENCE; or, Letters addressed to John Ellis, Esq. Secretary to the Commissioners of His Majesty's Revenue in Ireland, during the years 1685, 1687, and 1689, comprising many Particulars of the Revolution, and Anecdotes illustrative of the History and Manners of those Times.** Now first published from the Originals, with Notes and a Preface.

By the Hon. GEORGE AGAR ELLIS. In 2 vols. 8vo. with a Portrait.

2. **Letters from the Ægean, by James Emerson, Esq.** Containing, among other interesting Narratives, the singular History of Crevelier the Pirate, the original of Lord Byron's Corsair, an Account of the celebrated Dukes of the Archipelago, &c. with Map and Engravings. In 3 vols. post 8vo.

3. **Burchard's Travels in Arabia, comprehending an Account of those Territories which the Mohammedans regard as Sacred.** In 1 vol. 4to. 2s. 12s. 6d. with Map and Plans. Published by Authority of the Asiatic Association.

4. **A History of the late Catholic Association of Ireland, from its Institution in 1790, to its final dissolution in 1829.** By a Member of that Body. To which are added, the Opinions of a distinguished Traveller on the actual State of Ireland, and on the Elections of England. In 8vo.

Handsomely printed, in 4 vols. 8vo. with Maps, 5l. 8s. boards, **ORIGINES; or, Remarks on the Origin of several Empires, States, and Cities.**

By the late Right Hon. Sir WILLIAM DRUMMOND. Printed by A. J. Valpy; and sold by Baldwin and Co.; and all other Booksellers.

The German Student's Library. The following works have been lately published by Messrs. Trevellick and Co. 20, Becho Square.

BERNAY'S GERMAN POETICAL ANTHOLOGY; or, Select Pieces from the principal German Poets: accompanied with Notes, and preceded by an Historical Sketch of German Poetry. 12mo. 1829, 8s. 6d.

"We are not acquainted with so pleasant and useful a book to put into the hands of students, nor a more agreeable miscellany for the advanced scholar."—*Literary Gazette*, Feb. 20.

Noehden's Grammar of the German Language. 12mo. 5th edition, 1827, 10s. 6d.

Noehden's Exercises for Writing German according to the Rules of Grammar. 5th edition, 1827, 8s.

Rabenhorst's New Pocket Dictionary of the English and German Languages. 12mo. 3d edition, 1820, 10s.

Reymann's German and English Dialogues; with two Lithographic Tables, exhibiting the Alphabet and Forty Copies of German current Handwriting. 12mo. 1829, 7s. 6d.

Goethe's Hermann und Dorothea, Gedicht in Neun Gesängen aus den Versen in Prosa umgebildet, Von C. Th. Kersten, 18, mit 10 Holzschnitten, 1823, 5s.

Prosaische Anthologie der Deutschen. 12mo. London, 1821, 8s.

Historic Survey of German Poetry; interspersed with various Translations. By W. Taylor, Norwich. Vol. 1. 8vo. 15s. boards.

Klauwer Klattovsky's Comprehensive Grammar of the German Language, on a new Plan; condensed in Two Synoptical Tables, two folio sheets, 1829, 6s.; on Canvass, in One, 7s.

Just published, by R. Ackermann and Co. 25, Strand,

THE HISTORY and DOCTRINE of

BUDDHISM, popularly illustrated; with Notices of the Kappoosee, Demas Worsley, and of the Religious Incarnations of Ceylon. Embellished with Forty-three Lithographic Prints from original Singapore Designs.

By EDWARD UPHAM, M.B.A.S. Elephant 4to. price 6s. 3s. coloured; 3s. 3s. plain.

"It is a work of sterling value, and not only a valuable addition to every good library."—*Literary Gazette*, March 26th, 1829.

"We think it beyond comparison the most curious book that has ever reached Europe from the East."—*London Weekly Review*, 28th Feb. 1829.

In 2 vols. 8vo. price 11. 1s. in extra boards, **THE HISTORY of the HUGUENOTS during the SIXTEENTH CENTURY.**

By W. S. BROWNING, Esq.

This Work contains a clear and concise Narrative of the sufferings of the French Protestants during the 16th Century. It shows that the Massacre of St. Bartholomew was premeditated, and that the severity exercised towards the Protestants was instigated by the Court of Rome, and was the cause, rather than the consequence of their insurrection.

The author's object has been to vindicate the Reformation from the accusations of some modern writers. He has studiously avoided all theological discussions. The work comprises the substance of many unpublished MSS. numerous Memoirs, and Narratives of Contemporary Writers.

London: Printed for William Pickering, 47, Chancery Lane.

In 8vo. price 12s. boards, **AN INTRODUCTION to GEOLOGY; comprising the Elements of the Science in its present advanced State, and all the recent Discoveries. With an Outline of the Geology of England and Wales. 2d edition, entirely re-composed, and greatly enlarged, with new Plates, and a coloured Map and Cuts.**

By ROBERT BAKERWELL. Professor of Mineralogy, who is now superintending a reprint of this edition in America, (Philosophical Mag. Oct.) states his opinion, that it is the most intelligible, attractive, and readable work on geology, in the English language.

Printed for Longman, Rees, Orme, Brown, and Green.

In 4 vols. 8vo. with Plates, 2l. 16s. **THE CROMWELLIAN DIARY.** The DIARY of THOMAS BURTON, Esq. Member in the Parliaments of the Protector Oliver and Richard Cromwell, from 1656 to 1659. Now first published from the original Autograph Manuscript, with an Introduction, containing an Account of the Parliament of 1654, from the Journal of Gualdon Goddard, Esq. M.P., also now first printed; and several other curious Documents and Notices, historical and biographical.

The great interest of the book is Cromwell himself."—*Grand's Magazine*.

"This is little short of a miracle—the recovery of the debates of the Cromwellian parliaments taken on the spot by one of the very members."—*New Monthly Magazine*.

"These volumes overflow with information respecting the principles and proceedings of the legislature during a most important period of English history. Every library which pretends to contain an historical collection, must possess itself of Burton's Diary: it is as indispensable to Burns or Clarendon, as it is to the student of Henry Colburn, 8, New Burlington Street.

In 3 vols. post 8vo. 21s.; French 15s. **MEMOIRS of the EMPRESS JOSEPHINE.**

By MADEMOISELLE DUCREST. "A curious and entertaining piece of domestic biography of a most extraordinary person, under circumstances almost unappreciated by the public."—*New Monthly Magazine*.

"An extremely amusing book, full of anecdotes and traits of characters of kings, princes, nobles, generals, &c."—*Morning Journal*.

Printed for Henry Colburn, 8, New Burlington Street.

AMESBURY'S OBSERVATIONS ON FRACTURES, &c. with Plates, 2d edition, with an Appendix.

Published by T. and G. Underwood, 27, Fleet Street; and may be had of any Bookseller.

The object of this work is to show that Fractures of the Neck of the Thigh-bone, and others, admit of being united without leaving the Patient lame or deformed; and that Deformity, as a consequence of Fractures, and also the long continuance of Fractures of the Limbs in a dislocated state, are to be referred to the demonstrable Imperfections of the usual Modes of Treatment, and might be easily prevented.

This volume contains six cases of fractures of the neck of the thigh-bone, successfully treated by the means which the author recommends. Also, seventeen successful cases of fractures in different parts of the extremities which had resisted the usual means of cure. The fractures in these cases readily united, though some of them had existed many months before they were submitted to the modes of treatment which the author has introduced.

"This work merits the attention of the profession."—*Medical Gazette*.

"We must do Mr. Amesbury the justice to say, that he has completely demolished the strong-hold of this adversary; he has indeed broken the prohibitory of the surgical levitation. This work will no doubt be in the hands of every surgeon."—*Lancet*.

"Every practical surgeon must be much interested in the personal of Mr. Amesbury's book."—*London Medical and Physical Journal*.

"We should not be doing our duty to the profession and the public, did we not recommend every member of the former, professing to practise surgery, to peruse carefully the work itself."—*London Medical and Surgical Journal*.

"Mr. Amesbury does every thing short of performing miracles in his new treatment of fractures; yet he employs no mystery, no quackery, but proceeds on philosophical principles, derived from physiology and mechanics. Those who are interested in the subject will find ample satisfaction in the author's volume."—*Atterbury*.

Of whom may be had, by the same Author, **A Syllabus of Surgical Lectures on the Nature and Treatment of Fractures, Diseases of the Joints, Stiff Joints and Deformities, and Weaknesses of the Limbs and Spine. With Plates.**

Dr. Mayrick's Splendid Work, at Half-price.

THE WHOLE of the remaining COPIES of Dr. MEYRICK'S INQUIRY INTO ANCIENT ARMOUR AND WEAPONS OF WAR, having become solely the Property of J. DOWDING, Bookseller, No. 28, Newgate Street, this magnificent Work, containing a Critical and Historical Account of Armour and Modes of Warfare, with numerous Plates, brilliantly illuminated in Gold and Silver, to represent the Armour, Pageants, and Weapons, of the various interesting Periods of Chivalrous Times, and forming the most admirable illustration of History, Poetry, and Romance, that has ever been published, is now offered for sale for a limited period, at 10s. 10s. handsomely half-bound, lettered, and uncut, being only half the publication price.

Dowding's Cheap List, just published, includes this and more than Two Hundred other valuable Works, in every Class of Literature (at an average of one-third of their original Prices), and may be had gratis, upon a large sheet, for single postage, to any part of the Empire, on application (personally, or by letter, post-paid), at 28, Newgate Street, London.

Dr. Harrison on Spinal Diseases.
Just published, in 1 vol. royal 8vo. price 31s.

PATHOLOGICAL and PRACTICAL OBSERVATIONS ON SPINAL DISEASES, illustrated with Cases and Engravings. Also, an Inquiry into the Origin and Cure of Distorted Limbs.
By EDWARD HARRISON, M.D. F.R.S. Ed.
Formerly President of the Royal Medical and Royal Physical Societies of Edinburgh, &c. &c.
London: Printed for Thomas and George Underwood, 25, Fleet Street.

Latest published, with a Frontispiece, and 80 other Engravings, price 4s.

THE ARCANAE of SCIENCE, and Annual Register of the Useful Arts, for 1850.

John Murray, Albemarle Street.

8, New Burlington Street.

On Saturday, the 25th of April, Mr. Colburn will have the honour to publish the First Number of a New Weekly Paper, to be called

THE COURT JOURNAL. The leading and peculiar object of this Publication will be, to supply what has long been felt as a desideratum in the higher circles of the British metropolis. Its pages will furnish a mingled record and review of all matters and events (political subjects alone excepted), which are calculated to interest that class of readers who come within what is understood by the "Court Circle." Such will be the peculiar, but by no means the sole object of the Court Journal. It will, in fact, embrace every feature which favourably distinguishes the most approved literary journals of the day. The Conductors deem it unnecessary to put forth a formal prospectus, or to enter into any further details. Their work, when it appears, will speak for itself, and it will do so in a manner which will render it impossible for any one to mistake the nature of its resources, and the class of patronage under which it is ushered into the world, or to doubt that these are such as will never before possessed by a public journal.

The Court Journal will appear every Saturday Morning, handsomely printed on a quarto sheet of sixteen pages, price 1d.; or stamped for circulation in the country, five of postage, 1s.

Orders received by all Booksellers and News-vendors; and by the Clerks of the Roads.

LONDON: Published every Saturday, by W. A. SCRIPPS, at the LITERARY GAZETTE OFFICE, 7, Wellington Street, Waterloo Bridge, Strand, and 7, South Molton Street, Oxford Street; and J. Chapman, 25, Royal Exchange Alley, St. Martin's Lane, Ave Maria Lane, Ludgate Hill; A. Black, Edinburgh, Smith and Son, and Robertson and Aikman, Glasgow; and J. Cunningham, Dublin.

J. MOYES Top's Court, Chancery Lane.

THE LONDON LITERARY GAZETTE;

AND

Journal of Belles Lettres, Arts, Sciences, &c.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen, throughout the Kingdom; but to those who may desire its immediate transmission, by post, we recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 639.

SATURDAY, APRIL 18, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

Notices of the Life and Works of Titian. 8vo. pp. 243. London, 1829. Rodwell; and Colnaghi and Son.

THERE are few spectacles more honourable to human nature than that afforded by a man of talents and education, greatly advanced in years, who, preserving unimpaired the strength of his intellectual faculties, finds delight in exercising them, at once in the gratification of his own taste, and for the information and benefit of the public. This is more peculiarly the case when, as in the present instance, the selected topic is not one of those grave and solemn themes on which age is usually disposed to dwell; but belongs to that class of subjects, the just appreciation of which is generally supposed, to require all the finer and unworn susceptibilities and feelings of youth.

This interesting volume is dedicated, by its venerable author, Sir Abraham Hume (as we gather), to his son-in-law, Lord Farnborough, "who," as it is affectionately but justly observed, "having most honourably filled more than one important situation in the service of his country, now devotes a portion of his leisure to the encouragement of the fine arts and liberal sciences." The object of the work is "to lay before the English reader the substance of what various authors have stated respecting the life and works of Titian." The principal authorities which have been consulted on the occasion are, the edition of Vasari's *Lives*, printed at Leghorn in 1767, having several additional notes; Ridolfi's account of the Venetian School; Boschini's "*Ricche Minere della Pittura Veneziana*," printed at Venice in 1674; Ludovico Dolce's *Dialogue on Painting*, said to be written by Aretine himself; Aretine's *Letters*; and, of the more modern authors, Sandrart; Barry's *Picturesque Journey into Italy*; Zanetti on the Venetian Painters; Ponzi; Conca; Twiss's *History of the Escurial*; Cumberland's *Account of the Pictures in Spain*; Lanzi; Mengs; Mariette; Visconti; Ticozzi; Maer; and last, certainly not least, Sir Joshua Reynolds. Extracts have also been introduced from such catalogues as have been attainable of the principal galleries and collections, modern as well as those of former times; although it is "acknowledged that an attempt to trace down or enumerate with accuracy the many pictures Titian executed during so long a life, would be quite hopeless, as well as presumptuous, at the present day." In the next place, some records are given relating to Titian's protectors and patrons, of his intimate friends, his habits of life, and other particulars; and the volume closes with a descriptive Catalogue of Engravings after the Works of Titian, which was obtained for the purpose from the Bibliothèque du Roi, at Paris.

We shall proceed to extract a few passages from the work, selecting such as are of a general or amusing nature, and referring our readers to the publication itself for a critical and circumstantial description of a large portion of

the magnificent pictures produced by Titian during his splendid pictorial career.

"Pieve is a small town situated on the confines of Friuli, being the principal of the seven communes of Cadore; it is nearly surrounded by inaccessible mountains, in the midst of which is the source of the Pieve, a torrent river. In this sequestered spot Titian was born, in the year 1477, his father being of the ancient family of Vecelli. He began very early to shew a turn for drawing, and designed a figure of the Virgin, with the juice of flowers, the only colours, probably, within his reach. When ten years' old, his father sent him to a maternal uncle at Venice, where he became the scholar and inmate of Giovanni Bellino, with whom he remained for some time. * * * It was about 1507 that Titian abandoned the formal manner of G. Bellino, and adopted that of Giorgione so successfully, that to several portraits their respective claims could not be ascertained. At the age of eighteen he had become an inmate of Giorgione's habitation, and Vasari considers him to be his pupil; but that does not appear to be correct, for they were nearly of the same age, and were brought up together in the house of Bellino; and Vasari mentions, as an instance of resemblance of style, a portrait of a friend of Titian, belonging to the Casa Barbarigo, which would have passed for the work of Giorgione, had he not inscribed his name on it. Near this time he was employed to paint in fresco the façade of the Fondaco, or Exchange, of the German merchants, the opposite front towards the canal being allotted to the pencil of Giorgione. Titian chose for his subject female figures and boys, and over the door represented Judith with the head of Holofernes, very admirably coloured; but this work unfortunately was the cause of a breach between these two great masters; for the Venetians were so pleased with the performance of Titian, that they inadvertently extolled it to Giorgione, supposing it to be by his hand; the consequence was, that he dismissed Titian from his house, and their friendship ceased."

That envy should thus insinuate itself between such distinguished professors of so liberal and refined an art!

"The merits of Titian were so highly appreciated by the Duke of Ferrara, that he frequently invited him to accompany him in his barge when going from Venice to Ferrara. It was during his residence at the latter place, that he became acquainted with Ariosto, with whom he frequently conferred on the subject of his compositions; and from such conferences it may be supposed that the poet and the painter derived mutual advantage."

Being engaged to paint a fine picture of the Virgin's ascension to heaven, (in the lower part of which was an assemblage of the apostles) for the chapel of the convent of the Friars at Venice, as Titian was working on it, "he was frequently interrupted by the friars, particularly by one Germano, who took upon himself to criticise the large dimensions of the apos-

tes: Titian endeavoured in vain to set him right, by explaining to him, that figures necessarily ought to be in proportion to the distance from which they are to be viewed, and that he would find when the picture was in its place they would appear of their proper size. The monks, however, were at length convinced of their ignorance, for the emperor's ambassador, happening to see the picture, offered to purchase it for his master at a large price: this opened their eyes, and drew from them the confession that they were better acquainted with their breviaries than with works of art."

About the end of the year 1647, "at the invitation of Charles V., Titian joined the imperial court held at Innspruck and at Augsburg, with a train of distinguished young persons and attendants. * * * The emperor, then advanced in years, sat to him for the third time; the costume he chose to be painted in was brown armour enriched with gold. During the time of sitting, Titian happening to drop one of his pencils, the emperor took it up; and on the artist expressing how unworthy he was of such an honour, Charles replied, 'that Titian was worthy of being waited upon by Caesar.' While attending this court he was employed on the portraits of various illustrious personages of the house of Austria, and was often required to introduce himself into the composition. Ridolfi states the price received by Titian for each portrait of the emperor to have been 1000 crowns; but in further reward, and as a mark of high consideration, he was created 'Cavaliere,' his imperial patron buckling on the golden sword with his own hands, and at the same time conferring on him the title of Count Palatine, with letters of nobility to himself and his descendants, accompanied with many important immunities."

In speaking of his picture of the Magdalen, painted for Philip II., Sir Abraham Hume says: "Titian took the idea from an antique statue in his own possession, but availed himself of nature in the person of a young girl in his neighbourhood, who being fatigued by long standing, the tears ran down her face, and Titian attained the desired expression. So intent was he on what he was about, that it is said he neglected taking his ordinary repast. In point of colouring and lovely expression, Titian never surpassed this picture; which from the pains and labour he bestowed on it must have been a favourite subject. * * *

"It appears to be generally understood that Titian had, in the different periods of life, three distinct manners of painting: the first hard and dry, resembling his master, Giovanni Bellino; the second, acquired from studying the works of Giorgione, was more bold, round, rich in colour, and exquisitely wrought up; the third was the result of his matured taste and judgment, and properly speaking may be termed his own; in which he introduced more cool tints into the shadows and flesh, approaching nearer to nature, than the universal glow of Giorgione."

Of the mechanical means used by Titian in

the colouring of his pictures, the account derived by Sir Abraham from Boschini appears to us to be exceedingly obscure: a professional friend of ours, to whom we shewed it, declared it to be wholly unintelligible. It cannot be doubted that Titian and all the other great masters of the Venetian school had peculiar vehicles and peculiar processes. We fear, however, that little is at present known of them, and that they must be re-discovered. After stating what he has been able to ascertain on the subject, Sir Abraham Hume bestows this just eulogy on industry: "His grand secret of all, appears to have consisted in the unremitting exercise of application, patience, and perseverance, joined to an enthusiastic attachment to his art: his custom was to employ considerable time in finishing his pictures, working on them repeatedly, till he brought them to perfection; and his maxim was, that whatever was done in a hurry, could not be well done: '*che canta al improvviso, canta male.*'"

"To reckon up the protectors and friends of Titian, would be to name nearly all the persons of the age, to whom rank, talents, and exalted character, appertained; but it would not be doing justice to pass by those which Vasari and his other biographers have recorded:—the Emperor Charles V.; Philip II. King of Spain; Henry III. King of France; Ferdinand, King of the Romans; Gonzaga, Duke of Mantua; Alphonso, Duke of Ferrara; the Duke of Urbino; Pope Paul III.; the cardinals Farnese, Medici, Gonzaga, Este and Granvel, Mandrucci, and other distinguished prelates; the Doges of Venice, Grimani, Gritti, Lando, Trevisano, Venieri, and the Doge of Genoa, Augustin Doria. The following extract of a letter to Charles V. from Titian proves how high he stood in the emperor's estimation. 'If the unfounded account of my death gave your majesty any concern, it was very gratifying to me to know that my services were in your majesty's recollection, which has rendered my life doubly dear to me, and I hope God will preserve it until I have finished the work I am now employed upon, and which by September next will be ready to be sent to your imperial majesty.' Among his intimate friends were, Aretine, Ariosto, Gio. della Casa, Archbishop of Benevento; Pietro Bembo, created cardinal by Paul III.; Navagero, a distinguished Latin poet; Sperone Speroni; Bernardo, father to Torquato Tasso; Pietro Valerio; Ludovico Dolce, author of the dialogue on painting called Aretine; Botarello; Sansovino the famous architect; Gio. Maria Verdizotti, distinguished for his attachment to the art of painting, &c.; Count Baldessar Castiglione, the elegant author of the *Libro del Cortegiano*; Antonio da Leyva, one of Charles V.'s ablest generals; the Marquis of Guasto or Vasto, and other distinguished commanders.

"In the *Lettere familiere* of Aretine there are near a hundred addressed by him to Titian; and several letters and notes which passed between the three friends, Sansovino, Titian, and Aretine, and other members of the Academy at Venice, on the score of conviviality, in which luxurious allusions are made with spirit and humour to the delicacies they supped upon at their respective houses, where, among the most distinguished guests, were also F. Marcelino, Conde de Collatto, Bernardo Tasso, Bembo, &c.; a select party of ladies, Paola Sansovina, la Marcolini, Angiola Zaffetti, la Franceschini, la Violante, frequently graced these Attic entertainments. Titian regulated his domestic expenses with considerable attention to economy

till he arrived at the age of fifty; after which, the increasing affluence, the society of his friends, and the habits of the various courts he frequented, led him, from the year 1530, to adopt a more liberal establishment, and induced him to add to his former habitation, another house with pleasant gardens, situated at the extremity of Venice, towards Murano, in which quarter were the most fashionable walks of the city. Here he received the high honour of a visit from Henry III. King of France and Poland, on his return from the latter kingdom, accompanied by the Dukes of Ferrara, Mantua, and Urbino.

"Titian's manners, like those of the most eminent painter this country ever produced, were courteous, gentle, and unassuming; and like him also his friendship was solicited and his character esteemed by the most accomplished persons of his time. Titian being in the habit of living in the best society, acquired the ease and carriage of an accomplished gentleman, never presuming on his superior talents, but disposed to encourage the exertions of other artists; one of whom shewing him a picture he had just finished, Titian observed, 'that he was so pleased with it, that it appeared as if he had done it with his own hand.' There were other points of similarity to be observed between the prince of the Venetian school and Sir Joshua Reynolds, for the latter produced several grand compositions, as well as fascinating fancy pieces; and to both, all the rank, talents, and beauty of the time were anxious to sit.

"Vasari, who visited Titian twice at Venice in his advanced years, says, that he appeared to have enjoyed uninterrupted health during his very long life, together with an abundant share of every earthly felicity. His art gave him character, and his character contributed to dignify his art.

"Titian being full of years and honours, fell a victim to the plague in 1576, at the age of ninety-nine. To perpetuate his memory, the artists at Venice proposed celebrating his obsequies with great pomp and magnificence in the church of St. Luke, the programme of which is given at length by Ridolfi; but owing to the prevalence of the plague no funeral ceremony was allowed by the state: the authorities, however, made an exception in Titian's favour, and suffered him to be buried in the church of the Frari, at the foot dell' Altare di Crocifisso."

Having thus honourably interred our hero, we must take our leave of his venerable biographer, hoping that his years may be extended at least to the number of those of the great artist of whom he has collected these notices; and that, until the time shall come "decreed by fate," he may continue to amuse his leisure, and to gratify the world of taste, by publications similar to the present.

UNPUBLISHED POETRY.

In a recent Number we derived much pleasure, and we are sure, communicated much to our readers, by publishing a review, with extracts, from a small poetical volume by the Author of Pelham, of which a few copies were in private circulation among the friends of that distinguished writer. We have now an opportunity from giving another agreeable variety to our columns, by inserting a few graceful and feeling compositions by the Hon. Mr. Phipps, the son of Lord Mulgrave, and brother of a young and successful literary nobleman, Lord Normanby. These verses were written in aid of one of those benevolent schemes undertaken

by our fair dames* for the relief of the poor and distressed, by the sale of articles of their own manufacturing at some temporary bazar. They, no doubt, raised the prices of the commodities they so elegantly embellish; and having fallen into our hands, we take the liberty of promulgating them for the general gratification.

"Le Souvenir.

Yes, all is past! I saw him go,
His plume was fluttering in the breeze,
The early morning's ruddy glow
Was glancing through the waving trees.
The mottled light that shone and danced
Upon his arms and helmet bright,
Was like the flitting joy that glanced
O'er my short moments of delight.
His step was firm, his heart was gay,
I saw him on his war-horse spring,
I heard him carol on his way!—
Alas, alas! I could not sing.
And why should man thus flutter round
The downy nest where Love is born,
And still be free, whilst we are bound
By chains his heart has never worn?
He loved, as well as man can love,
But other feelings shared his heart;
Whilst all the griefs my breast that move,
No thought except of him impart.
The foam that fringes stormy seas
A moment glitters and is nought,
The gossamer that braves the breeze,
And by some idle flower is caught!
The elder-down that wings its flight,
And floats in wayward course through air,
A summer cloud—say, what so light?
What can with man's light love compare?
I think he loved me; but when fame
Had lit her altar in his breast,
The god that could a lion tame,
His weakness over man confessed.
Away, away! where falchions flash,
And eyes of fury glare around,
Where fiercest hands and spirits rash
Are met, my hero shall be found.
The ray that glances on thy blade
Shall light the tear-drop in mine eye;
The breeze in which thy pennon played
Was freighted with thy Laura's sigh."

"The Portrait.

And must I lose thee?—Go, then, go!
Fair portrait of what once I loved;
My comfort in my lonely woe,
Inconstant thou, like her, must prove.
What once I loved can I forget,
Because her fickle heart has changed?
Has her deceit, has my regret,
One link in that dear chain deranged?
You say I may no more possess
The portrait of another's bride;
My woe to soothe, my grief to bless,
The shadow now must be denied.
Away, then! other eyes shall gaze
Upon that beautiful form and face;
My memory only disobeys,
And dares those features still to trace."

"The Letter.

What can I write, or how confess
The chain that round my heart you wore?
How can a maid her thoughts express
To tell thee, yet not say, I love?
Had you been here, a word, a look,
The secret would at once reveal;
But modesty can hardly brook
To write what it has blushed to feel.
I read thy words—how cold they seem
To those that I have heard thee speak,
How poor to one fond glance's beam!
To one enraptured smile how weak!
I will not write:—I could but tell
A truth that you must long have guessed;
Nor could my pen declare so well
The feelings that each look confessed."

"The Casket.

They come:—away! thou much-loved token,
And midst more costly gems lie hid:
Since every link is to be broken,
Each thought of thee my friends forbid.
Though he is gone, can I forget him?
Will not each fond remembrance dwell
Upon the day when first I met him,
The tenderer moment of farewell?
In vain, with all these costly treasures,
They strive to win me back to mirth:
Can I be gay, or join in pleasures,
Or count these toys of any worth?

* This honourable distinction on the present occasion belongs to Lady Caroline Stanhope, whose charity led to the composition of these verses.

This pledge alone—his hand has bound thee,
And still thou couchest on my breast,
Might all the baubles that surround thee,
Thou only to my heart art prest.
His touch with brilliance could adorn thee,
As thoughts of him could rapture wake;
When none were near me, I have worn thee,
And loved thee ever for his sake."

Peace Campaigns of a Cornet. 3 vols. post 8vo.
London, 1829. Ebers and Co.

THIS production of Major N. Ludlow Beamish, the very able translator of Bismarck's Cavalry Tactics, following a literary fashion of the present day—a fashion more honoured in the breach than in the observance—is not calculated to add a feather to the soldier's cap. We are sorry to say this; but it is impossible for us to lend our countenance to any one of an ephemeral class of works which are, we lament to say, merely fungous excrescences on the tree of literature, the emblems of its decay, and poisoners of that wholesome sap which would otherwise invigorate and beautify it. The least offensive of these productions can only tend to waste the public mind in senseless frivolities; whilst the more pernicious publications, scandalously sustained by a base system of bribery and puffing, are the vilest corrupters of inexperienced youth, debauchers of female purity, and contaminators of general readers whose principles are not sufficiently confirmed or guarded against their dangerous influence, that ever disgraced the press of a moral country. We do not, indeed we cannot, apply these strong terms to Major Beamish's particular case; but we must express our regret, that any respectable and clever man should have fallen into the paltry ranks of these trading mercenaries and lying pretenders. He is not one of them; but he is defiled by being in their villainous company, and must suffer the mitigated reproof he has provoked from being seen in their ways and caught speaking a little in their slang. It is something in his favour that he does not assume to be what he is not, but comes honestly forward in his own character; that he is (or rather was) truly the *cornet* whose pranks and adventures he describes, and no low scribbler giving himself out to be a nobleman incognito, nor no ensign or lieutenant advertised as a man of rank in disguise.*

Having delivered our opinion of the school to which we cannot help referring this novel, we shall not be very particular in what regards its individual character. The author is evidently a person of talent, and some of his scenes possess much comic force and humour. But our tastes are offended with many oaths; and there are extravagancies and caricatures among the descriptions which produce no effect of mirth or laughter. What can we say of the gross absurdity of a story in which a lady entertaining a party, and in a rage at the breakage of some china, absolutely slaps her footman where no gentleman could endure a kick! The characters of Major and Mrs. Costiff, with their medicines and Cheltenham draughts, too, though drawn with spirit, border on the disagreeable. Mrs. Lovett, a match-maker, is of a better caste, more true to general nature, and more entertaining. The *Peace Campaigns*

* Such as the author of the indecent novel called *Ecce, a subaltern* of the name of Richardson; but, according to the system of delusion, falsehood, and humbug, practised in aid of this manufacturing school of dishonesty and trash, advertised in the newspapers as "a man of rank who has suffered by the nefarious practice of gambling in France," and who "has resolved to put others on their guard by a complete exposure of the whole system."—See *Observer*, March 29. Such are the tricks resorted to in order to bolster up rubbish and dissuade against our just and honest censures.

altogether are obviously drawn from real characters, and relate real circumstances;—the less objectionable, as there is no ill-nature in the portraits, which though personal are pleasant, and as there is nothing demoralising in the stories. The *Cornet* paints the frolics of full-grown boys with red coats and swords; a kind of society where men, by mixing too much together without the refining intercourse of the other sex, become rough, noisy, and fatiguing, if not intemperate, brutal, and licentious. What acts such gentry commit under the name of fun, in country quarters, in barracks, at messes, in private theatricals, &c. &c. appear to be all faithfully narrated in these pages, which will thus, probably, recommend them to a large class of military readers, and other idlers who take up a book of this sort merely to pass away the time. Among the most striking parts are, an account of a still-hunt in Ireland, which is really graphic and characteristic—a phrenological discussion—a chapter on after-dinner music—another on Banna's banks—and a whimsical description of Ballintemple corporation at an aquatic fête. But we shall take our only illustration from a trial in an Irish court (the assizes at Clonmel), where we recognise the identity of the famous agitator, the triumphant Mr. Daniel O'Connell.

"When Pierce got in, he found the clerk of the crown calling on the prisoners. Clerk. 'Patrick Gilloughly, are you ready for your trial?' Prisoner. 'Na, my lord.' Clerk. 'Well, you must be ready to-morrow. Timothy Spillaan, are you ready for your trial?' Pris. 'My lord, my witnesses arn't come yet; they'll be here a Monday.' Clerk. 'The court can wait no longer; you promised to be ready yesterday.' Gentlemen of the jury, you are to understand, that in No. 201, Timothy Spillaan stands indicted, for that he, not having the fear of God before his eyes, but being moved and seduced by the instigation of the devil—' Pris. 'Och, my lord, my lord! I'm as innocent as the shyld unborn.' Clerk. 'Hold your tongue, sir; his lordship will hear you by and by.—On the third May, &c. &c., with a certain oak stick, value sixpence.' Pris. 'Och, my lord, my lord! I didn't do it.' Clerk. 'Silence, sir.—Which he, said Timothy Spillaan, then and there held, did assault one Patrick Hurlihy; and in and upon his head did give him one mortal wound, of the breadth of three inches, and of the depth of four inches, &c. &c.' After the clerk of the crown had read the indictment, in which he was interrupted from time to time (as already mentioned) by the prisoner,—a smart, attenuated, little, bald-headed old gentleman, with small, sharp-cut features, whose superabundant vivacity and restless demeanour had already caught Pierce's attention, rose to address the jury, beginning *sotto voce*—[we skip the introductory parts].—Gentlemen of the jury, the deceased Patrick Hurlihy went, at the time laid in the indictment, which you have heard, to the fair of Thurles, in this county, with a view (as I am instructed) of making some purchases there. The fair was, as usual, very much crowded, and several tents were erected on the ground for the accommodation of the visitors. It appears that the deceased was sitting in one of these tents with some of his friends, quietly enjoying the classical recreations of the place. Now, gentlemen of the jury, the deceased wore a wig—a tow-wig; the weather was hot, and he did what I think you will all of you consider very natural for any man to do under such circumstances; he took off his wig, and

placed it on a peg in the tent—on a peg in the tent.' (Here the learned counsel looked through a small eye-glass, which was suspended by a black riband from his neck, inquiringly, first at the judge and then at the jury.) 'Having done this, gentlemen of the jury, which any of you might have done under the same circumstances, the deceased put his head out of the tent, to see what was passing in the fair. His head.'—(here the crown solicitor suggested the word bald)—'didn't I say so, sir? His bald head was thus exposed for about a minute.' (Here the solicitor whispered 'two minutes.') 'No matter, sir; I beg I may not be interrupted.—When a tremendous blow, which, I am instructed, was given by the prisoner at the bar, felled him, the deceased Patrick Hurlihy, to the earth.

'*Sternitur, exanimisque tremens procumbit humi bos.*'

'Yes, gentlemen of the jury, the blow was given with such professional dexterity, that the unfortunate man never spoke after. I know not what defence will be offered for the prisoner at the bar. It will scarcely be said that the temptation was irresistible; that an Irishman, a Tipperary man, at a fair, emerging, perhaps, from the intoxicating atmosphere of a whisky shop, with a shillelah in his hand, could not be expected, in the superabundance of his strength and spirits, to pass by unnoticed so provoking an object as a bald head thrust out of a tent.' * * * The clerk of the crown now called the first witness, Dennis Fogarty—

The list'ning crowd admire the lofty sound,
'Dinnis Fogarty!' they shout around,
'Dinnis Fogarty!' the vaulted roofs rebound:

but no Dinnis Fogarty came; and, after waiting a considerable time, the judge was desiring the counsel for the crown to call their next witness, when a head which 'tower'd above his sex,' was seen advancing through the crowd, and presently the aforesaid Dinnis, with difficulty emerging from the dense mass of persons who surrounded the table, stood confessed before the court and the jury. * * * He was near seven feet in height, of astounding proportions, and a long loose frieze coat, with ample cape and sleeves (which, made more for ornament than use, hung tenantless at his sides), set off his figure to the best advantage. His nether garment was of antique sheep-skin, 'rich with the spoils of time,' and open at the knees; while round his brawny calves hung, in picturesque festoons, the sad remains of a pair of Connemara stockings. The expression of his countenance was various and contradictory; one set of his features seemed to be at war with the other; his heavy brow and restless eye 'portended treasons, stratagems, and spoils;' but then, a paradise of fun and good humour was opened in the lower region of his face. In short, he was evidently (as the saying is) up to any thing; and the general *bisarrerie* of his appearance was not a little aggravated by his having taken a glass too much that morning. After Dinnis was sworn (and this was no easy matter, for he was twice detected in kissing his thumb instead of the book), he took his seat, looking knowingly at the gentleman of the bar who was going to examine him, as much as to say, 'by my shoul, Mr. Counsellor, but you shan't be after coming over me with your blarney, any way.' The examination then proceeded. Counsel. 'Did you know Patrick Hurlihy?' Witness. (Pre-tending not to hear, and inclining his body towards the counsel) 'What's that, sir?' Counsel. 'Did you know Patrick Hurlihy?' Witness. 'Did I know him?' Counsel. 'Yes,

air;—did you know him? *Witness.* 'Did I know him?' *Judge.* 'Why don't you answer the question, witness? Did you know him?' *Witness.* (With much impatience, as if he thought that the counsel knew this as well as himself, but was affecting ignorance for some sinister purpose) 'Why to be sure I did.' *Counsel.* 'Is he living or dead?' *Witness.* 'Living or dead?' *Judge.* 'Why don't you answer the question, witness? I shall put you into the dock if you don't. Come, sir, is he living or dead?'—answer that gentleman.' *Witness.* (Advancing close up to the counsel and looking him in the face, as much as to say, 'I now see clearly you are trying to humbug me, but I'll shew you that I'm not such a spalpeen as you take me for,') 'Darned well, you know he's dead.' Dinnis was now called to order by the court, and threatened with being sent to gaol if he did not conduct himself with more decorum. The examination then continued a good deal in the same strain, (Dinnis, notwithstanding the warning given to him, re-echoing almost every question before he answered it), until he was called upon to identify the prisoner at the bar. Dinnis then rose, and looked round the court in every direction but the right one, standing for a considerable time as if in great perplexity, and without saying a word. A wand was now put into his hand, and the judge desired him to place it on the head of the man who had struck the deceased Hurlihy. Upon this Dinnis commenced a most scrutinising search, thrusting the wand in every direction through the crowd, as if to poke out the villain should he endeavour to conceal himself; and standing on his toes lest any one should escape him. At length (as if he had suddenly and unexpectedly made the long-wished-for discovery) he placed the wand on the head of a young gentleman of the bar, who had just entered the court. Roars of laughter followed this palpable bit of Dinnis, in which he himself joined most heartily, and the counsel for the crown, after threatening him, to no purpose, with an indictment for perjury, in order to induce him to identify the prisoner, ordered him at length off the table. Though the crown was so far unsuccessful, the second witness fully identified the prisoner at the bar, and the case for the prosecution was then closed. At this moment, there was a general cry of 'make way for counsel!' and Pierce saw a large man, of massive though not unwieldy proportions, moving through the crowd. As if glorying in his might, this great character disdained to insinuate his portly circumference whenever an opening might present itself, and so to wind his weary way, but flung his body fearlessly amongst the opposing masses of his fellow-creatures, and bore down all before him; while the attorney for the prisoner, who had hitherto been obliged to conduct the defence single-handed, watched his wondrous progress with anxious eye, and an expression of countenance which seemed to chide the unfeeling multitude for visiting the ample sides of his favourite counsellor too roughly. 'Oh, Counsellor! I'd have been lost, if you hadn't come,' said the sensitive attorney; 'indeed, I'm afraid they are too strong for us as it is!' 'What have they proved?—what have they proved?' asked the counsellor, in a hurried manner; and then a close conversation followed between the counsellor and his wily employer, which was not audible in the grand-jury-gallery—when the aforesaid ponderous limb of the law rose,

Tallus prima Dares cepit altum in praelia totum,
Oscutitque humeros lateos, altumque iactat
brachia procerasque, et restat istum actum.

'My lord,' said this legal Dares, pulling his wig violently with both hands, until he had got it quite awry, 'I humbly submit to your lordship, that the prisoner at the bar should be acquitted. They have failed; indeed they have not even attempted to prove the length and breadth of the wound, which is quite material. The doctrine is laid down distinctly in 2d Hale, that the length and breadth of the wound must be shewn in all cases where it is possible to do so. Now here, my lord, there has not been even a scintilla of evidence upon that point.' (Here the counsellor took another pull at his wig.) Indeed, for any thing which your lordship has heard this day, my client—my unfortunate client, may be perfectly innocent of the charge brought against him.' ('The devil he might!' says Pierce to himself.) 'For how does the indictment run? (give me the record.) Now I pray your lordship's attention to this for a moment. 'On the 3d of May, &c. and so forth, with a certain oak stick, and so forth, which he, the said Timothy Spillan, then and there held, did assault one Patrick Hurlihy, and in and upon his head did give him one mortal wound, of the breadth of three inches, and of the depth of four inches, and so forth.' Some evidence has been given, I understand (for I was engaged in the other court when this case was called on), that the prisoner at the bar struck the deceased Patrick Hurlihy; but that is not enough: they should have gone further, and shewed that the wound was of the dimensions described in the indictment, for *non constat* that it is the same transaction. Such evidence, even in a civil action, would not sustain the declaration; but my unfortunate client's case is much stronger, standing here as he does in a criminal court. He is not, it is true, in affluent circumstances; but, good God, my lord! is there to be always one law for the rich and another for the poor in this ill-fated country? Are the lives of the finest peasantry on the face of the earth to be squandered away in this clumsy manner? Are the bloated, the base aristocrats who—' (Here the eloquent gentleman was called to order by the bench.) 'I beg your lordship's pardon; perhaps my feelings led me to say what was irrelevant. I shall not trespass further on the time of the court; but I call on your lordship, upon the principles of common sense, and the authority of Hale, and all the authorities, to acquit the wretched man at the bar.' (Here the great counsellor raised his shoulders to his ears, and moved his body as if he was in the act of sawing a piece of timber in a sawpit,—a grace of action peculiar to himself, and with which he was in the habit of enforcing his oratory.)

The court, jury, and auditory, are fairly bothered; but we cannot find room for more; and have only to add, that there are some good remarks on the Military College, bivouacs, and other *sogering* matters; and that we believe Major Beamish is now in Hanover, collecting materials for a work which we are sure will do him infinitely greater credit, and far more interest the public—namely, a History of the German Legion.

History of Russia and of Peter the Great. By General Count Philip de Segur, author of the "History of Napoleon's Expedition to Russia in 1812." 8vo. pp. 447. London, 1820. Treuttel and Würtz.

The vivacity and talent displayed by the Count de Segur in his History of Napoleon's fatal northern enterprise made us very desirous of meeting with any new work from his pen, and few subjects could be more

acceptable in themselves than that which he has here chosen for the exercise of his abilities. A concise account of the rise of the mighty empire of Russia was a great desideratum in our literature, and, indeed, in the literature of every nation; for though we are acquainted with a number of episodic and partial views, memoirs, surveys, biographies, sketches, essays, chronologies, annals, &c., and even with several general histories in various languages, we know of no publication which stands in the way of a production like the present. Karamsin's larger work is out of the reach of common readers, and Tooke's history is not only voluminous and imperfect, but now ancient and out of date. Under these circumstances, we have turned with pleasure to a volume which comprehends a brief and spirited *coup d'œil* over the principal events of early Russian history, and gives us, at more length, an account of the important reign of the Tsar Peter.

In this work Count de Segur has rapidly presented the leading political facts and movements to our eyes,—so that, without being perplexed by details, we are enabled to understand the progress of events and their prominent results. In executing this task he appears to us to have displayed very considerable talents, to have bestowed very considerable research, and to have evinced very considerable judgment and impartiality. A statistical view of the empire is followed by a sketch of seven centuries and a half, in which its history is divided into five great periods, two dynasties, twelve remarkable princes, and five capitals. Then fell Rurik, the last of the Rurik branch—a horrible interregnum ensued, and the family of Romanoff ascended the throne. A few pages more bring us to the time of Peter; and the concluding moiety of the volume is occupied with his memorable reign. Passing over the old annals of the Novgorodians, Varangians, and Slavonians, the introduction of Christianity by Vladimir the Great, the division of Russia into appanages, and the struggles for paramount authority which were the everlasting consequence, and the invasion of the Mongol Tartars (1225), which ended in the establishment of their empire at Kaptchak, we come to the revival of the Russian independence and of the power of the grand princes in the person of Alexander Nevsky, and the contest which ensued between the rival houses of Tver and Moscow. The latter gradually gained the ascendancy. Our author's fourth period commences here, and embraces the space between 1462 and 1613; and hence we will copy a few passages to shew the vivid style of the writer, certainly marked by an effort at *éclat*, but altogether striking and energetic.

"The spirit of the history of the whole of this fourth period,—the period of despotism,—stands fully displayed in its first reign, that of Ivan III. This prince ascended the throne in 1462, at the age of twenty-two; he reigned forty-three years. The three succeeding reigns present the continuation, and the horrible abuse, of the system of Ivan III. and the downfall of his race, the effect of that system, which itself was but an expansion of that of his ancestors. The life of Ivan the Great, like all great lives, had one uniform object,—autocracy. In him it was one of the powerful and exclusive passions, but without the rashness, the confusion, the violence, which are peculiar to them. From the age of twenty-three he proved himself capable of regulating its march, and of subjecting it to the slow prudence of a policy at once insidious even to perfidy, and circum-

spect even to cowardice, but ever invariable. Ivan III. wished to be independent out of his domains, and autocrat within; he had, therefore, numerous enemies among his neighbours and his subjects; but he succeeded in uniting, by turns, all these enemies against a single one, and thus successively subdued the one by the other. It was necessary for him to subdue *Kasan* and the *Golden Horde*, to which he was yet tributary; the great communities or Russian republics of *Novgorod*, *Pskov*, and *Viatska*, which affected a sovereignty almost equal to his own; lastly, the princes, his kinsmen, proud of the appanages which they still retained, and determined to live in them as masters. At the same time he had to repress *Lithuania*, which was always ready to offer to all these hostile ambitions, republics, and possessors of appanages, the protection of a sovereignty, long the fortunate rival of that of *Moscow*, which it had straitened on the west, the south, and even the north, by seducing from it successively its great vassals. Such were his adversaries. For allies, he made use, at home, of his nobles, princes, and subjects of southern and central Russia, inured to slavery, against his northern subjects, who were yet free; afterwards, he employed his nobles and his old and new slaves against the princes of his blood. Lastly, his omnipotence sufficed him against his own boyards, when he had no longer need of them, and whom he ceased to fear, after the humiliation of his other enemies, and the creation of a swarm of petty nobles, his immediate vassals. As to the *Golden Horde* and *Lithuania*, his external adversaries, he sought enemies for them in *Persia*, in *Sweden*, in *Hungary*, at *Vienna*, and even at *Rome*; but the celebrated *Stephen*, *bespodar* of *Wallachia*, and *Menghli-Ghirei*, *khan* of the *Crimea*, who were placed between and in dread of the *Golden Horde*, *Turkey*, and *Lithuania*, were the foes of his foes. These, then, were his natural allies, whom he distinguished above all others; his *Machiavelian* policy, while it incessantly deceived them, still contrived to retain them on the side of *Russia*, and in perpetual hostility with *Lithuania*, till he found the favourable moment for striking it in his turn. Such were the allies and the opponents of *Ivan III.* At the beginning of his reign he acknowledged all their rights; he cajoled all the hostile powers which he wished to destroy; he flattered all their pretensions, and even patiently submitted to the abuse of them. From the time of his accession, however, the fourfold contest which he was to sustain against the *Lithuanians*, the possessors of appanages, the *Russian republics*, and the *Tartars*, began with the latter; but remark with what precautions! If he does not pay the tribute of the *khan*, if he does not go to pick up his crown at the feet of that sovereign, do not imagine that his young pride haughtily rejects the shameful necessities imposed upon him by a half-vanquished barbarian. No; he merely eludes them, and, while he furtively withholds the tribute, he humbly acknowledges himself a tributary. Shortly after, the *Tartar residents*, their retainers, their merchants, who were yet established even in the *Kremlin*, were at length excluded from it. Who would not suppose that, in a powerful sovereign, this so much desired enfranchisement was the effect of a noble burst of indignation? Not so. On the contrary, it was by insidious pretexts, and by meanly purchasing the protection of a *Tartar woman*, that the grand-prince surreptitiously obtained from the *khan*

the order that these *Mongols* should no longer dwell as masters in the very abode of the *Russian sovereign*. At a later period, all that the high spirit of his wife, the daughter of the emperor of *Byzantium*, could obtain from the autocrat was, that he would avoid going to meet the *Mongol* envoy; that he would no longer degrade himself by spreading under the hoofs of this barbarian's steed a carpet of sable fur; that he would not go to prostrate himself at his feet; that he would refuse to hear on his knees the letter of the *khan*; and lastly, that he would not submit to present to the envoy of his master the cup of *koumiss*, and shamefully to lick from the neck of the barbarian's horse, the drops of the beverage which might have fallen upon it. And yet, as early as the first years of his reign, ancient *Bulgaria*, and the first and largest *Tartar* city, namely, *Kasan*, had yielded to his arms; nay, more, before that triumph and after, the *Golden Horde*, which had thrice risen in a body against him, had thrice fallen again, and the remnant of it, closely pursued, had at length been destroyed, even in its haunt. Behold, then, *Asia* vanquished, and *Muscovy* liberated!"

When the time arrived for the reduction of *Novgorod*, we are told:

"*Novgorod*, rather an ally than a subject of *Moscow*, reigned over all the north of *Russia*, whose exclusive commerce it possessed, and which it had to protect against the *Swedes*, the *Livonian knights*, and *Lithuania*. But, since the time of *Ivan Kalita*, immersed in luxury, it had oftener ransomed than defended its frontiers and its liberties! Of the latter, some had already slipped from its grasp; but, in 1471, emboldened by the presumed pusillanimity of the grand-prince, it determined to resume them. It was stimulated to this step by *Marpha*, the rich and powerful widow of a *Posadnick*, who is said to have been enamoured of a *Lithuanian*. The idea pleased her of bestowing her country on that of her lover. She was an ambitious woman, and in the ambition of females, the passions are almost always exerted to the advantage of a man: as if women, the radii of another centre, the complement of another sex, ought to exist only in that sex, and all that is merely personal to them were interdicted to their nature. She opened her palace, and lavished her treasures on the citizens of *Novgorod*, whom the darling sounds of their *vetchovi-kolokol* perpetually summoned to the market-place, which was the scene of their licentiousness. They drove out the officers of the grand-prince, they seized on his domains, and when the surrender of *Kasan* allowed *Ivan* to return towards *Novgorod*, and to make his threatening voice heard there, they broke out into revolt, and gave themselves, by a treaty, to *Casimir*, prince of *Lithuania*."

By stratagem and force *Ivan* also prevailed here; and his feudal sway progressively spread itself and increased. At length we find a statement which is peculiarly worthy of notice, even at the present day.

"He was desirous to obtain the pope's assent that *Sophia*, the last princess of the *Greek imperial family*, who, being dispossessed of *Byzantium* by the *Turks*, had taken refuge at *Rome*, should come to adorn his throne, to consolidate it with all her rights, and to environ it with all her fascinations. *Constantinople* is, in the eyes of the *Russians*, the sacred source of the faith which they profess; its emperors long gave to them their primates; it is from thence that they derive their written characters, their

vapour baths, a part of their manners and usages, the saints to whose images they pay an idolatrous worship, and lastly, the supreme religion. They had been brought to them in a former age by a *Greek princess*; it was she who had made their *Vladimir*, that mighty one below, a mighty one above; who had made that master of their destiny on earth their holy protector in heaven. Now that *Byzantium* was become captive to the *Turks*, the dexterous *Ivan* wished that a second *Greek princess* should come to render *Moscow* the heir of that *Byzantium*; that she should bring as her dowry to its grand-prince the two-headed eagle, that symbol of autocracy, and the title of *Tzar*, which, as the *Russians* tell us, is identical with that of supreme authority. He wished that she would introduce into his palace the haughty hierarchy of the sumptuous court of *Constantine*, and its pompous ceremonies, less frivolous than some persons imagine; in a word, that despotism of divine right, by which devotedness to the prince would be strengthened and even sanctified in *Russia*. This theocratic power, together with the iron yoke which *Ivan* inherited from the *Tartars*, and the entirely military constitution which was soon to be added by a great man, were destined to complete the most extraordinary concurrence of circumstances that ever formed princes to despotism, and nations to slavery. Nor was this all. By his union with that imperial scion, the skilful and powerful hand of *Ivan* seems to have turned back the face of his empire from east to west. He brought the weight of the *Russian throne* into the balance of *Europe*. *Russia*, which, during nearly three centuries, had been detached from civilisation, was again to be linked with it by the ties of policy, and by those of arts and sciences. It was the *Greeks*, expelled from *Constantinople*, and sheltered in *Italy*, who conveyed those arts to *Moscow*, in the train of their sovereign. In fact, by a singular conformity of circumstances, those *Greeks*, vanquished in their turn near the ancient and *Homeric conquests* of their ancestors, had come, like *Aeneas* and his *Trojans* of old, to dignify *Italy* also, by taking refuge there with their household gods. This was the reason why the crafty *Ivan* seemed willing to sacrifice even his religion to obtain this high alliance from the pope, who was then the protector of the *Greek princess*. See how triumphantly he caused to be conducted through his states this sovereign, who came to autocratise, and even to deify his power! Hear the language of his nobles and his priests. 'God,' said they, 'sends him this illustrious spouse, an offset of that imperial tree, the shadow of which was formerly spread over all orthodox *Christian brothers*. Fortunate alliance! which brings to mind that of the great *Vladimir*, and which will make another *Byzantium* of *Moscow*, and give to its grand-princes all the rights of the *Greek emperors*!' Thenceforth, a sumptuous train was requisite to the new autocrat. The novel pageantries of *Constantinople* came to fascinate the eyes of these barbarians. At the same time his people saw him raise the massy walls of the *Kremlin*, the awe-inspiring abode, the formidable fortress of autocracy; and also of that first church of stone, included within its circuit, which the *Muscovite architects* had thrice endeavoured to construct, and which had thrice fallen on these unskilful artificers. For nothing was neglected by *Ivan*. Founders, engineers, architects, miners, and minters, were invited from *Germany* and from *Italy*; and, following the foot-

steps of a civilised princess, they ventured to penetrate into these almost unknown countries. The mines of Petchora were discovered; and Russia, for the first time, saw silver and copper money coined in its capital."

"It is (pithily observes the count) the Russia of Ivan III. reformed by Peter the Great, that still exists." Yet, at the distance of twenty-eight years, his second successor Ivan IV. who followed Vassili Ivanovitch, the whole was convulsed almost to an utter overthrow. In 1533 commenced the reign of this madman; but we must reserve the illustrations till next Saturday.

Histoire de l'Université, &c. History of the University (of Paris) from its Origin to the present Times. By Eugène Dubarle. Vol. I. pp. 383. Paris, 1829.

WERE we to follow our judicious and learned author, step by step, through the various vicissitudes which this celebrated school has undergone,—our labour, like his, would not fall short of a fair octavo; but, what is still worse, we should place ourselves in the predicament of assaulting an English reader's patience, whilst the annalist himself has looked to native predilections for his hopes of popularity and acceptance. We do not, therefore, invite attention to details just as dull and prosy as the recital of the domestic fortunes of our own *almæ matres* would prove to our neighbours on the other side of the Straits of Dover; but throw open M. Dubarle's pages with a view of culing such things as may leave those who accompany us well content with having taken us as guides through a field where there is much of novelty and of more than transient interest to be gleaned.

We set out with the very first words of our historian's spirited preface: "Certainly, whoever would explore all the Universities of Europe, would not discover a single one worthy of being compared with this; whence we may affirm, as we would of the Trojan horse, that there have issued forth innumerable princes and valourous warriors; and, moreover, that she has produced to us an infinity of exalted personages, who will be noised amongst posterity so long as the world remains a world." Such was the panegyric which the judicious Stephen Pasquier, the University advocate, addressed to his constituents when pleading their cause before the parliament in 1564: and our University is still deserving of the encomium. Two centuries have elapsed, and it has maintained the superiority which it had acquired in Europe by its antiquity and learning. * * * It has grown in strength with the nineteenth century, and encircles a whole nation within its extensive precinct. Having been moulded, but upon a greater scale, from the fragments of the Parisian University, the masters who direct its studies have inherited the celebrity of their predecessors; their principles and acquirements have descended to them, and nothing which belongs to the ancient University can prove uninteresting to them, for they consider it in the light of a mother."

Neither Gaul nor Britain were total strangers to intellectual light before the advent of the Romans; they had passed the verge of national infancy.

"Divided into several communities, each of which had its distinct chief and its peculiar laws and government, Gaul was subject to the dominion of a community of religious principles. The Druids, whose name has descended to us, darkened by the terrors of a sanguinary form of worship, were their priests and legisla-

tors; they were the depositaries of whatever mental lights the nation possessed, and constituted a separate member of the body politic: whilst their numerous colleges [?], spread over the whole surface of the country—at Dreux and Autun, in Guyenne, Champagne, and Beauce—attested the extent of their powers. * * *

The education of youth being committed to their care, they adroitly acquired such an influence over the minds of their pupils as no circumstance could shake during the remainder of their days: in their twofold character as priests and teachers, they accustomed their scholars to reverence the ministers of a deity whom they depicted in terrific colours, and by this means gradually achieved a sway in the state, which became the more formidable inasmuch as it proceeded from the fears entertained of the divinity itself. The belief of a future life, and a dread of avenging deities, were the corner-stones of their religious faith; whilst those salutary impressions which might have become the basis of national morals, and have ameliorated the social state, were dexterously converted by the Druids into a means of consolidating their predominance."

In our own times, England has given a tone, and in a multitude of instances, a form, to the political institutions, the public spirit, the manufacturing activity, and many of the scientific and literary pursuits of her Gallic neighbours. At the earlier period of which we have been speaking, she appears to have contributed in no small degree to their intellectual, if not moral, amelioration; for her Druidical priesthood instructed the youth of Britain, drew many followers, whom they taught to learn verses by heart, and in other matters, public as well as private, used the Greek letters."

"The ascendancy," continues M. Dubarle, "which they had gained over the great mass of the people, and the privileges and honours by which they were encircled, filled their colleges with young persons from every quarter of Gaul, who resorted to them with an anxiety to avail themselves of the benefits of an education of which the Druids themselves are said to have acquired the art in the bosom of the forests of Great Britain. A crude ground-work of philosophy, a religion subservient to their own interests, and an acquaintance with the rude laws which governed them, were the whole extent of the instruction they imparted: this was always confided to the memory of their pupils, and by such means transmitted from age to age. It would seem that they were not without some smattering of *belles lettres*; and the Gallic Hercules, whose mouth emitted chains of gold, with which he linked his auditors together, may be adduced as a proof that the nation was not insensible to the charms of eloquence."

From the time, however, when Gaul was raised to the rank of a Roman province, "the Gaul himself forsook his national appellative, and merged into that of a Roman subject; whilst the community of laws, interests, and language, speedily annihilated every symbol of distinction between the conqueror and the conquered. Thenceforward participating in the advanced state of Italian civilisation, Gaul could pride herself, like Italy, on her noble cities, on their wealth, population, and magnificent structures. Treves, Cologne, Marseilles, Arles, and Lyons, rivalled the most celebrated of the imperial towns; the arts and sciences were cultivated within their walls, and multitudes of young men pressed forwards to imbibe

the instruction afforded by masters of high reputation. * * * Foremost among the cities where academies of great celebrity had been opened, were Marseilles," (which Cicero had long before honoured with the appellation of the "*New Athens*,") "Autun, Narbonne, Toulouse, Lyons, and Bourdeaux. The first of these, whose inhabitants were styled *Tyrlingui*, because they spoke the Greek, Latin, and Gallic languages, disputed literary precedence with Athens, and shone as the birth-place of Petronius, Favorianus, Trogonus Pompeius, Cæsius, and Salvianus. * * * Narbonne, the earliest of the Roman colonies beyond the Alps, not only claimed the distinction of having been the native country of the prince of orators, but sent forth Varro, Eriper, and the two Consensæ. Bourdeaux was the birth-place of Ausonius, whose talents, seconded by Gratian's friendship, raised him to consular honour; of Minervius, who was styled Quintilianus Secundus; and Proceresius, to whom the Romans erected a statue bearing this inscription:—

"ROME, TO THE KING OF ELOQUENCE."

The dissolution of the Roman empire entailed the decline and ultimate subversion of these celebrated nurseries of literature and science; and the episcopal and conventual schools became the only asylum whence learning dispensed its feeble ray over the darkened intellect of Europe during the seventh and eighth centuries. Charlemagne's accession to the French throne, towards the close of the latter century, was eminently conducive to the moral regeneration of his people. "He carefully cultivated the liberal arts," says Eginhard, "learned grammar from Peter, the deacon of Pisa, and devoted much time and pains to the study of rhetoric, the dialectics, and especially astronomy. He was anxious that daughters as well as sons should devote themselves to the liberal studies, which he had prosecuted himself." "He collected at Rome," says the monk of Angoulême, "masters of the art of grammar and arithmetic, and bringing them into France, commanded them to diffuse a taste for letters; for before our lord king Charles, the study of the liberal arts was unknown." At the period when Charlemagne ascended the throne, Gaul was sunk into the lowest depth of ignorance; the priests and monks themselves, amongst whom alone some remains of learning had long been preserved, were borne down the stream to which the age impelled them; they were scarcely able to write; and a circular from the emperor to the abbot of Fulda upbraids them with their negligence and ignorance, and recommends the election of men who were disposed to learn, and desirous of teaching that which they learned." England was again laid under intellectual contribution. "Italy," says our author, "was not the only country in which that sovereign singled out individuals who were capable of seconding him in the impulse he was ambitious of giving to the West; from every part of Europe he collected around his person all such as had acquired any fame by their talents and acquirements. The most celebrated of these was Alowin, the Englishman, who is better known by the name of Alcuin: he was led by Charlemagne to visit France in 780, and soon succeeded in gaining his friendship and confidence. The emperor, under his care, completed the studies he had begun; and the learned teacher founded the 'Palatine School' under the very roof of his royal pupil's palace. * * * This school served, to a certain extent, as a model, moulded under his own eyes, for his extensive domi-

* First book of a History of England.—Hart Miscellany, 8vo. edit. vol. II. p. 430.

nism, and intended to direct the studies of the rest of the kingdom. . . . These, and similar exertions, were crowned with complete success. The convents and cathedrales, being administered by learned prelates, acquired literary eminence; and, in certain dioceses, the villages themselves were possessed of schools, where, by the monarch's command, children were furnished with gratuitous instruction. . . .

In the catalogue of the celebrated schools of this period, Paris is not once named. It was Aix-la-Chapelle, on the frontiers of Germany, where the emperor had fixed his residence; and this was probably the site of the celebrated Palatine School, from which it has been attempted to derive the University of Paris. Nothing, however, can be more unfounded than this presumption; and, in spite of every effort to establish the contrary, Paris was destined to retain her obscurity in this respect for another century to come, until the time when Rami d'Auxerre, the monk, delivered his lectures within its walls."

Notwithstanding the temporary effulgence which, under the tutelage of Abelard, Peter Lombard, and other illustrious professors, conferred upon Paris the Hebrew appellation "*Carriath Sopher*," or city of letters, public study and civilisation had lain in a state of torpor from the demise of Charlemagne until the accession of Lewis the fat, in the beginning of the twelfth century. At that period the learned were awakened to the necessity of moulding into one harmonious whole the various branches of human knowledge, in order to render their united lights still more beneficial to mankind, and to shield them against the assaults of barbarism; hence arose the community termed *Universitas*, which became independent of the civil power, was governed by its own rector and its peculiar laws; and though the rival favours both of the sovereign and the Roman see gradually attained to such a degree of splendour and influence, that, in the fourteenth century, the smallest insult offered to its dignity, or the most venial violation of its rights, brought signal and certain vengeance on the offender's head,—even in lawless times, it was able to "overawe those who professed allegiance to no law but to that of their own good pleasure." In the year 1221 we find this body publicly styling itself the "*Universitas Magistrorum et Auditorum Lutetia*." And yet so far was it from deserving this comprehensive designation, that Gregory the Ninth having seven years afterwards forbidden the study of the classics "as a fermentation of mundane science," literature was neglected, and in 1254 the rules of probity were as entirely buried in oblivion as the names of Cicero and Virgil. Happily Honorius the Fourth considered his predecessor's judgment as fallible as his taste, encouraged the study of astronomy, and in the council of Vienne, held in the year 1311, established professorships of the Greek, Hebrew, Arabic, and Chaldaic languages in the Universities of Paris, Oxford, and Bologna.

Numberless were the colleges founded within the independent precincts of this University, particularly at the commencement of the fourteenth century, when it peopled a whole quarter of the capital, and its schools occupied entire streets. Our historian gives an account of six new colleges or halls founded for the reception of indigent students within an interval of ten years only! What says the nineteenth century to this fact? Simply, that the "march of liberality" is in an inverse ratio to the "march of intellect" (?).

Among the singular customs prevalent in

this age was the *bejaune*,—a name given to a species of contribution levied upon "fresh men," and consecrated to the purposes of eating and drinking. Ducange derives this appellation from the *becs jaunes*, or yellow beaks of birds that have not quitted the parent's nest, and are novices or inexperienced in the ways of the world. This custom was the source of such horrible excesses, that it was prohibited in 1342, under pain of corporal chastisement. Seven years afterwards, Clement the Sixth reduced the enormous expense attendant upon the reception of bachelors and doctors, prohibited the celebration of any banquet on the attainment of the bachelor's degree, and ordered that the cost of investing the occiput with a doctor's hat should not exceed the sum of 100*l*. We may here observe, that the little red hat was granted to doctors, as a mark of distinction, by Benedict the Twelfth, in 1334.

John the Second followed the example of many of his predecessors, in exempting the University from all subsidies and imposts; and his successor, Charles the Fifth, who was a man of extensive acquirements, spoke Latin, and was *moult argumentatif*, was accustomed to say that "as long as learning was honoured in his dominions, they would continue to prosper; but that when it should be contemned, they would fall to decay." This taste for study was the origin of the first library which France possessed; it consisted, says a contemporary writer, "of nine hundred volumes of the most notable works, compiled by sovereign authors, both of holy writ, theology, philosophy, and all the sciences, extremely well written and richly ornamented." Charles caused translations to be made of Livy, Valerius Maximus, and Æsop's fables, then termed the "*Bestiary*." The most celebrated of the translators was his tutor, Nicholas Oresme, who proved no small gainer by his labours; for he received one hundred livres (pounds) for his version of Aristotle's *Morals*, and a pension for the *Politics* of the same author. Charles, in fact, exerted himself to the utmost in giving encouragement to the professors and their studies, and evinced, on every occasion, his love for "his eldest daughter, the University of the clerks of Paris;" sending for the rector and teachers to hear them discourse on science, availing himself of their counsels in spiritual matters, shewing them much honour, and in every thing conducting himself benevolently and peaceably towards them. In his reign the University mastered ten thousand voters, besides the scholars or under-graduates; though there were Universities for law and medicine at Toulouse, (founded in 1233), Montpellier (1289), and Orleans (1307).

We close for the present our imperfect analysis of M. Dubarle's first volume, with the subsequent attestation of *papal infallibility*! "John the Twenty-second had affirmed, that the saints did not see God, and would not see him until the last resurrection; his opinion had spread into France, and been repeated from the pulpit in Paris. Philip de Valois, fearing the consequences of a theological controversy, determined to stifle it in its birth; and, with this intention, convoked an assembly of prelates and doctors in his palace at Vincennes: their decision was unanimous; the University, to a man, condemned the pope's opinion; and declared that the saints beheld the Deity face to face. A copy of this decision, dated in 1333, was sent by the king to the pope, together with a letter, in which he said,—'Our doctors understand what ought to be believed in matters of faith far better than the

jurists or other clerks who compose your court, and who know little or nothing of theology; and we will chastise those who maintain the contrary.'—It is added, that he threatened to have him burnt if he did not recall his assertion. But this dire extremity was avoided; the pope retracted, and died shortly afterwards."

The Miscellaneous Works of Sir Philip Sidney; with a Life of the Author, and illustrative Notes. By William Gray, Esq. of Magdalen College and the Inner Temple. Oxford, 1829. Talboys.

THERE is a self-congratulatory feeling about the present age, which, while it promises great things for the future, and vaunts itself on to-day, is too apt to forget the past,—and in such forgetfulness, like a traveller who hurries on without looking back to calculate distances, is somewhat inclined to imagine its progress far beyond the reality. Education, information, are the order of the day; but whether we are so much better informed than our ancestors, and whether we have not taken up with quantity rather than quality, remains to be proved. Instruction is now at work among the very lowest classes; but, after all, it is the higher ranks that give the tone to society and character to a nation; and we much doubt whether our young nobility and gentry are more highly educated, or of more cultivated intelligence, than in the age of Queen Elizabeth. Classical attainments, and those often of great extent, laid the foundation; a knowledge of French and Italian was essential; and the instruction was not considered completed till foreign travel had enlarged the understanding, while it polished the manners. There was scarcely a nobleman of any note who was not the patron of literary men; and, besides literary taste, many of them displayed talent. Sir Philip Sidney is a striking instance of this. He was not a man that made his own time, the time rather made him: he lived when literature was as much part of a finished gentleman as warfare; when a sonnet and a campaign were essential. He found these tastes existing; and in following he gave them all the advantage of his own fine-toned mind and noble spirit. Sir Philip was particularly fortunate in his destiny. With all advantages of gentle birth and breeding, with the favour of his sovereign, with all the interest belonging to an unhappy attachment and an early death, immortalised by the most graceful compliment poet ever paid; he was one of those characters that make the romance of history and the poetry of real life; and it is not a little to his credit, that, well calculated as his fortunate career was to excite envy, he was even more beloved than honoured, and not a contemporary account of him but speaks in words of commendation and attachment. The volume before us will be an acquisition to any library. There is a well-written Life, poetry of most curious conceit, some interesting letters, the eloquent Defence of Poesy, and notes that shew an intelligent and industrious editor. The following little piece is a fair specimen of its companions.

"Faint amorist, what! do'st thou think
To taste Love's honey, and not drink
One dram of gall? or to devour
A world of sweet, and taste no sour?
Do'st thou ever think to enter
Th' Elysian fields, that dar'st not venture
In Charon's barge; a lover's mind
Must use to sail with every wind.
He that loves, and fears to try,
Learns his mistress to deny.
Doth she chide thee? 'tis to shew it,
That thy coldness makes her do it;

Is she silent? Is she mute?
Silence fully grants thy suit:
Doth she pout, and leave the room?
Then she goes to bid thee come:
Is she sick? why then be sure
She invites thee to the cure:
Doth she cross thy suit with 'No?'
Tush, she loves to hear thee woo:
Doth she call the faith of man
In question? Nay, 'tis foot, she loves thee than;
And if ere she make a blot,
She's lost if that thou hit'st her not.
He that after ten denials
Dares attempt no farther trials,
Hath no warrant to acquire
The dainties of his chaste desire."

We have also in further praise to say that this is a most beautifully printed volume.

SIGHTS OF BOOKS.

A Catalogue of a Collection of English Divinity, &c. Part I. of Stock of the late Mr. Gilbert Dyer, of Exeter, &c. &c.

THIS most extensive and curious Collection, now on sale at Exeter, well deserves the notice of a Literary Journal. Part I. alone contains a catalogue of six thousand five hundred and forty-seven works of divinity; comprehending early Bibles, missals, the fathers of the church, ecclesiastical history and biography, old Roman catholic; puritan, and sectarian tracts and publications; and other productions, both rare and important. Of the late Mr. Dyer, the possessor of this extraordinary library, we have heard several remarkable anecdotes; one of which will account for his having so extensive a stock. Like the miser, Mr. D. was as devotedly fond of his books as the former is of his gold; and though a bookseller, he could not bear the thoughts of parting with any of his darling volumes. In vain was it to tempt him with high prices: he would readily allow them to be consulted, and liberally lend them to scholars and authors; but to part with them entirely was a sacrifice which he could not prevail upon himself to make. He thus accumulated the immense store which is now finding its way into the shelves of other bibliopoles; and the Catalogue of which is well worth attention, not only from its multitude of names, but from the interesting annotations which appear on many of the scarcest works.

The Legendary Cabinet; a Collection of British National Ballads, Ancient and Modern, from the best Authorities: with Notes and Illustrations. By the Rev. J. D. Parry, M.A., &c. post 8vo. pp. 436.

THIS is a very elegant-looking volume, and well adapted to general circulation,—the selection being as judicious as it is interesting: the more modern part is that which we like least: to be lacadaïcal is to be simple, and to be extravagant is to be romantic, with our modern ballad-mongers. We beg, however, to except Sir Walter Scott, though we incline to think he is the man with two lives, and writes remembering his chivalric state of pre-existence; and Southey, some of whose ballads are worthy of being five hundred years old. There are some appropriate notes; and altogether it is a volume that does much credit to its editor.

Poetical Recreations and Thoughts, in Rhyme, on Sacred and Miscellaneous Subjects. By Charles Augustus Hulbert. Longman and Co., London; C. Hulbert, Shrewsbury. 18mo.

WITHOUT any pretension of that high order, or faults of that striking nature, to call for severe criticism, this little volume displays

* * * * * 'Than' and 'then' were used as synonymous by our elder poets whenever their rhyme required the interchange."

much feeling and taste; and the religious spirit which pervades these pages will benefit many a reader, in whom some expression of piety may awaken those serious thoughts which are so rarely called forth in vain.

Eleanor Ogilvie, the Maid of the Tweed: a Romantic Legend. By Rosalia St. Clair, Author of "the Highland Castle." 3 vols. 12mo. A. K. Newman and Co. London, 1829.

THERE is a considerable share of romantic interest in these pages,—battle, love-making, hair-breadth escapes; and it is certainly rather above the common run of its competitors. Altogether, there is a large class of readers to whom this novel will be acceptable.

A Cantab's Leisure; Prose and Verse. By James Stringer. 2 vols. John Ebers and Co. London, 1829.

WE will not say that our Cantab's Leisure has not been well employed,—for the taste evinced in literary recreations speaks well for the mind which finds in them its enjoyment; but we doubt whether the mélange of tales, sonnets, essays, &c. the chance sketches of a young author's desk, were worth publishing. He may do better. There is a very pretty fanciful woodcut in the title-page.

ORIGINAL CORRESPONDENCE.

Paris, 11th April.

A WORK entitled "Pensées," by the Princess de Salma, is highly eulogised by the male sex, notwithstanding that the authoress tells truth, and treats the noisier part of creation with very little ceremony. The fair writer criticises severely man's abuse of power with regard to the female world, and also questions his right to the many social prerogatives which he has assigned to himself. Madame la Princesse forgets, without doubt, that force legitimises injustice, and that, like the lion in the fable, the strongest *a toujours raison*; therefore, until women discover a similar secret to that of Sampson's wife, to weaken their masters, they may just as well keep their thoughts unknown, and obey and suffer in silence. A famous mathematician lately published a short consolatory chapter addressed *aux femmes* on the subject of their present suffering: *selon lui*, in the next generation the superiority as to *la force physique* is to be their attribute.

The "Mémoires de Bourrienne" have, I presume, already appeared in London. They are the fashionable work of the day, and therefore are discussed with *chaleur* in literary circles. The author having received sixty thousand francs for these volumes is quite a sufficient recommendation, even if they possessed no intrinsic merit,—but M. Bourrienne is esteemed to be a most faithful historian; and as he was the constant companion of Napoleon previous to his elevation to power, he had more opportunities of becoming acquainted with the character of that great man than those who were only the contemporaries of his happier fortunes. The librarian, M. L'Avocat, who purchased those Memoirs, has, I understand, already doubled the sum which he gave for them. This is making a fortune with a vengeance.

Arts and sciences continue to meet with encouragement. A society of old ladies (I forgot, ladies are never old in Paris,) met a few evenings ago, and generously subscribed the sum of five thousand francs, which are to be awarded to the first person who will invent any adhesive substance to keep a wig firm on the head. Such a discovery would be of infinite service to

society, as the accidents which occur in consequence of the insecurity of that part of dress are really terrible! An antiquated coquette, who was lately at one of the theatres with her *Cicæbeo*, was an example of the fatal effects which may result from the uncertainty of false hair. This poor lady was quietly admiring the actors and actresses, when her *soupirant* feeling rather chilly *malgré son amour*, threw his mantle over his shoulders, and at the same moment flung madam's peruke, feathers, and a crescent of diamonds, into the pit. Could any event be more melancholy?

I understand that we are shortly to witness the ascension of a balloon by means of vapour. It would seem that steam is to bring all things to perfection. Some wise men even pretend that in a few years we shall be nourished by a *vapourish* process; consequently, the bodily organs will be preserved unimpaired for a long period, and we shall be all Methusalems. It will be rather a ridiculous sight to see a large company with gaping mouths sitting around a fuming paste!—the lovers of substantial will hardly patronise this system, I should think.

April 13th.

Great changes are talked of in the theatres for the opening of the new *année théâtrale*. Nothing, however, excites more interest among the Parisians than Laurent's speculation of a German operatic company, who are to give twelve, and if successful, twice twelve representations. The general opinion is, that the attempt will not succeed, as the German language is not much known among the French. There are, however, more than 50,000 Germans in Paris; and most of these would probably visit the Italian theatre, to witness the performance of their fellow-countrymen. This company is from Aix-la-Chapelle, and, according to report, will give Don Juan and Der Freyschütz in a style of which the French have no idea. It is expected that they will proceed to England when they have closed their engagement with Laurent. The Odeon, or second Théâtre Français, remains closed; but an attempt is to be made (at least such is the *on dit*), to amuse the inhabitants of that quarter, and of Paris generally, with a comic pantomime à l'An-laise.

The rage for scientific expeditions is not over. Arrangements are making, upon an extensive scale, for sending out competent persons with M. Caillé to Africa; and the Parisian scientific societies are very sanguine as to the anticipated results.

A report has recently been made to the government of the number of suicides in France annually. In Paris alone the average is 400. In this number, however, are included all who are found drowned without any marks of violence upon them; but it is believed that many are murdered by being thrown into the Seine after having been plundered.

Some workmen employed in making excavations upon the site of the ancient city of Fesulæ in Tuscany, lately discovered 3000 pieces of Roman coin, chiefly silver, struck under Julius Cæsar, the Triumvirate, and Augustus.

A new and very elegant mode of decorating the walls of rooms, instead of papering them, has just been adopted in Paris. It consists of glass stained, by a peculiar process, with landscapes of historical subjects. It is the invention of a retired officer; and in this country, where novelty is so much encouraged and glass is so cheap, the inventor is likely to be well remunerated. From the price of glass in England, however, the practice cannot be introduced there.

To the Editor, &c.

SIR,—By accident I have observed in the *Literary Gazette*, of Saturday the 11th, an article headed "Egypt," wherein it is represented that *I express a strong desire to return to that country, in order to pursue the excavations about the Temple of Absemlal*.

I beg leave to thank you, sir, for the zealous motives by which you are actuated in mentioning my name, and the object I have in view; but, at the same time, allow me to remark, that my return to the East can in no way whatever be influenced by the proposed subscription, which does not appear quite clear from the paragraph to which I allude.

I travelled in that country before for my own amusement, and I return for no other purpose. Being about to resume my travels in the East at any rate, I was prompted to make this attempt to obtain the means to uncover the Temple of Absemlal, solely from the interest I take in Egyptian antiquities; and any one in the smallest degree acquainted with the locality of that excavation must be aware, that the time it would require I should devote to so arduous and laborious an undertaking can be by no means inconsiderable; and at the conclusion, all I expect to compensate my time and trouble, besides my own contribution of £50, is the sight of the temple!

This, sir, I have been induced to notice, as adventures are by no means uncommon, and as I have no great desire to be considered one of the fraternity, I hope you will do me the favour to give this note a place in your next Number of the *Literary Gazette*. I have the honour to be, sir, &c.

ROBERT HAY.

April 13th, 1839.

ARTS AND SCIENCES.

ROYAL INSTITUTION.

APRIL 10.—Mr. Ainger this evening resumed his account of the early history of the steam-engine. Up to 1663, the date of the Marquess of Worcester's apparatus, it appeared that the only persons who have any claim to be considered as inventors of steam-engines are Hero and Porta. In 1672, Otto Guericke formed an apparatus to raise heavy weights on the principle of the hydrostatic press: he exhausted a cylinder of large diameter, by means of a pump having a piston of small diameter, so that the large cylinder being fitted with a piston to receive the pressure of the air, power would be gained in the ratio of the areas of the larger and smaller pistons. In 1688, Dr. Papin, a French philosopher, proposed to make a vacuum under a piston in a cylinder by the explosion of gunpowder; and in 1690 he proposed to use the well-known condensibility of steam for this purpose, instead of manual exertion. Papin's apparatus consisted of a cylinder close at bottom, fitted with a piston, under which was placed a small quantity of water, to be alternately vapourised and condensed, by alternately placing the cylinder on and off the fire: this is inferior as a practicable machine to that of Guericke, though it was the first that combined the piston and cylinder with the condensibility of steam; each of them having been well known separately. Whatever be the merit, therefore, of suggesting this combination, though in a most impracticable manner, belongs to Papin; and to this extent France may fairly claim a share in the progressive improvement of the steam-engine. In 1669 Mr. Savery made his first working model of a steam-engine, in which the elastic force and condensibility of the steam were employed upon the principles of

Hero and Porta; the whole being arranged with a series of vessels, valves, and pipes, so as to produce an effective machine, which in a few years was practically employed on a large scale. In 1707, Papin, who had abandoned his cylinder and piston, published a second project, copied avowedly from Savery's, and altered, as is universally admitted, for the worse. Still no very economical or practicable engine had been invented; this was reserved for Newcomen and Cawley, who, between the years 1705 and 1712, invented and perfected the common atmospheric engine, in which steam was generated in a boiler, conveyed under a piston in a cylinder, condensed by cold water, and adapted to a system of valves and other apparatus, which first rendered any effectual service to the manufacturing interests of England. In these progressive changes, observed Mr. Ainger, there is evidently not one which can be called very extraordinary. Hero applied all the powers of steam which are at present known. Savery and Newcomen are entitled to the praise of inventing ingenious machinery, which embodied the various suggestions that had been made; but the only great name in the history of the steam-engine, the only person who individually made any considerable advance, is the person who, by successive contrivances, converted the comparatively feeble, dangerous, and unmanageable machine of Newcomen, into the powerful, safe, and pliant instrument which now occupies and traverses every part of the civilised world; forming as it were so many living monuments to the memory of JAMES WATT.

On the table in the library were placed exquisite specimens of Litho-phanic porcelain, from Mr. Brady of the Quadrant: the effect of these unique specimens is produced solely by the variations in the thickness of a semi-transparent substance; the projections or thickest parts being the darkest shades, and the deepest cavities or thinnest parts the light. A well-finished drawing of fruit, by Mr. Pearsall, of the Institution, was also much admired. We likewise observed several Chinese mirrors, which are merely metallic plates, cast from an alloy of copper and nickel, and afterwards polished.

The evening meetings stand adjourned till the first of May.

SOCIETY OF ARTS.

APRIL 14.—The subject of this evening's meeting was the manufacture of glass, in continuation. The Secretary, after a short recapitulation of that part of the subject which had been discussed at the last meeting, proceeded to describe the principal varieties of manufactured glass.

He began with the common green bottle glass; stated its composition, and the uses to which it is peculiarly applicable; and then passed to the description of those varieties which are used in Italy and elsewhere as flasks for oil, wine, and other liquids.

The manufacture of blown window-glass was then described at some length, and was illustrated by the exhibition of specimens furnished by Mr. Jos. Chater. That kind called crown glass is the principal object of the British manufacturers; and the Secretary stated, that the weight of materials annually employed by them appears, from the excise returns, to amount to about 22,000 tons. The difference between crown glass and spread glass was explained, and specimens of this latter, in the state of muffs, as well as in sheet, were shewn: some curious specimens of ribbed, of checkered, and of Venetian window-glass were also exhibited.

Cast or plate glass was then described. Its discovery, in 1688, by M. Thwait, was noticed, and the celebrated manufactory of St. Gobin, near Paris, which for a century commanded almost the exclusive supply of mirrors of the finest quality and the largest dimensions. The different steps of the manufacture were detailed; the fusion of the materials, the casting the glass into plates, the grinding and polishing, and, lastly, the silvering.

The glasses of which oxide of lead as well as fixed alkali forms the flux were next mentioned. Those under the name of flint-glass are the great glory of the British manufacturers; specimens in different states, from the roughly-shaped mass as it comes from the hands of the blower, to the exquisitely finished and brilliant article after the cutter and polisher have expended on it all their skill, were exhibited in great variety, both white and coloured, having been contributed by the liberality of Messrs. Pellatt and Green, Mr. Blades, and Mr. Davenport. The composition of the purest kind of flint glass, technically called paste, was then described; and models in paste of the most celebrated diamonds were exhibited.

Coloured glasses, and the art of painting on glass with vitreous colours, were next treated of. First, the opaque and semi-opaque coloured glasses or enamels. These, it was stated, were well known to the ancients; and specimens in illustration of the perfection to which the Egyptians carried this branch of art were exhibited in the form of beads and other articles found at Thebes in Upper Egypt. Among the moderns, the Venetians seem to have chiefly excelled in enamelling; and some beautiful specimens of their skill were shewn. The art of painting on glass was stated to have originated from the mosaic works of the ancients in coloured glass, and to have been probably first employed only in the production of agreeable symmetrical forms, the colours of which were their chief merit. Afterwards attempts were made to represent the human and other figures, by cutting out from flat glass of different colours the several parts of the figures and of the drapery, and these pieces joined together by lead produced rude figures, of which the lead formed the outline. The discovery of the method of staining glass yellow and orange, added greatly to the resources of the art, as it allowed the figure to be drawn on uncoloured glass with the staining materials, while glass coloured throughout, or pot metal as it is called, was reserved for the draperies. A farther improvement took place on the discovery of a mode of plating uncoloured glass with coloured glass, as it enabled the artist, by grinding off the coloured plate, to represent the figure in white, which figure might afterwards be stained wholly or in part. The last and greatest addition to the resources of the art, arose from the invention of colours mixed with a vitrifiable flux, ground to a fine powder, and capable of being applied when mixed with oil of turpentine to the surface of uncoloured glass, in the same general manner as a painter in oil works on his canvass, but of course modified by the transparency of the plate on which he paints, and on the necessity of vitrifying his colours almost one by one as they are laid on.

Some very fine and interesting specimens of painting on glass in its rudest and in its most highly finished state were exhibited, for which the Society are indebted to Mr. Jos. Chater, Mr. Hodges, Mr. Shewell, Mr. Baillie, Mr. Hoadley, and Mr. Collins.

MEDICO-BOTANICAL SOCIETY.

APRIL 14. The President, the Right Hon. Earl Stanhope, in the chair.—Mr. Voys read a translation and condensation of several valuable and interesting papers by German authors, arranged by Philip Sandoz, esq. The principal ones were on the chemical constituents of the oil of nutmegs, and the medicinal uses of *Galeobdolon grandiflorus*.

The Archduke Joseph of Austria, the Grand Duke of Hesse d'Armstadt, and the Duke of Orleans, were elected honorary members. Mr. W. Marsden was elected a fellow. Mr. Le Souëf was admitted a foreign member.

Several donations were announced, amongst which were—some works on the generation of plants, by M. Adolphe Brogniart; a translation of the Batuta, presented by the Oriental Translation Fund, &c. The noble President notified that the anniversary dinner of the Society would be celebrated on the 25th inst. at the Thatched House Tavern.

INSTITUTION OF CIVIL ENGINEERS.

MARCH 31.—The question on the best method of filtering water was again submitted to discussion. Various applications of Mr. Simpson's cheap and effective plan were considered; in particular the improvement of water supplied to shipping, and the possibility of preventing deposition in the lockage of docks and canals adjacent to tide rivers. Mr. Deville remarked on the comparative purity of the rain water in the lighthouse tanks he had professionally examined. Mr. Collings described a filter bed, fully answerable for every domestic purpose, consisting of Barbadoes-stone vessels, suspended at the surface of the water in a cistern, and thus forming, on a small scale, a combination of the depositing reservoir and filtering apparatus.

April 7.—Mr. Mac Neil read a paper introductory to an intended treatise on a new pedometer. This machine is used to measure the draught power of horses, and, from that datum, to estimate the comparative qualities of roads in general. The exact average of tractile force is a quantity difficult to be determined, owing to the unequal strain produced by muscular action. By Mr. Mac Neil's instrument, when tried with three horses, the vibration of the index is reduced to within one pound, or a unity of the total force, and, under any circumstances, does not exceed five pounds. The superiority of roads founded on subpavement is confirmed in every experiment made with this invention; and the consequent public profit, in the diminished wear of horses and vehicles, can only be appreciated by a knowledge of the immense traffic which obtains throughout Great Britain.

EGYPTIAN EXPEDITION.

THE French savans and artists who are examining the monuments of Egypt reached the extreme point of their journey at the second cataract on the 31st of December.

The letters of M. Champollion, jun. are dated from Ouadi Halfa, 1st Jan. 1829. They furnish interesting particulars concerning the places situated between the two cataracts, and especially the great temple of Ypsamboul. The travellers suffered from the cold after having passed the tropic; but they were in excellent health at the date of these letters. We shall shortly publish an extract from them.

FOSSIL BONES.

WE lately mentioned the communication to the French Academy of the discovery of caves

at Bize, in the department of the Landes, containing the remains of human and animal bones supposed to be antediluvian. At a recent sitting of the Academy, two letters were read from Messrs. Tournai and Marcel de Serres (who are about to publish a detailed description of the cave), briefly stating the facts, and the conclusions to which they had arrived upon a consideration of those facts. The following extracts from M. Tournai's letter will be found highly interesting.

"The two caves at Bize are entirely filled with a black mud, containing a prodigious quantity of fossil bones. Some of these are in a complete state of decay; and they have rarely been found connected. They have not the appearance of having been gnawed. Only one tooth of a carnivorous animal has been remarked. The black mud does not contain any excrements of carnivorous animals. The animals buried in the mud of the caves of Bize differ entirely from those observed in the caves of France, Germany, and England. The same mud which contains fossil bones, several of which belong to lost species, also contains human bones, having in a great degree lost their animal matter; land-shells, several kinds of which are no longer in the neighbourhood; modern sea-shells; numerous fragments of earthen-ware; and fragments of charcoal. The top and the walls of the cave are, in several places, lined with an osseous concretion (*brèche osseuse*), which is nothing but the black mud cemented by stalagmite infiltrations. This concretion contains the same objects as the black mud. From all these circumstances I think myself authorised to conclude, that all the objects contained in the mud and in the concretion are of the same date; that, at a certain epoch, the first cave was entirely filled, which is sufficiently indicated by the concretion which covers the top of it: in the second cave, the top being higher, the mud could not reach it, but every thing shews that the mud there was higher once than it is at present;—that the caves were so filled during the intermediate period between the geological and the historical ages;—that the mud which filled them, and the fossil bones which it contains, are much more modern than those in the caves of Lunel-Viel, and the principal caves hitherto known;—that during the time which elapsed between the deposit of the mud in the caves of Lunel-Viel, and the deposit of the mud in the caves of Bize, animals in France underwent great changes;—that several species of animals have disappeared from the surface of the globe since the historical ages;—that man was contemporaneous with the phenomena with which the caves of Bize are filled."

THE ALPS.

A PARTY of naturalists intends in the approaching summer to explore some of the highest summits of the Alps. Last year, M. Hugi, of Soleure, attempted the dangerous undertaking of reaching the top of the primitive rocks, covered with ice, which are between Lauterbrunnen and St. Gothard. He was well prepared, and set off furnished with all the scientific instruments necessary to make experiments in such regions. On the first of August he directed his steps towards the Roth-Thal, in order to pass from thence to the Grimsel. He was accompanied by seven guides, but wandered for four days in the valley of Noth, in the midst of snow-storms. In vain he waited for more favourable weather. Compelled at length to renounce his plan of reaching a higher elevation, he made towards Lauterbrunnen,

and arrived at the Grindelwald. The weather had now become clearer, and allowed him, with five intrepid hunters, to climb the glaciers, and he attempted to cross on the ice to the Alps of the Valais. This expedition was attended with the greatest dangers; and when the naturalist wished to descend by the southern side of the Strahlack, enormous avalanches, which rolled after him, and plunged into abysses, the depth of which the eye could not measure, threatened every instant to carry him with them. At last he reached the valley of Urbach, whence he set off on a trip to the top of the Finster-Aar. This immense colossus was as if enveloped with a thick coat of snow and ice; yet M. Hugi attempted to scale it. A dreadful hurricane, which whirled in the air immense masses of snow, suddenly arose, the thermometer fell to nine degrees below zero, the little strength which the travellers retained just enabled them to cling to the ice in order not to be driven over the precipices: they had already attained an elevation of thirteen thousand feet above the Mediterranean, but they were obliged to give up the idea of reaching the top. M. Hugi went to the Valais, and made several other excursions among the same mountains; examining with peculiar attention the primitive rocks, and continually making experiments on the temperature of boiling water and spirits of wine in those frozen regions.

After having visited the Val Bedrette, the St. Gothard, and the Susten, he returned towards the Grimsel, hoping to be more fortunate than he was the first time; but increasing rains compelled him again to relinquish his project. His expedition was nevertheless productive of results very advantageous to science. He collected a set of geognostic specimens from the highest mountains of the Alps, and had an opportunity of studying the superposition of the rocks in those primitive layers. M. Hugi is at present employed in classing his collection and arranging his observations. This intrepid naturalist will form one of the party which, as we have already stated, intends next summer to explore those parts of the Alps which have hitherto appeared inaccessible.—*Foreign Journals.*

NEW PUBLICATIONS.

Hall's New General Atlas. Part XIII.

Longman and Co.

To mention a new Part of this publication continues to be the announcement of one of the best works of its class with which we are acquainted. Turkey in Asia (a country fit to be a mighty empire, instead of a barbarous region), British North America (with the boundary lines of 1825), and Birmah, with part (querre, parts?) of Anam and Siam, form the contents of this fine fasciculus.

Map of Nubia, comprising the Country between the First and Second Cataracts of the Nile.

From a Survey made by M. Parke and J. J. Scoles, Architects, in 1824.

NEVER was a publication better timed than this map, appearing as it does when the curiosity of civilised Europe is so much alive to the scientific investigation of the parts which it so clearly and excellently illustrates. Constructed upon actual survey by the able individuals whose names it bears, while travelling for professional improvement, it is, we believe, the first map of Nubia which has been given to the public from true and practical data. It is therefore an important accession to geography, besides being particularly appropriate and interesting at the present moment. Had it been intended to accompany the accounts of M.

trasted with the warm hues of the walls and foreground, are altogether enchanting. No. 697, *Near Canterbury*, by the same artist, is a fine specimen of broad and skilful pencilling. No. 506, *Fishermen on the look-out*, by J. M. Ince, holds a very fair rank in the class of coast-scenery. No. 543, *The Valley of Grindelwald and Glacier at Berne, Switzerland*, W. de la Motte. Frequently as we have seen representations of Swiss scenery, we do not remember to have met with any superior to the present in composition and execution. Mr. de la Motte has several other drawings distinguished for their merits: they will be found under Nos. 518, 528, and 736. No. 541, *Margate Jetty*, J. Atkinson. The drawings of this artist are always full of spirit and character. No. 735, *Cathedral at Frankfort on the Main*, W. H. Harriott, H. An amateur performance which does Mr. Harriott great credit.

Of the Prints in this Exhibition there are very few that have not come under our notice on their separate publication, with the exception of No. 804, *The Wreckers*, by J. Quilly, after Mr. Stanfield's highly interesting picture.

NEW PUBLICATIONS.

Portrait of the King. A lithographic facsimile after a drawing of Sir Thomas Lawrence, P.R.A.; by R. J. Lane, A.R.A. THIS profile portrait of our most gracious Sovereign appeared in the last Exhibition at Somerset House, and received our notice and commendation. We can only repeat, that, "as a most pleasing resemblance, as well as a spirited and tasteful work of art, it ranks among the best that we have seen from the masterly crayon of the accomplished President." The character which Mr. Lane imparts to his productions on stone, especially when the free handling of a practised pencil is to be imitated, is truly admirable.

Garrick in the Green-Room. Painted by William Hogarth; engraved by William Ward. Southgate.

A PRINT which will, no doubt, be interesting to the professors of the drama, and the curious collector; although it is a specimen of a kind of art, and a mode of costume, now obsolete. The disposition of Garrick, the principal figure in the group, is singularly egotistical—and with great propriety; for it is well known that, whether in the green-room or elsewhere, Davy must always play the first fiddle. He is represented with one of his legs thrown over the arm of the chair in which he sits, and his right hand is energetically stretched forth; while various members of the *corps dramatique* of that day—among whom are Beard, Baddeley, Mrs. Garrick, Woodward, Aickin, Macklin, Smith, Mrs. Yates, Mrs. Abingdon, O'Brien, &c.—are patiently listening to his recitation. In the foreground is a figure said to be that of Hogarth; but we rather think it must be the author whose work is under consideration, as he seems to be exultingly directing the attention of the other auditors to some beauty which the genius of Garrick has elicited. Amidst this assemblage of grotesque coats, waistcoats, stomachers, and head-dresses, the artist, (whoever he was, for the assumption of Hogarth's name is but ill sustained), with execrable taste, has introduced a naked figure of Fame, blowing a trumpet!* A biographical and critical analysis of the picture, by Mr. George

Daniël, has also been published; from which it appears that it was "originally" sold with a lot of miscellaneous rubbish in a public sale at Bristol, and was purchased by a broker for a few shillings; that, being conveyed to London, another dealer bought it for a trifling advance on the first cost; that it next became the property of Mr. Wheatley, a bookseller; and that from him it ultimately passed to Mr. Southgate. What the word "originally" here means, we are at a loss to understand. Of the earlier history of the picture we suppose that nothing is known, for nothing is told.

Who'll serve the King? Drawn on stone by T. Fairland, from a painting by R. Farrier. To the great and characteristic merits of the original picture the pages of the *Literary Gazette* have already borne ample testimony. In the print, the humour and expression are well preserved, and the execution is exceedingly spirited. It cannot fail to be a great favourite with the public.

SCULPTURE.

WE have just taken a glance at the two remarkable figures, of the life size, and executed in a kind of granite, of Tam o' Shanter and the Souter Johnnie, which have made much noise in Scotland, and have now reached Bond-street for exhibition in the English capital. They are the work of James Thom, a native of Ayrshire, twenty-six years of age, and a common stone-mason till these manifestations of a superior genius were produced. They are certainly very remarkable and characteristic statues. The quiet hilarity of the Souter telling his queerest stories, and the uproarious merriment of honest Tam, are expressed in a style as true to nature as nature herself. Nor is the rude material ill suited to the persons represented; its gray colour and roughness, on the contrary, accord with the rustic and homely forms of the peasant and cobbler.

We recommend these extraordinary specimens of natural talent to the attention of the curious. They are to be placed in Burns' monument, near the scene of the poem, "Alloway's auld haunted kirk;" and in the meantime will, we trust, obtain that popular favour which will help to encourage and reward the ingenious artist, who, we are happy to hear, has been patronised by Lord Cassilis, for whom he is executing the same group, with the addition of the landlord and landlady, immediately before Tam set out on his fearsome ride.

ORIGINAL POETRY.

STREET SKETCHES.

No. II.—*The Organ Boy*.

HE hath a spirit bright in its content,
And playful in its poverty; the rain
Of English clouds and atmospheric gloom
Of this brave island-clime have not bedimm'd
The merriness of his brown cheek, nor quenched
The lustre in his deeply-laughing eyes,
That sparkle forth the sunbeams of the soul!

Then breathe no pity on the organ-boy:
From his gay land a stock of sterling joy,
And proud young feelings that can well outwear
Each frown of fate, the stripling wand'rer
brought; [heart,
His mother's smile still brightens round his
His father's blessing, when he climbed his knee
At night, still sounds upon his inward ear;
And when the streets grow cloudy, and the tones
His organ weaves fall fruitless on the air,
He dreams of home deep-bosomed in bright vales
Of beauty, hill-spread vines, and fairy streams

That trifled sweetly as a sister's voice
Who prattled in her slumber:—days will dawn
When he again shall thread those glowing vales,
And tell his travels with unwearied tongue
To fond ones, nestling round his own fireside.

Nor think his errant life too mean to sing,
Albeit no music tuned to courtly ears
That are too satiate for the native sounds
That raise sweet echoes in romantic souls,
From him is heard; there are of meeker taste,
And simpler mind, who bid the roving boy
A welcome, and enchanted hear the notes
His organ wakes, of tenderness and truth:
As through the city's ever-busy streets,
And darkly-winding lanes, he roams and plays,
Many an ear drinks musical delight,
Many an eye with beams of vanished years
Is brightly charged,—and, from her window-
haunt,

Who makes the street to tinkle with the sound
Of halpence, thrown with no ungentle hand,
By some fair listener?—haply he woke dreams
Of childhood,—thoughts that cannot breathe in
words,

But live and fade in sighs of fond regret!

And round him, what a throng of urchins
group,
And dream his music sweet as Orpheus made!
The laughter hushed, the noisy tongue asleep,
The hoop, as weary, on his shoulder hung,
A schoolboy stands to listen, and admire
The melodies that dance along his soul
Like ripples fleeting o'er a ruffled stream!

Then let the streets still waken to the sound
Of such boy-minstrels; when afar they roam
Through villages, where music hath a flush
Of magic in her meanest tone, may smiles
Of welcome flash along the rough-worn face
Of age, and ruddy offspring of the fields:—
May gentle skies and glowing days attend,
And feelings toned to every tuneful hour!

There are who deem the BALLAD-SINGER
breathes

No music that rewards harmonious ears—
To whom an ORGAN-BOY but grating notes
Of discord scatters on the homeless wind;
Their sympathies are seasoned high, and scorn
The gentle: envy not their earthy souls!
For, hallowed Nature! thou art ever true;
And he who wanders, with an eye of love
And feeling, wide among thy many haunts,
Through mountain-walks, or unambitious vales
Where stream and meadow mingle their ro-
mance [still

Around,—in storm and sunshine finds thee
The same and magical!—and so in life;
Her sweet humilities have grace and power
Beyond her loftiness and fame: the Muse
Can never play the courtier; from the halls
And palaces of Kings she flies, to glades
Of lowliness, where faculties are found,
And Will and Action can reveal their sway:—
Where beats a heart, there Poetry may breathe
Her spirit round it; beautifying look
And word, extracting all the soul of things,
And veiling nature with a hue divine.

April 13, 1829.

R. MONTGOMERY.

SKETCHES OF SOCIETY.

PICTURE OF CHINA.—NO. I.

The Canton Register.

IN November 1827, an English newspaper, under the above name, was commenced at Canton, to be published twice a month,—but which seems, from the file before us, to have appeared somewhat irregularly; and as this may be classed among the literary curios-

* It is a whimsical point to notice that this Fame, blowing her trumpet, seems to have puffed in vain for at least one of the party,—for the list confesses that his name is "unknown!"

tion of the day," we trust our readers will not be displeased to accompany us through a review of it, as it in effect presents a real picture of the Chinese, an extraordinary people, in the 12th century, and illustrates, in a very curious and entertaining manner, their institutions, customs, opinions, and state of society.

No. 1, besides an address, and commercial notes, contains the Chinese currency of the cash or taen. A very complete and accurate series of these coins may readily be made, as every foreigner knows an immense number of them. The principal part of them in circulation at Canton are Cochon-Chinese; lighter, thinner, and of a whiter metal, than the real Chinese cash.

No. 3 mentions a curious custom. "The Chinese who take a liking to each other, or one with money who wishes the aid of another in power, or vice versa, very often bind themselves to a fraternal relation by *exchanging cards*. They are then called Hwan to be true to, 'exchange card holder and junior brothers.' Does not this custom resemble the *tesoro* *business* of the Romans?"

The 16th of November is the last day of the illuminations and street plays in honour of the god of fire, which have been celebrating for the last month in Canton. A company of actors from Hon-hwang performed plays yesterday in China-street, in the mandarin dialect.

"Snake Catchers.—The secret of rendering ductile, and handling with impunity, the most venomous serpents, which has so long been in the possession of the inhabitants of Western India, is not unknown in China. It is observed, that the native snake-catchers have cut their hands, previously to taking hold of the snake, with an antidote composed of pounded herbs. The virtue of the preparation is such, that they hold with the naked hand, and pursue fearlessly, the deadly *cobra de capello*, or *spasmodic-rigor*, a serpent which, next to the rattlesnake of North America, is perhaps one of the most dangerous reptile in existence. The serpent, in common with others of a similar nature, are not unfrequently met with in fumes, in the possession of those men who, for a trifling gratuity, exhibit them to the curious spectator."

- Fukang, August 23d.—His Imperial majesty has directed the military council of the empire to write to the governor of the capital, ordering him to go in person to various temples dedicated to the 'Black Dragon Deep,' the 'White Dragon Deep,' the 'Dragon (and Rain)' etc. to ascertain whether these places required repairs or not. For his majesty is deeply penetrated with a feeling of gratitude to the presiding divinity, who had, in consequence of devout prayer, granted rain to the thirty fathoms of Fukang province. In (Chinese) the god of the sea is called 'Lang-wang, the Dragon King' and in the names of these temples in Fukang, we observe in reference to rain or water the same allusion to a dragon."

Sham Province.—A native of this province, in August 1877, unintentionally caused the death of his own mother. The customer is, to cut him to pieces by slow degrees; that is, beginning at the less vital parts deliberately, to hands, the fore-arm, the feet, the legs, the thighs, the head, and then cut the trunk to the heart. But there was something extraordinary in his case, and the sentence is referred for consideration to Peking. His majesty listens to the criminal board. The offender, Yung-wei, accused his wife in incriminating

‘*Many of the things that we are doing in the U.S.*’

intercourse with his mother, for which his uncle tied him up and beat him. After which he witnessed the uncle going and spending the whole night in his mother's room. Yau-a-pá's feelings of anger and indignation were now worked up to the highest pitch. He seized a sickle, and made blows at Yau-toah his dear uncle. The uncle slipped, got behind him, and seized the handle of the sickle, with his arms round the asphex. The mother came behind and relieved the uncle from his embrace. He fled, and the mother threw her arms round the youth without his being conscious of the change. The struggle continued until the young man overpowered the woman, and wounded her mortally before he was aware that the stroke of the sickle entered his mother's heart. On the 21st of August his majesty's decision in the case of Yau-a-pá was received. His sentence is decapitation, after a period of imprisonment. This sentence usually terminates in strangling on a cross, which, leaving the body entire, is regarded as a lesser punishment than beheading. Yau-toah, the inveterate uncle, is ordered for immediate execution."

In No. 6 we have a hint which may be useful at home in the present age of conversions. Every body at Manilla is obliged to profess the Roman (Catholic) faith, which the Chinese junk traders have no hesitation in doing; but they always add the new religion to their own old one.

We have also the following extracts :
 " Japan. — We are happy to hear that some of the Dutch gentlemen, who have been during the last three years resident in Japan, have collected materials for a new account of that most exclusive country. It is a curious fact, that the Japanese translators are rendering into the Japanese vernacular dialect Morrison's Chinese Dictionary. The arrangement of the alphabetic part of the dictionary pleased the natives so much, that it has become fashionable at Nankooki to write a column of characters with their definitions on fans, and present them to friends."

"Content. — The lady of his amiable brother Hoppo died a few days since. Her death was announced in the Tartar manner, by saying 'she had gone to ramble among the great.' The governor, and all the great officers of the province, called and expressed their 'veneration.' The phrase is not one of grief or sorrow, but rather one of anger and indignation."

"A Tartar military officer in the city lately bought a slave-girl, whom he afterwards found to be a leper. He applied to the police (in redress); but the seller of the girl had already absconded. The Nankai magistrate has ordered the poor girl to be delivered up to the keeper of the leper hospital, has punished the middleman who appeared at the sale, by stripping his face and ordering him to find the seller, and to recover the price paid by the Tartar officer. We insert these seemingly trivial occurrences, to show the state of civility in this population and extraordinary courtesy."

A PARABE (for which Ackermann would have given his ears next Christmas).—When the heavens and earth had been consumed into being, and man had been called to taste the joys and glories of the sublimest Eden, every living thing was brought unto Adam, that it might inherit from him its befitting name. And flowers of every varied hue were among the lovely objects that his eye did rest upon; and as he named each of them, according to its own peculiar form, or fragrance, or colour, he added, "Be ye mindful of the name by which

the image of your Maker hath called you!" And it was yet but a short time afterwards that a flower, arrayed in the most pure of the firmament, spoke unto Adam, saying, "Lord! by what name didst thou call me? (W^ha truth, it shameth me that I did not heed it." And the first man answered, saying, "FORGET ME NOT!" Then the flower dropped its head, and went and hid itself in the lonely shade beneath the bough that woveh over the murmuring brook; and there it bled, mourning. And when the gentle hand of friendship, or the eager finger of love, stooped to pluck it in its loneliness, it still doth whisper softly, "FORGET ME NOT!"

MUSIC

NEW PUBLICATIONS

Bernett's Songs of the Minstrels. Vol. II.
Mayhew and Co.

(Of these twelve compositions we may safely say, that all the nine are far above mediocrity. The Portuguese song, "The spot where I was born," is particularly beautiful; and the Russian — "Maid of Tartary," highly striking and original. It is a great favourite with us, as every thing with originality belonging to it ought to be in our imitative day. These two, with the Nonopitan and Turkish, four of the twelve, are fully equal to the best of the first volume; the other eight are rather inferior to them; still there is not one which does not boast of some of the merits peculiar to this extremely pleasing and delightful publication. Mr. Barnett is, indeed, among the choicest and most tasteful of our young composers; and we have only, as critics, to caution him against one thing — monotony. The poetry is very appropriate, and written by the late Mr. Stee Van Dyck.

The last green Leaf: a Ballad. The Words
and part of the Melody by T. H. Bayly, Esq.
Willis and Co.

“We should not have liked the music of this had we heard it alone, or with other words; but there is a melancholy sweetness in the air which harmonises admirably with the sentiment of the song:—it is almost like sacred music.”

My Heart's True Pulse; a Ballad. By Mrs.
H. C. Witham. The Music by Dr. Carnaby.
William and Co.

We are sure this production must become a great favourite with the public. It is a beautiful and simple ballet, sweetly composed, and replete with good feeling and good taste.

(*It gallops away, my own dear Knight; a Ballad.*
By T. H. Burty. (Framers and Co.

ONE of our favorite lyricists best hits — sweet music, sweet words, all animation and spirit — “(I) do we never mention her,” and the “Bridemaids,” have had no more potent competitor for universal popularity.

Love not; the Words selected from the Po-
vers of Ronsard; the Music by J. Blankley.
Cramer and Co.

A PRETTY and pleasing air; but it reminds us so strongly of a remembered strain, that we cannot praise its originality.

[illegible]

trasted with the warm hues of the walls and foreground, are altogether enchanting. No. 697, *Near Canterbury*, by the same artist, is a fine specimen of broad and skilful pencilling. No. 506, *Fishermen on the look-out*, by J. M. Ince, holds a very fair rank in the class of coast-scenery. No. 543, *The Valley of Grindelwald and Glacier at Berne, Switzerland*, W. de la Motte. Frequently as we have seen representations of Swiss scenery, we do not remember to have met with any superior to the present in composition and execution. Mr. de la Motte has several other drawings distinguished for their merits: they will be found under Nos. 518, 526, and 736. No. 541, *Margate Jetty*, J. Atkinson. The drawings of this artist are always full of spirit and character. No. 735, *Cathedral at Frankfurt on the Main*, W. H. Harriott, H. An amateur performance which does Mr. Harriott great credit.

Of the Prints in this Exhibition there are very few that have not come under our notice on their separate publication, with the exception of No. 804, *The Wreckers*, by J. Quilly, after Mr. Stanfield's highly interesting picture.

NEW PUBLICATIONS.

Portrait of the King. A lithographic facsimile after a drawing of Sir Thomas Lawrence, P.R.A.; by R. J. Lane, A.R.A.

THIS profile portrait of our most gracious Sovereign appeared in the last Exhibition at Somerset House, and received our notice and commendation. We can only repeat, that, "as a most pleasing resemblance, as well as a spirited and tasteful work of art, it ranks among the best that we have seen from the masterly crayon of the accomplished President." The character which Mr. Lane imparts to his productions on stone, especially when the free handling of a practised pencil is to be imitated, is truly admirable.

Garrick in the Green-Room. Painted by William Hogarth; engraved by William Ward. Southgate.

A PRINT which will, no doubt, be interesting to the professors of the drama, and the curious collector; although it is a specimen of a kind of art, and a mode of costume, now obsolete. The disposition of Garrick, the principal figure in the group, is singularly egotistical—and with great propriety; for it is well known that, whether in the green-room or elsewhere, Davy must always play the first fiddle. He is represented with one of his legs thrown over the arm of the chair in which he sits, and his right hand is energetically stretched forth; while various members of the *corps dramatique* of that day—among whom are Beard, Baddeley, Mrs. Garrick, Woodward, Aickin, Macklin, Smith, Mrs. Yates, Mrs. Abington, O'Brien, &c.—are patiently listening to his recitation. In the foreground is a figure said to be that of Hogarth; but we rather think it must be the author whose work is under consideration, as he seems to be exultingly directing the attention of the other auditors to some beauty which the genius of Garrick has elicited. Amidst this assemblage of grotesque coats, waistcoats, stomachers, and head-dresses, the artist, (whoever he was, for the assumption of Hogarth's name is but ill sustained), with execrable taste, has introduced a naked figure of Fame, blowing a trumpet! A biographical and critical analysis of the picture, by Mr. George

Daniel, has also been published; from which it appears that it was "originally" sold with a lot of miscellaneous rubbish in a public sale at Bristol, and was purchased by a broker for a few shillings; that, being conveyed to London, another dealer bought it for a trifling advance on the first cost; that it next became the property of Mr. Wheatley, a bookseller; and that from him it ultimately passed to Mr. Southgate. What the word "originally" here means, we are at a loss to understand. Of the earlier history of the picture we suppose that nothing is known, for nothing is told.

Who'll serve the King? Drawn on stone by T. Fairland, from a painting by R. Farrier.

To the great and characteristic merits of the original picture the pages of the *Literary Gazette* have already borne ample testimony. In the print, the humour and expression are well preserved, and the execution is exceedingly spirited. It cannot fail to be a great favourite with the public.

SCULPTURE.

WE have just taken a glance at the two remarkable figures, of the life size, and executed in a kind of granite, of Tam o' Shanter and the Souter Johnnie, which have made much noise in Scotland, and have now reached Bond-street for exhibition in the English capital. They are the work of James Thom, a native of Ayrshire, twenty-six years of age, and a common stone-mason till these manifestations of a superior genius were produced. They are certainly very remarkable and characteristic statues. The quiet hilarity of the Souter telling his queerest stories, and the uproarious merriment of honest Tam, are expressed in a style as true to nature as nature herself. Nor is the rude material ill suited to the persons represented; its gray colour and roughness, on the contrary, accord with the rustic and homely forms of the peasant and cobbler.

We recommend these extraordinary specimens of natural talent to the attention of the curious. They are to be placed in Burns' monument, near the scene of the poem, "Alloway's auld haunted kirk;" and in the meantime will, we trust, obtain that popular favour which will help to encourage and reward the ingenious artist, who, we are happy to hear, has been patronised by Lord Cassilis, for whom he is executing the same group, with the addition of the landlord and landlady, immediately before Tam set out on his fearsome ride.

ORIGINAL POETRY.

STREET SKETCHES.

No. II.—The Organ Boy.

HE hath a spirit bright in its content,
And playful in its poverty; the rain
Of English clouds and atmospheric gloom
Of this brave island-clime have not bedimm'd
The merriness of his brown cheek, nor quenched
The lustre in his deeply-laughing eyes,
That sparkle forth the sunbeams of the soul!

Then breathe no pity on the organ-boy:
From his gay land a stock of sterling joy,
And proud young feelings that can well outwear
Each frown of fate, the stripling wand'rer
brought;

His mother's smile still brightens round his
His father's blessing, when he climbed his knee
At night, still sounds upon his inward ear;
And when the streets grow cloudy, and the tones
His organ weaves fall fruitless on the air,
He dreams of home deep-bosomed in bright vales
Of beauty, hill-spread vines, and fairy streams

That trifled sweetly as a sister's voice
Who prattled in her slumber:—days will dawn
When he again shall thread those glowing vales,
And tell his travels with unwearied tongue
To fond ones, nestling round his own fireside.

Nor think his errant life too mean to sing,
Albeit no music tuned to courtly ears
That are too satiate for the native sounds
That raise sweet echoes in romantic souls,
From him is heard; there are of meeker taste,
And simpler mind, who bid the roving boy
A welcome, and enchanted hear the notes
His organ wakes, of tenderness and truth:
As through the city's ever-busy streets,
And darkly-winding lanes, he roams and plays,
Many an ear drinks musical delight,
Many an eye with beams of vanished years
Is brightly charged,—and, from her window-haunt,

Who makes the street to tinkle with the sound
Of halfpence, thrown with no ungentle hand,
By some fair listener?—haply he woke dreams
Of childhood,—thoughts that cannot breathe in
words,

But live and fade in sighs of fond regret!

And round him, what a throng of urchins
group,

And dream his music sweet as Orpheus made!
The laughter hushed, the noisy tongue asleep,
The hoop, as weary, on his shoulder hung,
A schoolboy stands to listen, and admire
The melodies that dance along his soul
Like ripples fleeting o'er a ruffled stream!

Then let the streets still waken to the sound
Of such boy-minstrels; when afar they roam
Through villages, where music hath a flush
Of magic in her meanest tone, may smiles
Of welcome flash along the rough-worn face
Of age, and ruddy offsprings of the fields;—
May gentle skies and glowing days attend,
And feelings toned to every tuneful hour!

There are who deem the BALLAD-SINGER
breathes

No music that rewards harmonious ears—
To whom an ORGAN-BOY but grating notes
Of discord scatters on the homeless wind;
Their sympathies are seasoned high, and scorn
The gentle: envy not their earthy souls!
For, hallowed Nature! thou art ever true;
And he who wanders, with an eye of love
And feeling, wide among thy many haunts,
Through mountain-walks, or unambitious vales
Where stream and meadow mingle their romance [still]

Around,—in storm and sunshine finds thee
The same and magical!—and so in Life;
Her sweet humilities have grace and power
Beyond her loftiness and fame: the Muse
Can never play the courtier; from the halls
And palaces of Kings she flies, to glades
Of lowliness, where faculties are found,
And Will and Action can reveal their sway:—
Where beats a heart, there Poetry may breathe
Her spirit round it; beautifying look
And word, extracting all the soul of things,
And veiling nature with a hue divine.

SKETCHES OF SOCIETY.

PICTURE OF CHINA.—NO. I.

The Canton Register.

IN November 1827, an English newspaper, under the above name, was commenced at Canton, to be published twice a month,—but which seems, from the file before us, to have appeared somewhat irregularly; and as this may be classed among the literary curiosi-

* It is a whimsical point to notice that this *Fame*, blowing her trumpet, seems to have puffed in vain for at least one of the party,—for the list confesses that his name is "unknown!"

ties of the day,* we trust our readers will not be displeased to accompany us through a review of it, as it in effect presents a real picture of the Chinese, an extraordinary people, in the 19th century, and illustrates, in a very curious and entertaining manner, their institutions, usages, opinions, and state of society.

No. 1, besides an address, and commercial news, notices the Chinese currency of the *cash* or *taen*. A very complete and ancient series of these coins may readily be made, as every sovereign issues an immense number of them. The principal part of them in circulation at Canton are Cochín-Chinese; lighter, thinner, and of a whiter metal, than the real Chinese cash.

No. 2 mentions a curious custom. "The Chinese who take a liking to each other, or one with money who wishes the aid of another in power, or *vice versa*, very often bind themselves to a fraternal relation by *exchanging cards*. They are then called Hwan tse heung te, 'exchange card senior and junior brothers.' Does not this custom resemble the *testera hospitales* of the Romans?"

"The 16th of November is the last day of the illuminations and street plays in honour of the god of fire, which have been celebrating for the last month in Canton. A company of actors from Hou-kwang performed plays yesterday in China-street, in the mandarin dialect."

"*Snake Catchers*.—The secret of rendering docile, and handling with impunity, the most venomous serpents, which has so long been in the possession of the inhabitants of Western India, is not unknown in China. It is observed, that the native snake-catchers here rub their hands, previously to taking hold of the snake, with an antidote composed of pounded herbs. The virtue of the preparation is such, that they hold with the naked hand, and provoke fearlessly, the deadly *cobra de capello*, or spectacle-viper, a serpent which, next to the rattle-snake of North America, is perhaps one of the most dangerous reptiles in existence. This serpent, in common with others of a similar nature, are not unfrequently met with in Canton, in the possession of those men who, for a trifling gratuity, exhibit them to the curious spectator."

"*Peking*, August 22d.—His imperial majesty has directed the military council of the empire to write to the governor of the capital, requiring him to go in person to various temples dedicated to the 'Black Dragon Deep, the White Dragon Deep, the Dragon God Hall,' &c. to ascertain whether these places required repairs or not. For his majesty is deeply penetrated with a feeling of gratitude to the presiding divinities, who had, in consequence of devout prayer, granted rain to the thirsty fields of Peking province. In China the god of the sea is called 'Lung-wang, the Dragon King;' and in the names of these temples in Peking, we observe in reference to rain or water the same allusion to a dragon."

"*Ho-nan Province*.—A native of this province, in August 1827, unintentionally caused the death of his own mother. The sentence is, to cut him to pieces by slow degrees; that is, beginning at the less vital parts deliberately, the hands, the fore-arms, the feet, the legs, the thighs, the head, and then stab the trunk to the heart. But there was something extenuating in his case, and the sentence is referred for ratification to Peking. His majesty has sent it to the criminal board. The offender, *Yaou-a-pä*, detected his uncle in incestuous

intercourse with his mother, for which his uncle tied him up and beat him. After which he witnessed the uncle going and spending the whole night in his mother's room. *Yaou-a-pä's* feelings of anger and indignation were now worked up to the highest pitch. He seized a sickle, and made blows at *Yaou-tseih* his dear uncle. The uncle slipped, got behind him, and seized the handle of the sickle, with his arms round the nephew. The mother came behind and relieved the uncle from his embrace. He fled, and the mother threw her arms round the youth without his being conscious of the change. The struggle continued until the young man overpowered the woman, and wounded her mortally before he was aware that the stroke of the sickle entered his mother's heart. On the 21st of August his majesty's decision in the case of *Yaou-a-pä* was received. His sentence is decapitation, after a period of imprisonment. This sentence usually terminates in strangling on a cross, which, leaving the body entire, is regarded as a lesser punishment than beheading. *Yaou-tseih*, the incestuous uncle, is ordered for immediate execution."

In No. 6 we have a hint which may be useful at home in the present age of conversions. Every body at Manila is obliged to profess the Roman Catholic faith, which the Chinese junk traders have no hesitation in doing; but they always add the new religion to their own old one.

We have also the following extracts:

"*Japan*.—We are happy to hear that some of the Dutch gentlemen, who have been during the last three years resident in Japan, have collected materials for a new account of that most exclusive country. It is a curious fact, that the Japanese translators are rendering into the Japanese vernacular dialect Morrison's Chinese Dictionary. The arrangement of the alphabetic part of the dictionary pleased the natives so much, that it has become fashionable at Nangasaki to write a column of characters with their definitions on fans, and present them to friends."

"*Canton*.—The lady of his excellency the Hoppe died a few days since. Her death was announced in the Tartar manner, by saying 'she had gone to ramble among the genii.' The governor, and all the great officers of the province, called and expressed their 'vexation.' The phrase is not one of grief or sorrow, but rather one of anger and indignation."

"A Tartar military officer in the city lately bought a slave-girl, whom he afterwards found to be a leper. He applied to the police for redress; but the seller of the girl had already absconded. The Nanhä magistrate has ordered the poor girl to be delivered up to the keeper of the leper hospital, has punished the mid-man who appeared at the sale, by slapping his face and ordering him to find the seller, and to recover the price paid by the Tartar officer. We insert these seemingly trivial occurrences, to shew the state of society in this populous and extraordinary country."

A PARABLE (for which Ackermann would have given his ears next Christmas).—When the heavens and earth had been summoned into being, and man had been called to taste the joys and glories of the celestial Eden, every living thing was brought unto Adam, that it might inherit from him its befitting name. And flowers of every varied hue were among the lovely objects that his eye did rest upon; and as he named each of them, according to its own peculiar form, or fragrance, or colour, he added, "Be ye mindful of the name by which

the image of your Maker hath called you!" And it was yet but a short time afterwards that a floweret, arrayed in the meek azure of the firmament, spake unto Adam, saying, "Lord! by what name didst thou call me? Of a truth, it shameth me that I did not heed it." And the first man answered, saying, "FORGET ME NOT!" Then the floweret drooped its head, and went and hid itself in the lonely shade beneath the bough that waveth over the murmuring brook; and there it hideth, mourning. And when the gentle hand of friendship, or the eager finger of love, stoopeth to pluck it in its lowliness, it still doth whisper softly, "FORGET ME NOT!"

MUSIC.

NEW PUBLICATIONS.

Barnett's Songs of the Minstrels. Vol. II. Mayhew and Co.

Of these twelve compositions we may safely say, that all the airs are far above mediocrity. The Portuguese song, "The spot where I was born," is particularly beautiful; and the Russian "Maid of Tartary," highly striking and original. It is a great favourite with us, as every thing with originality belonging to it ought to be in our imitative days. These two, with the Neapolitan and Turkish, four of the twelve, are fully equal to the best of the first volume: the other eight are rather inferior to them; still there is not one which does not boast of some of the merits peculiar to this extremely pleasing and delightful publication. Mr. Barnett is, indeed, among the cleverest and most tasteful of our young composers; and we have only, as critics, to caution him against one thing—monotony. The poetry is very appropriate, and written by the late Mr. Stoe Van Dyck.

The last green Leaf: a Ballad. The Words and part of the Melody by T. H. Bayly, Esq. Willis and Co.

WE should not have liked the music of this had we heard it alone, or with other words; but there is a melancholy sweetness in the air which harmonises admirably with the sentiment of the song:—it is almost like sacred music.

WE are sure this production must become a great favourite with the public. It is a beautiful and simple ballad, sweetly composed, and replete with good feeling and good taste.

Oh gallop away, my own dear Knight: a Ballad. By T. H. Bayly. Cramer and Co.

ONE of our favourite lyrist's best hits—sweet music, sweet words, all animation and spirit. "O no we never mention her," and the "Bridemaid," have had no more potent competitor for universal popularity.

Love not: the Words selected from the Sorrows of Rosalie; the Music by J. Blockley. Cramer and Co.

A PRETTY and pleasing air; but it reminds us so strongly of a remembered strain, that we cannot praise its originality.

The late Mr. Bartleman.—We cannot mention a modern name more dear to the lovers of music in this metropolis than that of the late Mr. Bartleman: but if his loss has been a serious one to his profession, to his family it has been even more serious: his sisters, who were the sharers of the prosperity arising from his successes, are now, we fear, "depressed beneath the weight of other ills than grief." Numbers, however, of the nobility, and of the most distinguished private and professional friends of the deceased, have, as we understand, united to patronise a print which these ladies are now publishing from a fine

* Being the first English journal published in China.

miniature of the deceased, by means of which his fame promises to continue to them, now that he is no more, some of the advantages which they derived from it while he lived. The painting is by Hargreaves of Liverpool, and will be engraved, in his best style, by Thompson. The likeness is considered as most admirable.

DRAMA.

COVENT GARDEN FUND.

ON Friday in last week the anniversary of this excellent theatrical benevolent Institution was observed (as is usual with English charities) by the eating of a dinner, at Freemasons' Tavern. The Duke of Clarence having sent an apology, on account of the death of the Prince of Hesse Homburg, the Earl of Blessington very kindly undertook the duties of the chair, and was supported by Lord F. L. Gower, Lord A. Hill, Sir E. Codrington, General Phippe, Mr. Greville, and other friends of the Fund. Thanks to the exertions of the stewards, notwithstanding the several drawbacks which the meeting had to contend against, (the debate in the Lords, the absence of the Royal President, &c. &c.), the day went off uncommonly well, and a company of about 250 persons were amply entertained. Miss Hughes sang with great effect from the gallery; and Mathews not only sung, but spoke with infinite humour in the body of the hall. On returning thanks for the health of the stewards, he was eminently happy, and raised many a good laugh by his points: we are sorry we cannot remember them all! He told us that this task had been abandoned by every one of his fellow stewards, because it was so serious a thing to do; therefore they assigned it to a comic performer. Mr. Young argued that he was too young for the office, and therefore he thought it had better be done by a minor theatrical. Mr. Keeley thought he would not be seen, though he was always seen to advantage wherever he appeared; and Mr. Blanchard declined speaking lest he should not be heard in the room, as his voice had not been accustomed to fill a larger space than Covent Garden Theatre! Thus drolling through his "return thanks," our inimitable comedian contrived to excite nearly as much merriment as he is likely to do with his forthcoming entertainments at the Adelphi.*

Mr. Fawcett was very impressive in a speech when his health, as treasurer, was drunk. He alluded to his years, and anticipated retirement from the profession to which he has been too long an ornament and a credit to allow of such an allusion being made without calling forth expressions of reluctance and regret from all who heard him. We trust the day is yet far distant when age or infirmity will prompt his exit from the scene. In his subsequent observations, he replied to some criticisms formerly thrown out on the subject of the Fund and the subscribers in the *Literary Gazette*; and most earnestly exhorted his brethren, especially the younger portion of them, to support this Institution, as a refuge for them in the event of their being overtaken by sickness or misfortune.

* This theatre closed its most popular and successful season on Saturday, when Mr. Yates delivered an appropriate and clever address; in conclusion thus: "I beg to announce to you, that it is Mr. Mathews's intention to be at home for the first time in his own house; and as solitude, even at home, is sometimes uncomfortable, I intend to keep him company. But though our company will be thus reduced behind the curtain, we hope that it may not be reduced before it, since it is our determination to omit no exertion that our *At Home* should attract you from yours." The new pieces of the season have been as follows:—*Wanted a Partner*, Beazley; *My Absent Son* (withdrawn), Buckstone; *May Queen*, Buckstone; *Mason of Buda*, Blanché; *A Day's Fun* (withdrawn), Lum; *Earthquake*, Planché; *Taffy* was a *Welshman* (Christmas pantomime), Buckstone; *He's no Conjuror*, Buckstone; *Monsieur Mallet*, Monerief; *Red Rover*, Ball.

and compelled to leave the stage ere yet the grave was ready to receive them.

About £1000 were subscribed at this festive meeting.

The Surrey Theatre closed on Saturday, after a prosperous campaign, in which Elliston has shewn himself a vigorous as well as experienced commander. Indeed he merits great praise for his exertions both as manager and actor; and has done much to raise the reputation of this trans-fluvial theatre.

VARIETIES.

Roman Coins.—A peasant of the circle of Gortynak (Poland) lately found in a field, half a league from the Vistula, an urn, containing eighty-three Roman coins, viz. of Nero, 1; Galba, 3; Vitellius, 1; Vespasian, 17; Titus, 3; Domitian, 17; Nerva, 14; Trajan, 21; Adrian, 5;—making 82. The 83d bears on one side the inscription:—JULIA AUGUSTA TITI AUGUSTI. On the reverse: VENUS AUGUSTA.

Miss Wright.—This famous lady, who has been seeking the amelioration of the human race, by many eccentric means, in America, has, we see from a letter in the *Times* newspaper, at last landed in New York, and commenced a course of lectures, which are described as being no less eccentric than her preceding measures. She insists, it seems, upon the equality of the sexes, and thinks it quite reasonable and proper that females should be as free as males in all their actions. Her doctrines are of the easiest morality.

Extravagance of Footmen.—"I have seen balls where, the next day, in spite of the pillage of a pack of footmen, which was enormous, I have really noticed twenty or thirty hams, a hundred and fifty or two hundred carved fowls, and forty or fifty tongues; given away! Jellies melted on all the tables; pastry, pâtés, aspics, and lobster salads; all these heaped up in the kitchen, and strewn about the passages, completely disfigured by the manner in which it was necessary to take them from the dishes in which they had been served! And this extravagance had been of use to no human being! for even the servants would not consider it a legitimate repast, were they obliged to dine on the remains of a former day's banquet! This class of persons assimilate no little to cats, enjoying what they can pilfer, but very difficult to please in what is given to them." [We neglected to quote this curious picture from Ude's "*Host-Suppers*," in the Appendix to the tenth edition of his *Cookery*, reviewed in our last.

Madame Malibran arrived in London about a week ago, and is, we perceive, announced for Tuesday's opera, *Otello*. Garcia, her father, has reached Paris from Mexico, where he was alleged to have been murdered.

Veluti intends to give concerts at the Argyll Rooms during the season, in co-partnership with Mr. T. Walsh.

Nottingham.—By the fall of a portion of the rock on which part of the town of Nottingham is built, several houses have been buried in ruins, and the inhabitants have narrowly escaped with their lives.

Earthquake.—The earthquake in Murcia has been productive of terrible consequences. Craters vomiting forth lava and torrents of putrid water, are seen where human habitations stood: the course of the river Segura has been changed; and mineral springs have been transferred miles from their former localities. The loss of lives is also lamentably great.

Lithography.—Several stones, which it is said are equal for the use of the lithographer to those brought from Munich, have lately been found in the neighbourhood of Versailles, and of Vermanton (Yonne).

LITERARY NOVELTIES.

The Chronicle of Geoffrey de Villehardouin, Marshal of Champagne and Rouenne, concerning the Conquest of Constantinople by the French and Venetians in 1204, translated from the French by T. Smith—is announced for early appearance.

The publication of the Second Part of *Athenian's Fall of Nineveh* is, we hear, postponed till the beginning of next publishing season.

A Life of Archbishop Crammer is nearly ready, from the pen of Todd, the able Editor of Johnson's Dictionary.

An enlarged new edition of Boswell's Life of Johnson, with copious notes, is also preparing for the press, by the Right Hon. J. W. Croker. We have heard several interesting anecdotes of the additional matter elucidated by his ingenious inquiries. The work, we believe, will extend to five volumes, and appear before next Christmas.

Mr. T. Hood requests us to state that he has no further connexion with the Annual called the Gem. The Annual, we hear, is dropped as an Annual, but is to appear in the form of monthly Numbers, with beautiful engravings, and to commence in July.

The Oppenheim Library, consisting of many Hebrew Works, and a thousand Manuscripts, has, it is stated, been purchased for the University of Oxford for 11,000 dollars, and is now on its way to this country from Hamburg, where it has been during more than half a century.

A new monthly publication, *le Fructeur*, as the French say, to the English Magazines, was announced for the middle of April. Among the distinguished persons who have promised to contribute to it, we find the names of Castelnau Delavigne, Serbie, Veron, Rosini, &c. It is to be called *La Revue de Paris*.

The Family Library has started with that extraordinary success which proves the justice of our review of it. The subscription the first day amounted to six thousand; and the second edition of the first volume of the Life of Napoleon is already in the press. One nobleman, we are informed, subscribed for twenty copies of the whole series, with a view to distribution in the country where his estates are situated—viz. Ireland; and an eminent English prelate set his name down for twelve.

Mr. Buckingham has been very powerfully and successfully spreading the knowledge of Eastern subjects and literature; by delivering a course of 28 Lectures, not only in several large provincial towns, but also in various quarters of the metropolis. We had no opportunity of attending any of these interesting discussions at the London Tavern last week, nor at Freemasons' Hall this week; but we hope to have the pleasure of getting to Almack's (Willis's Rooms), where they are announced for the week ensuing.

In the Press.—*Beatrice*; a Tale founded on facts, by Mrs. Holland.—A Volume of Poems by Spence.

LIST OF NEW BOOKS.

Mackay's Essay on the Reformation, 8vo. 8s. 6ds.—Common Law Commission as to Process, Arrest, and Bail, 8vo. 4s. 6d.—The Protestant's Companion, 12mo. 5s. 6ds.—Law on the Digestive Organs, 2d edition, 8vo. 6s. 6ds.—Major on Insects prevalent on Fruit-Trees, 8vo. 10s. 6d. bds.—Compton's Savings Banks Assistant, 12mo. 5s. 6ds.—Exley's Natural Philosophy, 8vo. 14s. bds.—Influence and Example, fcp. 8s. 6ds.—Howarth's British Preserves, 36 Plates, 4to. 11 16s. bds.—Deceased Estates, 12mo. 6s. 6ds.—Stafford on Scriptures, 2d edition, 8vo. 5s. 6ds.—The Instant Reckoner, royal 12mo. 5s. 6d.—Rambach's Meditations, 2d edition, 8vo. 10s. 6d. bds.—Richard's India, Vol. I. 8vo. 16s. 6d. bds. (containing Life of Buonaparte).—Outline of a New System of Political Economy, 8vo. 10s. 6d. bds.—Florence; a Novel, 3 vols. post 8vo.—Dr. Kitchen's Housekeeper's Oracle, post 8vo. 6s. 6ds.

TO CORRESPONDENTS.

In reply to Vindicator, we would say, that our praise of the work in question ought only to be considered with reference to its own pretensions: it would be unfair to try publications by a higher standard than that which they ingeniously propose for themselves. Therefore, as far as it goes, we cordially approve of the said book.

In answer to our correspondent R.-de, we believe that a History of George the Third will form a portion of Mr. Murray's Family Library. We agree with him, that it is a desideratum, as Belsham's History is quite out of print, Afkio's Annals of George III. only a sketch, and Bissett's work written in an inelegant and prolix style.

ERRATA.—In the review of the History of the Huguenots, in our last No. p. 234, line 15, insert the words "the stranger" after "em."—In the Literary Notice of the Tales of a Chelsea Pensioner, for *Mardi* read *Maid*.—List of New Books, for *African Monarchs* read *Apicia's* *Moels*.

London: Printed for Thomas and George Underwood, 25, Fleet Street.

THE CROMWELLIAN DIARY. The

DIARY OF THOMAS MURTON, Esq. Member in the Parliaments of the Protector Oliver and Richard Cromwell, from 1659 to 1660, now first published from the original Autograph Manuscript, with an Introduction, containing an Account of the Parliaments of 1659, from the Journal of Gualtero Goddard, Esq. M.P., also now first printed; and several other curious Documents and Notices, historical and biographical.

"The great interest of the book is Cromwell himself."—*Genl's Magazine*.

"This is little short of a miracle—the recovery of the debates of the Cromwell parliaments taken on the spot by one of the very members."—*New Monthly Magazine*.

These volumes overflow with information respecting the principles and proceedings of the legislature during a most important period of English history. Every library which pretends to contain a historical collection, must possess itself of Burton's Diary: it is as indispensable as Burnet or Clarendon."—*Atlas*.

Printed for Henry Colburn, 8, New Burlington Street.

In 4 vols. 4to. The Clarendon Papers.
Inscribed with fine Portraits, copied from the Originals, by permission of the Right Hon. the Earl of Clarendon, and other Engravings, 5s. 3s.

THE CORRESPONDENCE and DIARIES

of HENRY HYDE, Earl of Clarendon, and LAWRENCE HYDE, Earl of Rochester; comprising minute particulars of the Events attending the Revolution, &c. &c. Published from the original Manuscripts, with Notes.

"Of all the momentous epochs in the annals of England, from the Norman Conquest to the year 1688, there is not one of equal moment to that upon which the volumes before us throw so many new lights."—*Literary Gazette*.

"A most remarkable and authentic private evidence which has descended to us, of the events connected with the Revolution of 1688."—*Monthly Review*.

"This valuable collection of papers is an important accession to the historical and biographical library."—*Gentleman's Magazine*.

Printed for Henry Colburn, 8, New Burlington Street.

AN ESSAY ON THE EFFECT OF THE

REFORMATION ON CIVIL SOCIETY IN EUROPE.

By WILLIAM MACKRAY,

Minister of the Gospel, Strirling.

"'Tis the cause of man."—*Cowper's Task*.

Printed for William Blackwood, Edinburgh; and

T. Cadell, Strand, London.

"The Professor of Natural Science, Aberdeen, along with the other Trustees of the late Mrs. Blackwood, described in 1830, as the subject of her Biennial Prize Essay, 'What has been the Effect of the Reformation on the State of Civil Society in Europe?' and an outline of the above essay obtained the prize. The author, from the peculiar aspect of the times, has now been induced to publish it, and in preparing it for the press, he has made so many additions, as to render it almost a new work."

THE JOURNAL of a NATURALIST.

Post 8vo. with Plates, 15s.

2. Oxford and Locke, by Lord Grenville.

3. The Botanical Miscellany, by Professor

Hooker, No. 1. royal 8vo. 84 Plates, 10s. 6d.

8th edition, 7s. 6d.
And, in the press, price 7s. 6d. the 3d edition of
Montgomery's Universal Prayer, Death, &c.

TALES OF MILITARY LIFE.

By the Author of the "Military Sketch Book."
Containing "Vanderloo" and "Vandenberg."
"The military are bivouacked in the heart of Society: they are constantly in the centre of its gaieties; the sharers alike of the joys and the perils of life. Their progress is full of diversity, and their adventures are equally tinged with the marvellous, the pathetic, and the humorous. Our author has seen them in all their opportunities, and seems as much at ease among the Guerrillas and spoliated vineyards of Spain, as when he sketches the domestic doings in the pleasant summer quarters at Bath."—*Atlas*.
Printed for Henry Colburn, 8, New Burlington Street.

A COMPANION TO POPE'S HOMER

AND DRYDEN'S *ÆNEID* OF VIRGIL; being an Explanation of the Mythology, History, and Geography, contained in those Works.
"The study of Homer and Virgil being considered an essential part of polite education, the young man, it is presumed, derives some advantages from a work intended as a companion to those poets. The author has endeavoured to comprise in this work the more material points relative to the mythology, religious rites, customs, fables, traditions, authentic history, and geography of the ancients."—*Author's Preface*.
"This book will be found as useful to those who are unacquainted with the dead languages, as to those who are conversant with them. We are able to state confidently that it has been compiled with great care, and contains a great variety of valuable information."—*Classical Journal*.
"The work is intended as a companion to Homer and Virgil's *Æneid*. The several articles are inserted in regular succession, as they occur in the text of the *Æneid*. This is an obvious and great improvement on the plan of a classical dictionary, in which the articles are inserted alphabetically; much time is thus saved, and much perplexity avoided, greatly to the reader's advantage."—*Edinburgh Review*.
"So far as Homer and Virgil are concerned, this commentary is very complete. There will be no occasion for reference to anybody's antiquities, Greek or Roman. The impurities of mythology are carefully swept away."—*Monthly Magazine*.
John Murray, Albemarle Street.

BOOKS IN THE PRESS.

For the Use of Private Families, Schools, &c.
In a few days will be published, in 1 handsome vol. 8mo. dedicated, by permission, to the Right Hon. and Right Rev. the Lord Bishop of London,

THE LIFE AND TIMES OF ARCH-BISHOP CRAMER.

By J. A. SARJANT.
London: Hurst, Chance, and Co. 65, St. Paul's Churchyard.

Cramer's Natural History.
On the 1st of May will be published, price 4s. in demy 8vo. and 6s. in royal 8vo. embellished with Right superior Engravings by Landseer and other eminent Engravers. No. 1. to be continued Monthly.

THE ANIMAL KINGDOM, Described and Arranged in conformity with its Organisation.

By the BARON CUVIER.
Translated, with large additional Descriptions of all the Species hitherto named, and of many not before noticed, and with other Original Matter.

By E. GRIFFITH, F.L.S., C. HAMILTON SMITH, and E. PIDGEON.
The Class Mammalia will form the first Thirty-six Numbers, the Class of Birds about Twenty-seven Numbers, the Fishes and Insects each about Twenty-four Numbers. It will be so arranged for the convenience of those who may confine their zoological studies to either of the Classes, that each Class will make a distinct volume, as well as one of the Series of the "Animal Kingdom." The Conclusion will contain a Tabular View of the System, a copious Index, and a general Terminology of the Science.

The engraved Illustrations of this Work are in a superior style of execution, by different artists of distinguished eminence; and among the rest, many are by Mr. Landseer. Most of them are from original drawings made from Nature, and several represent Species altogether new, or never figured before. The paper and type of this Work are in a corresponding style of excellence.

Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

THE FOREIGN QUARTERLY REVIEW

will be published on the 8th.
Seo Square, April 18th.

On Saturday, the 8th of April, Mr. Colburn will have the honour to publish the First Number of a New Weekly Paper, to be called

THE COURT JOURNAL.

The leading and peculiar object of this Publication will be, to supply what has long been felt as a desideratum in the higher circles of the British metropolis. Its pages will furnish a mingled record and review of all matters and events (political subjects alone excepted), which are calculated to interest that class of readers who come within what is understood by the "Court Circle." Such will be the peculiar, but by no means the sole object of the Court Journal. It will, in fact, embrace every feature which favourably distinguishes the most approved literary journals of the day. The Conductors deem it unnecessary to put forth a formal prospectus, or to enter into any further details. Their work, when it appears, will speak for itself; and it will do so in a manner which will render it impossible for any one to mistake the nature of its resources and the degree of its nature under which it is ushered into the world, or to doubt that these are such as were never before possessed by a public journal.

The Court Journal will appear every Saturday Morning, handsomely printed on a quarto sheet of sixteen pages, price 8d.; or stamped for postage, 1s.

Orders received by all Booksellers and News-vendors, and by the Clerks of the Banks.

THE EDINBURGH LITERARY GAZETTE.

To be published every Saturday Morning.
The purpose and value of a Journal conducted on the excellent plan of the "London Literary Gazette," containing critical notices of new works, and forming a compend of general literature, are so universally understood, as to render exposition superfluous. For a periodical of this description, Edinburgh affords peculiar facilities. As the seat of a flourishing University, and of one of the great European Libraries, it has long held an eminent rank in the republic of letters; and with reference to the trade of literature, it is the second publishing market in the British empire. It is the residence, or at least the occasional resort, of all the nobility, learning, and wealth of the country; and it forms the common centre of attraction for connoisseurs, artists, and men of science; the national mart where alone their genius and their works can be adequately appreciated and rewarded. With all these advantages, it must be considered rather extraordinary, that in a city so distinguished, no work of the kind now projected should hitherto have existed. At this moment it is the subject both of surprise and reproach, that Edinburgh possesses nothing in the shape of an exclusively literary paper at all corresponding with her resources, or worthy of her literary fame. A register or journal of criticism, unimpaired with political, combining an ample review of the current literature of the country, with an account of the progress and improvements in science and the arts, must be regarded as a desideratum which the Scottish press has yet to supply.

Anxious to avail themselves of these local advantages, and to furnish the British public with a work that shall unite the copious and solid information of the more elaborate reviews, with the interest and amusing varieties of a literary newspaper, the Projectors of the Edinburgh Literary Gazette have determined to commence their labours, fully convinced, that with the resources at their command, nothing but publicity and perseverance are wanting to crown their efforts with success. With regard to the practical part of the work, they pledge themselves that neither extensive nor expensive alterations in the nature and arrangement of the contents, a very few words will suffice. It were easy to frame a specious and imposing prospectus, which too frequently amounts to nothing more than an abstract theory of good intentions; a mere anticipation of ideal excellence, rather than a true index of the intended work. Avoiding all such ostentatious display, the Conductors of the Edinburgh Literary Gazette will make no promises on their part, and excite no expectations in the public which they are not amply prepared to realize.

The Projectors have only farther to add, that the most ample and efficient assistance has been secured. Each department will have its own appropriate contributors, on whose judgment and abilities the public may rely with confidence. Without affecting any boastful pretensions of ways and means, or making an empty parade of names, they are determined to state that in their list of auxiliaries will be found names which already have done honour to modern literature; and when the Author of the "Confessions of an Opium Eater," Delta of "Blackwood's Magazine," and Mr. Crispin, the Translator of Koch's "Revolutions of Europe," are mentioned, it will be deemed an honour of what the public have to expect. Finally, though the Projectors may not perhaps be able at once to develop their plan fully, and in all its parts, they feel assured that any primary obstacles will speedily be overcome. They will be constant to persevere, and success of the whole undertaking on the first Six Numbers of the work.

The Edinburgh Literary Gazette will be printed on a sheet equal in size to the largest literary paper in Britain, and will be published at No. 10, Prince's Street, (the premises occupied by the late Mr. Constable), where Subscriptions and Advertisements will be received. A list of Agents will be given in a future advertisement. In the meantime, Orders, &c. will be received and transmitted by all respectable Newsmen and Booksellers throughout the United Kingdom.

Price of each Number, 8d. unstampd, or 1s. stampd, 9d. each by post.
Edinburgh, No. 10, Prince's Street, March 2, 1829.

Early next week will be published, elegantly printed in 1 vol. and embellished with a finely engraved Vignette Title, by Finden,

THE POETICAL SKETCH-BOOK,

including "Australia."
By T. K. HERVEY.

2. The Life of Francis the First, King of France, in 3 thick vols. 8vo. with a fine Portrait from Titian, price 38s.

In the press,

3. The Adventures of a King's Page, 3 vols.
"If you would know whether virtues or vices keep a man farthest from a court, go to court and learn."—*Winter's Tale*.

4. Conversations on Intellectual Philosophy; or, a Familiar Explanation of the Nature and Operations of the Human Mind. 3 vols. 16s.
Printed for Edward Bull, New Public Subscription Library, 25, Holles Street, Cavendish Square.

To be published in the course of the next six weeks, by Mr. Murray.

A CHRONICLE OF THE CONQUEST OF GRANADA.

By the Author of the "Sketch Book." 2 vols. 8vo.

2. Colloquies on the Progress and Prospects of Society. By Robert Southey. 2 vols. 8vo. with Engravings.

3. All for Love, and the Pilgrim to Compostella. By Robert Southey. Foolscap 8vo.

4. The Life and Services of Captain Philip Beaver, late of H. M. Ship *Nileas*. By Captain Smyth, R.N. 8vo.

5. Life of Buonaparte, 2 vols.

6. Life of Heber.

7. Forest Scenes and Incidents in the Wilds of North America. Post 8vo.

8. Ireland, its Evils and their Remedies, by M. T. Sadler, M.P. 2d edition, 8vo.

9. Lectures on Sculpture, by John Flaxman, M.A. 24 Engravings, from Drawings of the Professor. Royal 8vo.

10. The Life of Bellarius. By Lord Mahon. 8vo.

11. Sermons preached in India by Reginald Heber, Lord Bishop of Calcutta. 8vo.

Waverley Novels.

On the 1st of June will be published, inscribed, by permission, to the King's Most Gracious Majesty, Volume First, of a new edition of

THE WAVERLEY NOVELS.

To be continued in Monthly Volumes, revised and corrected, with a general Preface, an Introduction to each Novel, and Notes, Historical and Illustrative.

By the AUTHOR.

Embellished with Frontispieces and Vignette Titles, from Designs executed expressly for the present edition, by the most eminent Artists.

Notice by the Publishers.

There are few circumstances in the history of letters more remarkable than the rise and progress of the Waverley Novels. Unlike most other productions of genius, they had no infancy to struggle with, but reached at once the highest point of public favour, a station which they have ever since maintained with undiminished popularity.

The circulation of these works having been hitherto confined, in a great degree, to the wealthier ranks of society, the Proprietors have resolved to place them within the reach of readers of all classes, by republishing them in a less costly, but at the same time more elegant shape, and with the additional advantage of a periodical issue.

The Publishers have therefore the honour of announcing the speedy commencement of a new edition, to be published in monthly Volumes.

In this undertaking they have had the cheerful co-operation of the author himself, who has not only revised every one of the novels, but has added explanatory notes, and a new introduction to each of them.

The new edition will not only be improved in the manner just stated, but also enriched by the pencils of the eminent artists who have been engaged to embellish it. Among these may be named—

David Wilkie, R.A.—Edwin Landseer, R.A.—C. R. Leslie, R.A.—John Cooper, R.A.—F. C. Stodart, R.A.—S. Newell, A.R.A.—F. P. Shephard—H. Corbould—William Kidd—J. Stanfield—John Burnet—and R. P. Beighton.

The Engravings will be executed on Steel, by Charles Heath, William Finden, Charles Rollis, James Mitchell, P. Engelhardt, Ambrose Williams, Robert Graves, J. C. Edwards, W. J. Cooper, W. Ensom, Davenport, Shenston, Duncan, Miller, and other eminent Engravers.

Plan of the Work.

I. The size to be royal 16mo. printed in the very best manner, and hot-pressed; each volume to contain about 600 pages, price 5s. done up in cloth.

II. The publication to commence on 1st June next, and to be continued regularly, on the 1st day of each month, till the whole is completed.

III. Each volume to have a Frontispiece, and Vignette Title-page, both containing subjects illustrative of the novel to which they are attached.

IV. The work will be completed in forty volumes, commencing with *Waverley*, and closing with *Woodstock*. The author's additions will form about two of these forty volumes.

The edition is so far advanced at press, that regularity of publication may be depended on; and, to such Subscribers as may wish to have some of the novels complete on the appearance of all classes, by republishing them in a less costly, but at the same time more elegant shape, and with the additional advantage of a periodical issue.

And, in like manner,

Guy Mannering, in 3 vols. on the 1st of August.

The Antiquary, in 2 vols. on the 1st of October.

Rob Roy, in 2 vols. on the 1st of December.

As well as such others, during the progress of the edition, as its arrangement enables the Publishers to deliver in complete Tales.

The public are respectfully requested to inspect the Designs and Engravings at the Presses of the Publishers, Messrs. W. & S. Newell, Boys, and Graves, Printers to His Majesty, 6, Pall Mall, London, by whom they will be sold separately, as well as afterwards announced.

Printing for Cadell and Co. Edinburgh; Stephen and Marshall, London; and to be had of every Bookseller throughout the Kingdom.

Early in May will be published, a new edition, with numerous Additions and Corrections, elegantly printed in 3 vols. 8vo. of

THE HISTORY OF GREECE.

By WILLIAM MITFORD, Esq.

To which is prefixed, a brief Memoir of the Author, by his Brother, LORD REDBULL.

Printed for T. Cadell, Strand; and W. Blackwood, Edinburgh.

Of whom may be had,

Questions adapted to Mitford's History of Greece. By the Rev. J. R. Major, Trin. Coll. Cambridge. 5s. price 6s. boards.

On the 8th of May, 8vo.

AN ACCOUNT OF SOME OF THE MOST IMPORTANT DISEASES peculiar to WOMEN.

By ROBERT GOODE, M.D.

Contents.—The Periodical Fevers of Lying-in Women—the Disorders of the Mind in Lying-in Women—Polypus of the Uterus—the Irritable Uterus—the Diseases liable to be taken for Pregnancy, and the Art of distinguishing them—the suspected Dropsy of the Ovary—a peculiar kind of Haemorrhage from the Uterus, &c.

John Murray, Albemarle Street.

Shortly will be published,

LESSONS FOR LOVERS.

By a HYPOCHONDRIAC, an UNHAPPY YOUNG LADY, and an ELDERLY GENTLEMAN of considerable Experience.

Printing for Hurst, Chance, and Co. 65, St. Paul's Churchyard.

LONDON: Published every Saturday, by W. A. SCRIPPS, at the LITERARY GAZETTE OFFICE, 7, Wellington Street, Waterloo Bridge, Strand, and 7, South Molton Street, Oxford Street; sold also by J. Chappell, 98, Regent Exchange; R. W. Smith, 10, Mark Lane; and by all the Booksellers in Edinburgh, Glasgow, and London.

J. MOORE, 7, York Court, Chancery Lane.

THE LONDON LITERARY GAZETTE;

AND

Journal of Belles Lettres, Arts, Sciences, &c.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen, throughout the Kingdom; but to those who may desire its immediate transmission, by post, we recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 640.

SATURDAY, APRIL 25, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

WAVERLEY NOVELS: THE NEW EDITION.

Our Notes on Scott's Notes.

OUR excellent telescope (superior in our opinion to that which discovered and traced the Encke comet, at least as a reflector,)—our excellent telescope, having had its smaller aperture placed towards our eye, and the larger directed towards the north, disclosed to our view, in the far horizon, but in right ascension, and near what seemed to be a full harvest moon, the apparition of the first star in the constellation of the new Waverley Novels. We had not time, unfortunately, for a deliberate contemplation; but as the records of even a peep may be interesting to our friends, we hasten to give them the fruits of our brief observation.

The first sign that struck us occurred in page or latitude 73, and is illustrative of Waverley's first visit to Scotland, where the landlord, who called himself a gentleman, was rude to his guest because he had not bespoke the pleasure of his society to supper. It is entitled "Scottish Inns," and is as follows:—

"The courtesy of an invitation to partake a traveller's meal, or at least that of being invited to share whatever liquor the guest called for, was expected by certain old landlords in Scotland, even in the youth of the author. In requital, mine host was always furnished with the news of the country, and was probably a little of a humourist to boot. The devolution of the whole actual business and drudgery of the inn upon the poor gudewife was very common among the Scottish Bonifaces. There was in ancient times, in the city of Edinburgh, a gentleman of good family, who condescended, in order to gain a livelihood, to become the nominal keeper of a coffee-house, one of the first places of the kind which had been opened in the Scottish metropolis. As usual, it was entirely managed by the careful and industrious Mrs. B—; while her husband amused himself with field sports, without troubling his head about the matter. Once upon a time the premises having taken fire, the husband was met walking up the High Street, loaded with his guns and fishing-rods, and replied calmly to some one who inquired after his wife, 'that the poor woman was trying to save a parcel of crockery, and some trumpery books;' the last being those which served her to conduct the business of the house. There were many elderly gentlemen in the author's younger days, who still held it part of the amusement of a journey 'to parley with mine host,' who often resembled, in his quaint humour, mine Host of the Garter, in the Merry Wives of Windsor; or Blague of the George, in the Merry Devil of Edmonston. Sometimes the landlady took her share of entertaining the company. In either case, the omitting to pay them due attention gave displeasure, and perhaps brought down a smart jest, as on the following occasion:—A jolly dame who, not 'Sixty Years since,' kept the principal caravansary at Greenlaw, in Berwickshire, had the honour to receive under her

roof a very worthy clergyman, with three sons of the same profession, each having a cure of souls; be it said in passing, none of the reverend party were reckoned powerful in the pulpit. After dinner was over, the worthy senior, in the pride of his heart, asked Mrs. Buchan whether she ever had had such a party in her house before. 'Here sit I,' he said, 'a placed minister of the Kirk of Scotland, and here sit my three sons, each a placed minister of the same kirk.—Confess, Luckie Buchan, you never had such a party in your house before.' The question was not premised by any invitation to sit down and take a glass of wine or the like, so Mrs. B. answered drily, 'Indeed, sir, I cannot just say that ever I had such a party in my house before, except once in the forty-five, when I had a Highland piper here, with his three sons, all Highland pipers; and deil a spring they could play among them!'

The following explain themselves:—

"Mac-Farlane's Lantern.—The clan of Mac-Farlane, occupying the fastnesses of the western side of Loch Lomond, were great depredators on the Low Country, and as their excursions were made usually by night, the moon was proverbially called their lantern. Their celebrated pibroch of *Hoggil nam Bo*, which is the name of their gathering tune, intimates similar practices, the sense being—

We are bound to drive the bullocks,
All by hollows, hirsts, and hillocks,
Through the sleet and through the rain.
When the moon is beaming low
On frozen lake and hills of snow,
Bold and heartily we go,
And all for little gain."

"The Castle of Doune.—This noble ruin is dear to my recollection, from associations which have been long and painfully broken. It holds a commanding station on the banks of the river Teith, and has been one of the largest castles in Scotland. Murdock, Duke of Albany, the founder of this stately pile, was beheaded on the Castle-hill of Stirling, from which he might see the towers of Doune, the monument of his fallen greatness. In 1745-6, as stated in the text, a garrison on the part of the Chevalier was put into the castle, then less ruinous than at present. It was commanded by Mr. Stewart of Balloch, as governor for Prince Charles; he was a man of property near Callander. This castle became at that time the actual scene of a romantic escape made by John Home, the author of Douglas, and some other prisoners, who having been taken at the battle of Falkirk, were confined there by the insurgents. The poet, who had in his own mind a large stock of that romantic and enthusiastic spirit of adventure which he has described as animating the youthful hero of his drama, devised and undertook the perilous enterprise of escaping from his prison. He inspired his companions with his sentiments, and when every attempt at open force was deemed hopeless, they resolved to twist their bed-clothes into ropes, and thus to descend. Four persons, with Home himself, reached the ground in safety. But the rope broke with the fifth, who was a tall, lusty man. The sixth was Thomas Barrow, a brave young English-

man, a particular friend of Home's. Determined to take the risk, even in such unfavourable circumstances, Barrow committed himself to the broken rope, slid down on it as far as it could assist him, and then let himself drop. His friends beneath succeeded in breaking his fall. Nevertheless, he dislocated his ankle, and had several of his ribs broken. His companions, however, were able to bear him off in safety. The Highlanders next morning sought for their prisoners, with great activity. An old gentleman told the author, he remembered seeing the commander Stewart,

Bloody with spurring, fiery red with haste,
riding furiously through the country in quest of the fugitives."

"Mr. R—d's Dream.—The legend of Mrs. Grizel Oldbuck was partly taken from an extraordinary story which happened about seventy years since in the south of Scotland, so peculiar in its circumstances that it merits being mentioned in this place. Mr. R—d of Bowland, a gentleman of landed property in the vale of Gala, was prosecuted for a very considerable sum, the accumulated arrears of teind (or tithe) for which he was said to be indebted to a noble family, the titulars (lay impropricators of the tithes). Mr. R—d was strongly impressed with the belief that his father had, by a form of process peculiar to the law of Scotland, purchased these lands from the titular, and therefore that the present prosecution was groundless. But after an industrious search among his father's papers, an investigation of the public records, and a careful inquiry among all persons who had transacted law business for his father, no evidence could be recovered to support his defence. The period was now near at hand when he conceived the loss of his lawsuit to be inevitable, and he had formed his determination to ride to Edinburgh next day, and make the best bargain he could in the way of compromise. He went to bed with this resolution, and, with all the circumstances of the case floating upon his mind, had a dream to the following purpose. His father, who had been many years dead, appeared to him, he thought, and asked him why he was disturbed in his mind. In dreams men are not surprised at such apparitions. Mr. R—d thought that he informed his father of the cause of his distress, adding that the payment of a considerable sum of money was the more unpleasant to him, because he had a strong consciousness that it was not due, though he was unable to recover any evidence in support of his belief. 'You are right, my son,' replied the paternal shade; 'I did acquire right to these teinds, for payment of which you are now prosecuted. The papers relating to the transaction are in the hands of Mr. —, a writer (or attorney), who is now retired from professional business, and resides at Inveresk, near Edinburgh. He was a person whom I employed on that occasion for a particular reason, but who never on any other occasion transacted business on my account. It is very possible,' pursued the vision, 'that Mr. — may have forgotten a matter which is now

of a very old date; but you may call it to his recollection by this token, that when I came to pay his account, there was difficulty in getting change for a Portugal piece of gold, and that we were forced to drink out the balance at a tavern.' Mr. R—d awoke in the morning with all the words of the vision imprinted on his mind, and thought it worth while to ride across the country to Invereark, instead of going straight to Edinburgh. When he came there, he waited on the gentleman mentioned in the dream, a very old man; without saying any thing of the vision, he inquired whether he remembered having conducted such a matter for his deceased father. The old gentleman could not at first bring the circumstance to his recollection, but on mention of the Portugal piece of gold, the whole returned upon his memory; he made an immediate search for the papers, and recovered them,—so that Mr. R—d carried to Edinburgh the documents necessary to gain the cause which he was on the verge of losing. The author has often heard this story told by persons who had the best access to know the facts, who were not likely themselves to be deceived, and were certainly incapable of deception. He cannot therefore refuse to give it credit, however extraordinary the circumstances may appear. The circumstantial character of the information given in the dream, takes it out of the general class of impressions of the kind which are occasioned by the fortuitous coincidence of actual events with our sleeping thoughts. On the other hand, few will suppose that the laws of nature were suspended, and a special communication from the dead to the living permitted, for the purpose of saving Mr. R—d a certain number of hundred pounds. The author's theory is, that the dream was only the recapitulation of information which Mr. R—d had really received from his father while in life, but which at first he merely recalled as a general impression that the claim was settled. It is not uncommon for persons to recover, during sleep, the thread of ideas which they have lost during their waking hours. It may be added, that this remarkable circumstance was attended with bad consequences to Mr. R—d, whose health and spirits were afterwards impaired by the attention which he thought himself obliged to pay to the visions of the night."

The following is an allusion to the only field-piece the Highlanders had in their army:

"This circumstance, which is historical, as well as the description that precedes it, will remind the reader of the war of La Vendée, in which the royalists, consisting chiefly of insurgent peasantry, attached a prodigious and even superstitious interest to the possession of a piece of brass ordnance, which they called *Marie Jeane*. The Highlanders of an early period were afraid of cannon, with the noise and effect of which they were totally unacquainted. It was by means of three or four small pieces of artillery, that the earls of Huntly and Errol, in James VI.'s time, gained a great victory at Glenlivet, over a numerous Highland army, commanded by the Earl of Argyle. At the battle of the Bridge of Dee, General Middleton obtained by his artillery a similar success, the Highlanders not being able to stand the discharge of *Musket's Mother*, which was the name they bestowed on great guns. In an old ballad on the battle of the Bridge of Dee, these verses occur:—

The Highlandmen are pretty men
For handling sword and shield;
But yet they are but simple men
To stand a stricken field.

The Highlandmen are pretty men
For target and claymore;
But yet they are but naked men
To face the cannon's roar.

For the cannons roar on a summer night
Like thunder in the air;
Was never man in Highland garb
Would face the cannon fair.

But the Highlanders of 1745 had got far beyond the simplicity of their forefathers, and shewed throughout the whole war how little they dreaded artillery, although the common people still attached some consequence to the possession of the field-piece which led to this disquisition.

The next is illustrative of the scene in Donald Bean Lean's cave, when Waverley made his first visit to the Highlands:—

"*Rob Roy*.—An adventure, very similar to what is here stated, actually befell the late Mr. Abercromby, of Tullibody, grandfather of the present Lord Abercromby, and father of the celebrated Sir Ralph. When this gentleman, who lived to a very advanced period of life, first settled in Stirlingshire, his cattle were repeatedly driven off by the celebrated Rob Roy, or some of his gang; and at length he was obliged, after obtaining a proper safe-conduct, to make the cateran such a visit as that of Waverley to Bean Lean in the text. Rob received him with much courtesy, and made many apologies for the accident, which must have happened, he said, through some mistake. Mr. Abercromby was regaled with collops from two of his own cattle, which were hung up by the heels in the cavern, and was dismissed in perfect safety, after having agreed to pay in future a small sum of black mail, in consideration of which, Rob Roy not only undertook to forbear his herds in future, but to replace any that should be stolen from him by other freebooters. Mr. Abercromby said, Rob Roy affected to consider him as a friend to the Jacobite interest, and a sincere enemy to the Union. Neither of these circumstances were true; but the laird thought it quite unnecessary to undeceive his highland host, at the risk of bringing on a political dispute in such a situation. This anecdote I received many years since (about 1792), from the mouth of the venerable gentleman who was concerned in it.

The following interested us much:—

"*Prince Charles Edward*.—The author of Waverley has been charged with painting the young adventurer in colours more amiable than his character deserved; but having known many individuals who were near his person, he has been described according to the light in which those eye-witnesses saw his temper and qualifications. Something must be allowed, no doubt, to the natural exaggerations of those who remembered him as the bold and adventurous prince, in whose cause they had braved death and ruin; but is their evidence to give place entirely to that of a single malcontent? I have already noticed the imputations thrown by the Chevalier Johnstone on the prince's courage: but some part at least of that gentleman's tale is purely romantic. It would not, for instance, be supposed, that at the time he is favouring us with the highly wrought account of his amour with the adorable Peggie, the Chevalier Johnstone was a married man, whose grandchild is now alive; or that the whole circumstantial story concerning the outrageous vengeance taken by Gordon of Abbachie on a Presbyterian clergyman is entirely apocryphal. At the same time, it may be admitted that the prince, like others of his family, did not esteem the services done him by his adherents so highly as he ought. Edu-

cated in high ideas of his hereditary right, he has been supposed to have held every exertion and sacrifice made in his cause as too much the duty of the person making it to merit extravagant gratitude on his part. Dr. King's evidence, (which his leaving the Jacobite interest renders somewhat doubtful) goes to strengthen this opinion. The ingenious editor of Johnstone's Memoirs has quoted a story said to be told by Helvetius, stating that Prince Charles Edward, far from voluntarily embarking on his daring expedition, was literally bound hand and foot, and to which he seems disposed to yield credit. Now, it being a fact as well known as any in his history, and, so far as I know, entirely undisputed, that the prince's personal entreaties and urgency positively forced Boisdale and Lochiel into insurrection, when they were earnestly desirous that he would put off his attempt until he could obtain a sufficient force from France, it will be very difficult to reconcile his alleged reluctance to undertake the expedition, with his desperately insisting on carrying the rising into effect, against the advice and entreaty of his most powerful and most sage partisans. Surely a man who had been carried bound on board the vessel which brought him to so desperate an enterprise, would have taken the opportunity afforded by the reluctance of his partisans, to return to France in safety. It is averred in Johnstone's Memoirs, that Charles Edward left the field of Culloden without doing the utmost to dispute the victory; and, to give the evidence on both sides, there is in existence the more trustworthy testimony of Lord Elcho, who states, that he himself earnestly exhorted the prince to charge at the head of the left wing, which was entire, and retrieve the day or die with honour; and on his counsel being declined, Lord Elcho took leave of him with a bitter execration, swearing he would never look on his face again, and kept his word. On the other hand, it seems to have been the opinion of almost all the other officers, that the day was irretrievably lost, one wing of the Highlanders being entirely routed, the rest of the army outnumbered, out-flanked, and in a condition totally hopeless. In this situation of things, the Irish officers who surrounded Charles's person interfered to force him off the field. A cornet who was close to the prince left a strong attestation, that he had seen Sir Thomas Sheridan seize the bridle of his horse, and turn him round. There is some discrepancy of evidence; but the opinion of Lord Elcho, a man of fiery temper, and desperate at the ruin which he beheld impending, cannot fairly be taken, in prejudice of a character for courage which is intimated by the nature of the enterprise itself, by the prince's eagerness to fight on all occasions, by his determination to advance from Derby to London, and by the presence of mind which he manifested during the romantic perils of his escape. The author is far from claiming for this unfortunate person the praise due to splendid talents: but he continues to be of opinion, that at the period of his enterprise he had a mind capable of facing danger and aspiring to fame. That Charles Edward had the advantages of a graceful presence, courtesy, and an address and manner becoming his station, the author never heard disputed by any who approached his person; nor does he conceive that these qualities are overcharged in the present attempt to sketch his portrait. The following extracts, corroborative of the general opinion respecting the prince's amiable disposition, are taken from a manuscript account of his romantic expedition, by James Maxwell of

Kirkcunell, of which I possess a copy, by the friendship of J. Menzies, Esq. of Pitfoddells. The author, though partial to the prince, whom he faithfully followed, seems to have been a fair and candid man, and well acquainted with the intrigues among the adventurer's council:—"Every body was mightily taken with the prince's figure and personal behaviour. There was but one voice about them. Those whom interest or prejudice made a run-away to his cause, could not help acknowledging that they wished him well in all other respects, and could hardly blame him for his present undertaking. Sundry things had occurred to raise his character to the highest pitch, besides the greatness of the enterprise, and the conduct that had hitherto appeared in the execution of it. There were several instances of good-nature and humanity that had made a great impression on people's minds. I shall confine myself to two or three. Immediately after the battle, as the prince was riding along the ground that Cope's army had occupied a few minutes before, one of the officers came up to congratulate him, and said, pointing to the killed, 'Sir, there are your enemies at your feet.' The prince, far from exulting, expressed a great deal of compassion for his father's deluded subjects, whom he declared he was heartily sorry to see in that posture. Next day, while the prince was at Pinkie-house, a citizen of Edinburgh came to make some representation to Secretary Murray about the tents that city was ordered to furnish against a certain day. Murray happened to be out of the way, which the prince hearing of, called to have the gentleman brought to him, saying, he would rather despatch the business, whatever it was, himself, than have the gentleman wait, which he did, by granting every thing that was asked. So much affability in a young prince, flashed with victory, drew encomiums even from his enemies. But what gave the people the highest idea of him, was the negative he gave to a thing that very nearly concerned his interest, and upon which the success of his enterprise perhaps depended. It was proposed to send one of the prisoners to London, to demand of that court a cartel for the exchange of prisoners taken, and to be taken, during this war, and to intimate that a refusal would be looked upon as a resolution on their part to give no quarter. It was visible a cartel would be of great advantage to the prince's affairs: his friends would be more ready to declare for him if they had nothing to fear but the chance of war in the field; and if the court of London refused to settle a cartel, the prince was authorized to treat his prisoners in the same manner the Elector of Hanover was determined to treat such of the prince's friends as might fall into his hands: it was urged that a few examples would compel the court of London to comply. It was to be presumed, that the officers of the English army would make a point of it. They had never engaged in the service, but upon such terms as are in use among all civilised nations, and it could be no stain upon their honour to lay down their commissions if these terms were not observed, and that owing to the obstinacy of their own prince. Though this scheme was plausible, and represented as very important, the prince could never be brought into it; it was below him, he said, to make empty threats, and he would never put such as those into execution: he would never in cold blood take away lives which he had saved in heat of action, at the peril of his own. These were not the only proofs of good nature the prince gave about

this time. Every day produced something new of this kind. These things softened the rigour of a military government, which was only imputed to the necessity of his affairs, and which he endeavoured to make as gentle and easy as possible.' It has been said, that the prince sometimes exacted more state and ceremonial than seemed to suit his condition; but, on the other hand, some strictness of etiquette was altogether indispensable where he must otherwise have been exposed to general intrusion. He could also endure, with a good grace, the retorts which his affectation of ceremony sometimes exposed him to. It is said, for example, that Grant of Glenmoriston having made a hasty march to join Charles, at the head of his clan, rushed into the prince's presence at Holyrood, with unceremonious haste, without having attended to the duties of the toilet. The prince received him kindly, but not without a hint that a previous interview with the barber might not have been wholly unnecessary. 'It is not beardless boys,' answered the displeased chief, 'who are to do your royal highness's turn.' The chevalier took the rebuke in good part. On the whole, if Prince Charles had concluded his life soon after his miraculous escape, his character in history must have stood very high. As it was, his station is amongst those, a certain brilliant portion of whose life forms a remarkable contrast to all which precedes, and all which follows it."

[To be concluded in our next.]

Stratton Hill. By the Author of "Tales from the East." 3 vols. 12mo. London, 1829. Colburn.

VERY elegantly written—fortunate, too, in having its author's haunted ground, Cornwall, untrod—blending historical information with antiquarian exactness—treating of a most exciting period,—we cannot but highly commend *Stratton Hill*. It is not a work to be considered as a mere novel; for in the progress of the fiction there is less room for praise—and the faults are those very common in works of this class;—too many persons are introduced on the scene—the story goes on too leisurely—the actors are drawn with more attention to costume than to character—and, aware of the stores of his memory, the author occasionally forgets to draw upon his imagination. The original sketch is often excellent. Carries the enthusiast wanderer from the Holy Land—Trenlyon, with his noble descent from King Arthur always uppermost in his thoughts—the vindictive Nicholas—all of these might have been worked up to still greater effect. Some of the detached scenes are both spirited and original: for example—

"Seated on a low and grass-covered bank, on which he supported himself with his trembling hands, while his large eye was fixed intently on the scene before him, was an old man, with a frame, even in ruins, like that of Hercules. It was Kiltor, the once famous wrestler, and the tenant of the valley, or bottom, as it was called, of Combe, who had implored his ancient friend to have him conveyed hither, that he might gaze on the array, and smell the battle, as it were, afar off. * * * At this moment Sir Beville slowly drew nigh the spot on which he sat; the old man looked eagerly and wistfully in his face, his own strong and miserable feelings giving way to the long and almost feudal attachment to the family. 'Is it you, Kiltor?' said the former; 'how have you contrived to leave your cottage, where you have been a home-keeper so many years?' 'I cudn't resist, my lord, to look upon strife,

or the shew of it, once more afore I die. 'Tisna wi' me now as in times long ower, when I ha' seen your young eye dance wi' joy as this hand cleared one prize ater another out o' the ring.' 'We all have our day, my friend,' was the reply; 'you have had yours, and fame enough too: you were long the first wrestler of your time, and others now have taken your place.' 'They have, they have, and I'm alive to see it; mere shilderlins, Sir Beville; men o' lath, that wud na' ha' faced the grip o' my hand, or stood the clinch o' my limbs, more than a withy; and the whole countrie is runnin' ater them—could I but be strong for one day, a prize day, as I was once, and they shud see thuse boastin' boys, one hurled to his back, without a limb movin'; another wi' broken bones; and, maybe, ane goin' double all his life ater, alike Carter was for many years!' and he laughed short and fiercely at the cruel remembrance he had conjured up. 'Old man, age has not brought you mercy or kindness of heart; these are not feelings for one whom the grave is waiting for. Years have, in truth fearfully changed you: I remember, it was when I was quite a child, Sir Richard, just returned from abroad, took me to see the contest in the ring. It was you, Kiltor, that won the day.' 'You remember that day?' said the wrestler exultingly, almost starting from the ground, though the movement gave him great pain: 'it was for the tankard, my lord, the selver tankard that your grandsire put up for the whole county. 'Twas a hard-folt day, and I did na' ken your eyes saw it; then ye saw ane after the other flinged upon the yerth, like the broken ore from the kibbal: my bones were like iron, and my joints like brass—look at me now, my lord! wud ye ken me for the same?—but ye'll ne'er see another day like that in the ring.' 'I should know that giant frame again,' Sir Beville said; 'it was free and supple then, and formed in the finest symmetry: there were others as tall and stout, but none took my childish fancy so much, and my grandsire was loud in his praises.' Kiltor clasped his hands firmly together, and the big tears slowly coursed down his hard face, all unwonted: the praises of his noble patron, whom he had not seen for many long years, during which praise had never reached his ear, the memory of that day of triumph, on which such lips had dwelt, brought happier and better times back, ere disappointment and disease had overcome him. 'I was all that: few so fine made, and none so strong. Blessin' upon the words that said it; the eye followed ater me when I past by; they gathered from the east and the west round the ring, all asked the furst thing, 'Where's Kiltor, the champion?' and the auld wemmen pointed me out to the young and comelie ones. 'Twas upon Stratton Down, my last field!—all day under a burnin' sky we wrestled, and I got many a hard fall; but when the last man was thrown, they carried me away in their arms to the village. There Catern, my young wife, the boast of the whole parish, waited for me. You never saw her dark eye in its strength:—how it looked upon me so in love and pride that day! We had a carouse that evenin', and I drank hard, and then went with her to our home in the Combe, not dreamin' that I shud ne'er rejoice again. Towards mornin' I woke; the dead palsy had seized my side, and all my strength past from me, and never, never came again. I cried loud and tossed my arms, but my body was like a lost man's driftin' upon the wave, or like Victor's when I pitched un dead in the ring, with his back furrowed in

the grass!" "And did you never recover, George, your health and strength again?" "They went from me in a moment, like a judgment from Heaven, as I said; and my limbs got cold and heavy like lead, and hanged from my body like the shotten branches of an old oak. Cattern cried over me day and night, and tended me like an enfant: but by lillies I got to hate her; her dark eye and sorrowin' face were always afore me, and sometimes I tho't they mocked me; and she changed from that time, like me; her beauty wasted like the froth o' the sea: she's ould now, and fierce, an' unhappy like me,—the once milde and mistreated woman. They came to my dwellin', one day, once a month ater that, the wrastlers from the other parish; for there was a wrastlin' 'greed upon, and they did na' ken my affliction. The Germoe men were among them, my ould rivals, burnin' at their bein' owercome, they challenged me to come forth to dare them 'pon the morrow, and their eyes gloated over my helpless state; I saw them look hard and joyin' at one another, and then they mocked me wi' their words, and my friends were sad and downcast. Oh, my lord, is it any wonder if my blood turned to gall? I gnashed my teeth and cursed them; and from that hour my heart changed like my body, and I ne'er spoke a kind word, or tho't a merciful thought aterwards; 'twas that hour that broke Cattern's heart, and seared my own like a nether millstone." "Wretched man!" said his noble auditor; "your life has, in truth, little left to desire; and what can death, with such passions, have to hope for?" "The feelings o' my youth are still strong; I ha' borne too long a livin' death to make me fear to give up my breath. I ha' but one hope: to see a stricken field, my lord, afore I die; the clashin' o' swords, the hard strife o' men strugglin' for the life of others; the drownin' o' voices—the ring is nothing to that."

"Beside them was an old man, who could have borne no part in the conflict, and yet he was slain among the rest. Rendered incapable by infirmity, more than time, of acting a soldier's part, or even wielding a weapon, it might have been thought that zeal for the cause, or concern for some son in the action, had brought his trembling steps there:—it was Kiltor the champion, stretched on the last of his fields. He had followed in some vehicle from the hamlet of Combe, about fifteen miles distant, the march of the troops, and had crept in the early morning to the foot of the eminence, resolved to see the battle. Having feasted so long in imagination of what a foughten field must be, he had enjoyed the reality, as a worn-out blood-hound listens to the baying of his comrades on the track of the prey. He had been observed gazing on the havoc caused by the ordnance on the height, and turning his enfeebled body quickly from side to side, as the balls struck the advancing ranks, and the cries came quickly to his ear; and his fierce eye and nerveless hand were raised, as the flashes broke on the air every moment from above. At last a small party turned from the closer contest that followed, and, retreating down the slope, fought and fell, many of them near the spot where he sat. This was what the iron-hearted wrestler had desired to see—in his own words, 'the hard strife o' men strugglin' for the life of others; they sunk dying almost at his feet; and the grim old man had crawled to where a wounded Republican lay; and, grasping his weapon, had hastened, it was evident, the approach of death. And there he now lay, struck probably by a chance ball, his face towards the

scene of the battle, with whose duration the thin remains of his life had kept pace, and the cruel smile on his withered lips shewed that he was contented so to die."

We can best liken this work to a chronicle of the olden time, not yet advanced to the staid dignity of history, when the pages dwelt with delight on the beauty of a fair dame and the valour of a single knight. In short, this novel is a spirited and stirring memoir of these eventful times; often elegantly written, as well as finely descriptive of Cornwall (almost a new region), and its manners and characters.

Sketches of Irish Character. By Mrs. S. C. Hall. 2 vols. 12mo. London, 1829. Westley and Davis.

THOROUGHLY Irish, with all the vivacity, blarney, blunders, pigs, and potatoes, of a Bannow cottage duly set forth—no exaggerated picture; a black-mud Rembrandt, with blunderbusses in the back-ground; no landscape à la Poussin, with peasants like graces, and roses and lillies à discrétion; but sketches with all the warmth yet simplicity, which says more than any preface could do for their actual truth. Mrs. Hall is particularly happy in her cottage-girl portraits—inborn coquettes, yet with a mine of deep feeling, which they are too healthy and too industrious to find time for fashioning into sentiment—

"Creatures not too bright and good
For human nature's daily food;

For heart and hearth and home content:"

always allowing for the one dear privilege of tormenting. "Lilly O'Brien" is certainly our favourite tale. The "Fisherman" is a natural curiosity, fit for a museum. Next to this we like "Hospitality." But for our own immediate purpose, that of extract, we must look among the shorter specimens. The following is very characteristic:

"Independence!"—it is the word, of all others, that Irish—men, women, and children—least understand; and the calmness, or rather indifference, with which they submit to dependence, bitter and miserable as it is, must be a source of deep regret to all who 'love the land,' or who feel anxious to uphold the dignity of human kind. Let us select a few cases from our Irish village—such as are abundant in every neighbourhood. Shane Thurlough, 'as decent a boy,' and Shane's wife, as 'clane-skinned a girl,' as any in the world. There is Shane, an active, handsome-looking fellow, leaning over the half-door of his cottage, kicking a hole in the wall with his brogue, and picking up all the large gravel within his reach, to pelt the ducks with—those useful Irish scavengers. Let us speak to him. 'Good morrow, Shane!' 'Och! the bright bames of heaven on ye every day! and kindly welcome, my lady—and won't ye step in and rest—it's powerful hot, and a beautiful summer, sure—the Lord be praised!' 'Thank you, Shane. I thought you were going to cut the hay-field to-day—if a heavy shower comes, it will be spoil'd; it has been fit for the sith these two days.' 'Sure, it's all owing to that thief o' the world, Tom Parrel, my lady. Didn't he promise me the loan of his sith; and, by the same token, I was to pay him for it; and depending on that, I didn't buy one, which I have been threatening to do for the last two years.' 'But why don't you go to Carrick and purchase one?' 'To Carrick!—Och, 'tis a good step to Carrick, and my toes are on the ground (saving your presence), for I depended on Tim Jarvis to tell Andy Cappler, the brogue-maker, to do my shoes; and, bad luck to him, the

spalpeen! he forgot it.' 'Where's your pretty wife, Shane?' 'She's in all the woe o' the world, Ma'am dear. And she puts the blame of it on me, though I'm not in the fault this time, any how: the child's taken the small pock, and she depended on me to tell the doctor to cut it for the cow-pock, and I depended on Kitty Cackle, the limmer, to tell the doctor's own man, and thought she would not forget it, because the boy's her bachelor—but out o' sight out o' mind—the never a word she could him about it, and the babby has got it natural, and the woman's in heart trouble (to say nothing o' myself);—and it the first, and all.' 'I am very sorry, indeed, for you have got a much better wife than most men.' 'That's a true word, my lady—only she's fidgetty like sometimes, and says I don't hit the nail on the head quick enough; and she takes a dale more trouble than she need about many a thing.' 'I do not think I ever saw Ellen's wheel without flax before, Shane?' 'Bad cess to the wheel!—I got it this morning about that too—I depended on John Williams to bring the flax from O'Flaharty's this day week, and he forgot it; and she says I ought to have brought it myself, and I close to the spot: but where's the good? says I, sure he'll bring it next time.' 'I suppose, Shane, you will soon move into the new cottage, at Clurn Hill. I passed it to-day, and it looked so cheerful; and when you get there, you must take Ellen's advice, and depend solely on yourself.' 'Och Ma'am dear, don't mention it—sure it's that makes me so down in the mouth, this very minit. Sure I saw that born blackguard, Jack Waddy, and he comes in here, quite innocent like—'Shane, you've an eye to 'Squire's new lodge,' says he. 'Maybe I have,' says I. 'I am y'er man,' says he. 'How, sa?' says I. 'Sure I'm as good as married to my lady's maid,' said he; and I'll spake to the 'Squire for you, my own self.' 'The blessing be about you,' says I, quite grateful,—and we took a strong cup on the strength of it; and depending on him, I thought all safe,—and what d'ye think, my lady? Why, himself stalks into the place—talked the 'Squire over, to be sure—and without so much as by y'er lave, sates himself and his new wife on the laase in the house; and I may go whistle.' 'It was a great pity, Shane, that you didn't go yourself to Mr. Clurn.' 'That's a true word for ye, Ma'am dear; but it's hard if a poor man can't have a frind to depend on.'"

The ensuing passage is for the benefit of our gentlemen readers.

"When Mr. Wortley met her, his very anxiety to render himself agreeable made him awkward; and here I really cannot avoid saying that English gentlemen, in general, do not know how to make love. I am sorry for it, and have sincerely pitied their *gawcherie*.—I suppose they find it unavoidable; it cannot be the fault of their heads, for their sagacity is proverbial; it cannot be the fault of their hearts, for the heart of an Englishman is the throne of every affectionate and noble feeling. I have often thought it was the fault of the climate; but of this I am certain, it is quite impossible to avoid laughing at their devotions, they pay them so strangely—never seem to know what to say—perhaps it goes off after a time—of that I cannot judge."

It would not be fair, after praising the pretty peasants, not to introduce one at least to our readers; we will take a sample by chance.

"Anty was a merry, laughing, blue-eyed lass, somewhat short, and without one good feature in her face; yet the gipsy was ea-

teemed pretty. It was really very provoking—she was any thing but pretty, and yet it was absolutely impossible to look on her face and think so; she had such coaxing smiles, and that heartfelt charm, a sweet low voice—‘an excellent thing in woman;’ and so many ‘ah do’s’ and ‘ah dont’s,’ and a trick of blushing—and blushes stealing over a pure white skin, are, it must be confessed, very agreeable things indeed; then there was a cheerfulness, a joyousness about her, perfectly irresistible: at wake or pattern, she had all the best boys at her command, and how she laughed at them! Anastasia M^{rs} Queen was a frequent visiter at the dilapidated castle; nay, was almost daily seen trudging towards it; her short scarlet cloak meeting the broad hem of her blue stuff petticoat, while the hood only half covered a profusion of deep but brown hair, (and here I feel it a duty to my country peasant-girls to say, that they generally have long and most luxuriant tresses, and, womanlike, are not a little proud of them); while from her well-turned but red arm hung a basket containing such presents as a Bannow maiden could present,—dried fish, or fresh cockles, delicate butter, barley or oat cakes, thin and curling, and new-laid eggs.”

In the style of Miss Mitford’s “Village,” though with more of interest in narrative, we cordially recommend these little volumes to all our readers with rural tastes, and even those who are not particularly pastoral will find much amusement in their animated pages.

Segur’s Russia (concluded).

WE promised some illustrations of the reign of Ivan IV. in this No. of our *Gazette*; and with these further examples of M. Segur’s style must close our review.

“The hideous scene opened by the naturalia of that court which the two preceding autocrats had suddenly called into existence, in the midst of coarse and brutal ignorance. Its nobles were barbarians, either upstarts or fallen from their pristine state. A great number of them were of the blood of Rurik. Formerly, the whole empire was the theatre of their ambition; its dilaceration, its division into appanages, their end; civil war their means: but, now that all was concentrated in the prince, their sole arena was his court; their end, the precarious power derived from favouritism; their means, intrigue; they were without rules, without manners, accordant to their novel situation; they knew no other restraint than an iron despotism, whose rude and ponderous mass had fallen into the hands of a female of blighted character, the mother of an infant who was only three years of age. Helena was the second regent of the Russians. Since the time of Olga, no similar instance had before occurred. Muscovite manners would have dictated that the widow of Vassili should be dead to the world; that a convent and a new name should have hidden her sorrows from public view; and the grandees were indignant to see the sceptre of Rurik in the hands of that Lithuanian widow, and of a lover, whom she dared to impose on them as a master. For four years, however, the impure couple kept their ground by means of despotism. That weapon, so illegitimate that it fits any hand that dares to wield it, gave an answer to all; to the indignation of the three uncles of Ivan, it replied by a lingering death in horrible dungeons; to their partisans,—by torture, the cord, and the axe; to those grandees who emigrated to Lithuania and Crimea, whence they brought back war,—by war and victory. But,

at length, crime did justice on crime; tortures were avenged by poison; the regent died suddenly, and the great boyards, of whom the majority were descended from princes of the blood, who formerly held appanages, seized upon the guardianship of that same despotism of which their ancestors had been the victims. In the foremost rank of these barbarians stood the Schuisky. They had long, and from father to son, been treated as the enemies of the grand-prince and of the state; their turn was now come to treat the state and its grand-prince as enemies. But the circle of their ambition was contracted amidst the crowd of other pretensions by which they were surrounded. They could only dilapidate the resources of the public, and of individuals, by their exactions; and avenge the fall of their ancestors, by the humiliations which they lavished on the heir of the grand-princes. The empire was a prey which they suffered the Tartars to rend in pieces, while they themselves exhausted it by their rapine and dissensions, and ensanguined it by their proscriptions, which they did not even deign to cover with the name of their royal ward; for the youthful Ivan was not spared any more than his subjects. His treasury was plundered, his domains were encroached upon; masters of his palace, the great boyards seemed hardly to endure his presence there; they delighted in degrading him. In his clownish brutality, Schuisky was seen to stretch forth his legs, and with the unworthy weight of his feet sully the descendant of so many sovereigns. The influence, however, of the Belsky, and of the primate, which was all at once increased by a Tartar invasion, awakened the patriotism of the nobles, restored some degree of order, and gave to the youthful Ivan a moment of dignity. But when the danger was over, the Schuisky reappeared; they surprised Moscow in the dead of the night, and made themselves masters of the palace; they pushed their brutal irruption even to the bed of their young master, whom they caused to pass suddenly from the calm of a sound sleep to all the palpitations of terror. From this refuge they violently dragged the primate, whom they ill treated, deposed, and replaced by another; and Prince Belsky, whom they murdered. Ivan supplicated them, but they disdained his prayers, and drowned them by vociferations; if he ordered, they took a pleasure in disobeying; if they saw him regret his mother, who had been their victim, their scoffs turned his filial piety into ridicule. Did his heart open to the soft and vivid friendships of childhood, they lacerated it, they tore from it the innocent object. In a council, they brutally apostrophised Vorontzof, who gave them umbrage; they darted on him like madmen, loaded him with blows, and rent with their feet the garments of the primate, who, touched by the entreaties of the grand-prince, implored them to spare the young boyard whom they wished to sacrifice. It was amidst these horrors that young Ivan reached his fourteenth year. The scene then changed, but in the personages only. This revolution was brought about by the Glinksky, who were kinsfolk of Ivan. All at once, in a hunting-party, an angry word, which they suggested to the grand-prince, thunderstruck the insolent Schuisky, and the whole train rushed immediately on that boyard, seized him, and threw him to the dogs, by which he was devoured. But his tyranny survived him; it was continued in the name of the prince. The Glinksky pushed him forward at their head in this path of blood and plunder. They allowed him to misuse his

recently acquired liberty. He squandered it in roaming without a purpose through his provinces, which were compelled to defray the charges; they were ruined by his costly presence, and astonished by his caprices. There, his unworthy kinsmen prompted him to punish without cause, and to reward beyond measure; glutting some with what was confiscated from others. They taught him not to think himself master, except when he was striking, except when he was causing to be tortured before his eyes the suppliants by whose entreaties he was wearied. These infamous beings made use of his youthful hand to massacre their enemies. Their dastardly subservience applauded his cruel sports, when he delighted himself with tormenting wild animals, and throwing down tame ones from the summit of his palace; when, in his disorderly rambles, he dashed old people to the ground, and trampled under the feet of his horses the women and children of Moscow. These ebullitions, this fermentation of the effervescent youth of a tyrant, had lasted three years, when, one day, he awoke in Moscow, surrounded by the flames of a horrible conflagration and the clamours of revolt. Ivan was only seventeen. Terror had been the first feeling of his infancy; long oppressed by its weight, his early youth had lately taken a delight in throwing it off upon the whole of his people; and now, from all points, that terror was rebounding back upon him in burning brands, in threatening cries, and in the blood of the Glinksky, whom the furious populace had torn in pieces. Amidst this universal disorder, Sylvester, a monk, one of those inspired personages who then traversed Russia, and who, like the Jewish prophets, or the derwishes, dared to stand up even against sovereigns, appeared in the presence of the frightened young despot. He approached him, the Gospel in his hand, his eye full of menace, his finger raised, and with a solemn voice he pointed out to him, in the surrounding flames, and blood, and furious cries, and the limbs of his dismembered kinsfolk, the wrath of Heaven, which his passions had at length aroused. To these terrific menaces he added the infallible effect of certain appearances then deemed supernatural; and thus working on this feeble mind, he became its master. Alexis Adascheff seconded Sylvester; they encircled the young tyrant with priests and able and prudent boyards; and, assisted by the young and virtuous Anastasia, his first and recently-married bride, they, during thirteen years, made Russia enjoy an unexpected felicity.

“Internally, every thing was bent down to earth; and yet the abject submission with which Ivan IV. was surrounded did not tranquillise him; his brain, shaken by the violent emotions of his infancy, and by his tyrant conscience, made ever present to him the phantom of a war of the public good. The strelitz did not suffice him; he formed a new guard of six thousand select men; in a word, of spies, informers, and assassins, ready to massacre all the grandees whom he might suspect to have the slightest memory of ancient independence. He chose his guards from the lower class, in order to be sure that envy would make them participate in the hatred which he felt. To these executioners he gave the property of their victims; and thus transferred eminence and nobility from those, who, having long possessed them, had any prejudices, pretensions, or habitudes whatever, to entirely new men, without principles, without prejudices even, and who thought themselves but too happy to bend to any thing that was required of them, so that they might accumu-

late riches. In his first fit of rage, several great boyards, of the family of Rurik, were put to death by beheading, poisoning, or impaling; their wives, their children, were driven by the knout into forests which echoed with their cries, and where they expired under the scourge. In a second paroxysm, he marched as a conqueror against the subjugated Novgorod; and, imagining that he imitated, or perhaps surpassed the victory of his grandfather, he pierced with his lance a throng of the unfortunate inhabitants, whom he had heaped together in a vast enclosure; and when at last his strength failed to second his fury, he gave up the remainder to his select guard, to his slaves, to his dogs, and to the opened ice of the Volkof, in which, for more than a month, these hapless beings were daily engulfed by hundreds. Then, declaring that his justice was satisfied, he retired; seriously recommending himself to the prayers of the survivors, who took special care not to neglect obedience to the orders of their terrestrial deity. Twer and Pakof also experienced his presence; Moscow, at length, again saw him, and on the same day the public square was covered by red-hot brasiers, enormous cauldrons of brass, and eighty gibbets. Five hundred of the most illustrious nobles, already torn by tortures, were dragged thither; some were massacred amidst the joyful acclamations of his savage satellites; but the major part of them expired under the protracted agony of being slashed with knives by the courtiers of the Muscovite monster. Neither were women spared any more than men; Ivan ordered them to be hanged at their own doors; and he prohibited their husbands from going out or in without passing under the corpses of their companions, till they dropped in decayed pieces upon them. Elsewhere, husbands or children were fastened dead to the places which they had occupied at the domestic table, and their wives or their mothers were compelled to sit for days opposite to these dear and lifeless remains. To the dogs and the bears which this raging madman delighted to let loose upon the people, was left the task of clearing the public square from the mutilated bodies which encumbered it. Every day he invented new modes of punishment, which his tyranny, jaded by so many excesses, still looked upon as insufficient. Very soon he required fratricides, parricides! Basmanof was compelled to kill his father; Prozorovsky, his brother! The monster next drowned eight hundred women; and, rummaging with atrocious cupidity the abodes of his victims, he, by dint of shocking tortures, compelled their remaining relations to point out the places in which their wealth was hidden. These confiscations, joined to monopolies, taxes, and conquests, accumulated in his palace the riches of the empire and of the Tartars. To this he joined those of the Livonians, whom he plundered, though he could not conquer them. In his long and fruitless wars against the Livonian knights, his transient successes were marked by frightful executions. The courageous resistance which the enemy opposed to him was, in his eyes, a revolt, and he ordered his prisoners to be thrown into boiling cauldrons, or spitted on lances, and roasted at fires which he himself stirred up. Setting himself above all laws, this lustful being married seven wives; even his daughter-in-law was forced to fly, terrified by his lasciviousness. To complete his usurpations, he assumed the manner of one who was inspired, and all those external signs which our bounded imagination attributes to the Divinity; he made himself god in the minds of his people. All that came

from his hand, blows, wounds, even the most degrading treatment, was received with resignation, nay, with adoration. In the blind and servile submission of this people, God and the Tsar were identified: their proverbial sayings bear witness to this; and to the influence of things and men was joined that of words, the power of which is more durable than it is sometimes imagined to be. Finally, in a humble supplication which was addressed to him by the most faithful of his subjects, his frenzy again saw a conspiracy of the boyards, of which the eldest of his three sons, and the only one who was capable of succeeding him, was to be the leader: transported with rage, the madman felled to the earth, with a mortal blow from a boar spear, this hope of his race, to expire himself soon after, consumed by regret without remorse, and giving orders for new executions."

These spirited pictures will suffice to indicate the ability and talent of the author; and with them we consign his volume to that extensive popularity which it is sure to enjoy.

The Botanical Miscellany. Part I. (to be continued quarterly.) By W. Jackson Hooker, LL.D. &c. J. Murray.

WE have here another new periodical addressed to the elucidation of an interesting branch of natural science, and from the eminent pen of Dr. Hooker. The object is stated to be, to give "figures and descriptions of such plants as recommend themselves by their novelty, rarity, or history, or by the uses to which they are applied in the arts, in medicine, and in domestic economy; together with occasional botanical notices and information." Of this design we cannot but cordially approve; and it affords us pleasure to see it so ably begun as it is in the first Part, now before us. It treats of the orders *Musci*, *Compositæ*, *Hepaticæ*, *Meliaceæ*, and other beautiful and useful plants, their generic characters, their varieties, their habitats, and occasional anecdotes, together with neat prints exhibiting the various distinguishing properties in flower, leaf, seed, stalk, &c. &c. &c. As these, however, cannot be illustrated by quotation, we must content ourselves with a few miscellaneous extracts, chosen rather for the sake of their own curious matter than as explanatory of the scientific system of the publication. The history of the mahogany-tree, for example, strikes us as being almost entirely novel, and to furnish some valuable particulars.

"The uses of mahogany wood (says Dr. H.) are too well known to render it necessary for me to mention them in this place; further than to say that almost all our valuable furniture is formed of it, and that it is peculiarly adapted to such purposes in consequence of its great beauty, hardness, and durability, by means of which it may be carved into splendid ornaments, and will take the most exquisite polish. It is said, too, to be almost indestructible by worms or in water, and to be bullet-proof: hence the Spaniards used to make their vessels of mahogany; and Capt. Franklin took with him to the shores of the Arctic Sea boats constructed in England of that wood, as being the lightest (in consequence of the thinness of the planks) and the most portable, combined with great strength. Although the Spaniards were, in all probability, the first to bring this wood into use, and although the French must be allowed to produce the most highly finished and ornamental work from it, it is into England that by far the largest importations of it are made, and where it is most extensively employed. Jamaica formerly yielded the greatest

quantity of this wood, and the old Jamaica mahogany is still reckoned, I believe, more valuable than that afforded by other countries. The quality depends much on the situation where the tree grows. In an elevated stony spot, where one would imagine there was scarcely soil to give nourishment to the roots, the wood is found to be of a superior grain and texture; whereas in low and alluvial situations, however vigorous and luxuriant the plant may be, the quality of the timber is always inferior, more light and porous, and of a paler colour.

"The first discovery of the beauty of mahogany wood is attributed to the carpenter on board Sir Walter Raleigh's ship, at the time that vessel lay in some harbour in the island of Trinidad, in 1595. Dr. Gibbons brought it into notice in England. He was an eminent physician about the end of the 17th or beginning of the 18th century; and a box for holding candles, and then a bureau, made of a block of mahogany, were given to him by his brother, a West Indian captain. At Honduras, a period of two hundred years is considered to be necessary from the time of the plant springing from seed to that of its perfection and fitness for cutting; an operation which commences about the month of August. The gangs of labourers employed in this work consist of from twenty to fifty each; but few exceed the latter number. They are composed of slaves and free persons, without any comparative distinction of rank; and it very frequently occurs that the conductor of such work, here styled the captain, is a slave. Each gang has also one person belonging to it termed the huntsman, who is generally selected from the most intelligent of his fellows; and his chief occupation is to search the woods, or, as it is called in this country, *the bush*, to find employment for the whole. Accordingly, about the beginning of August, the huntsman is despatched on his important mission, and if the owner be employed on his own ground, this is seldom a work of much labour or difficulty. He cuts his way into the most elevated situation among the thickest woods, where he climbs the tallest tree he can find, and thence minutely surveys the surrounding country. At this season the leaves of the mahogany-tree are invariably of a yellow-reddish hue; and an eye accustomed to this kind of exercise can, at a great distance, discern the places where the wood is most abundant. To such a spot are his steps directed; and, without compass or other guide than what his recollection affords, he never fails to reach the exact point at which he aims. On some occasions no ordinary stratagem is necessary to be resorted to by the huntsman, to prevent others from availing themselves of the advantage of his discoveries; for if his steps be traced by those who may be engaged in the same pursuit, which is a very common occurrence, all his ingenuity must be exerted to beguile them from the true scent. In this, however, he is not always successful, being followed by those who are entirely aware of the arts he may use, and whose eyes are so quick, that the slightest turn of a leaf, or the faintest impression of a foot, is unerringly perceived; even the dried leaves which may be strowed upon the ground often help to conduct to the secret spot; and it consequently happens that persons so engaged must frequently undergo the disappointment of finding an advantage they had promised to themselves, seized on by others. The hidden treasure being, however, detected, the next operation is the felling of a sufficient

Philadelphia, continued under Evergetes I. and Epiphane, terminated by Evergetes II. and Philometor, is entirely worthy of this period of decline. The portions of edifices built and decorated under the Romans are fewer; and when I quitted the island, I was surprised of this barbarous sculpture. I shall, however, stop there some days on my return, to complete the mythological part, and I shall amuse myself by examining the rocks of the first cataract, which are covered with historical inscriptions of the times of the Pharaohs.

We set sail from Philæ, to commence our voyage to Nubia, with a favourable wind. We passed Deboud without stopping, desiring to arrive as soon as possible at the extreme point of our journey. This little temple and the three pyramids are besides of modern date. On the 17th, at four o'clock in the afternoon, we were opposite the little monuments of Quarant, where I was not able to glean any thing. On the 18th we passed Taffah and Kainche, without landing. We then passed the tropic; and from that time, when we entered the torrid zone, we all trembled with cold, and were obliged to put on bernous and cloaks. That evening we slept beyond Dandour, not stopping to examine the temple. The next day, the 19th, we passed in the same manner the monuments of Ghirsche, which are of the good period, as well as a great temple at Dukkab, of the time of the Lagides. We landed in the evening at Miharrakah, an Egyptian temple of the lower ages, which was formerly converted into a Coptic church. On the 20th I stopped an hour at Ouadi Essebous, or the Valley of the Lions, so called from the sphinxes which adorn the dromos of a monument built in the reign of Sesostris; but a true provincial edifice, built of stones, joined together by mortar. At Derr or Derry I found a grotto temple, excavated in the rock, still preserving some bas-reliefs of the conquests of Rhameses the Great; and I collected there the names and the titles of seven sons and eight daughters of Pharaoh.

On the 24th, at sun-rise, we quitted Derry, passed by the ruined fort of Ibrim, and went to sleep on the eastern bank at Ghebel Mesmes, a most beautiful and well-cultivated country.

At length, on the 26th, at nine o'clock in the morning, I landed at Ypsamboul, where we remained also on the 27th. There I was able to enjoy the finest monuments of Nubia, but not without some difficulty. There are two temples entirely excavated in the rock, and covered with sculpture. The smallest is a temple of Hathor, dedicated by Queen Nofré-Ah, wife of Rhameses the Great, adorned on the outside with a façade, against which rise six colossi, each about thirty-five feet in height, also hewn in the rock, representing Pharaoh and his wife, having at their feet, the one his sons, the other her daughters, with their names and titles. These colossi are of excellent workmanship: their stature is slender, and their ornaments very elegant. I shall have very faithful drawings made of them. This temple is covered with beautiful bas-reliefs, and I have had drawings made of the most interesting.

The great temple of Ypsamboul is, alone, worth a voyage to Nubia. It is a wonder, which would be very fine even at Thebes. The labour which this excavation has cost terrifies the imagination. The façade is decorated by four seated colossi, which are not less than sixty-one feet in height. All four, of magnificent workmanship, represent Rhameses the Great. Their faces are portraits, and perfectly resemble the figures of that king which are at Memphis,

Thebes, and elsewhere. It is a work that deserves the highest admiration. Such is the entrance. The interior is entirely worthy of it, but it is a severe task to visit it. On our arrival, the sands, and the Nubians, who take care to heap them up, had closed the entrance. We had it cleared. We secured, as well as we could, the little passage which had been made, and took all possible precaution against the falling in of that infernal sand which, in Nubia as in Egypt, threatens to swallow up every thing. I threw off nearly all my clothes, and lay down flat at a small opening in a door, which, if cleared, would be at least 25 feet high. I fancied myself at the mouth of an oven, and, crawling entirely into the temple, found myself in an atmosphere heated to 51 degrees.* Rosellini, Ricci, myself, and one of our Arabs, went over this astonishing excavation, each holding a taper in his hand. The first hall is supported by eight pillars, against which lean as many colossi, each thirty feet high, and also representing Rhameses the Great. On the walls of this vast hall is a file of large historical bas-reliefs; one bas-relief, in particular, representing his triumphal car, accompanied by groups of Nubian, negro, and other prisoners, of the natural size, is a composition of the greatest beauty and effect. The other halls, of which there are sixteen, abound in beautiful religious bas-reliefs, which offer very curious particulars. The whole is terminated by a sanctuary, at the farther end of which are four fine statues in a sitting posture, much larger than life, and of very good workmanship. This group, representing Amon-Ra, Phré, Phte, and Rhameses the Great seated in the midst of them, deserved to have a new drawing made of it.

After two hours and a half spent in admiration, we felt the necessity of breathing a little fresh air, and returned to the entrance of the furnace, taking the necessary precautions on coming out. I put on two flannel waistcoats, a woollen bernous, and my great cloak, in which my people wrapped me up, as soon as I saw the light; and there, seated near one of the exterior colossi, whose immense leg defended me from the north wind, I rested for half an hour till I was rather cooler. This experimental visit proved to me that it is possible to remain two hours and a half or three hours in the temple without experiencing any difficulty of breathing, but only a weakness in the legs and joints; and thence I inferred, that on our return we shall be able to draw the historical bas-reliefs; working in parties of four at a time (not to expend too much air), and during two hours in the morning and two in the evening. It will be a severe campaign; but the result is so interesting, the bas-reliefs so beautiful, that I shall do my utmost to have them, as well as the legends, quite complete.

We quitted Ypsamboul on the morning of the 28th. Towards noon I stopped at Ghebel-Addeh, where is a small temple excavated in the rock. Most of its bas-reliefs have been covered with mortar by the Christians, who have adorned the new surface with paintings representing saints, particularly St. George on horseback; but by removing the mortar, I discovered that this temple had been dedicated to Thoth by King Horus, son of Amenophis Memnon, and I succeeded in having drawings made of three very interesting my-

* M. Champollion probably reckons by the centigrade thermometer, which, we believe, coincides with that of Réaumur; this would make the heat here stated nearly 147 deg. of Fahrenheit.

theological heresies. We then went to pass the night at Fava. On the 29th, an almost dead calm did not allow us to advance much beyond Fava; and on the 30th, at noon, we at length arrived at Ouedi Halfa, half a league from the second cataract, which is to us the pillar of Hercules.

It was not till yesterday that I set seriously to work. I have found here, on the western bank, the ruins of three edifices, but stones out of their places, which preserve only the end of the hieroglyphic legends. The first, which is the most to the north, is a small square building, without sculpture, and of very little importance. The second, on the contrary, interested me much. It was a temple, the walls of which were built of large unburnt bricks, the interior being supported by pillars of freestone and columns of the same material; but, like all those of the most ancient epochs, the columns resembled the Doric. This is the inimitable origin of the Greek orders. This first temple, dedicated to Horammon, was built under King Amempsiph II., son and successor of Thothmes III. (Morris), which I found by making my Arab sailors dig with their hands about some remains of pillars and columns where I perceived traces of hieroglyphic legends. I have been fortunate enough to find the end of the dedication of the temple on the fragments of the uprights of the first door. I have also discovered and caused to be cleared from the mud a great stele in a brick wall of the temple, surmounted with an art of adoration and the list of the gifts made to the temple by King Rhaman I., with three lines added for the same purpose by the Pharaoh his successor. Lastly, by the advice of Dr. Ricci, we set all our men to work with shovels and pickaxes in the cemetery, or rather the place which it had occupied, and we found there another great stele, of which the doctor made drawings, and which is very important, since it represents the god Mentem, one of the great divinities of Nubia, comforting and delivering to King Ousirma (of the 16th dynasty) all the people of Nubia, with the name of each of them inscribed on a sort of buckle fastened to the figure (knowing and bound), which represents each of these people, to the number of five. The following are their names, or rather those of the districts which they inhabited:—1. Arham; 2. (Dum); 3. Nebat; 4. Oucharkin; 5. Km. Three other names are entirely effaced. As for those which remain, I doubt whether they can be found in any Greek geographer; we ought to have the Strabo of 2000 years before the Christian era.

A second temple, which is larger, but as remote as the preceding, stands a little farther to the south; it is of the reign of Thothmes III. (Morris), also built of bricks, with pillars of the primitive brick. This was the great temple of the Egyptian town of Behent, of which this was the site, and which, from the extensive remains of pottery scattered in the place, which is now desert, seems to have been pretty considerable. It was, undoubtedly, the place by which the Egyptians kept in check the people between the first and second cataracts. This great temple was dedicated to Ammon-Ra and to Ptah, like most of the great monuments of Nubia. This is all that remains at Ouedi Halfa; and it is more than I expected at the first sight of the ruins.

To abbreviate this paper, we have omitted all the interesting details of the voyage, getting permission, &c. &c.

SOCIETY OF ARTS.

At the annual general election on the 18th, the following alterations were made: Lord Stanhope honorary V.P. in the room of Lord Liverpool, deceased; acting V.P.'s, R. Wilson and W. R. Keith Douglas, Esq., in the room of Joseph Hume and W. Tooke, Esqrs. In the committee, the chairmen chosen were, Correspondence, G. Moore, Esq., pro Dr. Bantock; Chemistry, Dr. Bantock, pro M. Faraday, Esq.; Manufactures, H. Wilkinson, Esq., pro T. Winkworth, Esq.; Merchandise, B. Dunkin, Esq., pro T. Bramah, Esq.; Colonies and Trade, R. Twining, Esq., pro G. Twining, Esq.; the other officers remain as last year.

LONDON PHRENOLOGICAL SOCIETY.

MONDAY, April 26th. Joseph Hayes, Esq., in the chair.—Dr. Elliotson read a paper, in refutation of the remarks made by Dr. Barrow against phrenology, in his late work upon Insanity. His purpose was to shew, that Dr. Barrow had not only made various incorrect statements, and contradicted himself, but had not adduced a single fact against phrenology, or appeared to have read the works of the founder, Dr. Gall. Henry Bohlen, Esq. and Alfred Dowling, Esq., were admitted ordinary members of the Society.

ST. PAUL'S.

THE pleasure we have derived from contemplating that laborious undertaking, the Pantheon of London at the Colosseum, and the general expressions of surprise and admiration of persons of the most cultivated taste who are daily visiting this stupendous work, has confirmed the statements and opinions in our Gazette of January 17th and 31st. We revert again to this subject, from a mechanical novelty having been produced by Mr. Parrie, whose name is familiar to the public, but only as connected with the Colosseum, and with other works of art now exhibiting. That gentleman has invented an apparatus for getting at large domes, &c.; and its immediate application to the dome of St. Paul's renders it a subject of public interest.

It is well known that the difficulty of approaching the cupola, on which is painted the history of the apostle to whom the cathedral is dedicated, by Sir James Thornhill, is the principal cause of the neglect and gradual decay of the productions of that great man. The question has been often agitated, why they alone should have remained untouched at the time when the rest of the interior of the building was cleaned; which, from the contrast, renders the necessity of doing something to that part above the Whispering Gallery more absolute. The great expense of erecting a scaffold sufficient for that purpose, seems always to have been the principal difficulty—added to the want of experience of the present class of artists in the decorative department, which has indeed been on the decline for some years, and is now nearly lost in this country. The culture of this art, and with it the absence of that natural activity, endow, and knowledge of the distant effort of painting, particularly from so great an elevation, seemed to have left no hopes of any thing being ever done towards the restoration of the enrichments of that glorious edifice. All these objections are, however, at once removed, as we understand Mr. Parrie has constructed a model; and through the means of Mr. Cockrell, whose experience and judgment in all the details of scaffolding may be estimated by the restoration of his ingenious and dangerous removal of the old

ball and cross, and substituting the new on the summit of the building, has had it examined and approved. Mr. Cockrell, having seen Mr. Parrie's plan, has, with a disinterestedness worthy of public thanks, brought the invention under the notice of the authorities of St. Paul's, as a subject deserving their attention. The result has been, that a few days ago, Mr. Parrie submitted his model to the inspection of the dean and chapter, who highly complimented him for his ingenuity, and for the simplicity of the means offered for executing this needful work.

Thus every obstacle seems removed regarding the expense of scaffolding from the ground or base of the building; and we feel the greatest confidence that no time will be lost in removing that cause of universal regret, and of saving the labours of Sir James Thornhill from total annihilation.

Mr. P.'s original aim was historic painting, to which he devoted a considerable portion of his time; his anatomical knowledge of the figure is well known. We recollect an interesting picture of his, of large dimensions, exhibited at the British Gallery some years since: the subject was Christ blessing little children; but from the want of encouragement in that department, he relinquished it for the more profitable, though less dignified branches of the art. His exertions for the last three years, while engaged on the painting of London—his mechanical knowledge, displayed on several occasions, among which, his contrivances submitted to the Dean of St. Paul's, and which was actually used in a dome of nearly thirty feet more in diameter than that in question—seem to have given him advantages seldom combined in one individual.

LITERARY AND LEARNED.

Oxford, April 17.—On Saturday last, being the last day of Lent Term, the honorary degree of Master of Arts was conferred on T. Pyrcroft, Esq., Commoner of Trinity College, the successful candidate for the readership in Logic lately given as a prize (as he is considered for by the junior members of the University) by Mr. Wynn.
(On the same day the following degrees were conferred: Doctor in Civil Law.—Rev. F. Warr, Preliminary of Wills, of Christ College, Grand canon of the diocese.
Bachelor in Civil Law.—Rev. J. C. Hall, Student of Christ Church.
Member of Arts.—Rev. G. H. Stoddart, Queen's College; Rev. N. Walsby, Marton College.

SOCIETY OF ANTIQUARIES.

On Thursday, St. George's Day, the annual election of officers, &c. of this Society took place, and the following was the result of the ballot:

George, Earl of Aberdeen, President; Thomas Amott, Esq., Treasurer; John Gage, Esq., Director, in the room of Mr. Markland (reigning); Nicholas Carls, Esq. and Henry Lunt, Esq., B.C.L., Secretaries.

On the Council remained—Lord Aberdeen, Mr. Amott, Mr. N. Lewis (Carlisle), Mr. Thoms, Mr. Lunt, Mr. Gage, Mr. Hudson (Barrow), Mr. Hallam, Mr. W. Rich. Hamilton, Mr. Markland, and Mr. C. W. Williams Wynn—and Mr. Bland, Mr. Britton, Mr. Ditcher, Mr. Lunt, Lord Farnborough, the Bishop of London, Mr. Lodge, Mr. G. Chantry, Mr. Phillips, Mr. Litherum, were elected in the room of Mr. Calry, the Bishop of Carlisle, Mr. Davies (Gilbert), Mr. E. Hartman, Mr. G. Hibbert, Dr. Merrick, Mr. Palgrave, Mr. Petrie, (apostrophe), and Earl Spencer, who went out by rotation.

After the election, about forty of the members dined together at Frodo's Tavern. Mr. Gagey in the chair.

share of attention at the present time is, that it is an early, vigorous, and uncompromising adversary of the papal power and religion.

Vindicia Ecclesie; or, the Church and its Champions, &c. 8vo. pp. 113. Hurst and Co.

THIS is a poetical (called by the writer, Mr. Orthos Pelham, a "righteous" rhapsody;" and addressed to the purpose of satirising Brunswickers and other opponents of the cause lately carried through the legislature. Of it we have only to say, that it displays smart party talents; but neither subject nor spirit are congenial to our literary pages, whatever they may be to one side of the political world.

Flowers of Fancy, exhibited in a Collection of Similes, taken from various Authors, and alphabetically arranged. By Henry Schultes. 8vo. London, 1829. Longman and Co.

THIS is a strange work,—the result of a great deal of readings, and yet hardly as applicable as the Rhyming Dictionary to the purposes of poetical composition. There is, however, a very good critical introduction, and the body of the volume contains a multitude of curious references, shewing how thousands of words, phrases, and illustrations, have been employed by many English authors of ancient and modern times.

Syllabic Spelling; or, a Summary Method of Teaching Children to Read, &c. By Mrs. Williams. 4th edition. 12mo. pp. 210. Whittaker and Co.

THE preface tells us that this edition is meant to clear up all the obscurities attendant upon the principles (of the *Sieur Berthoud*) and system which are the object of the writer to enforce, as "some persons have declared, after looking over the book, they could not form the least idea how it was to be used." Boeotians that we are, we must confess that we, even now, are compelled to join ourselves to the stupid band; for we really cannot make out any thing more than that, if this be a summary way of teaching to read, our lives would be too short to learn that useful art.

ARTS AND SCIENCES.

Ninth Letter of M. Champollion.

Ouadi-Halfa, the Second Cataract, Jan. 1, 1829.

I HAVE now arrived very happily at the farthest point of my voyage. Beyond it there are many monuments, but of little importance. I therefore stop here, and turn back, to begin seriously the examination of Nubia and Egypt, of which I have acquired a general idea in ascending the river: my labour really begins to-day, though I have already in my portfolio above 600 drawings; but so much remains to be done, that I am almost frightened at it. However, I hope to come off with honour, by eight months' exertion. I shall explore Nubia during the month of January; and about the middle of February I shall take up my residence at Thebes, where I shall remain till the middle of August. I shall descend the Nile rapidly, stopping only at Dendera and Abydos: the remainder is already in my portfolio.

My last letter was from Philæ. All is modern; that is to say, of the Greek and Roman times, with the exception of a little temple of Hathor, and of a propylon attached to the first pylon of the temple of Isis, which were built by the poor Nectanebo I. This, indeed, is the best part. The sculpture of the great temple begun

by Philadelphus, continued under Evergetes I. and Epiphanes, terminated by Evergetes II. and Philometor, is entirely worthy of this period of decline. The portions of edifices built and decorated under the Romans are worse; and when I quitted the island, I was very tired of this barbarous sculpture. I shall, however, stop there some days on my return, to complete the mythological part, and I shall indemnify myself by examining the rocks of the first cataract, which are covered with historical inscriptions of the times of the Pharaohs.

We set sail from Philæ, to commence our voyage to Nubia, with a favourable wind. We passed Deboud without stopping, desiring to arrive as soon as possible at the extreme point of our journey. This little temple and the three propylons are besides of modern date. On the 17th, at four o'clock in the afternoon, we were opposite the little monuments of Quartas, where I was not able to glean any thing. On the 18th we passed Taffah and Kalabche, without landing. We then passed the tropic; and from that time, when we entered the torrid zone, we all trembled with cold, and were obliged to put on bernous and cloaks. That evening we slept beyond Dandour, not stopping to examine the temple. The next day, the 19th, we passed in the same manner the monuments of Ghirsche, which are of the good period, as well as a great temple at Dakkeh, of the time of the Lagides. We landed in the evening at Miharrakah, an Egyptian temple of the lower ages, which was formerly converted into a Coptic church. On the 20th I stopped an hour at Ouadi Essebous, or the Valley of the Lions, so called from the sphinxes which adorn the domes of a monument built in the reign of Sesostri; but a true provincial edifice, built of stones, joined together by mortar. At Derr or Derry I found a pretty temple, excavated in the rock, still preserving some bas-reliefs of the conquests of Rhamses the Great; and I collected there the names and the titles of seven sons and eight daughters of Pharaoh.

On the 24th, at sun-rise, we quitted Derry, passed by the ruined fort of Ibrim, and went to sleep on the eastern bank at Ghebel Meames, a most beautiful and well-cultivated country.

At length, on the 26th, at nine o'clock in the morning, I landed at Ypsamboul, where we remained also on the 27th. There I was able to enjoy the finest monuments of Nubia, but not without some difficulty. There are two temples entirely excavated in the rock, and covered with sculpture. The smallest is a temple of Hathor, dedicated by Queen Nofré-Ari, wife of Rhamses the Great, adorned on the outside with a façade, against which rise six colossi, each about thirty-five feet in height, also hewn in the rock, representing Pharaoh and his wife, having at their feet, the one his sons, the other her daughters, with their names and titles. These colossi are of excellent workmanship: their stature is slender, and their ornaments very elegant. I shall have very faithful drawings made of them. This temple is covered with beautiful bas-reliefs, and I have had drawings made of the most interesting.

The great temple of Ypsamboul is, alone, worth a voyage to Nubia. It is a wonder, which would be very fine even at Thebes. The labour which this excavation has cost terrifies the imagination. The façade is decorated by four seated colossi, which are not less than sixty-one feet in height. All four, of magnificent workmanship, represent Rhamses the Great. Their faces are portraits, and perfectly resemble the figures of that king which are at Memphis,

Thebes, and elsewhere. It is a work that deserves the highest admiration. Such is the entrance. The interior is entirely worthy of it, but it is a severe task to visit it. On our arrival, the sands, and the Nubians, who take care to heap them up, had closed the entrance. We had it cleared. We secured, as well as we could, the little passage which had been made, and took all possible precaution against the falling in of that infernal sand which, in Nubia as in Egypt, threatens to swallow up every thing. I threw off nearly all my clothes, and lay down flat at a small opening in a door, which, if cleared, would be at least 25 feet high. I fancied myself at the mouth of an oven, and, crawling entirely into the temple, found myself in an atmosphere heated to 51 degrees.* Rosellini, Ricci, myself, and one of our Arabs, went over this astonishing excavation, each holding a taper in his hand. The first hall is supported by eight pillars, against which lean as many colossi, each thirty feet high, and also representing Rhamses the Great. On the walls of this vast hall is a file of large historical bas-reliefs; one bas-relief, in particular, representing his triumphal car, accompanied by groups of Nubian, negro, and other prisoners, of the natural size, is a composition of the greatest beauty and effect. The other halls, of which there are sixteen, abound in beautiful religious bas-reliefs, which offer very curious particulars. The whole is terminated by a sanctuary, at the farther end of which are four fine statues in a sitting posture, much larger than life, and of very good workmanship. This group, representing Amon-Ra, Phré, Phé, and Rhamses the Great seated in the midst of them, deserved to have a new drawing made of it.

After two hours and a half spent in admiration, we felt the necessity of breathing a little fresh air, and returned to the entrance of the furnace, taking the necessary precautions on coming out. I put on two flannel waistcoats, a woollen bernous, and my great cloak, in which my people wrapped me up, as soon as I saw the light; and there, seated near one of the exterior colossi, whose immense leg defended me from the north wind, I rested for half an hour till I was rather cooler. This experimental visit proved to me that it is possible to remain two hours and a half or three hours in the temple without experiencing any difficulty of breathing, but only a weakness in the legs and joints; and thence I inferred, that on our return we shall be able to draw the historical bas-reliefs; working in parties of four at a time (not to expend too much air), and during two hours in the morning and two in the evening. It will be a severe campaign; but the result is so interesting, the bas-reliefs so beautiful, that I shall do my utmost to have them, as well as the legends, quite complete.

We quitted Ypsamboul on the morning of the 28th. Towards noon I stopped at Ghebel-Addeh, where is a small temple excavated in the rock. Most of its bas-reliefs have been covered with mortar by the Christians, who have adorned the new surface with paintings representing saints, particularly St. George on horseback; but by removing the mortar, I discovered that this temple had been dedicated to Thoth by King Horus, son of Aménophis Memnon, and I succeeded in having drawings made of three very interesting my-

* M. Champollion probably reckons by the centigrade thermometer, which, we believe, coincides with that of Réaumur: this would make the heat here stated nearly 147 deg. of Fahrenheit.

thological bas-reliefs. We then went to pass the night at Faras. On the 29th, an almost dead calm did not allow us to advance much beyond Serré; and on the 30th, at noon, we at length arrived at Ouadi Halfa, half a league from the second cataract, which is to us the pillars of Hercules.

It was not till yesterday that I set seriously to work. I have found here, on the western bank, the ruins of three edifices, but stones out of their places, which preserve only the end of the hieroglyphic legends. The first, which is the most to the north, is a small square building, without sculpture, and of very little importance. The second, on the contrary, interested me much. It was a temple, the walls of which were built of large unburnt bricks, the interior being supported by pillars of freestone and columns of the same material; but, like all those of the most ancient epochs, the columns resembled the Doric. This is the incontestable origin of the Greek orders. This first temple, dedicated to Horammon, was built under King Amenophis II., son and successor of Thouthmosis III. (Mœris), which I found by making my Arab sailors dig with their hands about some remains of pillars and columns where I perceived traces of hieroglyphic legends. I have been fortunate enough to find the end of the dedication of the temple on the fragments of the uprights of the first door. I have also discovered and caused to be cleared from the sand a great stela in a brick wall of the temple, inscribed with an act of adoration and the list of the gifts made to the temple by King Rhameses I., with three lines added for the same purpose by the Pharaoh his successor. Lastly, by the advice of Dr. Ricci, we set all our men to work with shovels and pickaxes in the sanctuary, or rather the place which it had occupied, and we found there another great stela, of which the doctor made drawings, and which is very important, since it represents the god Mandon, one of the great divinities of Nubia, conducting and delivering to King Osortasen (of the 16th dynasty) all the people of Nubia, with the name of each of them inscribed on a sort of buckler fastened to the figure (kneeling and bound), which represents each of these people, to the number of five. The following are their names, or rather those of the districts which they inhabited:—1. Schamik; 2. Osou; 3. Schoat; 4. Oscharkin; 5. Kos. Three other names are entirely effaced. As for those which remain, I doubt whether they can be found in any Greek geographer; we ought to have the Strabo of 2000 years before the Christian era.

A second temple, which is larger, but as ruinous as the preceding, stands a little farther to the south; it is of the reign of Thouthmosis III. (Mœris), also built of bricks, with pillars of the primitive Doric. This was the great temple of the Egyptian town of Beheni, of which this was the site, and which, from the extensive remains of pottery scattered in the plain, which is now desert, seems to have been pretty considerable. It was, undoubtedly, the place by which the Egyptians kept in check the people between the first and second cataracts. This great temple was dedicated to Ammon-Ra and to Phré, like most of the great monuments of Nubia. This is all that remains at Ouadi Halfa; and it is more than I expected at the first sight of the ruins.

[To abbreviate this paper, we have struck out all the unimportant details of the voyage, getting provisions, &c.—Ed.]

SOCIETY OF ARTS.

AT the annual general election on the 15th, the following alterations were made: Lord Stanhope honorary V.P. in the room of Lord Liverpool, deceased; acting V.P.'s, R. Wilson and W. R. Keith Douglas, Esq., in the room of Joseph Hume and W. Tooke, Esqrs. In the committees, the chairmen chosen were, *Correspondence*, G. Moore, Esq., *pro* Dr. Bostock; *Chemistry*, Dr. Bostock, *pro* M. Faraday, Esq.; *Manufactures*, H. Wilkinson, Esq., *pro* T. Winkworth, Esq.; *Mechanics*, B. Donkin, Esq., *pro* T. Bramah, Esq.; *Colonies and Trade*, R. Twining, Esq., *pro* G. Twining, Esq.: the other officers remain as last year.

LONDON PHRENOLOGICAL SOCIETY.

MONDAY, April 20th. Joseph Hayes, Esq. in the chair.—Dr. Elliotson read a paper, in refutation of the remarks made by Dr. Burrows against phrenology, in his late work upon Insanity. His purpose was to shew, that Dr. Burrows had not only made various incorrect statements, and contradicted himself, but had not adduced a single fact against phrenology, or appeared to have read the works of the founder, Dr. Gall. Henry Behnes, Esq. and Alfred Dowling, Esq., were admitted ordinary members of the Society.

ST. PAUL'S.

THE pleasure we have derived from contemplating that laborious undertaking, the Panorama of London at the Colosseum, and the general expressions of surprise and admiration of persons of the most cultivated taste who are daily visiting this stupendous work, has confirmed the statements and opinions in our *Gazette* of January 17th and 31st. We revert again to this subject, from a mechanical novelty having been produced by Mr. Parris, whose name is familiar to the public, not only as connected with the Colosseum, but with other works of art now exhibiting. That gentleman has invented an apparatus for getting at large domes, &c.; and its immediate application to the dome of St. Paul's renders it a subject of public interest.

It is well known that the difficulty of approaching the cupola, on which is painted the history of the apostle to whom the cathedral is dedicated, by Sir James Thornhill, is the principal cause of the neglect and gradual decay of the productions of that great man. The question has been often agitated, why they alone should have remained untouched at the time when the rest of the interior of the building was cleaned; which, from the contrast, renders the necessity of doing something to that part above the Whispering Gallery more absolute. The great expense of erecting a scaffold sufficient for that purpose, seems always to have been the principal difficulty—added to the want of experience of the present class of artists in the decorative department, which has indeed been on the decline for some years, and is now nearly lost in this country. The oblivion of this art, and with it the absence of that natural activity, coolness, and knowledge of the distant effect of painting, particularly from so great an elevation, seemed to have left no hopes of any thing being ever done towards the restoration of the enrichments of that glorious edifice. All these objections are, however, at once removed, as we understand Mr. Parris has constructed a model; and through the means of Mr. Cockerell, whose experience and judgment in all the difficulties of scaffolding may be estimated by the recollection of his ingenious and dangerous removal of the old

ball and cross, and substituting the new on the summit of the building, has had it examined and approved. Mr. Cockerell, having seen Mr. Parris's plan, has, with a disinterestedness worthy of public thanks, brought the invention under the notice of the authorities of St. Paul's, as a subject deserving their attention. The result has been, that a few days ago, Mr. Parris submitted his model to the inspection of the dean and chapter, who highly complimented him for his ingenuity, and for the simplicity of the means offered for executing this needful work.

Thus every obstacle seems removed regarding the expense of scaffolding from the ground or base of the building; and we feel the greatest confidence that no time will be lost in removing that cause of universal regret, and of saving the labours of Sir James Thornhill from total annihilation.

Mr. P.'s original aim was historic painting, to which he devoted a considerable portion of his time: his anatomical knowledge of the figure is well known. We recollect an interesting picture of his, of large dimensions, exhibited at the British Gallery some years since: the subject was Christ blessing little Children; but from the want of encouragement in that department, he relinquished it for the more profitable, though less dignified branches of the art. His exertions for the last three years, while engaged on the painting of London—his mechanical knowledge, displayed on several occasions, among which, his contrivance submitted to the Dean of St. Paul's, and which was actually used in a dome of nearly thirty feet more in diameter than that in question—seem to have given him advantages seldom combined in one individual.

LITERARY AND LEARNED.

Oxford, April 17.—On Saturday last, being the last day of Lent Term, the honorary degree of Master of Arts was conferred on T. Pycroft, Esq. Commoner of Trinity College, the successful candidate for the readership in India, lately given as a prize (to be contended for by the junior members of this University), by Mr. Wynn.

On the same day the following degrees were conferred: Doctor in Civil Law.—Rev. F. Warr, Prebendary of Wells, of Oriel College, grand compunctus; Bachelor in Civil Law.—Rev. J. C. Hall, Student of Christ Church.

Masters of Arts.—Rev. G. H. Stoddart, Queen's College; Rev. N. Wodehouse, Merton College.

SOCIETY OF ANTIQUARIES.

ON Thursday, St. George's Day, the annual election of officers, &c. of this Society took place, and the following was the result of the ballot:

George, Earl of Aberdeen, *President*; Thomas Amyot, Esq., *Treasurer*; John Gage, Esq., *Director*, in the room of Mr. Markland (resigned); Nicholas Carlisle, Esq. and Henry Ellis, Esq., B.C.L., *Secretaries*.

On the Council remained—Lord Aberdeen, Mr. Amyot, Mr. Nicholas Carlisle, Mr. Douce, Mr. Ellis, Mr. Gage, Mr. Hudson Gurney, Mr. Hallam, Mr. W. Rich. Hamilton, Mr. Markland, and Mr. C. W. Williams-Wynn;—and Mr. Bland, Mr. Britton, Mr. Dibdin, Mr. Ellis, Lord Farnborough, the Bishop of Llandaff, Mr. Lodge, Sir G. Ouseley, Mr. Phillips, Mr. Uttersoun, were elected in the room of Mr. Caley, the Bishop of Carlisle, Mr. Davies Gilbert, Mr. E. Hawkins, Mr. G. Hibbert, Dr. Meyrick, Mr. Palgrave, Mr. Petrie, Captain Sabine, and Earl Spencer, who went out by rotation.

After the election, about forty of the members dined together at Freemasons' Tavern: Mr. Gurney in the chair.

KING'S COLLEGE.

If there be any danger to the Protestant religion from the recent concessions made to our Roman catholic fellow-subjects, it ought surely to be an object with every individual who is truly, and from conviction, attached to the primitive tenets of Christianity, to rally round and support, with increased zeal, such institutions as tend not only to uphold, but to diffuse the principles of a liberal Christian education, and the practices of a pure, and rational, and essentially holy religion. Amongst these institutions, there is none which more truly deserves this character than the projected Royal College; and knowing, as we do, how rigid are the safeguards which are provided by its intended constitution against its being at any time converted into an engine hostile to the established faith of these realms, we feel confident that a numerous and brilliant attendance of its supporters will consummate this noble enterprise with their "*esto perpetua*" at the meeting of the 16th of May, when his Grace of Canterbury will both confer and derive honour from presiding on an occasion so entirely worthy of his amiable and exalted character.

Mr. Buckingham's Lectures at Almack's.—During the week Mr. Buckingham delivered his series of lectures on the geography, antiquities, climate, government, manners, productions, &c. &c. of the Eastern World. These lectures are exceedingly interesting; and though perhaps rather too long (for Almack's), the unrestrained and animated manner of the lecturer, and the occasional introduction of well-told anecdote, keeps *ennui* wholly at a distance.

His first lecture in these rooms was on Monday,—the country he chose for his subject Egypt. Tuesday's lecture embraced Arabia; and on Wednesday, Palestine and Syria were treated of.

FINE ARTS.

SUFFOLK STREET GALLERY.

(Fifth Notice.)

We proceed to select a few subjects for remark from the North Room.

No. 249. *Landscape, with Cattle.* J. Dearman.—In this, as in a larger painting already noticed, Mr. Dearman has evidently chosen Cuypp as his model, and in so doing he may have done well; but it is one thing to take a hint from a favourite master, and another to look at nature entirely through the medium of his works. Here, the sky is Cuypp, the effect of light is Cuypp, and all but the figures and the finished pencil is Cuypp. We therefore say to this young artist, as Peter Pindar said to Gainsborough, when he found him copying too largely from Snyders:

"An eye, an ear, a mouth, a nose,
Were modesty, one might suppose;
But, hang it! you must not smuggle the whole dog!"

No. 243. *Phasianus Amherstia*, &c. G. Stevens. This is a well-executed performance; but so curious and interesting a specimen of ornithology, sparkling like a gem, hardly required so much surrounding gloom to set it off.

No. 241. *A Friar collecting Herbs.* Mrs. Henderson.—Though placed too high for particular inspection, there is enough of character and effect visible in this clever work to prove its claims to attention. The simplicity of design, and the harmonious tone of the colouring, both appear to be deserving of praise.

No. 257. *Wreck off the French Coast.* J.

W. Allen.—A tremendous scene, faithfully transferred to canvas.

No. 258. *Landscape and Cattle, from Nature.* W. R. Earl.—A sweet and pleasing exhibition of nature, which forms an admirable contrast to the work just mentioned.

No. 260. *Benevolence.* H. B. Zeigler.—The subject of this picture is not very obvious; for the little group which gives it its title is merged in the landscape composition. The latter is executed with skill; but we regret that Mr. Zeigler did not make his figures more prominent.

No. 260. *Italian Girls Spinning.* J. Hollins.—Mr. Hollins has given a grace and character to his girls superior to the ordinary employment in which they are engaged. It is an interesting picture, and shows the artist's taste and powers for the higher walks of his profession.

No. 327. *Muscle-Gatherers.* A. Fraser.—In a good style of art. Mr. Fraser keeps his ground (as an Hibernian would say) both on land and on water.

No. 284. *Savoyards.* R. Edmonstone.—Mr. Edmonstone, we think, was the first to give an interest, through the medium of art, to these young itinerant musicians, and he has certainly been one of the most successful in the use of them as models.

No. 298. *Portrait of a Lady.* Miss Daniell.—An elegant and tasteful performance.

No. 308. *Property of Cadland, the property of his Grace the Duke of Rutland.* R. B. Davis.—No one knows better how and when to throw an effect of chiaroscuro over his animals, or how and when to mingle the picturesque in his works, than Mr. Davis. He knows also when the singleness of his subjects requires, with a reference to the exhibition of its points and beauty, the absence of the interference of other objects near or remote; and this he accomplishes without being common-place.

No. 317. *The Harvest Dinner.* W. Shayer.—Well imagined, and, generally speaking, well executed. The composition is good, and the varied foliage pleasingly picturesque. The part opposed to the sky is, however, in our opinion a little too hard, and somewhat formal in shape.

No. 334. *The Wye and Severn, with Chestow Castle, from Wind Cliff.* J. Glover.—As in all Mr. Glover's works, the aerial perspective and tints are beautifully represented.

No. 339. *On the Coast of Sussex—Morning.* E. Child.—To the lazy and fashionable bards of modern days, who will not have their slumbers disturbed at so early an hour, and who yet choose to write about "the dawn," it may be useful to vouch, from our own observation, for the accuracy of this representation of the approach of morning light.

No. 342. *A Mill.* A. Stannard.—Had we seen only the title in the catalogue, and the name of the artist, our imagination would have gone to work with the broken and picturesque character of the subject; nor should we have been disappointed when we beheld the real performance. We might say much the same of No. 349, *Landscape*, by J. Stark. Examples like these shew with what advantage the Flemish school may be studied by our artists, without any sacrifice of local truth.

No. 358. *Girl at the Spring.* J. Boaden.—We have seen enough of Mr. Boaden's works to know that if he chooses to take nature as his model, no one can impart a more appropriate character to his subject. In this instance, however, the artificial is much too prevalent. Instead of a simple and unconscious rustic, his girl at the spring is a coquetish lass, standing

up as if to be admired, or to have "her picture drawn."

No. 364. *The Hearty Squeeze.* R. W. Bass.—This dramatic scene between a robust country squire and an effeminate town dandy, is exceedingly entertaining. The contrasted expression of the squeezer and the squeezed is admirable; and we almost sympathize with the pallid sufferer, whose distorted features and writhing limbs shew that a shake of the hand may shake the whole frame. The accessories of the picture are also remarkably well painted.

Besides the portrait of Mr. Adolphus, to which we formerly adverted, this room contains several well deserving of notice, among which are No. 336, *Portrait of a Lady*, S. Howell, which in character and costume is truly admirable; No. 324, *Portrait of G. Hadley, Esq.*, C. Ambrose; No. 323, *Portrait of a Lady*, H. Meyer; No. 326, *Portrait of J. Carpus, Esq.*, S. J. Stamp; and No. 363, *Portrait of a Gentleman*, T. Clatter. The last-mentioned artist has, we think, added portraiture to his talent for familiar life very successfully.

[To be continued.]

MR. WEST'S PICTURES.

WE perceive with pain that the splendid collection of pictures painted by the late venerable President of the Royal Academy, which has been exhibiting in Newman Street for some years past, is advertised to be disposed of by auction next month. That this numerous and highly interesting collection, from which Mr. West derived so much justly-merited fame, should be dispersed over the face of the world, as it probably will be, thereby depriving our own country of the credit of possessing so great an ornament entire, is deeply to be lamented. The complaint is certainly a just one, that works of art of the highest order have not met among us with the encouragement which they deserve. Yet there is probably no medium so active in operating on the better feelings of our nature as graphic representations; and of painting, it may be more appropriately said than of the stage, that its effects are

"To wake the soul by tender strokes of art,
To raise the genius, and to mend the heart;
To make mankind, in conscious virtue bold,
Live o'er each scene, and be what they behold."

The execution of such elaborate and highly-finished productions as those to which we refer, requires not only brilliant genius, extraordinary vigour, and persevering industry; the sustaining hand of a liberal patronage is likewise indispensable. This was munificently held forth by his late Majesty, who, we are informed, conferred on Mr. West a thousand pounds per annum, to enable him to maintain his family in the respectability suitable to the elevated station he had attained, unshackled and undisturbed by worldly considerations. During the progress of the great works which his late Majesty graciously commissioned Mr. West to undertake, it was generally understood that on their completion an adequate remuneration would have rewarded the exertion of the distinguished artist's talents, and the exclusive occupation of the greatest portion of his long life. To this Mr. West was encouraged to look forward as a future provision for his family. These works were still proceeding, when an event occurred, deeply lamented by the whole nation, and to Mr. West in particular, producing effects which he could not have anticipated, and ought not to have experienced. About the year 1810, the payment of the income so considerably bestowed upon him by his royal patron was suddenly

suspended; and his hopes of future compensation were completely extinguished; and this, too, at a period when he had attained to the advanced age of seventy-two years. He had now, therefore, in the decline of life, and at the very time at which he had fondly anticipated the enjoyment of the reward of his labours, to struggle with adverse circumstances, and to bear up against impending ruin. With the renovated energy of youth, he subsequently designed and executed two of the most surprising and successful efforts of his genius, "Christ rejected by the Jews," and "Death on the Pale Horse;" compositions which, whether we consider the magnitude of their dimensions, the vigour of their conception, or their masterly execution, stand unrivalled in modern art.

If any collection of pictures can be considered of national interest, it is that formed by the works of the late President. The subjects are principally taken from the sacred writings, on which our holy religion is founded; from the history of the country, on which the glory of the nation is built; or from the classic authors, to whom the poetic minds of her sons are indebted for their most refined conceptions, and by whom they have been led to imitative acts of valour and patriotism. We repeat, therefore, our regret at the dispersion which will probably so soon take place; and we may live to see the time when the country will regret having reduced the immediate heirs of this great master to the necessity of disposing of his works by public sale.

MODERN SCULPTURE.

ANOTHER peep at Mr. Thom's "Tam O'Shanter and Souter Johnny" has confirmed, and indeed increased, the high opinion which a hasty glance induced us to pronounce upon them in our last No. When it is considered that they are the first works of a young country stone-mason, who had never seen a statue in his life, and who had had no opportunity of applying himself to those preparatory studies in which many artists spend so large a portion of time; and when it is considered that (as we understand) he commenced them at once, from the block, without having made any previous drawings or models,—they appear little less than miraculous. If any thing were wanting to confound the cold metaphysical reasoners who contend that there is no such quality as genius, these statues would assuredly supply the deficiency. They go a great way also to shake, if they do not entirely overthrow, the long-received opinion, that sculpture ought not to enjoy the range of painting, but ought strictly to confine itself to the representation of lofty or tragic character and expression. Unfeigned, however, as is our admiration of what Mr. Thom has thus produced, we should only flatter him, if we maintained that he had nothing to acquire. But we do most earnestly hope that he will not be so ungrateful to nature, who has done so much for him, as to desert her school; and that what he has yet to learn, and which regards details principally, he will learn where he has already profited so largely. We are the more solicitous on this head, because we well know that he will speedily be surrounded by persons who will continually prate to him about the antique and the classical. For the refined works of ancient art we have the greatest reverence; but is the human mind to be doomed perpetually to tread a beaten path? Poetry has long given up the heathen mythology; and none but school-boys and school-girls now rhyme about Mars, Venus,

Apollo, "and the rest." Why are not the arts of design, occasionally at least, to follow their sister's example? One of the greatest charms of this young man's productions is their originality. Let him never sacrifice it. Let him scorn to be an imitator. Into close study we trust he will plunge; but let it be the study of life, breathing around him; let it not be study at second, or third, or fourth hand.

It is but justice to Mr. Thom to remark, that his statues are seen to exceeding disadvantage in the room in which they are at present placed. They are illuminated only by a reflection from a brick wall. The consequence is, that the lights are dim, and that the shadows want sharpness. As the material of which the figures are composed is itself of a middle tint, the indistinctness thus occasioned impairs, although it cannot destroy, their effect.

MR. HAYDON.—This able painter's picture of Eucles is about to be withdrawn, that it may be finished; and we are glad to hear that it has not appealed to the public in vain. Mr. Haydon's Pharaoh dismissing Moses (hitherto but imperfectly seen) is next to be exhibited: it is decidedly one of the artist's very best small pictures.

Paintings collected by the late Richard Mortimer, Esq. of Percy Street.—The artist and the amateur will find much in this collection to admire, and something (for the hand of Time has been at work) to discover out of hidden beauties and uncertain forms. But the main character which the collection bears, is the stamp of good taste and genuine art. The grand picture by Rembrandt, of Haman, Esther, and Ahasuerus, is certainly a splendid production: Of its character and composition we cannot speak too highly; and the colouring and chiaroscuro are in the first style of the master. There is a very clever picture by Albert Cuyp of Morning,—preparing for the Chase; a Harbour Scene and Calm by Dubbels—a performance that would not disgrace the pencil of the best Flemish artists in scenes of this kind. There are in all fifty-five pictures, among which are some rare and valuable paintings of the old masters.

SKETCHES OF SOCIETY.

PICTURE OF CHINA.—NO. II.

WE have much pleasure in continuing our extracts from the Canton Journal, at once so novel and so curiously illustrative of China at the present time.

"No corpse is allowed to enter the gates of Peking without an imperial order; because, it is said, a rebel entered in a coffin during the reign of Kienlung. However, even at Canton, and in all other cities of the empire, no corpse is permitted to enter the southern gate, because the Emperor of China sits on his throne with his face towards the south."

"The emperor has been absent from the capital to the eastward to deposit the remains of the late empress his mother in their resting-place, and to pour out libations to her manes. He visited also the felicitous ground where he looks onward to dwell ten thousand years—his own mausoleum, which he found completed in a most substantial and satisfactory manner. The great officers engaged in superintending the works have all been graciously rewarded; and the people through whose grounds his route lay having been much inconvenienced by the great retinue which attended him, have

had half the land-tax for the current year remitted.

"Canton, Jan. 31st.—To-day the six men mentioned in the following document appeared before Messrs. Majoribanks, Jackson, Lindsay, and Astell, knelt down and returned thanks, in the Chinese manner, for the providential deliverance mentioned in the paper itself. Dr. Morrison handed a Chinese paper to them, stating that the English gentlemen considered what they had done as a duty which the supreme Ruler required of every man towards his fellow-creatures; and all the recompense they desired was, that the men whose lives had been saved would imitate the example set them, should it ever be their lot to meet with a drowning human being, whether native or foreigner. Mr. Jackson then delivered to them 270 dollars which had been subscribed for their relief, as the junk and cargo were completely lost. The old man of the village took away the Chinese document to shew it to others, and engrave it upon a stone, to perpetuate the advice contained in it. As the Tungkoon district is on the banks of the Canton river, from First Bar down as far as Chuenpee, there is reason to hope this occurrence may excite a feeling of humane exertion on the part of the native population. Old Wongyaming presented four copies of the thanksgiving document: one for the committee, and one each for Messrs. Jackson, Lindsay, and Astell.

"Translation.—We, Wonghestick and the others (undersigned) are natives of the villages Sungwantze and Yumowsha, in the district Tangkoonune, under the Foo of Kwongchou, in the province of Kwongting. Having been at the village Chintsune (in Shuntak district, where a great fair or market is held) to trade, we were returning home in a junk, on the 12th of the 12th moon of the 7th year of the reign of Taoukwang, when passing the Lion's Reach (Second Bar), we met with a sudden and unexpected great gust of wind, which upset the boat and sunk us in the water, where we were gradually approaching the point of death, having scarcely any breath left in us. Thanks to the English supercargoes, Jackson and others, who, a long way off, observed us, and immediately themselves came in three boats, with haste saved us and took us into their chop-boat, where they employed every means to restore us ere we were resuscitated—we have received from them life-giving favour and re-creating virtue. Further, we have to thank them for bestowing on us money to pay our expenses home, for clothes, and other things. When we got home, we proclaimed the occurrence every where, and there was not a man in the village who did not reverently praise the great virtue of these gentlemen. Therefore, the village squire and old man (Wongtowyoong and Wongyaming) led forth the four men, Wonghestick, &c., to go in person to Canton, to knock head and return thanks for this illustrious goodness. Again we have to return thanks for the bestowment of much gold to make up our loss, and to provide us clothes and food. This really is favour upon favour! Who has ever done this? What shall we do to recompense it? We shall at home erect a gold-lettered tablet, with the names of our deliverers inscribed; and knock head and return thanks, praying that they may enjoy long life, riches, and honours. And abroad we shall spread their names and disperse the fame of their virtues. This return for such illustrious goodness is but a ten thousandth part of what we owe. Especially to state these things we

present this petition. Before Mr. Jackson's bar to render thanks.

"Wonghestick, Laechongseep, Leongshingt-sim, Laemantsune.

"Knock head and worship a hundred times."

"*The New Year.*"—The Chinese make their new year commence on the new moon nearest to the time when the sun's place is in the 15th degree of Aquarius. It is the greatest festival observed in the empire. Both the government and the people, rich and poor, take a longer or shorter respite from their cares and their labours at the new year. The last day of the old year is an anxious time to all debtors and creditors, for it is the great pay-day, and those who cannot pay are abused and insulted, and often have the furniture of their houses all smashed to pieces by their desperate creditors. On the 20th of the 12th moon, by an order from court, all the seals of office throughout the empire are locked up, and not opened till the 20th of the 1st moon. By this arrangement there are thirty days of rest from the ordinary official business of government. They attend, however, to extraordinary cases. During the few last days of the old year, the people perform various domestic rites. On one evening they sweep clean the furnace and the hearth, and worship the god of their domestic fires. On new year's eve they perfume hot water with the leaves of wongpe and pumelo trees, and bathe in it. At midnight they arise and dress in the best clothes and caps they can procure; then, towards heaven, kneel down and perform the great imperial ceremony of knocking the forehead on the ground thrice three times. Next they illuminate as splendidly as they can, and pray for felicity towards some domestic idol. Then they visit all the gods in the various surrounding temples, burn candles, incense, gilt paper, make bows, and prostrate pray. These services to the gods being finished, they sally forth about day-light in all directions to visit friends and neighbours, leaving a red paper card at each house: some stay at home to receive visitors. In the house, sons and daughters, servants and slaves, all dress and appear before the heads of the family to congratulate them on the new year. After new year's day, drinking and carousing, visiting and feasting, idleness and dissipation, continue for weeks. All shops are shut, and workmen idle for a longer or shorter period, according to the necessities or the habits of the several parties. It is in Canton generally a month before the business of life returns to its ordinary channel."

SIGHTS OF LONDON.

LONDON never was so full of sights: we shall just trace our last day's round.

The Water-Colour Exhibition, which opens on Monday with no fewer than four hundred productions, of the least striking of which we might fairly pronounce the epithet of beautiful. If possible, it is superior to former years for variety and interest: it is indeed of age at this its twenty-first birth-day! We are sorry we cannot, this week, particularise: we can only say that Fielding, Robson, Prout, Barret, Dewint, Hills, Wild, Stephanoff, Richter, Varley, Harding, Cristall, Cox, Hunt, Mackenzie, and all those artists who have so much

charmed the public before, are as high as ever; and that among newer names we notice two Misses Sharpe as the authors of several exquisite performances.

From the delightful to the horrible is but a step. Burford's Panorama of Pandemonium, in Leicester Square, is an appalling scene, from Milton, and painted, we may truly observe, with both spirit and fire.

And yet more horrible is it to view the model of the prison of the Holy Inquisition at Coimbra in Portugal, one of the cleverest things of its kind that we ever saw. It takes to pieces most ingeniously; and we advise our readers to lose no time in seeing this specimen, which affords a perfect idea of the infernal system pursued by that monstrous tribunal.

Six paintings by Hogarth. Mr. Carpenter, we hear, has bought two. We have seen two at Penny's Gallery in Pall Mall. These are in the coarser manner of Hogarth, if by that eminent master.

Poor Chuney's skeleton, alas! at the Egyptian Hall: Polito's menagerie in full glory at Charing Cross Mews.

Though last, not least, a lady with a beard eight inches long, whiskers and mustachios to match. He-she exhibits somewhere about St. James's; and the dandies are leaving off the wear of the above articles in consequence.

We had almost forgotten a new musical instrument, the *Kalfithongon*, in King Street, Covent Garden. It is an engine of great powers, and worthy of the examination of the curious.

DRAMA.

KING'S THEATRE.

ON Tuesday night, Rossini's opera of *Otello* introduced to the most crowded (though we cannot say to the most fashionable) audience we have witnessed this season the much-talked-of Malibran,* in the rôle of the "gentle Desdemona." The extravagant praises recently lavished upon this vocalist in Paris, excited expectations which were not altogether realised amongst the more musical portion of her impatient auditory. In the first and second acts she disappointed us much: her acting was replete with French starts, and her singing with English shakes; nor were the redundancy of roulades, in which, in the latter, she so much indulged, at all times executed with that nicety of precision we were prepared to expect. Indeed, we fear (though we hope sincerely our apprehensions may prove premature) that the indiscriminate praise of our Parisian friends has contributed more to mislead her judgment than to improve her taste. In the third act, however, the *amende* was made by Madame Malibran for her previous errors, and she put forth powers which convince us that she is a donna of no ordinary merit. Let her trust more to the purity of her naturally sound contralto tones, develop the pathos which, we are persuaded, she possesses, consign her shakes to the sirens of England, and, though last, not least in consequence, abandon her parental predilection for meretricious ornament—and we hesitate not to predict that she will ultimately become a second Pasta.

Donzelli's representation of *Otello* was not to our taste; and we are sorry to add, that he does not improve upon acquaintance. His fine, mellifluous tones won on our favour at first; but he continues to sing too much on the top of his voice; and his abrupt and unmeaning transitions from bellowing to whispering, and again

from whispering to bellowing, impress us with the opinion that he understands little of the poetry of music. Upon the dropping of the curtain, the shout of the audience raised from the dead the Moor and his bride, who both acknowledged in person their grateful obligations to the *resurrection-men* in the pit.

We have to congratulate the manager upon the acquisition of a clever little *danseuse*, who made her *début* in the divertissement.

DRURY LANE AND COVENT GARDEN.

EASTER pieces do not demand elaborate criticism. At Drury Lane, founded on a tale in Mr. Crofton Croker's admirable *Fairy Legends of the South of Ireland*, we have *Thiarna-na-Oge* very cleverly dramatised (as every thing he does is) by Mr. Planché. The dialogue, indeed, is far above the usual order of Easterlings; and great skill is shewn in making the uncouth but kind-hearted lover a fairly favourite. Mr. Weekes in this character had the best opportunity he has yet enjoyed in London for displaying his talents; and he and Mrs. C. Jones are both capital. Harley is lively and pleasant; Miss Booth energetic and interesting. The music is very sweet: the national melodies arranged with good taste. A round, "Up, up, the sun is up!" in the last scene but one, is uncommonly pretty. Of the next important accessory, the scenery, our report must also be favourable. A Subaqueous City is a splendid Martin-like composition by Stanfield; and Shebeen House by Andrews, and Ghena Bay by Stanfield, are delightfully painted. Muccrus Shore is another of Stanfield's happiest efforts; and the descent of O'Donaghue and his people, at the end, really what it ought to be—magical. The piece is performing nightly with most complete success.

At Covent Garden the *Shadowless Men* is equally fortunate. Keelley and O. Smith are resplendent in their respective walks; Miss Goward has not too much to do; and Mr. Wood has a very pretty song. The music is by Mr. Rodwell, and some of the concerted pieces do him much credit. Here also the scenery is excellent throughout; and the shadow and no shadow managed most cleverly by means of a gauze curtain, with a second person behind it to enact shadow where wanted.

VARIETIES.

Dannecker.—A colossal statue of Christ, executed in marble by Dannecker, of Stuttgart, and which is considered as one of the finest specimens of modern sculpture, has been transported to Tzarskoie-Celo, in Russia, and placed on a pavilion, erected for its reception in the imperial garden.

Prometheans.—Under this classical name, Mr. S. Jones (the contriver of several ingenious articles, such as portable kitchens, steam bug-destroyers, &c. &c.) has just invented a new method of obtaining light, merely by compressing a match, of which a boxful is likely to last a long while in any climate. We have found these matches inflame quite readily: the smell is sulphureous, and not the most pleasant.

Aërostation.—M. Giuseppe Massucci has sent to the French Academy, from Rome, the model of a boat which he has invented for the purpose of aerial navigation.

Fountains.—It has long been understood that two sheets of water, capable of furnishing constant springs of wholesome water, rising above the soil, flow under the basin of Paris. The one is between the chalk and green sand,

* "*Faust upon a Sacrifice*." His majesty has published the names of the kings and great statesmen who are permitted to eat flesh with him at the new year. Here follow the names of six kings, the heir apparent, the ministers who form a council of six, and about a dozen others, among whom we observe the name of old Sung-tajin, Lord Macartney's venerable conductor from Peking, who was reported dead two years ago."

* This lady, as Mademoiselle Garcia, some four years since, made her *début* in this country, in Meyerbeer's beautiful opera of *Il Crociato in Egitto*.

and furnishes gushing springs wherever it is allowed to escape, provided it be in a place in which the two beds which enclose it remain intact. The other sheet of water, lower than the first, is, nevertheless, capable of rising higher. It is equally wholesome, and is also capable of furnishing constant springs. Its position, however, has not been ascertained until lately; but it has been at length found by labourers working at the wet-dock of Saint-Ouen. The water rose in the first instance with great noise, and, after several applications of the pump, was brought to the level of the soil, on which it flowed, impregnated with a great quantity of green sand. In a short time, however, it became pure, and eventually threw up a jet of considerable height, and consisting of a large quantity of water. It has been recommended to bore for this water in the least elevated parts of the French capital; such as the Hôtel de Ville, the Palais Royal, the Jardin des Plantes, &c.

The idea of reforming the orthography of the French language is taken up warmly by many of the savans and literati of Paris. In the last number of the *Revue Encyclopédique* there is a very clever article on the universality of the French language; in which the author, M. Julien, although he does not go to the extreme recommended by M. Marle in his *Appel aux Français*, points out many absurdities of spelling, and of consequent bad pronunciation. As an instance of the license that is taken with words which are so written as to lead to no idea of the pronunciation that ought to be given to them, he mentions the following from Racine, as uttered at the Théâtre Français by a celebrated actor:

"Noble et brisant auteur d'une triste famille,
Toi dont ma mère osait se vanter d'être sœur."

Instead of

"Noble et brillant auteur d'une triste famille,
Toi dont ma mère osait se vanter d'être fille."

It is probable that some reform will really take place. M. Marle estimates, that if his system of writing words as they are pronounced were to be adopted, a foreigner would learn the French language in one-sixth part of the time now devoted to it.

The late Earthquake.—A letter from Ancona, of the 24th of March, states, that on the 22d of that month, the day when the earthquake commenced in Spain, two sharp shocks were felt there; they were accompanied by a rumbling noise, resembling the discharge of cannon, and many persons were violently shaken in their beds. The shocks do not appear to have occasioned any serious injury.

New Coach.—A French paper states, that a patent has been taken out in Paris for a new coach, with one wheel only, capable of accommodating from thirty to forty passengers.

Expédition de l'Atrolabe.—Messrs. Quoy and Gaymart have transmitted an account of their researches to Paris, accompanied by ninety-two plates. Sixty-two cases, filled with zoological specimens, stuffed and in spirits, are on their way to the Museum of Natural History. They have also succeeded in taking two specimens of the *babiroussa*, the first ever seen alive in France; as well as a live ape, of the black cynocephalus kind, destined for the same repository. The vessel anchored in the harbour of Toulon on the 26th of March.

It is generally supposed that the Chamber of Deputies will, during the present session, or early in the next, take into consideration the state of the criminal law, with a view to the abolition of the penalty of death in all cases except murder. M. Charles Lucas, a leading

member of the French bar, in the course of an answer to an article of the Duke of Broglie, on the punishment of death, contends that the fear of death has little influence upon the criminal, and that the chance of escaping it gives him strong encouragement. He states that, in France, a person accused of a capital crime has from fifty to eighty-two chances of acquittal in the hundred; and that even when condemned, he has an equal number of chances in his favour that he will not suffer death. In illustration of his position he gives the following table:—

	1886.	1887.
Accused	915	876
Condemned to death	150	109
Committed	28	30
Executed	110	75

From this he goes on to shew, that from the prevailing horror of the punishment of death which is felt by juries, and the legal chances of escape, the criminal is encouraged in his course; whereas the dread of solitary confinement or perpetual hard labour might operate strongly upon him. As an instance of the effect of hard labour for life, at what are called the galleys, he quotes the letter of one of the adjutants of the Bagne of Toulon, who states that from 1821 to 1824, not less than eight adjutants of that bagne were assassinated by convicts, who had no other motive for their crime than obtaining the means of getting rid of an existence which had become burdensome to them.

Magnetism of the Earth.—A young natural philosopher, of the name of Babinet, has been recently employed in a series of experiments, with a view of ascertaining the magnetic power of the globe. He has communicated to the French Academy, as the result of his investigations, the following theorem:—"A magnetic pole, which, at the distance of a *mètre*, acts on a pole equal to itself with the power of a *milligramme*, is governed by the earth with a horizontal power of three hundred and twenty *milligrammes*."—*Le Globe*.

New Pyrometer.—A new air-thermometer has been invented by M. Pouillet, for the purpose of measuring degrees of heat in very high temperatures; an object hitherto of very difficult attainment. By means of this instrument it has been ascertained, that the heat of melted silver is 1677°; of a melted mixture of one part gold and three parts silver, 1803°; and of melted pure gold 2096°.

A very fine and interesting specimen of a fossil fish has, we are told, lately been discovered in a bed of clay belonging to the Hastings sand formation, in the parish of Heathfield, in Sussex. It belongs to the genus *Lepidosteus* of Lacépède. The remains of this ichthyolite are abundant in the strata of Tilgate forest, in the white rock at Hastings, and in the sand-stone quarries near Tunbridge Wells; but they consist for the most part of detached scales only. The specimen above mentioned is in the possession of Mr. Mantell, of Lewes.

Thorwaldsen.—A bust of the late Emperor Alexander, executed in Carrara marble by the celebrated Thorwaldsen, has lately been placed in the town of Kharkof, in Russia. It is a striking resemblance; the artist having obtained three sittings of the emperor during his stay at Warsaw in 1820.

Russian Lithography.—A collection of Russian national costumes, drawn on stone, has been published at St. Petersburg, under the title of "The Russian Album." The execution of the drawings is very indifferent. A lithographic press has been established in the town of Theodosia; and the direction of it has been confided to a society of amateurs, who

intend publishing a series of drawings, representing every interesting object in the government of Taurida, a country rich in antiquities and subjects of natural history, and the scenery of which is very picturesque.

Napoleon.—In Madame Durand's Memoirs, just published at Paris, she mentions, that when Napoleon and Maria Louisa, having been affianced, met four leagues from Soissons, Maria Louisa first broke silence, by saying to the emperor, "Sire, your portrait is not flattered." Madame Durand adds, that it was flattered, nevertheless; and then, instead of censuring this piece of wretched hypocrisy as it deserves, says, with mawkish sentimentality—"but love was already exercising its sweet influence!" This must have been love at first sight, with a vengeance!

LITERARY NOVELTIES.

A Catalogue of privately printed Books, with some account of them, is preparing by Mr. John Martin, who intends to confine the list to such as have been printed in this country, with the exception of those printed abroad and naturally connected with English literature.

Messrs. Oliver and Boyd of Edinburgh have the following works in their last announcement: *Tales of Field and Flood*, with Sketches of Life at Home. By John Malcolm, author of *Scenes of War*.—*Biographical Sketches and Authentic Anecdotes of Dogs*. By Captain Thomas Brown.—And an Epitome of the Game of Whist. By E. M. Arnaud.

The papers of Mr. Stepney, who was British minister in Germany in the time of Queen Anne, have been deposited in the British Museum. There are a number of letters of Addison among them, and many other interesting documents.

The same national Institution has also recently been enriched by the papers of Count Joseph de Palaiseau, one of the leading chiefs in the war of La Vendée, which that nobleman has bequeathed to the Museum. They relate in great measure to the Vendean war, and partly to the Count's mission to Canada. Letters from Mr. Pitt, the present King of France, and many highly eminent individuals, are in this collection.

The Marquess Spineto is preparing for publication a Course of Lectures upon Hieroglyphics, delivered at the Royal Institution and at the University of Cambridge.

In the Press.—*The Family Album*; or, St. Mark's Gospel analyzed and prepared for Reading and Expounding to a Family Circle. By the Rev. S. Hinds, M.A., Vice-Principal of St. Alban's Hall, Oxford.

LIST OF NEW BOOKS.

Clouds and Sunshine, post 8vo. 8s. 6d. bds.—Jarrin's Italian Confectioner, 4th edition, royal 12mo. 9s. bds.—Ude's French Cook, 10th edition, royal 12mo. 12s. bds.—Sadler's Ireland, 2d edition, 8vo. 12s. bds.—Tacitus's Life of Agricola, with Interlinear Translation, 12mo. 2s. 6d. bds.—Cottle's Malvern Hills, Poems and Essays, 2 vols. 12mo. 12s. bds.—Peace Campaigns of a Cornet, 3 vols. post 8vo. 1l. 7s. bds.—Cappen's Topographical Dictionary, 8vo. new edition, 1l. 11s. 6d. bds.—Mills on the Lungs, 8vo. 8s. bds.—Williams's Views in Greece, 2 vols. DEBRET'S PEERAGE of the UNITED

KINGDOM of GREAT BRITAIN and IRELAND.

Printed for Rivington, Egerton, Clarke, Longman and Co., Cadell, J. Richardson, and J. G. and F. Rivington, St. Paul's Churchyard, Beeth, Baker, Bagster, Hatchards, Hamilton and Co., Farbury and Co., Scholey, Pickering, Lloyd, Hodgson, Templeman, and Houlstons.

Of whom may be had, uniformly printed,

Debrett's Baronetage; new edition, corrected to Sept. 1838, 2 vols. 12mo. price 11s. 6d.

Handsomely printed in 2 large vols. 8vo. with a Portrait, beautifully engraved by Dean, price 11s. 6d. boards.

THE LIFE and TIMES of WILLIAM

LAUD, D.D. Lord Archbishop of Canterbury.

By JOHN PARKER LAWSON, M.A.

Printed for C. J. G. and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall.

In 8vo. price 3s. 6d. boards.

PRACTICAL SERMONS on the LORD'S

PRAYER, the BEATITUDES, and the SACRAMENT of the LORD'S SUPPER.

By SAMUEL WIX, M.A. F.R. and A.S.

Vicar of St. Bartholomew the Less, London.

Printed for C. J. G. and F. Rivington, St. Paul's Churchyard, and Waterloo Place, Pall Mall; and Henry Wix, 41, New Bridge Street, Blackfriars.

Of whom may be had, by the same Author,

Scriptural Illustrations of the Thirty-Nine Articles of the Church of England, with a Practical Comment upon each Article. Affectionately intended to promote Religious Peace and Unity. 8vo. 6s.

In 11 vols. 8vo. price 7s. 14s.; or, on large paper, royal 8vo. (of which only 150 Copies are printed), price 11s. 11s. extra boards.

PLATONIS OPERA OMNIA; recensuit

et Commentariis Scholasticis illustravit IMMANUEL BEKKERUS.

Accedunt Versiones doctissimi Heindorff, Wyssbach, Ast, Buttmann, Grotzsch, Finsler, Serrant, Routh, Stallbaum, Nitsch, Henze, Fischer, Boeckh, Lange, Nurnberger, Gutschmann, & J. Wolf, accuratissime Annotationes Textuales, Versio Latina, et Tituli Lexicon Vocum Platonicarum.

This beautiful edition has received the highest encomiums from the late Professor Dobree, and many other eminent British and Continental Scholars, and is the only Variorum one hitherto published. It contains the whole of the Greek Text, revised and amended from Manuscripts now first collated or used in any edition of Plato; the Latin Translation of Ficinus; the Greek Scholia; the Annotations, either entire or in part, of the different Commentators on the Text of Plato, or the Works attributed to him; a Reprint of the Lexicon Platonicum of Timaeus, as edited by Rubinius; the whole preceded by Fischer's Literary Notice of the Life and Writings of Plato. Bekker's Text and Scholia are used, and such typographical errors are corrected as had escaped that Editor's vigilance.

The spirited Projector of this fine Classic intended to publish it at 10s. 10s. for the small, and 14s. 14s. for the large paper; but it is now (for the benefit of his Estate) offered at the above-mentioned reduced Prices, by

James Duncan, 37, Paternoster Row; Parker, Oxford; and Deighton, Cambridge.

In 8vo. 21s. boards.

GREEK GRADUS, or, Greek, Latin, and

English Prosodial Lexicon; containing the Interpretation, in Latin and English, of all Words which occur in the Greek Poets, from the earliest period to the time of Ptolemy Philadelphus, and also the Quantities of each Syllable; thus combining the advantages of a Lexicon of the Greek Poets and a Greek Gradus for the Use of Schools and Colleges.

By the Rev. J. BRASSE, B.D. late Fellow of Trin. Col. Cam.

"The indefatigable application required in the compilation of the 'Greek Gradus' is manifest; and we heartily recommend the work as supplying a desideratum in our school-books, and likely to be advantageously used to a very wide extent."—*Literary Chronicle*.

Sold by Baldwin, Longman, Whitaker, Rivington, Simpkin, London; Parker, Vincent, Oxford; Deighton, Newby, Cambridge; and all other Bookellers.

Works lately published by Whittaker, Treacher, and Co. Ave Maria Lane.

In 12mo. with numerous Cuts, and a Portrait of the Author, engraved by Fladen, from a Bust by Kendrick, price 6s.

THE HOUSEKEEPER'S ORACLE; or,

Art of Domestic Management. Containing a complete System of Carving with accuracy and elegance; Hints relative to Dinner Parties; the Art of managing Servants, and the Housewife's and Epicure's Calendar, shewing the Seasons when all kinds of Meat, Fish, Poultry, Game, Vegetables, and Fruit, first arrive in the Market, earliest Time forced, when most plentiful, when best and cheapest. To which are added, a Variety of useful and original Receipts.

By the late WILLIAM KITCHENER, M.D.

2. The Art of Invigorating and Prolonging Life, by Food, Clothes, Air, Exercise, Wine, Sleep, &c.; or, the Invalid's Oracle, containing Physic Prescriptions, pointing out agreeable and effectual Methods to prevent and relieve Indigestion, and to regulate and strengthen the Action of the Stomach and Bowels; to which is added, the Pleasure of Making a Will.

By the late Dr. Kitchener. In 12mo. the 6th edition, very greatly augmented and improved, price 7s. 6d.

3. Apician Morsels. In folio 8vo. with Cuts, price 8s. Tales of the Table, Kitchen, and Larder; consisting of Epicurean Precepts, Nutritive Maxims, Deductions, Anecdotes, &c. Illustrative of the veritable Science of the Mouth, which includes the Art of never breakfasting at Home, and always dining Abroad.

Grands gourmands, or the lovers of good eating and drinking, will find some exquisite pickings among these "Apician Morsels."

4. A concise and practical Treatise on the Growth and Culture of the Carnation, Pinks, Auricula, Polyanthus, Ranunculus, Tulip, Hyacinth, Rose, and other Flowers; including a Dissertation on Soils and Manures, and Catalogues of the most esteemed Varieties of each Flower. By Thomas Hogg, Florist, Fiddington Green. A new edition, in 12mo. with coloured Plates, price 1s.

5. The Divine Origin of Christianity, deduced from some of those Evidences which are not founded on the Authenticity of Scripture. By John Sheppard, Esq. of Frome. In 2 vols. 12mo. price 14s. boards.

6. Thoughts, chiefly designed as preparative or persuasive to private Devotion. By John Sheppard, Esq. In 12mo. the 5th edition, price 6s.

7. Syllabic Spelling; or, a Summary Method of Teaching Children to Read and Spell with facility and pleasure. In 12mo. the 4th edition, with an entirely new Set of Copper-plate Engravings, and an improved Arrangement adapted to them. By Mrs. Williams. A number of her "Conversations on English Grammar." Price 8s. handsomely half-bound.

N.B. This edition contains a variety of testimonials in favour of the System, from some of the most respectable Professors of the English Language, as well as from several parents, whose children have been instructed by this novel mode of instruction; I have learned in the course of a very few months to read correctly, and with perfect ease, the longest and most difficult words.

Boxes, with appropriate Counters, for the Amusement of Young Beginners, may be had, if required, of the Publishers.

THE QUARTERLY REVIEW,

No. LXXVIII. was published on Tuesday.

FATHER BUTLER, the LOUGH

DEARG PILGRIM; being Sketches of Irish Manners. 12mo. with Plate, 2s. 6d. cloth.

2. Edmund O'Hara, an Irish Story. By the Author of "Elmer Castle." In 12mo. with Plate, 2s. 6d. cloth.

3. Ellmer Castle; a Roman Catholic Story. 2d edition, with Plates, 12mo. 3s. 6d. cloth.

4. A Visit to my Birth-Place. By the Author of "Early Recollections," &c. 2d edition, 12mo. with Plate, 2s. 6d. cloth.

5. The Abbey of Innismoy. By the Author of "A Visit to my Birth-Place," &c. 2d edition, with Plate, 12mo. 3s. 6d. cloth.

6. Retrospections; a Soldier's Story. By the Author of "A Visit to my Birth-Place," &c. 12mo. In the press.

Printed for W. Curry, Jun. and Co. 9, Upper Sackville Street, Dublin; and Hurst, Chance, and Co. London.

Read and Bell Suppers.

Price 12s. the 10th edition, thoroughly revised and enlarged, with a new Portrait of the Author,

THE FRENCH COOK; a System of

Modern Fashionable and Economical Cookery.

By LOUIS EUSTACHE UDE.

"What will most recommend this edition, however, at this season is, its admirable directions for rout and supper-parties: in this respect it is quite an oracle; and there are few or above the middle ranks of life who may not derive from it with advantage in giving these parties so prevalent at this period of the year, and the pleasure of which depends so entirely on good arrangements."—*Literary Gazette*, April 11th.

Also, the 4th edition, price 8s. 6d.

The Italian Confectioner; or, Complete

Economy of Desserts. By G. A. Jarrin, Confectioner, New Road Street.

In 3 vols. 8vo. 2l. 5s. boards,
GREEK TESTAMENT, with English Notes, 2d edition. Containing: Copies Critical, Philological, and Explanatory Notes; with Parallel Passages, &c. from the Classics, and with References to Venerable for Idioms, and Bos for Ellipses. To which is prefixed, a short Treatise on the Doctrines of the Greek Article, according to Bishop Middleton, Mr. Grenville Sharpe, &c. briefly and compendiously explained, as applicable to the Criticism of the New Testament. The various Readings are recorded under the Text. Greek and English Indexes are added.
By the Rev. E. VALPY, B.D.
This Work is intended for the Use of Students in Divinity, as well as for the Library.
"After a minute examination, the author of the present manual considers this edition of the Greek Testament as the most valuable of any that has yet been published with critical and philological apparatus, and recommends it to students who wish to purchase only one edition of the 'Greek Testament.'—*Horn's Introduction to the Bible*.
Greek Septuagint, with the Apocrypha, from the Oxford edition of Bos and Holmes. 28s. boards.
This edition is best-pressed, and handsomely printed in 1 vol. 8vo.
For use in Churches and Chapels, as well as the Library.
"This elegantly executed volume is very correctly printed, and (which cannot but recommend it to students in preference to the incorrect Cambridge and Amsterdam reprints of the Vatican text), its price is so reasonable as to place it within the reach of almost every one."—*Horn's Introduction to the Bible*.
* * * The Septuagint and Testament may be had uniformly bound in Four handsome Volumes.
Sold by Longman, Baldwin, Whittaker, Harding, Rivington, Sherwood, J. Richardson, and all other Booksellers.

In 1 vol. 18mo. very neatly printed and hot-pressed, price 7s.

Whittaker's History of Craven, large paper, 6s. 6d. Published at 15s. 15s.
2d edition, 8vo.
IRELAND; its Evils, and their Remedies; being a Refutation of the Errors of the Emigration Committee and other touching that Country. To which is prefixed, a Synopsis of an original Treatise about to be published, on the Law of Population, developing the real Principle on which it is universally regulated.
By MICHAEL THOMAS SADLER, M.P.
John Murray, Albemarle Street.

In 1 vol. 12mo. price 6s.
EARLY IMPRESSIONS; or, Moral and Instructional Entertainment for Children, in Prose and Verse, with 12 Designs by Dighton, and intended at once to instil into the minds of children the most essential principles of morality and reason, and at the same time to oblige them to think for themselves, may be considered as one of the happiest specimens of our modern improvements. The book is adorned by several pretty engravings from designs of Dighton, and is altogether a very elegant substitute for the common school-book, &c.—*Observer*, March 2nd.
In 2 vols. 8vo. price 10s. 6d. dedicated, by permission, to the Duke of Wellington,
A TREATISE ON THE VARIETIES OF DRAPESS AND DISEASES OF THE HAIR.

In 2 vols. post 8vo. 22s. 6d.
TALES OF MILITARY LIFE.
By the Author of the "Military Sketch Book." Containing Vandelure and Gentleman Gray.
"The military are bivouacked in the heart of Society; they are constantly in the centre of its gaieties; the sharers alike of the joys and sorrows of life. Their progress is full of diversity, and their adventures are equally tinged with the marvellous, the pathetic, and the humorous. Our author has profited by his opportunities, and seems as much at his ease among the Guerrillas and spoliated vineyards of Spain, as when he sketches the domestic doings in the pleasant summer quarters at Bath."—*Atlas*.
Printed for Henry Colburn, 5, New Burlington Street.

8vo. 12s.
A COMPANION TO POPE'S HOMER and DRYDEN'S ÆNEID OF VIRGIL; being an Explanation of the Mythology, History, and Geography, contained in those Works. With a copious Index.
"The study of Homer and Virgil being considered an essential part of polite education, the young man, it is presumed, derives some advantages from a work intended as a companion to these poets. The author has endeavoured to compress in this work the more material circumstances relative to the mythology, religious rites, customs, fables, traditions, authentic history, and geography of the ancients."—*Author's Preface*.
"This book will be found as useful to those who are unacquainted with the dead languages, as to those who are conversant with them. We are able to state confidently that it has been compared with great care, and contains a great variety of valuable information."—*Classical Journal*.
"The work is intended as a companion to Homer and Virgil's Æneid. The several articles are inserted in regular succession, as they occur in the translations of Pope and Dryden. This is an obvious improvement on the plan of a classical dictionary, in which the articles are inserted alphabetically; much time is thus saved, and much perplexity avoided, greatly to the reader's advantage."—*Electric Review*.
"So far as Homer and Virgil are concerned, this commentary is very complete. There will be no complaint of reference to anybody's antiquities, Greek or Roman. The impurities of mythology are carefully swept away."—*Monthly Magazine*.
John Murray, Albemarle Street.

In 5 vols. 18mo. price 54s.
D'ERBINE; or, the Cynic. A Novel of the "De Vere" Class.
London: Printed for W. Simpkin and R. Marshall, Stationers' Hall Court, Ludgate Street.

In 2 vols. 8vo. price 24s. boards.
MAHOMETANISM UNVEILED. An Inquiry, in which that Arch-Heresy, its Diffusion, and Continuance, are examined, on a new Principle, tending to convert the Evidence and aid the Evidence of the Christian Faith. By the Rev. CHARLES FORSTER, B.D. Chancellor of Ardref, and Examining Chaplain to the Lord Bishop of Limerick.
Printed for James Duncan, 87, Paternoster Row; and John Cochran, 108, Strand.

Price 2l. 10s. in cloth boards, illustrated with 100 Engravings of curious, rare, and interesting Subjects,
LONDINIANA; or, Anecdotes, Tracts, and Memorials of the Streets, Buildings, and Personages connected with the History of London in all Ages.
By E. W. BRAYLEY, Esq.
This work, like Fox's "Londiniana," will prove to the literary world as amusing and instructing in the English language, as Fox's is in the French language; and it may be added, that its contents are not compiled from other books; but chiefly from original documents in the British Museum, the Guildhall Library, &c. &c.
London: Printed for Hurst, Chance, and Co. 65, St. Paul's Churchyard.
Of whom may be had, just published,
The Operative Chemist, price 31s. 6d. By Samuel F. Gray, Esq. Author of the "Supplement to the London Pharmacopoeia," &c.

Publishing in Monthly Parts, price 1s. and Weekly Numbers, price 3d.

THE OLLIO.

"The 'Ollio' is a various and entertaining miscellany, adorned with clever woodcuts, (one for every week)—so clever, indeed, that nothing but a large sale could tempt the Proprietors to disburse the attendant expense. It is hardly possible to dip anywhere without being attracted by the matter to read on. This is exactly the character which such a work ought to possess."—*Literary Gazette*.

No. 71 contains the original Irish legends on which Thruane the Oge, or the Prince of the Lakes, as performing at Drury Lane Theatre, is founded.

Part XVIII. will be ready with the Magazine, and may be had of all Booksellers and News-vendors throughout the Kingdom.

Just published, by A. J. Valpy, M.A. and may be had of all Booksellers.

SCHOOL and COLLEGE GREEK CLASSICS, with English Notes, Questions, &c.

The following are already published:

Euripides, Hecuba. By the Rev. J. R. Major, Master of Woburn School, and of Trin. Coll. Cam. 4s.

Euripides, Medea. By the same. 5s.

Sophocles, Oedipus Tyrannus. By the Rev. J. Brasse, D.D. late Fellow of Trin. Coll. Cam. 5s.

"This is, beyond all comparison, the best student's edition of a Greek play which has ever been published. The original edition of Porson, which forms the ground-work of the present, is, after all, a book more adapted to the finished scholar and classical critic, than to those who are only pursuing the studies which are to render them worthy of a station within the envied pale."—*Literary Chronicle*, Jan. 1867.

Thucydides, Herodotus, Xenophon, Demosthenes, &c. will speedily be published in succession. At the express desire of many eminent Schoolmasters, Mr. Valpy has commenced the publication of a Series of such of the Greek Authors as are chiefly read in the upper Classes of Schools and in Colleges. The best Texts are adopted, and the Critical and Explanatory Notes are presented, it is presumed, in a more inviting and accessible form than those of Latin Commentators, by avoiding that profusion of annotation which frequently anticipates the ingenuity, supercedes the industry, and consequently retards rather than promotes the improvement of the pupil. Examination Questions, adapted to the points discussed in the Notes, and Indices, are also added; and the Series, it is hoped, will constitute a convenient introduction to the niceties and elegancies of Greek Literature, and to the perusal of that portion of the relics of antiquity which is best calculated to interest a youthful mind.

Each volume will be sold separately, and it is intended that all shall be published in a cheap duodecimo form.

Sold by Baldwin, Longman, Whittaker, and all other Booksellers.

In 8vo. 9s. 6d. boards.

VIGOR on the IDIOMS of the GREEK LANGUAGE, translated into English and abridged.

By the Rev. J. SEAGER.

"When you have a spare half hour read Vigor. Consult him again and again, and read him a third time while you are in statu pupillari. Have the book almost by heart."—*Dr. Parr's Letter to Dr. G. F. Burney*.

"This volume is compiled with much industry and judgment, and altogether, a more valuable service could not well have been rendered to the inquiring student of the classics. We have great satisfaction in announcing that the same able editor is about to favour us with the critical works of Bos and Hermann, executed on a similar plan."—*Oxford Literary Gazette*, No. 3.

Hoggeven on the Greek Particles, in a few days, 3s. 6d.

Bos and Hermann are under abridgment on the same plan, and will be published soon. The Four Volumes will form about 900 pages each, and may be purchased separately or together.

Sold by Longman, Baldwin, Simpkin, Whittaker, and all other Booksellers.

In post 8vo. price 3s.

A TREATISE on NERVOUS DISORDERS; including Observations on Dietetic and Medicinal Remedies.

By THOMAS RICHARDS, Surgeon.

"We have read this work with considerable satisfaction. Mr. Richards is clear and succinct in his mode of treating the subject. He divests it of all technicalities, and imparts his knowledge in a plain and very intelligible style. His whole work is characterized by liberality and sound sense."—*New Monthly Magazine*.

"We do not think that there are any, even professional readers, who could peruse the last three chapters of this book without pleasure, and not a very great number who could do so without profit."—*London Weekly Review*.

London: Hurst, Chance, and Co. 65, St. Paul's Churchyard.

In 18mo. price 3s. 6d.

A HISTORY of the RISE, PROGRESS, and SUPPRESSION of the REBELLION in the COUNTY of WEXFORD, in the Year 1798; with an Account of the Author's Captivity among the Rebels, and merciful Deliverance.

By GEORGE TAYLOR.

Will be published early in June.

ANGLO-FRENCH COINAGE ILLUSTRATED,

from Specimens composing the Cabinet of an Amateur who has devoted Five Years in forming a Suite by far the most numerous, either public or private, in Europe, of these interesting Coins: it commences with Henry II. and terminates with the Reign of Henry VI. In course of the Work, from Thirty-five to Forty unpublished (of which a good part are considered unique) Types and Varieties will appear.

It will form a Quarto Volume, printed in the same manner as the "Catalogue of Anglo-Gallic Coins," the *Bibliotheca Numismatica*, published about two years ago. The Cabinet, including doubles, consists of Thirty-four gold and Two Hundred and Forty-five silver and billion Anglo-French Coins, independent of the Calais money, which the Author excludes, as properly belonging to the English Series.

The Plates are engraved by Mr. Finden.

To be published by Hearne, 81, Strand.

On the 1st of May will be published, price 5s. No. 1. of

The Repertorium Theologicum; or, Critical

Record of Theological Literature. Edited by the Rev. Dr. Wall, of St. John's College, Cambridge.

It will contain Articles on the Samaritan Notions of a Messiah—On the Parable of the Vine—On the Zebul and Dish of Moses—On the Abasurus of Esther—On Scriptural Geography—On the Life, Character, and Writings of Isaiah—On Ancient Manners and Customs—On the Religion of the Druids, &c. &c.

London: John Hearne, 81, Strand.

LONDON: Published every Saturday, by W. A. SCRIPPS, at the LITERARY GAZETTE OFFICE, 7, Wellington Street, Waterloo Bridge, Strand, and 7, South Moulton Street, Oxford Street: sold also by J. Chappell, 98, Royal Exchange; E. Marlborough, Ave Maria Lane, Ludgate Hill; A. Black, Edinburgh; Smeany, and G. Robertson and Altknow, Glasgow; and J. Cumming, Dublin.

J. MOYES Teak's Court, Chancery Lane.

THE LONDON LITERARY GAZETTE; AND Journal of Belles Lettres, Arts, Sciences, &c.

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen, throughout the Kingdom; but to those who may desire its immediate transmission, by post, we recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 641.

SATURDAY, MAY 2, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS:

The Sectarian; or, the Church and the Meeting-House. 3 vols. 12mo. London, 1829. Colburn.

NOT even a novel shall betray us into opinion upon theological controversies: ours is a mere report, and an account of these volumes in their literary character. Thus considered, we have no hesitation in saying the *Sectarian* is a clever and striking production; a publication which is likely to provoke much discussion, high praise, and deep censure. For it is a severe picture of sectarianism; and while it seeks to vindicate the more liberal principles of the established church, attributes to baptists and other dissenters (by implication in the drawing of its *dramatis personæ*—a *dramatis personæ*, by the way, evidently coloured from life and experience,) the most utter selfishness, and eager pursuit of worldly advantages.

In perusing these volumes we have to warn our readers, that they must expect to find several of the earlier chapters uncharitably heavy; but as they advance, the shrewdness of the writer becomes more obvious; and there are frequent glimpses of a vein of quick pleasantry, which agreeably diversify the more serious material. It is certainly in his attacks upon sectarian hummeries and pretensions, and in his defence of the church against the dangers which he apprehends from the graver designs of its adversaries, that our author exhibits his talents to the greatest advantage. We do not think that he has so vivid a conception of character, and consequently that his personations are rather outlines than vigorous portraits. Neither is the story very good as a story; and the incidents appear to be simply taken from ordinary proceedings. This, perhaps, will be a recommendation of the work; for it will be thought that the descriptions of the hurry and worry, the ridiculous vanity, the caballing, the hypocrisy, and the solemn fooleries, of these religion-mongers of sundry denominations, are all actual matters of fact. In the school of criticism, we ought to add, that the dialogues are feeble, and the parts addressed to what is called light reading, out of place and unnecessary: in short, that there is about one volume too many, and one which weakens what would otherwise have been more condensed and powerful. The adventures of Creevy are amusing and smartly sketched; and there are some palpable hits in the details of Mr. Hanby's manœuvring: but we have said enough to indicate what sort of a performance this is, and an extract must speak the rest.

Lydia Orton is a young, beautiful, and rich convertite; and Molesworth, one of the sect of a higher order, has become insane. At a subsequent meeting, "as Lydia looked round her, expecting some one else to take up the theme, she observed a young man, whom she had not before noticed, further than as one of those whose intellectual look formed a contrast to the mass of the imbecile and the ignorant; who, seemingly under the influence of a strong

feeling of what they had just heard, sat wringing his hands, as if his mind was full of something on the subject, which he seemed doubting whether he should attempt to deliver to his fellows. After a little time, appearing to take courage, he at length rose, and, with some hesitation, made a speech, as a sequel to the former; which, from its melancholy import, its appearance of deep truth, from the logical form in which it was put, and the manner in which its propositions were made to rest on passages of Scripture; as well as the intense conviction with which it evidently was uttered, was strongly and sadly affecting. The serious young gentleman took as a sort of motto to his speech, or, as it was called, his exhortation, part of a sentence, addressed by St. Paul to the churches of Galatia—viz. the words, 'Who gave himself for us, that he might deliver us from this present evil world.' He first decanted on the general calamities of life, and the many sad and frightful events recorded in history; upon all which he dwelt with a melancholy pathos, exclaiming that the present was truly denominated by the Scriptures *an evil world*. But it was, he argued, peculiarly so to the true followers of Messiah, as had been ably shewn them in the searching address they had just heard, from the painful warfare they had constantly to wage with it; and because much of the good that it promised, was to them like the tempting apple hanging on the tree of knowledge, of which they were not permitted to eat. There was, however, he added, much comfort in the consideration expressed in the words of the prophet Isaiah, that the righteous would soon be 'taken away from the evil.' Here he remarked, that the words of this passage were usually quoted in the restricted sense in which they stood in our translation, which said, that they would be taken away from the evil to come; but it would be seen upon inspection, that the words 'to come,' printed in italics, were not in the original, and, for some unknown reason, had been supplied by the translators; that evil, in fact, was, in a peculiar manner to the righteous, at all times existing; that it was past, present, and to come: so that, at whatever time the Christian's warfare should be terminated by death, he would emphatically be 'taken away from the evil.' But still it had, in the same word, been said, 'sufficient for the day is the evil thereof;' and although we were not by anticipation to lay up for ourselves sorrow for the day of suffering, still in every day there had been, and would be, *evil* meted out to them; and sufficient for every day as it came would be found its own portion of *evil*. The ultimate consolation, however, always was, that from this evil world the Christian was soon to be taken away, and he was to be taken from the evil to the good; from evil, and sorrow, and struggle with an evil heart of unbelief, to unmixed good; and though the days of their pilgrimage on the earth, like those of the patriarch Jacob, were likely to be both few and *evil*, yet there was laid up for them in

heaven a better and an enduring substance. This species of theo-philosophy, not unfashionable as a matter of cant, even among the thoughtless and the empty, always came home to the heart of Lydia, youthful and formed as she was for relishing the happiness of life, like a sad and depressing knell. But when she remarked, that so young a man as the speaker was evidently himself deeply under the influence he described, she was ready to reproach herself for any hesitation in giving her complete assent to its truth; and, from this day, she felt willing to resign the world, and inwardly to take the veil of entire devotion to her 'high vocation.' After the singing of a hymn, expressive of corresponding sentiments, the assembly knelt down to prayer in a state of high excitement, exclaiming to themselves, 'Who is sufficient for these things?' and thinking of the present sad state of their beloved brother, Molesworth. But when, in the prayer, the member who was the organ of it, and who had been a close intimate of him whom they now bore on their spirits, began to call upon Heaven in behalf of the brother who had so often joined in their prayers, and encouraged their hearts in this very place; who was so dear to them all, but who was now afflicted with a sore affliction, and might never again lift up his voice within their humble tabernacle; the voice of the member trembled and became choked with his feelings. His words of prayer came from the bottom of his heart, amid sobs and tears, until at last he was completely overpowered, and stopped entirely. The whole assembly remained on their knees in silence, which was only interrupted by the sobs of many who were drowned in grief. Aged men round Lydia wept like infants, and she herself was dissolved in sorrow, until the assembly rose with one accord, wiping away their tears; the speaker being unable to finish the prayer. As they were about to separate, Lydia found that Mr. Keville meant forthwith to proceed to Mr. Molesworth's house, to endeavour to obtain admission to the chamber of the unfortunate, to have the satisfaction of seeing him, and haply of being able to afford him some comfort. Lydia eagerly asked permission of Mr. Keville to accompany him, which, with little hesitation, was granted; and she went to the interview with feelings of the same painful interest which one may have who is carried along to an execution, or to witness the agonies of the human being who is to be broken upon the wheel. When they arrived at Mr. Molesworth's house, they were shewn up stairs and ushered into the drawing-room without ceremony, where they found the wife and mother-in-law of the afflicted man with some young children. The whole house seemed in that disordered state which the absorbed feelings of its mistress, occupied with this terrible domestic calamity, and exclusive attention to the sick, had naturally allowed it to get into. Mr. Keville would have withdrawn upon seeing the ladies, knowing their disapproval (particularly that of his mother-in-law) of

Mr. Molesworth's religious sentiments and associates; but his amiable wife, knowing Mr. Keville's great worth, and respecting him for his sincerity, came forward and held out her hand, expressing gratitude for his visit to the house of mourning, and smiling sadly on Lydia as she led her into the room. They sat a few moments in silence, during which one of the children, who had observed Lydia sometimes at the house, along with the others of the people of — Street, when Mr. Molesworth had had religious parties, came forward, and, innocently recognising Lydia, was caressed by her. 'Do you know that lady, my love?' whispered her mother to the child, when it returned to her side. 'Yes, mamma, that is the very good lady from England, that used to come here with the poor-looking people to sing hymns with papa and Thomas Keatly the shoemaker.' This answer of the child was eagerly listened to and observed by Mrs. Molesworth's mother, who was walking backwards and forwards without deigning to notice Mr. Keville. And while that gentleman was making some inquiries regarding the sick, the old lady came forward, in consequence of what the child said, and, in a low and compassionate tone, addressed Lydia thus: 'Madam, I presume you are one of the religious people whom my unfortunate son-in-law used to be so frequently among?' 'I have often had the pleasure of meeting with Mr. Molesworth, madam,' said Lydia, as if prepared for some contemptuous speech. 'Young lady, I am sorry for you,' said the other, emphatically. 'Sorry for me, madam?' 'Yes, my dear young lady, sorry, very sorry, to see one of your appearance and connexions throwing away your happiness in the world and your reason with these people. God grant that you may never come to be in the condition of poor Molesworth!' 'I hope, madam,' said Lydia, shocked. 'I hope so too, young lady; but take an experienced woman's advice. Don't hope about the matter, but leave them; I say, leave them.' 'Mother,' interrupted her daughter, 'Mr. Keville wishes to see my poor husband. I suppose he may?' 'Oh! certainly,' said the old lady, with an expression of vexation, 'certainly, Mr. Keville! By all means, go up and see what a pretty state you have helped to bring the father of these unfortunate children to. It must be a pleasant sight to see, to be sure!' 'Mother, don't speak so,' said Mrs. Molesworth, mildly; 'I have enough to bear at present.' 'I will speak, I cannot help speaking, Mrs. Molesworth. You have always taken his part in his folly, in giving himself up to these enthusiasts. He loved them better, I believe, than his own wife and children.' 'Do not say so, mother! He was always a most affectionate husband to me,' said the poor lady, with tears. 'Ay, ay! he has brought himself and his family to a pretty pass, I think.' Mr. Keville walked humbly and sadly towards the door, and together with Lydia seemed glad to avoid this scene."

An interview with the maniac ensues; and it is a painful one to read—we give the ending.

"God have mercy upon this unhappy sufferer!" prayed Mr. Keville, as they retired amidst the shrieks of their lamented friend, which rung in their ears as they proceeded down stairs, until the very street-door was closed upon them. He continued more or less in this state, according to the account of his attendant, for two days, by which time he was unable to sit up; and on the third he fell into a stupor, which the physicians said was likely to have a fatal termination. Towards the

evening of that day, however, his eye cleared, he was propped a little up, and he seemed to busy himself silently in vain efforts to fold up one of his sleeves. 'Sir,' said his man, observing his efforts, 'I will help you.' 'You will help me!' he said scornfully; 'no, no, John!' he continued, shaking his head, and as if quite in his senses; 'you cannot help me—and in my case vain is the help of man!' And immediately he began to sing, in the clear and tasteful manner for which he was remarked when in health, the hymn beginning—

'Oh God! our help in ages past,
Our hope for years to come,
Our refuge from the stormy blast,
And our eternal home!'

This hymn he finished to the end; and when he got to the concluding lines,

'Be thou our guide while life shall last,
And our eternal home!'

he repeated them, as usual, his voice sinking into weakness, and faltering with emotion. A few relieving tears trickled down his worn cheeks. As he laid back his head, he had just strength to raise his hand to his head and cover his eyes with his long thin fingers; the corners of his mouth dropped gradually down; and the servant, after some time observing that he did not alter his position, approached the bed-side, and found that his master was dead!"

As we have observed, this book (which it is impossible sufficiently to illustrate by quotations within our compass) will assuredly incur obloquy among the friends of Missionary and Bible Societies; but with this our Journal has nothing to do. The author is, we believe, a Mr. Andrew Picken: he is evidently a young writer; but we hear that a small volume of Tales which he published about seven years since in Edinburgh met with considerable success, and was deemed a production of promise;—the hope of which being fully realised, the *Sectarian* (whatever may be its faults or imperfections) must serve rather to increase than lessen.

Constable's Miscellany, Vol. XXXVIII. A Personal Narrative of a Journey through Norway, part of Sweden, and the Islands and States of Denmark. By Derwent Conway, author of "Solitary Walks through many Lands." Edinburgh, 1829, Constable and Co.; London, Hurst and Co.

WE remember an artist calling one fine spring morning to bid us farewell, as he was departing for Norway. "Norway!" we ejaculated; "Italy you mean; what can take you to Norway?" "An empty portfolio, which must be replenished: now, in Switzerland, Italy, &c. there is not a tree or a cottage, let alone lake or valley, that is not as well known as the Saracen's Head. Two great causes take me to Norway—necessity and novelty." He was right; never did painter return with a more exquisitely-filled sketch-book. Mr. Conway set forth on the same principles, and has also found the advantage of somewhat deviating from the beaten track; for a more amusing little volume has not for some time attracted our notice. Evidently one of those accommodating tempers that suit themselves to circumstances, and whose very acquiescence is popularity, our traveller soon seems to have made himself at home, and his domestic sketches are very real pictures: we will just spend a day with him.

"Coffee was ready in the breakfast-room at seven, or earlier. Every one drank two small cups; but no bread, nor any other thing, was eaten along with it. At about half-past eight,

breakfast was served. It consisted of cold meat and game, sliced sausages of various kinds, bread, *gammel orské* cheese, butter, potted fish, coffee, wine, and cogniac. The bread was of three kinds; the common sour bread of the country, which I already said is liked by all ranks; a sweetish rye-bread, with caraway seeds, to me extremely palatable; and wheaten-bread, which was baked once a week. The last, however, was not used by the family unless when visitors, accustomed to wheaten-bread, were in the house, an occurrence somewhat rare; nor, indeed, is it considered any luxury by the natives, who seem universally to prefer rye-bread. All kinds of meat are cut for breakfast by the Norwegians into very thin slices, which are put between pieces of bread and butter. Dinner was served at one o'clock. This is a very tedious meal in Norway, for only one dish is placed upon the table at one time.

The following is a specimen of a Norwegian dinner:—Soup is invariably the first dish; and in this article of food the cookery of the Norwegians is extremely *récherché*. They make soup of every thing; of meat, especially game; of vegetables alone; of vegetables and meat; and of fish. It is upon this last soup that the cook exhausts her art. In every kind of soup there are a number of balls made of a hard biscuit, like an English rusk crushed, and mixed with butter, beat eggs, milk, and nutmeg. Without these balls a Norwegian would consider his soup to be uneatable. If the soup be of meat, fish is the next entry; but if it be fish-soup, then fish is omitted. Roast-meat follows, accompanied by a great variety of vegetables, pickles, and preserves. Among the former are generally peas, prepared as I have detailed in a former chapter, and cauliflower stewed in cream, and seasoned with nutmeg. All vegetables are prepared for the table in a very artful manner; they are never seen in their natural state. Cream is the universal sauce, and many other kinds of seasoning besides nutmeg are mixed with it. Of pickles and preserves there is always a great variety at a Norwegian table. This will not seem remarkable, when I come to speak of the occupations of the Norwegian ladies. After roasted meats game follows—never of less than two kinds; one soup generally being some species of wild duck; and the other, woodcock or pheasant. Puddings and pastry are not much in vogue; but various kinds of sweet cake are brought upon the table along with the dessert, which, in summer, comprehends every fruit, excepting the peach, known in more temperate latitudes. Immediately after dinner, coffee is introduced—tea follows about six, and at nine supper is served. Supper is almost as substantial a meal in Norway as dinner, and is composed of nearly the same materials. I have not only seen roast hare at supper, but roasted mutton, fish, and vegetables.

But the cooking in Norway is execrable; every thing swims in cream or butter; meat and vegetables are alike spoiled by this disagreeable addition; and I believe every traveller in Norway will admit, that for some time after arriving in the country, the digestive organs become deranged, and that, in most instances, a bilious attack is the consequence." However, the method of dressing peas meets his approbation. "Instead of boiling the vegetable in a quantity of water, and straining off the water, the Norwegians stew the peas with only as much water as prevents them from burning, and with a little butter and salt, and a few young carrots cut in slices. Nothing is strained off, the whole being served up in one dish.

THE mode of preparing green peas, I prefer either to the English mode or to the French *petit pois* sugared."

The condition of the fair sex might almost call upon the Society for the Diffusion of Useful Knowledge—to much does it require amelioration.

"Eating and drinking is the great business of the Norwegians, the sole occupation of many, and the chief luxury of all; and it is owing to this that the condition of the Norwegian females is so much lower than it is in any other of the European countries. I have heard an English lady, married and settled in Norway, say, (not from her own experience, but from what she saw around her), that she would rather be a maid-servant in England, than a *frou* in Norway.

"Women even of the highest rank in Norway are slaves; the greater, indeed, the establishment, the greater the slavery, which is precisely the reverse of the condition of females in England. Whatever the number of servants may be in the different departments of a Norwegian establishment, they are not entirely trusted to in any thing; the mistress of the house is still principal housekeeper, chief laundry-maid, and head cook. The cook-maid in Norway is not intrusted with any of the great operations in the art;—her duties are precisely those of the menial who in England is designated a scullion. If a *frou* be so fortunate as to have grown-up daughters, her duties are in some degree lessened. In a family with which I had constant intercourse, the two young ladies, *frøken*s, as young ladies of quality are called in Norway, had their alternate weeks in the cooking department; at least half of every day was spent in the kitchen; and the whole truth it was to do this duty, did not take her that at the dinner-table with the rest of the company, but appeared when dinner was finally concluded; and then with cheeks that would have made rouge be superfluous. I have mentioned elsewhere, that the duties of the ladies do not end with the cooking of dinner; the young ladies (if there be any) carry in the dishes, and if there be none, the mistress of the house. They also change the plates, wipe the knives, and perform every other office that is performed elsewhere by servants; but in Norway, a servant is seldom or ever seen in a dining-room. The Norwegians would, indeed, consider it disrespectful treatment, were they to employ servants to wait upon their guests. In one house where we occasionally visited, and in which there were no young ladies, two farmer's daughters, neatly dressed, always assisted the lady of the mansion to wait upon the company. A Norwegian lady might, indeed, be cited as a pattern to any English servant in the waiting department. She is constantly walking round the table, observing the wants of the guests, and supplying them. Nor does she, in general, partake of dinner with the party, but dines either before dinner is served, or after it is taken away. There is little of the comfort of an English dinner-table in this; but daily custom at length reconciles one to it. But the duties of a Norwegian lady are not confined to preparing the dinner and serving the guests. They have other domestic duties of a still more unfeminine character. When in Norway upon a subsequent occasion, and at a different season, I heard a young lady decline an invitation to pass a week with a friend, because it was slaughter-time. What should we think in England of a young lady who should make such an apology? But the apology requires explanation. Late in the

autumn, just before winter is expected to set in, the establishment of a Norwegian family (especially if distant from any great market) is a scene of extraordinary activity and preparation; for it is at this time that the winter stores are provided; and this implies, in the first place, the slaughter of a great many animals. Then follow the various culinary operations: the salting of meat, the making of different kinds of sausages, and meat-balls for soup, and black puddings and white puddings. &c. &c.; and for all the various sausages and puddings, the meat is grated, and beaten, and seasoned—operations that require no inconsiderable time and labour. In all these matters the young ladies are the chief actors; so that it can scarcely be wondered at that the *frou* refused an invitation because it was slaughter-time. But these duties are not only performed by ladies of all ranks in Norway, but are considered by them to be agreeable; and this season of slaughter and preparation is looked forward to as a time of more than common amusement. It can scarcely be supposed that these habits should not influence the tastes and feelings of the female sex. Every young lady, and consequently every woman in Norway, is a *connoisseur* in gastronomy. There is no subject upon which a stranger will find a Norwegian lady so much *au fait* as in this. Indeed, I do not know any subject upon which a *frou* or her daughters will descant with so much interest, or to which they will lend a more willing ear, than to the secrets of cookery, or the merits of a particular dish. It has been usual to judge of the civilisation of a country by the estimation in which the female character is held, and the accomplishments which it is thought necessary that females should possess. If by this test we judge of the civilisation of Norway, we shall place it low indeed in the scale of nations. That a woman—of whatever rank—should be a good housekeeper, is the *ne plus ultra* of female excellence. And so essential is this knowledge considered, that if a young lady have not sufficient opportunities at home to become acquainted with the female duties of mincing, seasoning, stuffing, and cooking, she is sent for a time to board in some family where she may have greater facilities of being initiated in these mysteries. It is scarcely necessary to say, that in all these matters there is a perfect correspondence of opinion between the one and the other sex. Without this, indeed, the domestic régime could not be as it is. In Norway, as in most of the continental nations, young ladies look forward to be, one day, at the head of establishments of their own. But that this prospect may be realised, such an education is necessary as will enable them to regulate their own household affairs according to established and approved usage. For even if a husband were contented to dispense with the usual accomplishments of a Norwegian wife, no servants could be found qualified to take her duties off her hands. Men in Norway do not in general marry to have a companion in a wife, but to have some one to manage his establishment, and perform those services which he cannot obtain from servants. I recollect hearing a gentleman with *Von* prefixed to his name, observe one day of a lady to whom he had just been paying a visit, 'I call her an excellent wife;' and upon inquiring the grounds of this opinion, it appeared that he had found the lady assisting her servants in washing clothes. The more I saw of Norwegian society, the less I found to admire in the mental attractions of the females. I speak of their acquired, not of their natural endowments; but so long as the

indulgence of the palate is looked upon as the *summum bonum*, those female accomplishments which tend to secure this will be esteemed the highest. A woman who attends to her household duties—and these begin when she is taught the first rudiments of education—has no longer time to devote to acquirements of a higher order. There is also another cause that contributes in no small degree to blunt those refinements in thought and feeling which, in England form the great charm of female society—the necessity for being so much in the society of servants, occasioned by the nature of female duties. It is scarcely possible to conceive, that a lady who passes the greater part of every day in the kitchen, should not carry away from it some taint of coarseness, if not of vulgarity. It is only justice to add, that against the character or conduct of the Norwegian ladies I have nothing to allege, either from observation or hearsay."

They dance well, however, and also possess a not very general accomplishment. "The ladies are in general quite able to manage a sail and rudder; nor are they indifferent rowers either, with an easy boat and light oars. I was not a little surprised at the first discovery I made of this talent. A young lady who resided with her family about six miles distant from the *Stor Soen Gaard*, called one morning, and staid dinner; and I, as in duty bound, walked down to the lake with her, when she took leave. Her boat was moored to a stone; and when I had unfastened the moorings, expecting to see a boatman make his appearance, she jumped into the boat, pushed off from shore, and was soon gliding over the water, under the united impetus of a light air that filled the small sail, and the strokes of two slender oars. But the reader must not fancy he sees another 'Lady of the Lake' in her fragile skiff; for, in the first place, the lady whom, out of compliment, I have designated a young lady, was of a certain age; and in the next place, the boat was not a skiff, but a clumsy boat; and the oars, although slender, were yet heavier and larger than any poet ever contemplated putting into the hands of a heroine."

There are some amusing legendary stories; and accounts of the universal belief in the "subterraneous people." "The idea the Norwegians entertain of this supernatural race will best appear from the stories that have been related to me. These I heard not in Osterdalen, but during my residence near Drammen, which has been mentioned already. The following was related to me by the housekeeper, as a fact that happened to her uncle when he was a boy. This boy was destined for a soldier; and being one day in the fields with his father, shortly before leaving home, he happened to drop a knife upon the ground, which, notwithstanding the most diligent search, he was unable to find. A little while after this he went, abroad, and after being absent fifteen years, returned to Norway. Travelling homewards one evening, when he was about twenty-five Norwegian miles from his father's house, he became extremely weary; and feeling at length exhausted with fatigue, he walked into a cottage that stood not far from the path, which was, at that place, a forest-path,—within which there was no one but a very old woman alone. After sitting for a little while, he observed a knife lying upon a table, precisely similar to that which he had lost fifteen years back. He mentioned to the woman the circumstance of his having lost a knife at that time; and said, "If this cottage were not so far from my own home, I should have believed this to be my own

knife, it is so like it." "It may well be like it," she replied, "for it is the very same; when you dropped it, it cut my daughter's leg, who was at that time running on the ground in the shape of a mole; and, therefore, I resolved you should not get it back, but immediately turned it into a worm, which my daughter brought away." It was then, said the housekeeper, that her uncle first discovered that he was in the company of one of the subterraneous people, who, upon this occasion, had assumed the human form. After sitting a short time longer, the soldier proposed to pursue his journey; but the little woman or witch insisted upon his staying till the morrow, assuring him he should lose no time in his journey by the delay; for if he would but promise that she should have the red cow, with the fine bells at its collar, she would undertake that he should be transported home without stirring a step. To this he answered, that having been fifteen years absent, he did not know whether they had any cows at home. She told him there were seven. He said he could not make any promise, for if there were cows, the cows were not his; he agreed, however, to stay all night. Next morning, while he and the old woman were at breakfast, a bell was heard tinkling. "O!" said he, starting up, "that bell reminds me of the days of my childhood; it is the very sound of the red cow's bell you spoke of yesterday." "Well may it," said she, "for I ordered the cow here this morning." A ter breakfast the soldier took leave; and on stepping out of the cottage-door, he found himself close to his father's garden.

"They are reputed not to have the power of transforming one animal into another, but only of diminishing the size of animals, so that they may the easier carry them under the earth. I shall add but one other short tradition, not only generally believed, but which has given rise to a common Norwegian proverb, 'Remember the Bishop of Drontheim's cattle,'—used as an injunction to keep a sharp look-out upon your property. The following is the origin of the proverb:—one summer, many summers ago, the Bishop of Drontheim sent his cattle up into the mountains to graze. They were the finest cattle in all Norway; and when the bishop sent them, he gave strict orders to those who had charge of them, upon no account to lose sight of them, as many of the subterraneous people inhabited the bowels of the Rooras Mountains. The injunction, never to lose sight of them, had particular reference to the belief, that so long as a human eye is upon an animal, the subterraneous people have no power over it. The bishop's cattle were accordingly driven to the mountains; and one day, when the herds were grazing, and the herdsmen were seated upon different spots, with their eyes fixed upon the cattle, a Norwegian elk, of most extraordinary size, was seen upon the highest part of the mountains. The eyes of the three herdsmen were withdrawn from the cattle, and were fixed, for a moment, upon the elk; and when they again looked to the valley, the cattle were no more to be seen in their natural stature, but reduced to the diminutive size of small mice. The bishop's three hundred cattle were running down the mountain-side, and before the herdsmen could reach them, they were all seen to enter a crack in the earth and disappear; and so the Bishop of Drontheim lost his cattle."

There is also a large assortment of demons: one of these will be enough.

"Each river has not its distinct demon, one

being supposed to preside over them all; and, like the mountain demon, he is invisible, excepting only his hand,—so at least says a tradition current on the shores of the Miosen lake; a tradition that has been the means of saving some raisins and flour to the dwellers upon the lakes. A fisherman residing on the lake Miosen wished to present a Christmas cake to the water-sprite, and went down to the lake with it in his hand; but when he found the water frozen over, he was unwilling to lay his cake upon the ice, because that would give the demon the trouble of breaking it. He therefore returned for a pickaxe, and hammered with all his might to break the ice; but he succeeded in making only a very small hole, quite insufficient to allow the cake to pass through. He laid the cake down upon the ice in despair, uncertain what to do, when a very small hand, as white as the snow on the hills, was thrust up from under the ice, and the cake instantly becoming of a size suited to the hole, the hand pulled it down. And now, to save trouble to the demon in altering the size of the cake, the offerings of the water-demon are always made of a size suited to the smallest hole that can be made in the ice. This tradition has also furnished a compliment to the ladies, of whom it is not unusual to say, 'She has a hand like the water-sprite.'

The narrative of the inland journey is very amusing; and altogether this little volume is well worthy of its place in the excellent collection to which it belongs.

Waverley Novels (II).

Our Notes on Scott's Notes.

WHEN we last week spoke of our telescope and our hurried view of the northern hemisphere, we might have claimed more merit than we actually did claim for the glass, though we have also to notice a want of distinctness into which our haste led us,—namely, our omission to notice that Mr. R—d's dream was a note on the *Antiquary*, and not on *Waverley*, which, however, would appear to most of our readers from the mention of Mrs. Grisel Oldbuck. As for the telescope affair, it may be affirmed that ours is preferable to that which discovered the Encke Comet, since we could discern not what was in existence, but what was yet to come,—just as if an astronomer could anticipate that other ominous comet, him, her, or it, of the 1832, which is foretold to come into operation when the present lease of the earth expires.

Our remaining extracts conclude the subject of Charles Edward, of whose interesting character our last concluded with a striking sketch.

"The following account of the skirmish at Clifton is extracted from the manuscript Memoirs of Evan Macpherson of Cluny, chief of the clan Macpherson, who had the merit of supporting the principal brunt of that spirited affair. The memoirs appear to have been composed about 1755, only ten years after the action had taken place. They were written in France, where that gallant chief resided in exile, which accounts for some Gallicisms that occur in the narrative. 'In the prince's return from Derby back towards Scotland, my Lord George Murray, lieutenant-general, cheerfully charged himself with the command of the rear; a post which, although honourable, was attended with great danger, many difficulties, and no small fatigue: for the prince being apprehensive that his retreat to Scotland might be cut off by Marischall Wade, who lay to the

northward of him with an armie much superior to what his royal highness had, while the Duke of Comberland with his whole cavalerie followed hard in the rear, was obliged to hasten his marches. It was not, therefore, possible for the artillirie to march so fast as the prince's army, in the depth of winter, extremely bad weather, and the worst roads in England; so Lord George Murray was obliged often to continue his marches long after it was dark almost every night, while at the same time he had frequent alarms and disturbances from the Duke of Comberland's advance'd parties. Towards the evening of the twentie-eight December, 1745, the prince entered the town of Penrith, in the province of Comberland. But as Lord George Murray could not bring up the artillirie so fast as he wou'd have wish'd, he was oblig'd to pass the night six miles short of that town, together with the regiment of MacDonel of Glengarrie, which that day happened to have the arrear guard. The prince, in order to refresh his armie, and to give my Lord George and the artillirie time to come up, resolved to sejour the 29th at Penrith; so ordered his little army to appear in the morning under arms, in order to be reviewed, and to know in what manner the numbers stood from his having entered England. It did not at that time amount to 5000 foot in all, with about 400 cavalerie, compos'd of the noblesse who serv'd as volunteers, part of whom form'd a first troop of guards for the prince, under the command of my Lord Elchoe, now Comte de Weems, who, being proscribed, is presently in France. Another part formed a second troop of guards under the command of my Lord Balmirino, who was beheaded at the Tower of London. A third part serv'd under my Lord le Comte de Kilmarnock, who was likewise beheaded at the Tower. A fourth part serv'd under my Lord Pitligow, who is also proscribed; which cavalerie, though very few in numbers, being all noblesse, were very brave, and of infinite advantage to the foot, not only in the day of battle, but in serving as advanced guards on the several marches, and in patrolling during the night on the different roads which led towards the towns where the army happened to quarter. While this small army was out in a body on the 29th December, upon a rising ground to the northward of Penrith, passing review, Mons. de Cluny, with his tribe, was ordered to the Bridge of Clifton, about a mile to southward of Penrith, after having pass'd in review before Mons. Pattullo, who was charged with the inspection of the troops, and was likewise quarter-master-general of the army, and is now in France. They remained under arms at the bridge, waiting the arrival of my Lord George Murray with the artillirie, whom Mons. de Cluny had orders to cover in passing the bridge. They arrived about sunsett, cloely pursued by the Duke of Comberland with the whole body of his cavalerie, reckoned upwards of 3000 strong; about a thousand of whom, as near as might be computed, dismounted, in order to cut off the passage of the artillirie towards the bridge, while the duke and the others remained on horseback in order to attack the rear. My Lord George Murray advanced, and although he found Mons. de Cluny and his tribe in good spirits under arms, yet the circumstance appear'd extremely delicate. The numbers were vastly unequal, and the attack seem'd very dangerous; so my Lord George declin'd giving orders to such time as he ask'd Mons. de Cluny's opinion. 'I will attack them with all my heart,' says Mons. de Cluny, 'if you order me.' 'I do order it, then,' answered

my Lord George; and immediately went on himself along with Mons. de Cluny, and fought sword in hand on foot, at the head of the single tribe of Macphersons. They in a moment made their way through a strong hedge of thorns, under the cover whereof the cavalerie had taken their station, in the struggle of passing which hedge my Lord George Murray, being dress'd *en montagnard*, as all the army were, lost his bonnet and wig; so continued to fight bear-headed during the action. They at first made a brisk discharge of their fire-arms on the enemy, then attacked them with their sabres, and made a great slaughter a considerable time, which obliged Comberland and his cavalerie to fly with precipitation and in great confusion; in so much, that if the prince had been provided in a sufficient number of cavalerie to have taken advantage of the disorder, it is beyond question that the Duke of Comberland and the bulk of his cavalerie had been taken prisoners. By this time it was so dark that it was not possible to view or number the slain, who filled all the ditches which happened to be on the ground where they stood. But it was computed that, besides those who went off wounded, upwards of a hundred at least were left on the spot, among whom was Colonel Honeywood, who commanded the dismounted cavalerie, whose sabre, of considerable value, Mons. de Cluny brought off and still preserves; and his tribe lykeways brought off many arms;—the colonel was afterwards taken up, and, his wounds being dress'd, with great difficulty recovered. Mons. de Cluny lost only in the action twelve men, of whom some having been only wounded, fell afterwards into the hands of the enemy, and were sent as slaves to America, whence several of them returned, and one of them is now in France, a sergeant in the regiment of Royal Scots. How soon the accounts of the enemies' approach had reached the prince, his royal highness had immediately ordered *mi Lord le Comte de Nairne*, brigadier, who, being proscribed, is now in France, with the three batalions of the Duke of Athol, the batalion of the Duke of Perth, and some other troops under his command, in order to support Cluny, and to bring off the artillirie. But the action was intirely over before the Comte de Nairne, with his command, could reach nigh to the place. They therefore return'd all to Penrith, and the artillirie marched up in good order. Nor did the Duke of Comberland ever afterwards dare to come within a day's march of the prince and his army during the course of all that retreat, which was conducted with great prudence and safety when in some manner surrounded by enemies."

We hope that our next telescopic vision will exhibit the little interesting satellite (or preface) which appears to precede the larger body; all that we could see of it enables us to state that it is extremely curious.

Thompson's Visit to Guatemala.

[Second notice.]

IN our former paper* on the subject of this pleasant volume, we were obliged abruptly to quit our traveller as he entered Sansonate, the capital of Guatemala, that new republican confederation of about two millions of souls. Having established himself at head-quarters, one of Mr. Thompson's first expeditions was to a village at no great distance, called Amatitlán, where a festival was held, and where, of course, he saw a good deal of the manners of the country.

* No. 632.

"As we approached (he says) the village of Amatitlán, the country became more and more interesting. From the summit of a lofty eminence, which our animals had gained with laborious exertion, the prospects which opened before us were enchanting and terrific, like the charms of some beautiful female maniac. On our right were the mountains rising abruptly from the deep embedded valleys at their base: here there were corpses hanging over craggy ravines, whose abysses appeared bottomless, as hid from our inquiring gaze: and there, plots of ground delicately cultivated, and smiling with the harvest. On the left, I was still more struck with the appearances which the prospect presented to our observation. It was as if, in the midst of her happiest efforts, Nature had fitfully thrown up her task, prodigally wasteful of materials so choice and abundant. Amatitlán, the village to which we were going, was situated amidst forests of trees of the most exhilarating verdure. Its red-tiled houses, awakening the ideas of peaceful domesticity and social comfort, heightened the refreshing effect of the scene. Above the whole, a lofty woody mountain flung its partial shade over the fair face of the lake which reposed at its feet. The descent of the wood seemed difficult, and would have appeared impossible, but from the reflection that the journey down it was practicable, because it had often been made. As we descended, we came closer and closer to the object we were pursuing, and, different from most other objects of human pursuit, we found, that, when attained, the more interesting it proved."

The Guatemalian women, we are also assured by the author, are far superior to those of Mexico in beauty: indeed, he betrays, on some occasions, that either their charms or the climate warmed him exceedingly. Among the favourite amusements, cock-fighting is described; and the *finale* of one of these combats is thus characteristically given:—

"The spectacle was scarcely concluded before 'the rainy season began.' During the whole of my journey I had scarcely experienced one drop of wet; and now the rain poured down in such torrents, that I could hardly cross the way without being nearly drenched. There was no carriage or conveyance in the place, and hardly an umbrella, which was a great oversight, as the inhabitants ought to have learnt, without any almanack to tell them, to 'expect much rain about this time.' Indeed, the regularity and precision with which these showers fall, when they once begin for the season, are so great, that by the assistance of a tolerable watch and a good horse, you may always escape them. The present tornado, unexpected as it was, seemed very little to disarrange or inconvenience the party assembled: some walked quietly through it, whilst others laughed and chatted in the passage and doorway of the house, as if prudently, though inconsiderately, waiting for its abatement. The inanimate part of creation was differently affected: the parched ground bubbled and sputtered like a drunken toper; the lanky banana crouched down and riggled like an invalid in a shower-bath; and the red tiles were deserting their ranks one by one, like bad soldiers, leaving the way open to the enemy. Whilst the squall was at its height, I saw two horsemen come dashing up the street at full speed: they stooped at the door of the cock-pit: they were each covered with a large mantle, and, without alighting, had caught up in their arms a damsel a-piece, who adjusted themselves with wonderful activity on the pommels of the saddles. It

was still raining profusely, but the mantles were thrown round the young ladies with such skill, and so completely enveloped them with their gallant knights, who darted off again at a gallop, that I concluded they must have reached their homes in an instant, and probably without much inconvenience. The gentlemen when they had set down, returned to take up in the same manner, till the whole of the party was thus disposed of, or had found other means of reaching their respective abodes. There was something both romantic and classical in the sight. Every body has heard of the knights of old carrying off their inamoratas, and of the Romans stealing away their Sabine wives; but few can have an idea of the grace and facility with which the operation may be performed, who has not witnessed the above specimen of Guatemalian horsemanship."

A future play-house scene will further illustrate the history of diversions and climate.

"The play was something about the 'Glory of Independence,' and abounded with allusions which an English auditory would term 'clap-traps.' The acting was, however, equal to any I had seen at Mexico; and the audience altogether appeared to evince as much indifference to the pieces represented as the best-bred company in any European theatre could affect to do. I took suckets, as Johnson has it, with the young ladies; and was rather pleased than otherwise with the performance. We had also some glasses of champagne occasionally handed round to us, which excited, as I thought, the envy of some gentlemen in the pit, who had been smoking incessantly, and might consequently be rather thirsty. There was a scene, not badly drawn, representing the temple of the sun. One of the actors was describing the indestructible glory of Anahuac, and had just said that its brilliance should never be dimmed, when a tremendous shower, accompanied with thunder and lightning, took place. The rain dashed down in torrents on the crazy theatre, and spouted in volumes through the crevices of the broken roof. The audience were not to be affected by words, but, acknowledging that facts were stubborn things, mustered themselves indiscriminately in patches in the pit, or jumped into the boxes to escape the effects of the tornado. There is little encouragement given to plays at Guatemala; probably not more than was found in England previously to the time of Elizabeth."

Having returned to the capital, we find many notices worthy of extract; but our present paper is necessarily so circumscribed, that it must only be considered as keeping the subject of this interesting volume alive for future reference.

Histoire de l'Université. Par E. Dubarle.

WE cannot refrain from bringing these attractive annals again under the notice of our readers; and resume our selections by putting it to the clerical and medical throng of university aspirants whether the youthful Latimer of our days would be willing to submit to the drudgery of sixteen years of theological studies before he could contend for a bachelor's degree, or the stripling Galen to nine years' learned durance before he were allowed to grace his paternal cognomen with an M.D.? Such things were in the fourteenth century, when the classes opened at five in the morning, and the scholar was enjoined to hear lectures sitting upon the floor, not upon stools or elevated seats, which, as the bull of Urban V. sets forth, "are calculated to feed the pride of youth." In this matter, Philip Augustus deserved well

of the city of Paris when he bestowed upon the Hôtel-Dieu "all the straw of our chamber and mansion at Paris, each time that we may quit that city to sleep elsewhere;" for it must be almost superfluous to remark, that the luxury of carpets succeeded to the garnishing of our forefathers' floors with rushes or straw.

It was in the same age that the devotion of Clement VI. to the frailer sex brought down upon a sect of wretched enthusiasts the exterminating thunders of the church. "At a time when the foundation of numerous colleges," says our author, "was enhancing the splendour of the University of Paris, the emperor Charles IV., who had been educated there, raised up a foreign rival of its glories in the year 1348, when he founded the University of Prague, in his hereditary dominions of Bohemia. The object of this institution was to dispel the darkness which prevailed throughout that portion of the empire, and had given rise to a thousand religious systems and heresies, which the unenlightened multitude were eager to embrace, and for which no antidote had been devised but the fire-brand and the sword. A sect, which had sprung up and sunk into abeyance in the twelfth century, was revived by the misfortunes of the times, and at that period set Germany in an uproar; this was the sect of the Flagellants, amongst whom were a vast number of females: these deluded beings conceived they could appease the Divine wrath by offering corporeal sufferings in expiation of their offences, and spread themselves through the towns and villages, armed with whips and other instruments of torture, with which they lacerated themselves in a piteous manner. But their superstitious practices were aggravated by their intolerance, and led them to the commission of frightful excesses. The University (of Paris) had condemned them in 1349: Philip forbade them to enter France, under pain of death; and the thunders of the church were not slow in overtaking them. So austere a sect as this could not be tolerated by a pontiff whose gallant manners were the subject of public scandal. 'When he was an archbishop,' says an old historian, 'he was perfectly at ease among women; and when a pope, took no pains to conceal or restrain his weakness.' Ladies of rank frequented his chamber as assiduously as prelates; amongst others was a certain Countess de Turenne, on whom he conferred a multitude of favours; and when he was sick, he was tended by females.' This same Clement could not do otherwise than erect the battery of a bull against the Flagellants; and they speedily made their exit."

The University of Paris was accustomed to use a most effectual means of upholding its authority and maintaining its political influence; for on every occasion where it found itself likely to lose the support of the government, whether that occasion were an equitable or an arbitrary exercise of its power, it either threatened, or actually proceeded, to close its courses. Nor was it ashamed openly to proclaim this alternative as an essential principle of its policy. It possessed in a supreme degree the *vis animi* peculiar to corporate bodies; and publicly declared in 1281, "that it would shut its halls whenever the interest of even one solitary member of its body should require it; telling Philip the Bold, at the same time, 'It is the force of your prayers, sire, and our respect for you, which will induce us to order the masters to resume their courses; though it is, nevertheless, under a firm reliance that you will preserve our privileges,'" &c. It applied the same irresistible argument in its contest

with the French church, at the close of the thirteenth century, when it insisted upon a more equal distribution of ecclesiastical benefices. "This distribution had been intrusted to prelates named by the king, and it would appear that justice was not at all times the dictator of their choice. 'They gave exclusive preference,' says Barbazan, 'to their relatives and friends, who were raised to canonries before they knew how to read; nor could anything be obtained from them, excepting by members of their own families, by persons who could afford to purchase their favours, or by dint of consummate hypocrisy.' The University, being heartily sick of the contest, closed the whole of its courses, and did not re-open them until it had carried its point." A similar expedient proved similarly efficacious on the following remarkable occasion in the year 1408. "The provost of Paris, le sire de Tignonville, had caused two students, who had been guilty of the greatest atrocities, to be arrested, and offered to deliver them over to the judicial power of the University; but that body disclaimed all connexion with two such miscreants, and they were consequently condemned and hung. The Duke of Burgundy, who then reigned supreme, was a secret enemy of the sire de Tignonville, and could not forgive the active inquiries he had set on foot into the Duke of Orleans' assassination, of which those inquiries had compelled him to avow himself the author. Under these circumstances, the Burgundian raised up against him the students of the Norman nation, who were his devoted partisans; for, imitating the example set him by Duke Philip, his father, John-sans-peur had induced a party in the University to espouse his cause. This party, therefore, set about exasperating the minds of their brethren, and impelled them to protest against the violation of their privileges. An official interregnum of all lectures and studies was the consequence; and as the government appeared to sanction the provost's conduct, the University in a body sought an audience of the king, and told him, that, as justice was denied them, and their franchises were invaded, the king's daughter, to whose honour such insults had been offered, would depart like a wandering lamb, and seek an asylum elsewhere. The rector added, in order to shew she was neither ungrateful, nor unmindful of the numerous benefits which the king had conferred upon her, that she had now come to bid him farewell. 'You shall not depart,' answered Charles; 'we will not allow our well-beloved daughter, whom our ancestors have fostered so long and so paternally beneath the shade of the lily, to transfer her affection to any other parent; so far are we from desiring to retrench your privileges, that we are disposed, on the contrary, to extend them; and, as regards the business now in hand, you shall receive that satisfaction which children have a right to expect from their father.' In truth, exemplary atonement was made to the University. A decree of the council declared that the provost had acted with precipitancy and imprudence, ordered him to cut down the bodies from the gallows with his own hand, to kiss the mouth of each of them, to pay the costs of the train which was to be headed by the executioner, clothed in a surplice, and to bring up the procession with all his household: he was afterwards dismissed; whilst the bodies of the two robbers were interred in the convent of the Mathurins, and honoured with a monument, on which they were represented swinging from a gibbet, with an inscription, recording the circumstances of the occurrence, subjoined."

Contemporary writers tell us, that no event created so much uneasiness in Cromwell's mind as the publication of Allen's biting vindication of tyrannicide; and well may the soul of the canting regicide have quailed within him, when his countrymen were bidden to open the page of that holy book, "besoiled by the dung of the usurper's mouth-honour," and they would read, "as thy sword hath made women childless, so shall thy mother be childless among women." But Allen's doctrine was not then broached for the first time; and we proceed to shew, that a learned scion of the Parisian University had maintained, nearly three hundred years before, that, in certain cases, *killing was not murder*.

"From the unhappy commencement of the king's (Charles VI.) illness, France fell into a state of frightful anarchy, and the sceptre became a bone of contention to the violence of political factions, who, in the absence of a competent owner to wield it, snatched it from time to time out of each other's hands. The Duke of Orleans, the king's only brother, had just fallen by the daggers of assassins, whom the Duke of Burgundy himself had employed; and yet, so omnipotent was his influence at this period, that he did not hesitate to avow himself their abettor. Had not the page of history minutely recorded the circumstance, and the very terms made use of, it would have been difficult to have esteemed as otherwise than apocryphal, the speech delivered by his apologist on the 8th of March, 1408, before a large assembly, at which the dauphin presided in the king's absence, and in the presence of earls, barons, knights, the rector of the University, and a host of doctors and citizens. The orator was a cordelier, one Master John Petit, a doctor of the University, whose accessibility to golden persuasions induced him to enter upon a justification of this foul deed: 'Now,' said he, 'his grace the Duke of Burgundy, aware that my means were scant, hath made me partake every year of a good and great pension, whereby I might frequent the schools; from the which pension I have drawn a great part of my expenditure, and shall hereafter find it similarly available, if such shall continue to be his grace's pleasure.' After this exordium, worthy of the 'cunning livery of hell,' he advanced twelve reasons, in honour of the twelve apostles, shewing how allowable and even glorious it was to slay a tyrant, and calling upon the king to recompense the Duke of Burgundy in the same way that God recompensed 'Monseigneur St. Michael, the archangel, for having slain the devil: and it is,' continued he, 'both rightful, reasonable, and equitable, that every tyrant should perish by open force or secret blow—the proper death of disloyal tyrants; and it is not only lawful, but also honourable and meritorious in every subject, and still more so in his majesty's relatives, to kill, or cause to be killed, a disloyal tyrant and traitor; ay,' added he, 'it is a courageous thing, and a religious duty, and a sacrifice beyond all others pleasing to the Lord!'" The University itself, which sided at that time with the Burgundian party, did not raise its voice against this horrible doctrine, though it had the good taste to renounce the part it had taken, at the Council of Constance, six years afterwards. "The Duke of Burgundy himself, who was an object of terror to every soul breathing, came out of the ordeal with flying colours; and the king presented him with letters patent, in which he declared that he held him in singular esteem."

But there is a revolution in the affairs of the prince as well as the peasant; and scarce eight

years more had rolled over his head, when the omnipotent John of Burgundy found it advisable to turn his back upon Paris as a fugitive, and the multitude "whose bleared sights were lately spectacled to see him," were ready to have plunged their knives in the throats of his adherents. On the 16th of September, 1418, the parliament, yielding to the representations of the University, issued a decree, "prohibiting any one from putting another to death, or even from publishing that an individual could lawfully slay another party without the sanction of justice!" The monarch himself ate his late words, and condemned the Duke of Orleans' assassination; the University cried Marantha! over the "killing-no-murder;" tenets of John's apologist; the bishop of Paris pronounced sentence upon them before a numerous auditory; the apology itself was burned by the hands of the common executioner; and the body of Master John Petit, who had been called to his last account at Heedin, was ignominiously disinterred!

We will give the conclusion of this article in an early Number.

SIGHTS OF BOOKS.

First Steps to Astronomy and Geography. With Plates. 12mo. pp. 386. London. Hatchard and Son.

A CLEVER and well-digested book of instruction, in the form of dialogue; the plates neat, and the illustrations plain and clear.

The Art of Latin Poetry. 8vo. pp. 302. Cambridge, W. P. Grant; London, Simpkin and Marshall.

A VERY agreeable and useful manual, founded on the well-known work of Jani, by a member of the University of Cambridge. Written in English, it is far more likely to inform and benefit the student than any production in modern Latin; and it has besides the merit of really improving the original, both by omissions and additions. Altogether it is a volume of pleasant instruction, which we can cordially recommend.

The Magic Fountain, with other Poems. By Robert Story. 12mo. pp. 186. London, W. Croft.

LOCAL and personal, or rather inoffensively egotistical, there is nothing in these effusions to have recommended them to publication for general readers.

A Walk on the Coast of Dorsetshire, from Lyme to Lulworth. By T. H. Williams, of Exeter. W. C. Pollard, Exeter. 1828.

A PLEASING little descriptive volume, illustrated by nine etchings, chiefly outlines. Mr. Williams announces his intention of continuing his Walk to the extremity of the county; and promises a particular account, accompanied by plates, of the coal money,—a species of counters, bearing the marks of the lathe, formed from the mineral of the district, and used, in remote ages, either by the Druids in their superstitious rites, or by the natives in their commercial intercourse,—which has lately been discovered on the cliffs of Kimmeridge, beyond Lulworth.

The British Preserve. Drawn and etched by S. Howitt. T. Griffith.

WE noticed with the commendation which they deserved several of the early Numbers of this pleasing work, which is now completed, and published as a whole. It contains between forty and fifty etchings of quadrupeds and birds, more particularly of such as are the

objects of the sportsman; and it is accompanied by descriptions, illustrative of their habits, manners, &c. The plates are exceedingly well executed, exhibiting, with great accuracy, not only the forms and character of the various subjects, but the scenes to which they respectively love to resort. The descriptions, though concise, are satisfactory; and are written in a very simple, unaffected manner. It is a book that must be amusing to all readers; and will be especially interesting to the younger classes of the community.

Autographs of Royal, Noble, Learned, and Remarkable Personages conspicuous in English History. Engraved under the direction of Charles John Smith; accompanied by concise Biographical Memoirs by John Gough Nichols. Parts IX. and X. J. B. Nichols and Son.

CONTAINING together 109 autographs, and as many notices; the latter comprehending (as in the preceding portions of the work) a body of information of the most curious, entertaining, and instructive character.

Engraved Illustrations of Ancient Arms and Armour; after the Drawings, and with the Descriptions, of Dr. Meyrick. By Joseph Skelton, F.S.A. Part XVII.

THE plates and the descriptions in the present Part of this interesting publication are of—"the Target of Francis I., A.D. 1526;" "Italian Buckler and Antelaces;" "Bills and a Gisleme;" "Tartar Arms;" and "Armour of a Knight, A.D. 1360." In the continuation of the preface, Dr. Meyrick states several circumstances which had rendered the plates in his "Critical Inquiry" unavoidably imperfect and unsatisfactory.

ARTS AND SCIENCES.
SOCIETY OF ARTS.

APRIL 28th.—The subject of this evening's illustration was the manufacture of paper. The Secretary began by stating that the leaves of trees were probably the first vegetable substances used for writing on: the leaves of the Cumean sibyl, and the oracular leaves of the oaks of Dodona, were of this description. In India, and other tropical oriental countries, the leaves of various kinds of palm are even still employed for this purpose; specimens of which were exhibited. Another vegetable substance used in the state in which nature offers it, is the bark of trees; *liber*, as the Romans called it, whence our English word *library*. Specimens of birch bark, adapted to this purpose, were shewn. The bark of the beech was employed by the Teutonic nations: in the language of these people the beech was called *bock*, whence we derive our word *book*.

The Egyptians, inhabiting a country not adapted to the growth of trees, appear never to have used bark for writing on. An aquatic plant, abounding in the marshes of Lower Egypt, and known to the Greeks under the name *βύβλος* (biblos), was first remarked for the toughness and pliability of its stem, which caused it to be employed for cables and for matting. It afterwards, under the name *παπύρος* (papyrus), became celebrated as the material from which the Roman empire for several centuries derived its supply of paper. A description was given, from Pliny and other ancient authors, of the different varieties of paper made from papyrus, also of the method of making it in Egypt, and of re-manufacturing it at Rome. Specimens of the stem of the papyrus from Egypt and from Sicily were

exhibited, and a Greek MS. on a roll of this material.

In the seventh century cotton paper was introduced from the East into Europe, and superseded the use of papyrus. We are indebted for its introduction to the Arabians, who appear to have become first acquainted with it by their conquest of Samarcand, at that time the great centre of communication between China and the other parts of Asia. Paper, therefore, made from vegetable fibre appears to be one of the many ingenious and useful inventions that have arisen in China. The chief material of paper in China is the fibrous bark of the paper mulberry, of which the less civilised tribes of the Indian archipelago, and of the Polynesian islands, prepare a kind of cloth by beating the bark so as to separate its fibres in some degree from each other. Several very curious specimens of this cloth were exhibited. A paper for writing on is prepared in Java from the same bark, and by a modification of the same process; of which an interesting specimen was shewn.

The manufacture of paper in China was then described, and illustrated by a very copious series of specimens, presented to the Society by one of their members, J. Reeves, Esq. of Canton.

In Nipal, and the northern parts of India, paper is made in the same way as in China, but from the fibrous bark of a species of daphne, which, from its acrimony, has the invaluable property of not being attacked by the white ant. Specimens of daphne bark, of paper made from it in Nipal, and of the same paper re-manufactured in England, were exhibited,—as well as of a very remarkable paper made in Cashmeer.

Early in the fourteenth century, the application of linen rags to making paper was discovered. The superiority of this paper over that made of cotton was immediately perceived, and the use of this latter was soon abandoned.

The Secretary then proceeded to a detailed account of the various steps in the manufacture of paper as commonly practised in this country, illustrated by specimens; and concluded by an account of the very ingenious machine invented by M. Fourdrinier, and perfected by other artists, by means of which paper may be made of almost any length, and with a rapidity hitherto unknown.

The specimens exhibited, besides those belonging to the Society, were furnished by the East India Company, the Royal Asiatic Society, Mr. Showell, Mr. Donkin, Mr. Cooper, Mr. Anderson, curator of the Apothecaries' Garden at Chelsea, and Mr. Solly.

In the account which we gave the week before last of the lecture on glass delivered at the Society of Arts, the name Hodges has been printed by mistake, instead of Hedges. We also omitted to notice some very curious specimens of glass corroded or decomposed by long exposure to the air, being part of a window in the church of St. Neot's in Cornwall, more than 300 years old. These specimens were furnished by Mr. Hedges, under whose direction the whole of the windows of that church have been restored.

COLLEGE OF PHYSICIANS.

ON Monday evening another conversazione was held in the hall of the College—Dr. Maton in the chair. The first paper, read by Dr. Macmichael, was entitled, "observations on the pestilential character of the plain of Ephesus." The author of this paper, Dr. George Hall, one of the Radcliffe travelling Fellows

from the University of Oxford, gave a very interesting account of a journey he had made from Smyrna, to visit the ruins of ancient Ephesus. He described the marshy plain, which is watered by the Cayster, still, as in the days of Virgil, the favourite resort of the sea-bird and water-fowl. It is surrounded on all sides by ridges of lofty hills, except to the N.E., where a narrow interval gives passage to the Cayster: there is no ventilation, and the sea breezes are shut out by the ridges of neighbouring mountains. In the summer, the sun acting upon the waters of an almost stagnant river and its marshy shores, the air becomes charged with pestilential vapours, and the inhabitants suffer from the most virulent *miasma*. Dr. Hall on his return to Smyrna did not feel the effects of his excursion for four or five days: then, indeed, the symptoms of a most alarming fever came on, from which he had the narrowest escape. The chief feature of the disorder was the affection of the head, requiring repeated bleeding, and the use of large doses of calomel: towards its close it assumed a remitting type, and was then treated with quinine.

The second paper was a very learned dissertation by Dr. Badham, Professor of Medicine at the University of Glasgow. In this he attempted to prove, that the *loimos*, or plague, of Athens was not at all like the formidable disease to which the name of plague is now given; but rather resembled the fever of the Mediterranean, or typhoid yellow fever of Gibraltar and Cadiz. The paper was full of classical allusion, and shewed that the author was quite master of the lore of antiquity, the possession of which has always been the ornament of the professors of the science of medicine.

On the upper table were placed different preparations of vegetable substances, such as morphine, &c., which have been lately introduced by the French chemists. The assembly was numerous attended.

LYNNÆAN SOCIETY.

SINCE our last notice under this head, two meetings have been held. At the former, Lord Stanley, M. P., the president, was in the chair. The paper read was entitled, "on the origin of buds in the vegetable structure," by the Rev. Patrick Keith, F.L.S. At the last meeting, A. B. Lambert, Esq. vice president, was in the chair; and the continuation of a "descriptive catalogue of Sicilian plants," by John Hogg, Esq. M.A. F.L.S. was read.

MEDICO-BOTANICAL SOCIETY.

THE tenth (we believe) anniversary meeting of this Society was celebrated at the Thatched House Tavern, on Saturday last—the Right Hon. the Earl Stanhope, president of the Society, in the chair, supported by Count De Moltke, the Danish ambassador; Count Ludolf, the Neapolitan ambassador; Mr. Barbour, the American minister, and Baron Cetto, the Bavarian minister; Mr. Rocafuerte, the Mexican minister; the Spanish Consul-General; the American Vice-Consul; Col. Sir John Scott Lillie, Bart.; the Secretary of the Asiatic Society; Messrs. J. Capel, M.P., and W. A. Mackinnon; Drs. Price, Sigmond, Ainslie, and Gordon; and about sixty other gentlemen, friends to the Institution.

The noble President, from the chair, very ably advocated the cause of the Society in two or three speeches during the evening, as did also the American minister and several other gentlemen. On the table were placed a great variety of very pleasing exotics, obtained, by

favour, from the King's gardens at Kew. A beautiful palm overhung the president's chair.

After several appropriate toasts were drank, Mr. Frost offered some remarks upon the plants on the table; soon after the delivery of which the President left the chair, followed by the foreign ministers.

ZOOLOGICAL SOCIETY.

THE annual meeting of this body took place on Wednesday; Baring Wall, Esq. in the chair. Mr. Vigors read a very satisfactory report on the Society's proceedings during the past year. This report stated that the Society had obtained a charter; that thirty-three acres of beautiful ground, together with a farm, in the vicinity of Kingston, had been disposed of by the corporation of that town to the Society, upon very advantageous terms; seven acres and a half of the whole number having been bought by the Society for 1000*l.*, the remainder let for twenty-one years, with a right of renewal. The establishment at Kingston had been obtained in order that the beasts and birds belonging to the Society might breed in peace and safety. From the report it also appeared that the Society's finances were in a very prosperous state, and that 112,000 persons had visited the Gardens in the Regent's Park during the year. The report was ordered to be printed, together with the charter, and a copy of each given to the members.

After some good-humoured discussion about the death of a lion, bear, &c., the following persons were chosen to fill up the vacancies in the council; the other officers stand as heretofore.

W. J. Broderip, Esq. *vice* H. T. Colebrooke, Esq.; Rev. Dr. Hodgson, Dean of Carlisle, *vice* Viscount Gage; J. W. Hull, Esq. *vice* Dr. Goodenough; R. H. Jenkinson, Esq. *vice* Dr. Raffles; Marquess of Lothian, *vice* Sir R. H. Vyvyan, Bart.

DUTCH VOYAGE IN THE SOUTH SEA.

Frankfort, April 3d.

THE relations of our countryman Dr. Henry Macklot, who is gone to the Dutch colonies as naturalist, have lately received letters from him, the last of which is dated Amboyna, Sept. 18, 1828. He passed the summer in a voyage to New Guinea, and along the coast of that inhospitable country. The expedition left Amboyna on the 22d of April, proceeded first to the Island of Banda, from thence set sail for New Guinea, and after a tedious voyage cast anchor on the 21st of May at the mouth of the river Dourga, on the south-west coast. Here they had a skirmish with the natives, in which two officers were mortally wounded, and several of the savages killed. They then steered along the coast northwards, and after encountering many hardships and accidents, entered a bay, which they named Triton's bay, after one of the ships—situated in 3° 33' 30" south latitude, and 134° 5' longitude. Arrangements were here made for forming a colony, and building a fort for its protection. The 24th of September, being the birthday of his Majesty the King of the Netherlands, was fixed for the taking possession of the land, in the name of this sovereign. Dr. Macklot describes it as a mountainous and extremely fine country. The crew suffered much from disease.

On the 30th of August they again set sail, and on the 6th of September reached Amboyna. From hence Dr. Macklot intends to proceed to Timor, where he will pass several months in the service of the government, and calculates

to return to Java in a couple of years. He is at present much engaged in arranging his collections and observations, which will be published hereafter.

CELESTIAL PHENOMENA FOR MAY.

THE bright constellations that ornament the wintry sky are rapidly gliding into the effulgence of the solar beams, while those which indicate the progress of the vernal and the advance of the summer seasons are gaining on the celestial canopy. Shortly after the decline of the orb of day, Orion may be feebly seen, bowing his gigantic form towards the ruddy west; the Bull bathing his forehead in the lingering rays of parting light; Castor and Pollux, with the planet Saturn, reclining on the glowing tinge which marks the boundary of twilight; farther removed from "the golden lightning of the sunken sun," the Lion shines with splendour, dividing the empire of the mid-heaven with the Virgin and Boötes; in the south-east the Scorpion ascends—the dreaded sign of the votaries of astrology as the omen of every direful calamity. But, beneficent or baleful, these starry symbols of the incessant revolutions of the rolling world are associated in the mind of the student of nature with delightful recollections—the bright star Regulus, with the odorous train of Flora; Spica Virginis, with the harbingers of the beauty of summer and the bounty of autumn; Lucida Lyra, with the harmony of the groves; and even Antares, the red and inauspicious star of Scorpio, with the daisied meadow, the ripening harvest-field, and dewy eyes.

Lunar Phases and Conjunctions.

	D. H. M.
☉ New Moon in Aries	2 19 57
☽ First Quarter in Leo	10 7 36
☾ Full Moon in Libra	18 7 48
☿ Last Quarter in Aquarius	25 8 19

The moon will be in conjunction with

	D. H. M.
Mercury in Aries	2 8 52
Venus in Aries	2 11 20
Mars in Taurus	5 9 0
Saturn in Cancer	8 14 0
Jupiter in Scorpio	19 9 54

4th day—Mercury in conjunction with Venus. 7th day, 13 hrs. 45 min.—in superior conjunction, passing to the south of the centre of the sun's disc. 20th day, 8 hrs. 15 min.—Venus in superior conjunction, after which this beautiful planet will be hailed as the evening star.

Mars in Taurus is too near the sun for observation. Jupiter, owing to his great southern declination, is not in a favourable position for long-continued observation, the meridian altitude being only 17°: it may easily be distinguished by its brightness and vicinity to the two bright stars in the head and body of the Scorpion, with which it forms an unequal triangle. It rises S.E. by E. at the following times respectively:—

D. H. M.	D. H. M.	D. H. M.	D. H. M.
7 9 45	13 9 19	19 8 52	25 8 24

Eclipses of the Satellites.

	D. H. M. S.
First Satellite	2 13 16 30
	9 15 10 40
	18 11 33 19
	26 13 27 35

	10 18 41 49
Third Satellite	21 10 45 6
	28 14 43 16

Saturn will be visible a short time after sunset, and Uranus before sunrise.

SOLAR SPOTS.—The sun's disc has latterly been very copiously covered with spots. 20th ulto. twenty-eight of considerable magnitude were observed, besides several minute ones in the vicinity of the larger. These spots extended from the eastern quite across to the

western edge, and occupied a zone nearly sixty degrees in breadth. The bright mottled appearance, called facule, was very conspicuous towards the western regions, covering large portions of the sun's surface. 29th April—numerous spots are still traversing the disc, nearly all of which are to the north of the sun's equator. J. T. B.
Dorchester.

LITERARY AND LEARNED.

ROYAL SOCIETY.

THURSDAY, April 30. The President in the chair.—Lord De Dunstanville, David Pollock, Esq., and W. Pole, Esq., were severely introduced, and took their seats for the first time as Fellows. Two curious and exceedingly interesting papers were read: the first was "on the respiration of birds," by Messrs. Allen and Pepps; the second was the report of a chemical examination of Thames water, by Dr. Bostock. Amongst the donations we noticed the cast of a medallion of the head of Leonard Euler, presented by the Rev. John Hewlett, and esteemed a faithful likeness of that celebrated mathematician; the cast was executed at Petersburg in 1793, by Rachette;—Flora Batava by the King of the Netherlands; a number of lithographic plates by Hulmandel; Count de Montlivault's Cosmological Essay and Letters; and a very rare copy of Tycho Brahe's Mechanical Principles of his System of Astronomy, presented by Professor Rigaud, of Oxford.

At a late meeting, a paper was read, entitled "astronomical observations made in the observatory at Paramatta;" by Charles L. Rümker, Esq., communicated by the President.—The object of this memoir is the determination of the right ascension of two circum-polar stars of the southern hemisphere, by a direct comparison with the sun, independent of the transit, and of the solar tables. This comparison is made by deducing the superior and inferior culminations of the stars from an uninterrupted series of equal altitude, for the space of a month about the time of the equinox. This gives the difference of right ascension between the sun and stars. Finally, the distance of the sun from the equinoctial point is derived from the observed declination of the sun on those days. In an appendix, the author subjoins a list of the stars of which he ascertained the right ascensions by equal and absolute altitudes.

ROYAL SOCIETY OF LITERATURE.

THE readings of the Society have lately consisted of portions of a valuable memoir, "on the use of the ancient Cycles in settling the differences of Chronologists." This memoir is by Dr. Nolan. An outline, embracing the readings of March 4th and 18th, and April 1st and 15th, will be given in our next Number.

The annual meeting of the Society was postponed by adjournment last Thursday, on account of the Drawing-room, till Thursday next at two o'clock, when the Marquess of Lansdowne, vice-president, is expected to take the chair, in the absence of the Bishop of Salisbury, president.

THE ANTIQUARIES OF SCOTLAND held their ninth sessional meeting on Monday, when Mr. Hay's spirited design for opening the great Egyptian temple of Aseemba (see recent *Literary Gazette*) was warmly recommended to encouragement by the chair. Among the donations announced were a variety of antiquities from Sir G. Murray, which had been sent to the Right Hon. Secretary by

Mr. Warrington, the British consul at Tripoli.

MANCHESTER.—At the annual meeting of the Literary and Philosophical Society of this populous and intelligent town, on the 16th ult. John Dalton, Esq. was elected president; Dr. Holme, Dr. Henry, and Messrs. P. Ewart and G. W. Wood, vice-presidents; Mr. P. Clare and the Rev. J. J. Taylor, secretaries; Mr. B. Haywood, treasurer; Mr. W. R. Whetton, librarian; and Messrs. J. Blackwell, J. Davies, T. Hopkins, L. Buchan, J. C. Dyer, and Dr. E. Carbutt, of the council. What we have seen of the proceedings of this Society induces us to wish it every possible success in the prosecution of its useful plans, inquiries, and undertakings.

FINE ARTS.

SUFFOLK STREET GALLERY.

[Sixth and concluding notice.]

The Sculpture Room,

We have already observed, enjoys a great advantage in point of light over any room appropriated to a similar purpose elsewhere. It also exhibits a well-selected variety of works, arranged with much skill and judgment.

Among the busts interesting from the public character of the individuals represented, are No. 852, *A Bust of Lord Eldon*, L. W. Sievier; No. 837, *Marble Bust of Sir Francis Burdett*, J. Ternouth; No. 836, *Bust of the late Lord Bishop of Salisbury*, J. Kendrick; and No. 850, *A Marble Bust of Sir H. Davy, Bart. from an original in terra cotta*, by the Hon. A. S. Damer, J. Mason. The model for this last must have been made some years ago.

No. 848. *Marble Monument to the memory of the late Dr. Kitchiner, executed by order of his Son, W. B. Kitchiner*. J. Kendrick.—As a pleasant writer, as well as a most inoffensive and social man, Dr. Kitchiner will long hold a place in the remembrance and esteem of many. This monument is equally creditable to the affection of the son and the talents of the artist.

No. 830. *The Batter—Statue in Marble*. No. 832. *The Bowler—Statue in Marble*. H. Rossi.—Mr. Rossi has here shewn that the manly game of cricket can furnish studies of form and attitude as worthy of the attention of the young sculptor as many of the antique statues.

No. 834. *Eve*. T. Hughes.—"The serpent beguiled me, and I did eat." The sentiment of self-abasement and condemnation is well expressed in the character of this figure; but it strikes us that the exuberance of hair which is generally allowed to the representations of our common mother might have been more advantageously employed in the composition.

No. 846. *Equestrian Statue of the late Duke of York*. R. Lawrence.—Compositions of this kind are so generally alike, that an artist has little opportunity of exercising his invention; but must rest his claims to distinction principally on symmetry and resemblance. In both those points we think that Mr. Lawrence has very fairly succeeded.

No. 847. *The Angel Gabriel—a Sketch*. F. Tatham.—A Michael-Angelo sort of study; the attitude apparently that of fixed attention.

No. 856. *Adam and Eve lamenting over the dead Body of Abel*. J. Kendrick.—Frequently as this subject has been handled, Mr. Kendrick has imparted to it sufficient originality, and peculiar pathos.

No. 861. *A Bas-Relief, in Marble; forming part of a Monument to the memory of the*

late Sir L. T. Worsley Holmes, Bart.: to be erected in Arretton Church, Isle of Wight. J. Haskoll.—If the whole of this monumental tribute should be executed with as much taste and elegance as this portion of it, it will be a very fine work.

No. 858. *The Combat for Patroclus' Body*. C. Smith.—Conceived and designed in the true spirit of the subject. We have seldom seen a model in which muscular action has been more skilfully displayed. We are sorry to say that No. 867, *An Allegorical Idea for a Monument to the memory of the late John Kemble*, by the same artist, is by no means equally successful, either in grouping or in character.

No. 865. *Bacchus, in Marble*. L. W. Sievier.—A tasteful little figure, well suited for a cabinet or mantel ornament.

No. 869. *Monumental Sketch for a National Monument to the late Lord Dunsan*. J. Kendrick.—We like not the Roman or the Greek costume, as applied to our military, and still less as applied to our naval heroes; and, but for some superstitious notions, would banish Victories from the tombs of our "mighty dead." No. 876, *Small Sketch of the National Monument erected in St. Paul's to the memory of General R. Ross*, is in better keeping, and is exceedingly spirited. But here is a weeping Britannia, out of place in any case but that of the loss of her honour;—a loss which we trust she will never suffer.

No. 877. *A Group*. P. Mac Dowell.—A very clever performance; but the quotation in the catalogue, which refers to colour, is most inapposite. The character and expression of the gentle pair, however, sufficiently point out their feelings and sentiment.

MR. WEST'S PICTURES.

[Second notice.]

WE proceed to give a brief account of a few of Mr. West's principal pictures, both at the gallery in Newman Street, and elsewhere; together with some particulars respecting them, which we are sure will be read at the present moment with considerable interest.

Whatever may be the view taken of this great artist when he is compared with men of "the olden time," and of other countries, no impartial person can deny his title to being the first historical painter of modern days in this country. There may be found individual examples of contemporary art among us that may vie with, or even, in some rare instances, perhaps, excel the works of West; but where are we to look for so striking an assemblage, from a single hand, of pictorial excellence? The *coup d'œil* of the noble performances of his which are now arranged in the gallery in Newman Street, cannot fail of filling every enlightened spectator with admiration; and must give the foreign visitor especially a much more complete idea of the character of the British school of historic art than he could possibly acquire in any miscellaneous collection. It is a congregated whole, in which the same powers shew themselves under a variety of forms; now towering to the highest flights of a vivid imagination, and now stooping to the representation of the familiar scenes of domestic or pastoral life.

It must be the most inveterate prejudice that can contemplate such productions as "The Battle of La Hogue," "The Death of General Wolfe," and others of the same class, without acknowledging their extraordinary merit, not only as regards composition and character (of which they are among the purest and best existing models), but as respects the union of

every essential quality of art. The latter, especially, was painted under circumstances which shewed the sound judgment and independent spirit of the artist. When Mr. West commenced his career in this country, it was usual to treat historical subjects of a modern description in what was called the classical style of art; to clothe the figures in Greek or Roman costume; and to introduce as many Fames, Victories, and heathen deities, as the painter could find room for, and afford. All this it was gravely supposed imparted an air of elevation to the work. When Mr. West received the commission to paint "The Death of General Wolfe," he determined not to imitate this tasteless practice. In vain did contemporaries remonstrate; he answered only by requesting that they would suspend their opinions until his picture was finished. When that happy moment arrived, Mr. West assembled his friends, among whom were most of the living artists of eminence, and shewed them his performance. The impression which it made was immediate and conclusive; and Sir Joshua Reynolds in particular (then Mr. Reynolds) complimented Mr. West in the highest terms on the reform which he had introduced, and on the ability with which he had proved how possible it was to compel the fashion of the day to serve every purpose of pictorial representation. A similar interference with Mr. West's intentions was attempted when the commission was given him to paint "Penn's Treaty with the Indians;" and it was suggested to him that the formal and somewhat uncouth habiliments of "the friends" might be dispensed with. On such terms Mr. West declined proceeding; but being then left to pursue his own plan, the result was a lasting monument of his genius and judgment.

If, in the estimation of the classical scholar, there is higher ground on which to raise the superstructure of an artist's reputation, that ground Mr. West has most triumphantly occupied. The grandeur, or, indeed, the sublimity of some of his works of this description, has seldom been excelled in any age or country. Among the earliest of his classical productions was "Agrippina landing at Brundisium with the ashes of Germanicus." This picture originated in a conversation at the table of Archbishop Drummond, when Mr. West was present. The archbishop, probably as a hint to the young artist, mentioned the subject, narrated its details in the language of the historian, and placed its various capabilities in so interesting a point of view, that Mr. West's imagination was captivated, and the next morning he presented a sketch to his grace, who was so delighted with it that he requested Mr. West to execute a finished picture for him. Touching, however, as was the character of silent grief imparted to this work by Mr. West, and magnificent as were the architectural and other parts of the composition, it was outdone by his "Regulus." Never was manly fortitude more admirably and more affectingly portrayed than in this representation of the patriot-hero, returning amidst the grief, not of kindred, not of friends, but of a whole nation. *Salvator Rosa* stands deservedly high both in historical and in imaginative art; but how inferior is his *Regulus*, with the tub, and the spikes, and the hammers, and all its other mean and vulgar accessories, to the noble and dignified conception, and the masterly execution, of Mr. West's picture!

Of Mr. West's powers in the illustration of the drama, who that recollects his "Lear" can for a moment doubt? He here reaches the climax of the great poet's description; and touches the sublime in the character of the mad-dened monarch, without losing sight of truth in the representation of the fierce elemental warfare which rages around him.—How disgraceful to this country that so transcendent a production was permitted to leave it at a price less than the cost of the frame! Well might a late distinguished amateur (Sir George Beaumont) exclaim, on learning the occurrence, "If Raphael or Michael Angelo could revive, and sit down to paint in England, a prison or a workhouse would be his reward." Let us hope that a better and more patriotic feeling now exists; and that that feeling may be strongly manifested on the occasion which will so soon give it an opportunity of evincing itself.

[To be continued.]

EXHIBITION OF LODGE'S PORTRAITS.

WE were much gratified the other day with a private view of the beautiful gallery of portraits of the most illustrious personages of English history, which is about to be re-opened by Messrs. Harding and Lepard. It is impossible to conceive an exhibition more powerfully interesting to all the dignified and intellectual classes of the community. To the man of rank it is interesting, as illustrative of the numerous and intricate connexions existing among all the noble families in the country; to the man of letters it is interesting, as tending to elucidate, and even to revive his acquisitions of historical knowledge; to the man of taste it is interesting, as presenting an assemblage of characteristic portraits, many of them from the pencils of the most distinguished artists, and diversified by all the varieties of the costume which belonged to the periods at which the originals respectively flourished. The ambitious, the philosophical, the brave, the compassionate, the learned, the witty, the loyal, the patriotic, may all here find appropriate subjects of contemplation; and, with reference to the youthful mind especially, it is not indulging too much in fancy to say, that in this gallery emotions may be excited, which may have an extraordinary influence on the future destinies of those by whom they are experienced.

The collection has been augmented since last year by the accession of various portraits, which can now be spared from the hands of the artists engaged in executing the engravings. Among these new introductions are, the great Marquess of Granby, from the picture by Sir Joshua Reynolds, presented by his present Majesty, when Prince Regent, to the Earl of Egremont; Lord Rodney, from the picture by Sir Joshua, in the same collection; the celebrated Earl of Peterborough, from a picture by Dahl, which was a great favourite with the late lamented Earl of Liverpool; the Earl of Orford, from a picture by Jarvis, at Houghton; Sir Isaac Newton, from a picture by Kneller, at Petworth; the Hon. Robert Boyle, from a picture at Combe Wood, &c. The catalogue also states, that copies of two of his Majesty's pictures, viz. Lord Nelson and Lord St. Vincent, both by Hoppner, will be added to the exhibition in a few days, the royal sanction to the making of those copies not having been received in time to admit of their being finished for the opening. W. Hilton, R.A., Mr. Derby, and the late Mr. Satchwell, were the artists principally employed in the production of this admirable little gallery. There are two or

three contributions to it also by J. Jackson, R.A. Some inconvenience having been sustained last season in consequence of the crowd of visitors (exceeding five-and-twenty thousand in number), an additional room has been this year thrown open for their accommodation.

It appears that the monthly edition of the work for which these beautiful drawings were undertaken, the publication of which was commenced on the 1st of January last, having been exhausted in three weeks by the influx of two thousand subscribers, the interim has been occupied in the preparation of another set of plates; and that the republication of that monthly and cheap edition will commence on the 1st of May. The 37th Number of the two-monthly edition of the work has just been published, and contains portraits and memoirs of John Manners, Marquess of Granby; Charles Mordaunt, Earl of Peterborough; Sir Isaac Newton; George Lord Rodney; and the Hon. Robert Boyle. Both the plates and the biographical notices are worthy of the preceding parts of the work.

ROYAL ACADEMY.—The Exhibition opens on Monday: it is, we understand, a rich collection, which we can well believe, from the works we have seen in the rooms of artists previous to their being sent.

ORIGINAL POETRY.

SONG.

COME, send around the sparkling bowl—
Like Woman's eye, the wine is bright—
And every free and jovial soul
Shall revel deep in bliss to night.
Though sober mortals strive to catch
A distant ray from Wisdom's shrine,
Can they in learning's pathway match
The graceful chaplet of the vine?
Alas! the wreath the sage bestows,
Droops o'er the wrinkled brow of care;
While ours in sunny fragrance glows,
Fresh from the wine-cup, in our hair.

Bath, Jan. 25.

CECIL.

ON JEALOUSY.

O JEALOUSY! destructive as thou art,
Whence springs thy influence o'er the wither'd heart?
Why is thy power, that lasting source of ills,
Encouraged still, and cherish'd while it kills?
Or art thou from beneath or from above,
From slighted friendship or neglected love?
Or does ambition fan thy fatal flame?
Envy and thou are evermore the same.
With thee a long and dreadful train appears
Of sleepless nights and agonising years.
Look on the young, the loved, the great, the fair,
And others' bliss shall be thine own despair.
What shall elude the swiftness of thy wing,
Or heal the torment of thy serpent-sting?
O Jealousy! thy fierce, evenom'd dart
Makes hell on earth within the human heart:
Thine iron sceptre unresisted reigns,
Transfixing mortals with undying pains;
Mirth, health, and life itself, thou dost destroy—
Where'er thy poison spreads, farewell to joy!

HANNAH GOLDING.

BIOGRAPHY.

THE EARL OF BUCHAN.

THIS aged nobleman, so well known to the literary world by his writings and love of letters, and to all tourists who have visited the pastoral beauties and monastic antiquities of the south of Scotland by his possession of Dryburgh Abbey—died a few days ago at Dry-

Buchan, in his 77th year, being born on the first of June, 1742. Though Lord Buchan published only a few works (viz. a speech intended to have been spoken at the meeting of the peers of Scotland, &c. 1789;—*Life of Napier, of Merchiston*, &c., 1788;—and, in conjunction with Dr. Minto, an *Essay on the Lives and Writings of Fletcher of Saltoun*, and the poet Thomson, 8vo., 1792), yet his mind was almost continually devoted, through a long series of years, to the pursuits of literature. His correspondence with scholars and men of science, at home and abroad, may be said to have been almost unbounded; and many of the most distinguished individuals of the past and present generation were to be numbered among his friends. In Scotland patronage can rarely afford to take a very munificent form, nor did the circumstances of the Earl of Buchan enable him to become an exception to the general order. But in kind offices, in recommendations, in introductions, in suggestions, and in warmly interesting himself and others within his sphere for the promotion of deserving efforts and youthful or lowly aspirants to fame, he well merited the name of a zealous patron. His latter years were clouded with the infirmities of age. He was the eleventh earl, and brother of the late Thomas Lord Erskine: he is succeeded by H. David, the eldest son of his brother, the witty and accomplished Henry Erskine.

JOHN REEVES.

THIS gentleman, who for many years occupied so important a rank in the political-literary annals of his times, died a few days since, in Half-Moon Street, at the advanced age of seventy-seven. He was educated at Eton and Merton College, Oxford, where he took his Bachelor's degree—obtained a Fellowship at Queen's—took his Master's degree in 1778—and was called to the bar in 1780. His first publication was a law book, in 1779; which led to his *History of the English Law from the Saxons to Henry VII.*, 2 vols. 4to., 1784; and the same extended to *Philip and Mary*, 4 vols. 8vo., 1787. Political pamphlets, and productions in reviews and other periodicals, flowed from his pen during the agitated period of the French Revolution; and it may be said, that few writers, if any writer, produced more decided effects upon public opinion than Mr. Reeves. In later life his labours partook more of a religious character: witness his collection of the Greek and Hebrew Texts of the Psalms, in 1800; the *Book of Common Prayer*, with Notes, 1801; and the *Holy Bible*, in nine or ten vols. 8vo. and 4to., 1802. Mr. Reeves held some valuable official situations, the reward of his talents and of the services he rendered his country in dangerous and critical periods. He was also a Fellow of the Royal Society; and an ardent friend and treasurer of that excellent charity, the Literary Fund, from the date of its formation. In his manners, Mr. Reeves (whom we knew well) was kind and agreeable, and his conversation facetious and replete with intelligence. His habits, to the last, were those of extreme neatness, bordering on that precision which is attributed to the sect of bachelors. He lived in great intimacy with such dignitaries of the church and luminaries of the law as were his contemporaries. His library is a very fine one.

MR. KOLLMAN.

We know we shall give pain to many of our readers when we acquaint them with the demise of Mr. A. F. C. Kollman, Organist of his

Majesty's German Chapel, at St. James's Palace, which took place unexpectedly on the evening of Easter Sunday;—for no one could be more esteemed by all who knew him, through the course of a long life, than was this distinguished author. His memory, however, will live in his works, which may be designated as the *Encyclopedia of Musical Science*. Mr. Kollman was the first person who published a treatise on the Rhetoric of Music; but the chief feature of his life was his *New System of Musical Harmony*.

SKETCHES OF SOCIETY.

PICTURE OF CHINA.—NO. III.

OUR extracts, continued, to illustrate the present state of China, need little introduction: the first short passage is new to us.

"On the frontier, the military have been detected in conniving at natives poaching, and destroying the stage, whose horns form a valuable medicine, and is claimed as imperial property."

The following shews that there are great rogues, and an inefficient police, in other cities as well as in London. It is a curious picture of manners.

"Proclamation.—Our chief magistrate in the city of Canton has published the following document, printed in large characters, and pasted against the walls of houses in the streets, as is usual with the Chinese government. 'Wang, by special appointment the principal magistrate of Kwangchow-foo, who has been promoted three steps, and honourably recorded five times, hereby issues an urgent interdict. The metropolis of this province (Canton) is a place of crowded resort, where persons from the five regions (east, west, north, south, and centre) of the empire dwell promiscuously. Inside the city, and outside in the suburbs, market places are as thick as scales on a fish. It continually occurs that there are found a number of vagabonds acting irregularly and illegally. In the day-time they grope and cut away purses from persons walking in the streets; at night, they bore their way through walls to steal and rob; so that the resident inhabitants scarcely ever sleep on a tranquil pillow. Beside, there are local blackguards, called Tekwan and Lantsae, who saunter idly about the streets, wasting their property, and neglecting their proper business: these at last make gambling their trade, and swindling their profession, on which they depend for raiment and food. There are also hard-hearted soldiers and gnawing lictors, who connect themselves with these people. Some post themselves at ferry landing-places, or station themselves about markets, or rove about the streets, to extort money under various pretences; or, maddened by liquor, act cruelly, disturb and annoy the people in a hundred ways. It is not possible to record all the poisonous and pernicious effects produced by them on the district. Since I came to the present situation, I have repeatedly commanded the inferior magistrates to act faithfully in the seizure of such persons; but the depraved spirit still prevails. The year has now attained its evening, when hurry and perturbation make pilfering easy. I therefore command all civil and military officers under me to exert themselves diligently in the apprehension of vagabonds; and I command both soldiers and people to attend to their respective duties. You, people, have each an occupation: if you keep in your own department, obey the laws, and diligently trade or work, you have plenty of ways to obtain a livelihood. Why willingly become a bandit, and cast yourselves

on the downward stream? The law's net is very broad; the meshes, though wide, suffer none to escape. Having once violated the law, you will fall into the pit of punishment. There, though you should desire to be a worthy subject of a holy age, you will be unable to effect your wishes. After this proclamation, let every one arouse, repent, and reform; let all aim to renew the skin of their faces, and avoid that repentance which is useless as a man's attempting to bite his own navel. Ye dwellers in market-places, take good heed to your doors, and shut them carefully morning and evening. If vagabonds, as before, swindle, rob, and annoy, seize them, and drag them before a magistrate. If lictors connive and combine, I shall, on the moment of detection, flog them till they die. I am resolved to shew no indulgence. Let every one tremblingly obey. Oppose not. A special proclamation."

This magistrate tells the people in another place, in a good metaphor, that though he will administer justice strictly, he will not be too unmerciful; in short, that he intends "to hold the laves by the middle."

"Jan. 29th.—Linafong, for murder, was decapitated, and the following day his head sent in a cage to be suspended where the murder was committed. On the 31st, Chingteen-shing was beheaded for robbery. At these executions it is usual for the military officer at the head of this district, called the Kwng-Chow-Heep, to attend. The person who now holds that office, however, considers executions so common-place, he declines going in person, unless five criminals and upwards are to be put to death."

"Feb. 1st.—This morning, Lamalow, for coasting piracy, was beheaded. This execution makes the number of capital punishments which have taken place during the last twelve months, within a mile of the foreign factories, amount to 202: full two-thirds of them were inflicted by the local authorities, without any previous reference to Peking. The crimes were generally robbery, rape, and murder. The modes of punishment were decapitation, strangulation on a cross, and slowly cutting to pieces. The unhappy culprit is stripped naked, and lashed to a cross; a cut is made across the forehead, and the skin of the face pulled down; then the feet, legs, hands, arms, and head, are successively cut off from the trunk, which is finally stabbed to the heart. This terrible and cruel form of death is called *dingche*, i. e. ignominious and slow,—and is inflicted for crimes against superiors, treason, the murder of parents, &c. The population of this province is perhaps equal to that of Scotland; but how widely different the number of capital punishments, besides those who die in prison annually from cruel usage!"

"Feb. 4th.—Last night, a storm of very loud thunder and heavy rain passed over Canton. Thunder in winter is considered by the Chinese as ominous of some impending calamity. It is a proverb, that thunder in the tenth moon is baneful to sovereign princes.

"Feb. 4th.—To-day is a great holiday throughout the empire. It is called *Yingchun*, i. e. meeting the spring, to-morrow, when the sun enters the fifteenth degree of Aquarius, being considered the commencement of the spring's season. It is a sort of Lord Mayor's day. The chief magistrate of the district goes forth in great pomp, carried on men's shoulders, in an open chair, with gongs beating, music playing, and nymphs and satyrs, seated among artificial rocks and trees, carried in procession. He goes to the general parade ground, on the

east side of Canton, on the following day, being *Lapchun*, the first day of spring, in a similar style. There a buffalo, with an agricultural god made of clay, having been paraded through the streets, and pelted by the populace to impel its labours, is placed on the ground in solemn state; then this official priest of spring gives it a few strokes with a whip, and leaves it to the populace, who pelt it with stones till it is broken to pieces; and so the foolish ceremony terminates. The due observance of this ancient usage is supposed to contribute greatly to an abundant year."

"The law of homicide is very unequal in China. A grandfather or grandmother killing a grandchild, a father or mother killing or wilfully murdering their own son or daughter, and a master or mistress killing a domestic slave, are only punished with sixty or seventy blows. Even if they wish to lay the murder falsely on some other person, the punishment is but eighty blows and three years transportation."

MUSIC.

NEW MUSICAL FUND.

THE annual concert on the 24th ult., in aid of this Fund for the relief of decayed and aged musicians, was brilliantly attended: Mr. F. Cramer leader of the band, and Sir G. Smart conductor. Strange to say, there were no vamped excuses for indisposition or absence made; and all the performances went off regularly in the order announced by the programme. The female vocalists were Cam-porese, Pisoni, Malibran Garcia, Blasia, Miss Graddon, Farrar, and H. Cawse, with the bewitching Lancashire chorus-singers, &c. The stars of the other sex, independently of an immense number of auxiliaries and satellites, consisted of Donzelli, Braham, Zuchelli, Phillips, Master-Smalk, Bellamy, and Taylor. "Though lowly my cot," sung by Phillips, was the only encore of the evening. Lindley's accompaniment to Braham's "Alexis" was in his best taste. Mr. Wright's harp concerto, Arnot's violin concerto, Schmidt's trombone obligato, and Fiebig's kalliethongon, were the chief instrumental attractions; but so powerfully assisted by the ablest musicians in the metropolis, the cause could not be in better hands; and they proved by their gratuitous aid that their decayed brethren were thought worthy of their sympathy and mutual interest. This feeling will not, we trust, be lost sight of, as the applicants increase, and the Fund is drawn upon by the pressure of their need.

MISS CHAMBERS.—We observe a royally and highly patronised concert on Thursday next, announced for the benefit of this lady, whose unfortunate situation,—having fallen from a state of affluence into that of dependence upon her musical talents,—has excited a generous sympathy in the public mind. We cannot but express our hope that the union of benevolent feeling with the first attractions in our existing circle of vocal and instrumental music, will prove very productive on this occasion. Miss C. herself has long been much admired as a singer in private life.

EISTEDDVOD.—On Wednesday this Welsh national concert is announced, under the direction of that true and honest Cambrian, Mr. Parry. Our readers are aware how much we are enchanted with the ancient style of Penillion singing (in which the bards chant extempore to the varying airs of the harp); and when we add our expectations of other treats

both in music and recitations, together with the distribution of medals and premiums for poems and essays, we are sure not to be disappointed in a very peculiar and pleasing entertainment.

DRAMA.

KING'S THEATRE.

"VARIETY is charming," so says the proverb, and so thinks the active Laporte, who has, since the season commenced, given us as many operas as singers. The novelty of Tuesday was the newly "cast" representation of Rossini's incomparable *Barbiere di Siviglia*. Madame Malibran was the heroine of the piece; and, as far as chastity of style goes, sang more to our satisfaction in the rôle of Rosina than in that of *Desdemona*; but we question the propriety of her taking a soprano part. Her ambition may prompt her to display her versatility of talents; but the voice is not to be forced with impunity; and Madame M. must be well aware that she who sings *highest* sings not the best.

We are not disposed, like some of our contemporaries, to heap unmerited praise on this rising and really naturally gifted vocalist. We wish her well; and are more desirous to act the part of real friends in pointing out her faults, and censuring her in the right place, than flattering her vanity by applauding in the wrong. We could point out, particularly in the second act, many faults in this lady's performance of Rosina; but we shall reserve our remarks for another opportunity.

Our favourite Zuchelli personated *Figaro*; and though he sung as delightfully as ever, and acted with his wonted discretion, still the gentleman was not to be concealed under the barber's guise. The part of the Count was sustained by Bordogni; could Donzelli have only lent him his leathern lungs, his performance had been perfect. Nothing was wanting but vocal power. A Signor Graziani made his debut as *Dottor Bartolo*: his performance was not characterised by any extraordinary mark of merit—it nevertheless was spirited, and appeared to amuse the audience. In conclusion, we must express our admiration of the manner in which the choruses are gotten up at this theatre. To Velluti, we believe, the public are originally indebted for this improvement; and we only regret that the company so seldom testify their approbation of this portion of the performances, to encourage those who so well merit it.

On Thursday there was a splendid opera; the stalls, which the manager, to appease a senseless clamour, was forced to lower to 14s. 6d., were sold by agents at a guinea and a half, and two guineas each—putting this neat difference into their own pockets!!

Mdlle. Sontag has arrived to strengthen the concluding part of the operatic season.

ADELPHI.

Mathews and Yates both at Home.

ON Tuesday evening we had the pleasure of witnessing a rehearsal of their new entertainments (publicly begun on Thursday) by these incomparable masters of the mimetical and histrionic art. Were they not so amusing, we would say that their performances were astonishing. Mathews, in his *Spring Meeting*, is equal, if not superior, to the happiest of his former efforts; and story, jest, description, personation, song, patter, and transformation, diversify the scene with extraordinary vari-

semblance. Six songs: 1, a *coup-d'œil* over his preceding *At Home*; 2, "London Newspapers;" 3, "Doncaster Races;" 4, "a Ship Launch;" 5, "a Concert at Woolwich;" and 6, "the Lord Mayor's Show," afford endless opportunities for the display of his wonderful powers. In these, as well as in the prose portions, he steps out of one character into another with such instantaneous rapidity and perfect truth, that the spectator is tempted to doubt his individuality; for he is now a Yorkshire boor, now a primo buffo, now an old Scots-woman, now a child, &c. &c.;

All things by fits, and nothing long.

Among the most novel and striking of the present assumptions, we could not help being delighted with that of the late kindly though eccentric Dr. Kitchiner: it is the worthy Oracle *De arte coquinarâ in propriâ personâ*, comparing a damp bed at an inn to a wet meadow, with the moon for a warming-pan! (We wish we could see his great compeer, the immortal Ude, as ably personified: it would afford a fund of mirth.) A nose-mask makes our dramatic hero in a moment a musical hero at the Concert, where he stands before us and sings,—the real De Begnia. But the whole of the concert, with its imitations of many popular vocalists and instrumentalists, and its caricature of a pasteboard orchestra, is ludicrous in the extreme. The reappearance of the old Scotswoman, with a second tale of "the minister, ma gudeman," quite as good as the first, is another marked and delightful feature in the new piece. The Yorkshireman, in the Carlisle coach and elsewhere, is also a capital hit: his appeals to "oompany" are irresistible, and the whole peculiarly true to the northern style in gesture, voice, and character.—But if Mathews is in himself a sufficient host and magnet of attraction, what shall we add respecting the additions made by Yates, he being, besides, an entire "oompany," and doing all that might be done by some dozen of clever actors. In his first scene, which divides the *Spring Meeting* into two halves, he performs judge, counsel *pro* and *con*, and witnesses, female and male, in an Irish trial for breach of promise of marriage between a green-grocer and a butter-woman of Cork. The dialogue is humorous; and the skill with which he assumes the several parts most laughable. The dame complainant and the witness for her are so clever, that they must be seen to be appreciated; nor are the judge's puns, nor the lawyers' oratory, less effective. In the concluding act by the same versatile ubiquitous, he plays a whole pantomime—alone he plays it, and so quick are his changes, that pantaloons, harlequin, columbine, clown, house-keeper, French hair-dresser, &c. &c. seem to be upon the stage altogether at the same time. It is a marvellous exhibition; and we have only to drop the curtain upon it by advising all our readers to see it raised as soon as possible, if they want many a hearty laugh, and the sight of a species of performance, such as, we think, never was produced before. On Thursday the public opening was fully as successful as we predicted it must be: a crammed house, and the most unanimous applause.

Poor Kean is, indeed, very ill in Ireland; so much broken down (as we learn from a private letter), as hardly to leave a hope of his resuscitation for the stage.

VARIETIES.

Longevity.—Barbarini, the singer, who was once a great favourite with the Russian court, is said to be still living, at the age of 104 years, at Veronege, where he keeps an inn. He walks four or five miles daily, and frequently amuses his guests with playing on the guitar.

Westminster Abbey.—Part of the interior, near the roof, of this noble pile was discovered to be on fire on Monday night, soon after ten o'clock; but the flames were happily extinguished before any serious damage ensued. It is yet uncertain whether this is to be attributed to design or accident.

Picture Sale.—Mr. H. Phillips was yesterday selling, and continues to sell to-day, a capital collection of pictures, the property of Mr. Emmerson. The best examples are of the Dutch and Flemish schools; and some of these are of the first class.

Paris.—It is stated in a letter from Paris, that the Champs Elysées are to be laid out similar to those of Versailles: the expense will, it is supposed, amount to two millions of francs.

Currants.—The French are about to introduce into Corsica the culture of the raisin de Corinthe (currants), for which purpose a thousand plants have been imported from the Morrea. It is thought by the best horticulturists, that the climate of Corsica is well adapted to the growth of this excellent grape.

New Cannons and Rockets.—An engineer of St. Petersburg has invented a new kind of cannon for the war with Turkey, which will, it is said, prove a very formidable instrument. In size and weight it is equal to the ordinary sixty-four pounder; but the bore is calculated for a very small ball, which will range more than twice the distance of the shot now used. Russian agents are at present in this country and in the Netherlands superintending the casting of cannon on this principle. The same engineer has also invented a new rocket, which is reported to be much more destructive than the Congreve rocket.

Population of the Netherlands.—From a recent census, the population of the Netherlands is found to be 6,166,854.

Coffee from Acorns.—The use of coffee made from roasted acorns is now, it seems, becoming very general in Germany. Some of the German papers state, that persons with debilitated stomachs have been able to take this coffee when they could digest no other preparation; and that after long use, they have recovered the tone of the stomach, and acquired considerable *embonpoint*. There is nothing new in this discovery, however; for among the lower orders in many parts of Portugal, where the sweet acorns grow abundantly, they are used both for bread and coffee; although they are not considered very wholesome as an article of food, and are taken solely on account of their cheapness. They are a powerful astringent; and in cases where Peruvian bark is recommended, are said to be employed in Germany with good effect in the way of coffee.

Chlorine.—It is said that the most beneficial effects have been produced in pulmonary complaints by injections of chlorine. A physician in Paris has invented an instrument for the purpose.

Receipts of Parisian Theatres.—The receipts of the Paris theatres during the month of March were, 682,429 francs, which were thus divided: Théâtre Français, 85,607; Variétés, 84,181; Madame, 66,875; Opéra Comique, 66,174; Italian Opera, 56,940; Porte St. Martin, 55,740; French Opera, 52,875; Nouveautés,

52,803; Cirque Olympique, 47,700; Ambigu, 40,660; Vaudeville, 38,128; Gaîté, 34,764. These receipts are higher than in many of the preceding months.

Vaccination.—It is said that several thousands of persons who had been vaccinated took the small-pox in the last epidemic which reigned at Marseilles, and that that disorder proved mortal to forty-five of them; the greater number of whom were adults, whose vaccination had been quite regular. It is hence argued in the French papers, as the result of the experience of medical men, that the effect of vaccination in preventing the contagion of the small-pox diminishes with the lapse of time; and that, after a certain period, a fresh vaccination becomes necessary; but it seems to be still allowed on all hands, that when persons who have been vaccinated take the small-pox, the latter, in most cases, assumes a very mild form.—M. Robert, physician to the Lazaretto at Marseilles, has published an account of the above-mentioned epidemic, which he identifies with that which raged not long ago in the Antilles; whence he presumes it to have been brought to Havre, and thence by the boats up the Seine to Paris.

Lithography.—A new lithographic process has been announced at Paris, which, besides other advantages, is said to be much cheaper, and much more rapidly performed, than any hitherto known.

Conductors.—A commission, appointed by the French Academy, to inquire into the causes of a failure on the part of a conductor to save a powder-magazine at Bayonne from partial explosion by lightning, has reported, that the accident was attributable solely to the mal-conformation of the conductor.

Supply of Water in Paris.—A company is forming in Paris for the supply of water, by means of pipes, to every floor of the houses. The expense of the works which have been resolved upon for this purpose is estimated at fifty-one millions of francs. The water is to be taken from the Seine, at some distance from Paris, so as to ensure a pure supply.

Miss Wright.—This lady, whom we lately mentioned as having obtained some celebrity in America, had previously purchased a small territory near the Mississippi, in West Tennessee, and was peopling it with slaves, whom, in conjunction with a Mr. Flower, she purchases, and who are to be emancipated after three years' labour.

Muriate of Lime.—The use of a solution of muriate of lime has been recently adopted with good success, in the South of France, in the growth of Indian corn and other farinaceous vegetables. Two patches of corn were planted in a similar soil, one of which was watered regularly with the muriate of lime, and the other treated in the ordinary mode. The vegetation of the corn to which the muriate was applied was much more rapid than that of the other, and the produce was finer in quality and one-sixth greater in quantity.

The English.—In noticing a translation into Italian of the late Mr. John Bell's "Observations on Italy," the *Revue Encyclopédique* says: "At every moment we meet in this book with English barrenness and impassibility.* But it is the peremptory tone that accompanies its decisions which rendered it successful in England. The Englishman, in fact, makes no attempt, in matters relating to the arts, to clear up any doubt, to discuss any question; he requires a ready-made opinion, which he can

* It was this provoking English "impassibility" which gained the battle of Waterloo!—*Ed. L. G.*

briefly pronounce, and have done with it. One may apply to him the words addressed by Virgil to Dante, in crossing the hall of the lukewarm: 'To what purpose talk with these folks? Give them a look, and pass on.'

'Non ragioniam di loro; ma guarda, e passa.'

LITERARY NOVELTIES.

We observe an *Encyclopædia of Plants* announced from the able and indefatigable pen of Mr. Loudon, of which the Prospectus is full of blossom—blossom which, knowing the talents of the author, we are sure will not disappoint in the fruits. The work is to resemble Mr. L.'s highly popular volumes on Gardening and Agriculture, and will contain no fewer than nearly ten thousand engravings on wood, of which beautiful specimens are given in the Prospectus before us. Altogether, we anticipate one of the most interesting, useful, and valuable contributions which have ever been paid to botany.

The *Offering*, a new Annual, edited by the Rev. Thomas Dale, M.A., is announced for the ensuing season.

The Rev. Robert Everest, A.M. of Oxford, has in the press a *Journey through Norway, Lapland, and part of Sweden; with Remarks on the Geology of the Country, Statistical Tables, Meteorological Observations, &c.*

We learn from Italy that Dr. Uccelli has been just turned out of the Professor's chair at Pisa, for having written a work upon Comparative Anatomy, two volumes of which were devoted to Gall's system of phrenology. By a singular regulation, he is permitted to enjoy the salary of the professorship, but forbidden to instruct youth!!

Mr. William Hoaking is preparing for publication a *Popular System of Architecture*, to be illustrated with engravings, and exemplified by reference to well-known structures. It is intended as a *Class or Text-Book* in that branch of a liberal education, and will contain an explanation of the scientific terms which form its vocabulary and are of constant occurrence.

A forthcoming work, *Mémoires Complètes du Duc de Saint Simon*, is exciting great interest in Paris. These *Mémoires*, which are said to be very curious, were commenced in 1688, and finished in 1743.

In the Press.—The *Garland*, a volume of Poems, by Henry Brandreth, Jun.

LIST OF NEW BOOKS.

Lachlan's *Leonora*, 2 vols. 12mo. 12s. bds.—Miller's *Mémoires* (Spanish), 2 vols. 8vo. 2l. 2s. bds.—Forster's *Sermons*, 2 vols. 8vo. 1l. 1s. bds.—Murray's *Glance at Switzerland*, 12mo. 7s. bds.—Bell on the Teeth, 8vo. 1l. 1s. bds.—*Præparanda per Spemantem*, 12mo. 4d. bds.—*Selections on Religious Subjects*, 12mo. 3s. bds.—Jones's *Sermons*, 8vo. 10s. 6d. bds.—Reay's *Morden*, 3 vols. post 8vo. 1l. 4s. bds.—Harrison's *Tales of a Physician*, crown 8vo. 7s. 6d. bds.—D'Erbine, or the *Cynic*, 3 vols. 12mo. 1l. 4s. bds.—Hall's *Sketches of Irish Characters*, 2 vols. 12mo. 12s. bds.—Southey's *Colloquies*, 2 vols. 8vo. 1l. 10s. bds.—Stratton Hill, a Tale, 3 vols. post 8vo. 1l. 11s. 6d. bds.—The *Sectarian*, 3 vols. 1l. 7s. bds.—*Life of Francis the First, King of France*, 2 vols. 8vo. 1l. 8s.—The *Hope of Immortality*, a Poem, fcp. 6s. bds.—Murray's *Practical Remarks on Modern Paper*, 12mo. 4s. bds.—The *Beavers and the Elephants*, 12mo. 2s. 6d. hf. bds.—Southey's *All for Love*, fcp. 8vo. 7s. 6d. bds.—*Chapters on Churchyards*, 2 vols. fcp. 12s. bds.—*Theologicum Repertorium*, by Dr. Wall, No. 1. 8vo. 6s.

TO CORRESPONDENTS.

✉ We are this week reluctantly compelled to postpone several articles intended for publication; and, indeed, to clear off several arrears, in order to make room for a mass of interesting novelties with which our tables are now laden. If therefore our present No. is not of a striking character, we can safely promise that a few of its successors must be so.

The Holy Bible Chronologically arranged.
Handsome printed, in a large vol. 8vo. price 4s. boards, a new edition, with Marginal References, in such
THE OLD AND NEW TESTAMENT,
arranged in Historical and Chronological order, in such
Manner that the Books, Chapters, &c. may be read as one
connected History, in the very Words of the Authorized Transla-
tion. With copious Notes and Indexes.
By the Rev. GEORGE TOWNSEND, M.A.
Prebendary of Durham, and Vicar of Norton.
Printed for C., J., G., and F. Rivington, St. Paul's Churchyard,
and Waterloo Place, Pall Mall.

Six Views, 30s.
**COLLOQUIES ON THE PROGRESS AND
PROSPECTS OF SOCIETY.**
By ROBERT SOUTHEY, Esq. LL.D. Poet-Laureate.
John Murray, Albemarle Street.

5, New Burlington Street.
This day Mr. Colburn will have the honour to publish the
First Number of a New Literary Paper, to be called

THE COURT JOURNAL. The leading
and peculiar object of this Paper will be, to supply
what has long been felt as a desideratum in the higher circles of
the British metropolis. Its pages will furnish a mingled record
and review of all matters and events (political subjects alone
excepted), which are calculated to interest that class of readers
who come within what is understood by the "Court Circle."
Such will be the peculiar, but by no means the sole object of the
Court Journal. It will, in fact, embrace every feature which
favourably distinguishes the most approved literary journals of
the day. The Conductors deem it unnecessary to put forth a
formal prospectus. Their work, when it appears, will speak for
itself; and it will do so in a manner which will render it impos-
sible for any one to mistake the nature of its resources, and the
class of patronage under which it is ushered into the world, or
to doubt that these are such as were never before possessed by
a public journal.
The Court Journal will appear every Saturday Morning, hand-
somely printed on a quarto sheet of sixteen pages, containing
48 Columns, price 8d.; or stamped for circulation in the country,
free of postage, 1s.

Orders received by all Booksellers and News-vendors, and
by the Clerks of the Roads.
Communications for the Editor may be addressed to the
care of Mr. Colburn.
Advertisements should be sent to the Office, No. 19,
Catherine Street, Strand.

Neatly printed in 18mo. price 3s. (published for the Benefit of
the Spanish and Italian Refugees)

**THE GARLAND; a Collection of
Poems.**
By HENRY BRANDRETH, Jun.
Author of "Field Flowers; a Collection of Poems."
"A pleasing little volume of poems, containing an extraordi-
nary variety of pieces on different subjects, in the whole of which
the author displays much poetical talent, and a refined classical
taste."—*Morning Post*.
Printed for Thomas and George Underwood, 38, Fleet Street.

In 8vo. 12s. 5s. boards,
**KING ALFRED'S SAXON VERSION
OF BERTHUS DE CONSOLATIONE PHILOSOPHIE:** with an English Translation and Notes.
By J. J. GORDON, Esq.

* * Twenty-five Copies have been printed on large paper.
In 8vo. price 5s. boards,
**The Will of King Alfred, Saxon and En-
glish; with a Preface and Notes.**

In 1 vol. 8vo. price 10s. 6d. cloth boards,
The Chronicle of Geoffroy De Villehardouin,
Marshal of Champagne and Romania, concerning the Conquest
of Constantinople by the French and Venetians, 1204. Trans-
lated from the French, with a Preface and Notes.
While Joinville, Froissart, and Monstrelet, have become fami-
liar to the public, through the medium of the Translations of
Joinville, their more ancient precursor, Villehardouin, has been
utterly neglected, and is known merely as the authority whence
modern historians have derived their accounts of the Establish-
ment of the Latin Empire at Constantinople.
London: Printed for William Pickering, Chancery Lane;
M. A. Nattall, Tavistock Street, Covent Garden; and Combe
and Son, Leicester.

A new and improved Edition.
In 1 thick vol. 8d edition, much enlarged and improved,
price 15s.
MODERN DOMESTIC MEDICINE; or,
a Popular Treatise, exhibiting the Nature, Symptoms,
Causes, and most efficacious Treatment of all Diseases em-
bracing all the Modern Improvements in Medicine. Containing also
a copious Collection of approved Prescriptions, Medical Manage-
ment of Children, Rules of Diet, Virtues and Doses of all Medi-
cines, &c. The whole forming a comprehensive Medical Guide
for the Clergy, Families, and Jurels.
By T. J. GRAHAM, M.D. &c.

"We conscientiously recommend Dr. Graham's Treatise to the
public. It is very far above the celebrated Buchan's, and we
shall preserve the volume as the advice of an invaluable friend,
to which we can refer in the most of need, without any doubt
of being benefited by its wisdom."—*Literary Chronicle*.

"In the opinion of a respectable physician, well known in our
connection, it is enriched with much of all that modern practice
has ascertained to be valuable, and is not only incomparably
superior to Buchan's, but also to every similar work in our lan-
guage."—*Western Magazine*.

"It will be found a very valuable acquisition to the family
library."—*Imperial Magazine*.

"It is altogether deserving of permanent popularity."—*Lon-
don Weekly Review*.

"It is one of the very best and most useful books published in
modern times."—*Monthly Oct.* No. 16.

Published by Simpkin and Marshall, Stationers' Court, London;
sold by all Booksellers.

Price 8s. sewed,
**ALFRED the GREAT. A Drama, in
Five Acts.**
"Et mecum tota nobilitas Westsaxonica gentis pro recta jura
consensit quod me oportet dimittere et eis liberos ac totam
hominis cogitationem constituit."—*Treatise on Anglo-Saxon Ed.*
Published by Longman, Rees, Orme, Brown, and Green.

Just published,

No. 642.

SATURDAY, MAY 9, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

Anne of Geierstein.

FEELING the general interest attached to Sir Walter Scott's first appearance upon German ground, our readers will not be surprised to find that we have this week turned our big telescope in that direction, and caught a distinct view of the rising luminous body. Fortunately for us, too, it happens that, under the title of *Bannerburg's* Narrative, we have a wild tale, told by a remarkable Swiss to the English hero of the romance, respecting the house and ancestry of the heroine; which is just of a fitting length for the *Literary Gazette*, and which we have great pleasure in presenting to the public as a specimen of the mysteries, so finely and characteristically dwelt upon by the celebrated author of *Anne of Geierstein*. The following is the entire legend:—

"I told you, (said Rudolf) that the lords of Arnheim, though from father to son they were notoriously addicted to secret studies, were, nevertheless, like the other German nobles, followers of war and the chase. This was peculiarly the case with Anne's maternal grandfather, Herman of Arnheim, who prided himself on possessing a splendid stud of horses, and one stood in particular, the noblest ever known in these circles of Germany. I should make wild work were I to attempt the description of such an animal, so I will content myself with saying his colour was jet-black, without a hair of white either on his face or feet. For this reason, and the wildness of his disposition, his master had termed him Apollyon; a circumstance which was secretly considered as tending to sanction the evil reports which touched the house of Arnheim, being, it was said, the naming of a favourite animal after a foul fiend. It chanced, one November day, that the baron had been hunting in the forest, and did not reach home till night-fall. There were no guests with him, for, as I hinted to you before, the castle of Arnheim seldom received any other than those from whom its inhabitants hoped to gain augmentation of knowledge. The baron was seated alone in his hall, illuminated with ~~candles~~ and torches. His one hand held a volume covered with characters unintelligible to all save himself. The other rested on the marble table, on which was placed a flask of Tobac pipe. A page stood in respectful attendance near the bottom of the large and dim apartment, and no sound was heard save that of the night wind, when it sighed mournfully through the rusty coats of mail, and waved the tattered banners which were the tapestry of the feudal hall. At once the footstep of a person was heard ascending the stairs in haste and precipitation; the door of the hall was thrown violently open, and, terrified to a degree of ecstacy, Caspar, the head of the baron's stable, or his master of horse, stumbled up almost to the foot of the table at which his lord was seated, with the exclamation in his mouth,—My lord, my lord, a fiend is in the stable!" What

means this folly?" said the baron, arising, surprised and displeased at an interruption so unusual. "Let me endure your displeasure," said Caspar, "if I speak not truth! Apollyon—Here he paused. 'Speak out, thou frightened fool,' said the baron; 'is my horse sick, or injured?' The master of the stalls again gasped forth the word 'Apollyon!' 'Say on,' said the baron; 'were Apollyon in presence personally, it were nothing to shake a brave man's mind.' 'The devil,' answered the master of the horse, 'is in Apollyon's stall!' 'Fool!' exclaimed the nobleman, snatching a torch from the wall; 'what is it that could have turned thy brain in such silly fashion? Things like thee, that are born to serve us, should hold their brains on a firmer tenure, for our sakes, if not for that of their worthless selves.' As he spoke, he crossed the court-yard of the castle, to visit the stately range of stables which occupied all the lower part of the quadrangle on one side. He entered, where fifty gallant steeds stood in rows, on each side of the ample hall. At the side of each stall hung the weapons of offence and defence of a man-at-arms, as bright as constant attention could make them, together with the buff-coat which formed the trooper's under garment. The baron, followed by one or two of the domestics, who had assembled full of astonishment at the unusual alarm, ~~had stood by~~ between the rows of steeds. As he approached the stall of his favourite horse, which was the uppermost of the right-hand row, the good steed neither neighed, nor shook his head, nor stamped with his foot, nor gave the usual signs of joy at his lord's approach; a faint moaning, as if he implored assistance, was the only acknowledgment of the baron's presence. Sir Herman held up the torch, and discovered that there was indeed a tall dark figure standing in the stall, resting his hand on the horse's shoulder. 'Who art thou,' said the baron, 'and what dost thou here?' 'I seek refuge and hospitality,' replied the stranger; 'and I conjure thee to grant it me, by the shoulder of thy horse, and by the edge of thy sword, and so as they may never fail thee when thy need is at the utmost.' 'Thou art, then, a brother of the Sacred Fire,' said Baron Herman of Arnheim; 'and I may not refuse thee the refuge which thou requires of me, after the ritual of the Persian Magi. From whom, and for what length of time, dost thou crave my protection?' 'From those,' replied the stranger, 'who shall arrive in quest of me before the morning cock shall crow, and for the full space of a year and a day from this period.' 'I may not refuse thee,' said the baron, 'consistently with my oath and my honour. For a year and a day I will be thy pledge, and thou shalt share with me roof and chamber, wine and food. But thou, too, must obey the law of Zoroaster, which, as it says, Let the stronger protect the weaker brother, says also, Let the wiser instruct the brother who hath less knowledge. I am thy stronger, and thou shalt be safe under my protection; but thou art the wiser, and must

instruct me in the more secret mysteries.' 'You mock your servant,' said the strange visitor; 'but if aught is known to Dannischemend which can avail Herman, his instructions shall be as those of a father to a son.' 'Come forth then from thy place of refuge,' said the Baron of Arnheim: 'I swear to thee by the sacred fire which lives without terrestrial fuel, and by the fraternity which is betwixt us, and by the shoulder of my horse, and the edge of my good sword, I will be thy warrant for a year and a day, if so far my power shall extend.' The stranger came forth accordingly; and those who saw the singularity of his appearance, scarce wondered at the fears of Caspar, the stall-master, when he found such a person in the stable, by what mode of entrance he was unable to conceive. When he reached the lighted hall to which the baron conducted him, as he would have done a welcome and honoured guest, the stranger appeared to be very tall, and of a dignified aspect. His dress was Asiatic, being a long black caftan, or gown, like that worn by Armenians, and a lofty square cap, covered with the wool of Astracan lambs. Every article of the dress was black, which gave relief to the long white beard that flowed down over his bosom. His girth was fastened by a saah of black silk net-work, in which, ~~instead of a pendant or gem, was stuck a silver case, containing writing materials and a roll of parchment.~~ The only ornament of his apparel consisted in a large ruby of uncommon brilliancy, which, when he approached the light, seemed to glow with such liveliness, as if the gem itself had emitted the rays which it only reflected back. To the offer of refreshment, the stranger replied, 'Bread I may not eat, water shall not moisten my lips, until the avenger shall have passed by the threshold.' The baron commanded the lamps to be trimmed and fresh torches to be lighted, and sending his whole household to rest, remained seated in the hall along with the stranger, his suppliant. At the dead hour of midnight, the gates of the castle were shaken as by a whirlwind, and a voice, as if of a herald, was heard to demand his lawful prisoner, Dannischemend, the son of Hali. The warder then heard a lower window of the hall thrown open, and could distinguish his master's voice addressing the person who had thus summoned the castle. But the night was so dark that he might not see the speakers, and the language which they used was either entirely foreign, or so largely interspersed with strange words, that he could not understand a syllable which they said. Scarce five minutes had elapsed, when he who was without again elevated his voice as before, and said in German, 'For a year and a day, then, I forbear my forfeiture;—but coming for it when that time shall elapse, I come for my right, and will no longer be withstood.' From that period Dannischemend, the Persian, was a constant guest at the castle of Arnheim, and, indeed, never for any purpose crossed the drawbridge. His amusements, or studies, seemed centred in the library of the

castle, and in the laboratory, where the baron sometimes toiled in conjunction with him for many hours together. The inhabitants of the castle could find no fault in the Magus, or Persian, excepting his apparently dispensing with the ordinances of religion, since he neither went to mass nor confession, nor attended upon other religious ceremonies. The chaplain did indeed profess himself satisfied with the state of the stranger's conscience; but it had been long suspected that the worthy ecclesiastic held his easy office on the very reasonable condition of approving the principles and asserting the orthodoxy of all guests whom the baron invited to share his hospitality. It was observed that Dannischemend was rigid in paying his devotions, by prostrating himself in the first rays of the rising sun, and that he constructed a silver lamp of the most beautiful proportions, which he placed on a pedestal, representing a truncated column of marble, having its base sculptured with hieroglyphical imagery. With what essences he fed this flame was unknown to all, unless perhaps to the baron; but the flame was more steady, pure, and lustrous, than any which was ever seen, excepting the sun of heaven itself, and it was generally believed that Dannischemend made it an object of worship in the absence of that blessed luminary. Nothing else was observed of him, unless that his morals seemed severe, his gravity extreme, his general mode of life very temperate, and his fasts and vigils of frequent recurrence. Except on particular occasions, he spoke to no one of the castle but the baron; but as he had money and was liberal, he was regarded by the domestics with awe indeed, but without fear or dislike. Winter was succeeded by spring, summer brought her flowers, and autumn her fruits, which ripened and were fading, when a footpage, who sometimes attended them in the laboratory to render manual assistance when required, heard the Persian say to the Baron of Arnheim, 'You will do well, my son, to mark my words; for my lessons to you are drawing to an end, and there is no power on earth which can longer postpone my fate.' 'Alas, my master!' said the baron, 'and must I then lose the benefit of your direction, just when your guiding hand becomes necessary to place me on the very pinnacle of the temple of wisdom?' 'Be not discouraged, my son,' answered the sage; 'I will bequeath the task of perfecting you in your studies to my daughter, who will come hither on purpose. But remember, if you value the permanence of your family, look not upon her as aught else than a helpmate in your studies; for if you forget the instructress in the beauty of the maiden, you will be buried with your sword and your shield, as the last male of your house; and farther evil, believe me, will arise; for such alliances never come to a happy issue, of which my own is an example.—But, hush, we are observed.' The household of the castle of Arnheim having but few things to interest them, were the more eager observers of those which came under their notice; and when the termination of the period when the Persian was to receive shelter in the castle began to approach, some of the inmates, under various pretexts, but which resolved into very terror, absconded,—while others held themselves in expectation of some striking and terrible catastrophe. None such, however, took place; and, on the expected anniversary, long ere the witching hour of midnight, Dannischemend terminated his visit in the castle of Arnheim, by riding away

from the gate in the guise of an ordinary traveller. The baron had meantime taken leave of his tutor with many marks of regret, and some which amounted even to sorrow. The sage Persian comforted him by a long whisper, of which the last part only was heard,—'By the first beam of sunshine she will be with you. Be kind to her, but not over kind.' He then departed, and was never again seen or heard of in the vicinity of Arnheim. The baron was observed during all the day after the departure of the stranger to be particularly melancholy. He remained, contrary to his custom, in the great hall, and neither visited the library nor the laboratory, where he could no longer enjoy the company of his departed instructor. At dawn of the ensuing morning, Sir Herman summoned his page; and, contrary to his habits, which used to be rather careless in respect of apparel, he dressed himself with great accuracy; and, as he was in the prime of life, and of a noble figure, he had reason to be satisfied with his appearance. Having performed his toilet, he waited till the sun had just appeared above the horizon, and, taking from the table the key of the laboratory, which the page believed must have lain there all night, he walked thither, followed by his attendant. At the door the baron made a pause, and seemed at one time to doubt whether he should not send away the page, at another to hesitate whether he should open the door, as one might do who expected some strange sight within. He pulled up resolution, however, turned the key, threw the door open, and entered. The page followed close behind his master, and was astonished to the point of extreme terror at what he beheld, although the sight, however extraordinary, had in it nothing save what was agreeable and lovely. The silver lamp was extinguished, or removed from its pedestal, where stood in place of it a most beautiful female figure in the Persian costume, in which the colour of pink predominated. But she wore no turban or head-dress of any kind, saving a blue riband drawn through her auburn hair, and secured by a gold clasp, the outer side of which was ornamented by a superb opal, which, amid the changing lights peculiar to that gem, displayed a alight tinge of red, like a spark of fire. The figure of this young person was rather under the middle size, but perfectly well formed; the eastern dress, with the wide trousers gathered round the ankles, made visible the smallest and most beautiful feet which had ever been seen, while hands and arms of the most perfect symmetry were partly seen from under the folds of the robe. The little lady's countenance was of a lively and expressive character, in which spirit and wit seemed to predominate; and the quick dark eye, with its beautifully formed eyebrow, seemed to presage the arch remark, to which the rosy and half-smiling lip appeared ready to give utterance. The pedestal on which she stood, or rather was perched, would have appeared unsafe had any figure heavier than her own been placed there. But, lo! as she had been transported thither, she seemed to rest on it as lightly and safely as a linnet, when it has dropped from the sky on the endril of a rose-bud. The first beam of the rising sun, falling through a window directly opposite to the pedestal, increased the effect of this beautiful figure, which remained as motionless as if it had been carved in marble. She only expressed her sense of the Baron of Arnheim's presence by something of a quiver of respiration, and a deep blush, accompanied by a slight smile. Whatever reason the Baron of

Arnheim might have for expecting to see some such object as now presented its actual presence, the degree of beauty which it exhibited was so much beyond his expectation, that for an instant he stood without breath or motion. At once, however, he seemed to recollect that it was his duty to welcome the fair stranger to his castle, and to relieve her from her precarious situation. He stepped forward accordingly with the words of welcome on his tongue, and was extending his arms to lift her from the pedestal, which was nearly six feet high; but the light and active stranger merely accepted the support of his hand, and descended on the floor as light and as safe as if she had been formed of gossamer. It was, indeed, only by the momentary pressure of her little hand, that the Baron of Arnheim was made sensible that he had to do with a being of flesh and blood. 'I am come as I have been commanded,' she said, looking around her: 'you must expect a strict and diligent mistress, and I hope for the credit of an attentive pupil.' After the arrival of this singular and interesting being in the castle of Arnheim, various alterations took place within the interior of the household. A lady of high rank and small fortune, the respectable widow of a count of the empire, who was the baron's blood relation, received and accepted an invitation to preside over her kinsman's domestic affairs, and remove, by her countenance, any suspicions which might arise from the presence of Hermione, as the beautiful Persian was generally called. The countess Waldstetten carried her complaisance so far, as to be present on almost all occasions, whether in the laboratory or library, when the Baron of Arnheim received lessons from, or pursued studies with, the young and lovely tutor, who had been thus strangely substituted for the aged Magus. If this lady's report was to be trusted, their pursuits were of a most extraordinary nature, and the results which she sometimes witnessed were such as to create fear as well as surprise. But she accordingly vindicated them from practising unlawful arts, or overstepping the boundaries of natural science. A better judge of such matters, the Bishop of Bamberg himself, made a visit to Arnheim, on purpose to witness the wisdom of which so much was reported through the whole Rhine-country. He conversed with Hermione, and found her deeply impressed with the truths of religion, and so perfectly acquainted with its doctrines, that he compared her to a doctor of theology in the dress of an Eastern dancing-girl. When asked regarding her knowledge of languages and science, he answered that he had been attracted to Arnheim by the most extravagant reports on these points, but that he must return confessing 'the half thereof had not been told unto him.' In consequence of this indisputable testimony, the sinister reports which had been occasioned by the singular appearance of the fair stranger, were in a great measure lulled to sleep, especially as her amiable manners won the involuntary good-will of every one that approached her. Meantime a marked alteration began to take place in the interviews between the lovely tutor and her pupil. These were conducted with the same caution as before, and never, so far as could be observed, took place without the presence of the countess of Waldstetten, or some other third person of respectability. But the scenes of these meetings were no longer the scholar's library, or the chemist's laboratory;—the gardens, the groves, were resorted to for amusement, and parties of hunting and fishing, with evenings spent in the dance, seemed to announce that

the studies of wisdom were for a time abandoned for the pursuits of pleasure. It was not difficult to guess the meaning of this; the Baron of Arnheim and his fair guest, speaking a language different from all others, could enjoy their private conversation, even amidst all the tumults of gaiety around them; and no one was surprised to hear it formally announced, after a few weeks of gaiety, that the fair Persian was to be wedded to the Baron of Arnheim. The manners of this fascinating young person were so pleasing, her conversation so animated, her wit so keen, yet so well tempered with good nature and modesty, that, notwithstanding her unknown origin, her high fortune attracted less envy than might have been expected in a case so singular. Above all, her generosity amazed and won the hearts of all the young persons who approached her. Her wealth seemed to be measureless, for the jewels which she distributed among her fair friends would otherwise have left her without ornaments for herself. These good qualities, her liberality above all, together with a simplicity of thought and character, which formed a beautiful contrast to the depth of acquired knowledge which she was well known to possess,—these, and her total want of ostentation, made her superiority be pardoned among her companions. Still there was notice taken of some peculiarities, exaggerated perhaps by envy, which seemed to draw a mystical distinction between the beautiful Hermione and the mere mortals with whom she lived and conversed. In the merry dance she was so unrivalled in lightness and agility, that her performance seemed that of an aerial being. She could, without suffering from her exertion, continue the pleasure till she had tired out the most active revellers; and even the young Duke of Hochspringen, who was reckoned the most indefatigable at that exercise in Germany, having been her partner for half an hour, was compelled to break off the dance and throw himself, totally exhausted, on a couch, exclaiming he had been dancing not with a woman, but with an *ignis fatuus*. Other whisperers asserted, that while she played with her young companions in the labyrinth and mazes of the castle gardens at hide-and-seek, or similar games of activity, she became animated with the same supernatural alertness which was supposed to inspire her in the dance. She appeared amongst her companions, and vied with them with a degree of rapidity which was inconceivable; and hedges, trellage, or such like obstructions, were surmounted by her in a manner which the most vigilant eye could not detect; for, after being observed on the other side of the barrier at one instant, in another she was beheld close beside the spectator. In such moments, when her eyes sparkled, her cheeks reddened, and her whole frame became animated, it was pretended that the opal clasp amid her tresses, the ornament which she never laid aside, shot forth the little spark, or tongue of flame, which it always displayed, with an increased vivacity. In the same manner, if in the twilight hall the conversation of Hermione became unusually animated, it was believed that the jewel became brilliant, and even displayed a twinkling and flashing gleam which seemed to be emitted by the gem itself, and not produced in the usual manner, by the reflection of some external light. Her maidens were also heard to surmise, that when their mistress was agitated by any hasty or brief resentment (the only weakness of temper which she was ever observed to display), they could observe dark-red sparks

flash from the mystic brooch, as if it sympathised with the wearer's emotions. The women who attended on her toilette farther reported, that this gem was never removed but for a few minutes, when the baroness's hair was combed out; that she was unusually pensive and silent during the time it was laid aside, and particularly apprehensive when any liquid was brought near it. Even in the use of holy water at the door of the church, she was observed to omit the sign of the cross on the forehead, for fear, it was supposed, of the water touching the valued jewel. These singular reports did not prevent the marriage of the Baron of Arnheim from proceeding as had been arranged. It was celebrated in the usual form, and with the utmost splendour, and the young couple seemed to commence a life of happiness rarely to be found on earth. In the course of twelve months the lovely baroness presented her husband with a daughter, which was to be christened Sibylla, after the count's mother. As the health of the child was excellent, the ceremony was postponed till the recovery of the mother from her confinement; many were invited to be present on the occasion, and the castle was thronged with company. It happened that amongst the guests was an old lady, notorious for playing in private society the part of a malicious fairy in a minstrel's tale. This was the Baroness of Steinfeldt, famous in the neighbourhood for her insatiable curiosity and overweening pride. She had not been many days in the castle, ere, by the aid of a female attendant, who acted as an intelligencer, she had made herself mistress of all that was heard, said, or suspected, concerning the peculiarities of the Baroness Hermione. It was on the morning of the day appointed for the christening, while the whole company were assembled in the hall, and waiting till the baroness should appear, to pass with them to the chapel, that there arose between the censorious and haughty dame whom we have just mentioned and the Countess Waldstetten a violent discussion concerning some point of disputed precedence. It was referred to the Baron von Arnheim, who decided in favour of the countess. Madame de Steinfeldt instantly ordered her palfrey to be prepared, and her attendants to mount. 'I leave this place,' she said, 'which a good Christian ought never to have entered; I leave a house of which the master is a sorcerer, the mistress a demon who dares not cross her brow with holy water, and their trencher companion one who for a wretched pittance is willing to act as match-maker between a wizard and an incarnate fiend!' She then departed, with rage in her countenance and spite in her heart. The Baron of Arnheim then stepped forward, and demanded of the knights and gentlemen around, if there were any among them who would dare to make good with his sword the infamous falsehoods thrown upon himself, his spouse, and his kinswoman. There was a general answer, utterly refusing to defend the Baroness of Steinfeldt's words in so bad a cause, and universally testifying the belief of the company that she spoke in the spirit of calumny and falsehood. 'Then let that lie fall to the ground which no man of courage will hold up,' said the Baron of Arnheim; 'only, all who are here this morning shall be satisfied whether the Baroness Hermione doth or doth not share the rites of Christianity.' The Countess of Waldstetten made anxious signs to him while he spoke thus; and when the crowd permitted her to approach near him, she was heard to whisper,—'O, be not rash! try no experiment! there is something mys-

terious about that opal talisman; be prudent, and let the matter pass by.' The baron, who was in a more towering passion than well became the wisdom to which he made pretence,—although it will be perhaps allowed that an affront so public, and in such a time and place, was enough to shake the prudence of the most staid and the philosophy of the most wise—answered sternly and briefly, 'Are you, too, such a fool?' and retained his purpose. The Baroness of Arnheim at this moment entered the hall, looking just so pale from her late confinement as to render her lovely countenance more interesting, if less animated, than usual. Having paid her compliments to the assembled company, with the most graceful and condescending attention she was beginning to inquire why Madame de Steinfeldt was not present, when her husband made the signal for the company to move forward to the chapel, and lent the baroness his arm to bring up the rear. The chapel was nearly filled by the splendid company, and all eyes were bent on their host and hostess as they entered the place of devotion immediately after four young ladies, who supported the infant babe in a light and beautiful litter. As they passed the threshold, the baron dipped his finger in the font-stone and offered holy water to his lady, who accepted it, as usual, by touching his finger with her own. But then, as if to confute the calumnies of the malevolent lady of Steinfeldt, with an air of sportive familiarity which was rather unwarranted by the time and place, he flirted on her beautiful forehead a drop or two of the moisture which remained on his own hand. The opal, on which one of these drops had lighted, shot out a brilliant spark like a falling star, and became the instant afterwards lightless and colourless as a common pebble, while the beautiful baroness sunk on the floor of the chapel with a deep sigh of pain. All crowded around her in dismay. The unfortunate Hermione was raised from the ground and conveyed to her chamber; and so much did her countenance and pulse alter within the short time necessary to do this, that those who looked upon her pronounced her a dying woman. She was no sooner in her own apartment than she requested to be left alone with her husband. He remained an hour in the room, and when he came out he locked and double locked the door behind him. He then betook himself to the chapel, and remained there for an hour or more, prostrated before the altar. In the meantime most of the guests had dispersed in dismay; though some abode out of courtesy or curiosity. There was a general sense of impropriety in suffering the door of the sick lady's apartment to remain locked; but, alarmed at the whole circumstances of her illness, it was some time ere any one dared disturb the devotions of the baron. At length medical aid arrived, and the Countess of Waldstetten took upon her to demand the key. She spoke more than once to a man who seemed incapable of hearing, at least of understanding, what she said. At length he gave her the key, and added sternly, as he did so, that all aid was unavailing, and that it was his pleasure that all strangers should leave the castle. There were few who inclined to stay; when upon opening the door of the chamber in which the baroness had been deposited little more than two hours before, no traces of her could be discovered, unless that there was about a handful of light gray ashes, like such as might have been produced by burning fine paper, found on the bed where she had been laid. A solemn funeral was

nevertheless performed, with masses and all other spiritual rites, for the soul of the high and noble Lady Hermione of Arnheim; and it was exactly on that same day three years that the baron himself was laid in the grave of the same chapel of Arnheim, with sword, shield, and helmet, as the last male of his family."

Mahometanism Unveiled: an Inquiry, in which that Arch-Heresy, its Diffusion and Continuance, are examined on a new Principle, tending to confirm the Evidences, and aid the Propagation, of the Christian Faith. By the Rev. Charles Forster, B.D. Chancellor of Ardfert, and Examining Chaplain to the Lord Bishop of Limerick. 2 vols. 8vo. London, 1829. J. Duncan.

IT is the remark of Gibbon, respecting the article "Mahomet" in Bayle's Dictionary, that the writer "has shewn how indifferently wit and philosophy supply the place of genuine information." Yet the Mahomet of Bayle and of Voltaire, of Moreri and of Prideaux—the Saracen's head of a clumsy limner—has hitherto passed for a veritable likeness of the Arabian heresiarch. Sale, the learned translator of the Koran, was, we believe, the first Christian writer who gave any thing like a fair or competent view of the character of Mahomet and the religion which he taught. In his Introduction he has exposed many of Prideaux's inaccuracies, and has shewn how grossly the credulity of the Christian world has been abused by the legendary tales respecting the Prophet of Mecca. Even Sale, however, and Gibbon himself, have failed to do justice to the subject. The latter, through his ignorance of the oriental languages, was incapable of drawing his information from the primary sources; and while he justly censures Bayle, he has caught not a little of his spirit. The most popular account of Mahometanism in our language is contained in the Bampton Lectures of White, which, by the elegance of their composition, deserve the celebrity they have obtained. If to this praise be added the commendation due to upright and pious intentions, it is, however, the utmost that can be awarded to the writer, who was a brilliant advocate, but neither a philosophic thinker nor a sound reasoner.

Such a work as the present was much wanted. Apart from the particular theory of the author, it places the phenomenon of Mahometanism before us in its true light. It shews that its approximation to Christianity is very much closer than has usually been imagined; and that the wide diffusion and permanent dominion of this heresy are not to be satisfactorily accounted for by the secondary causes usually assigned as a solution of the problem. The candour and discrimination which are evident in the preliminary statement of the subject of inquiry must produce a very favourable impression on the reader. In the following paragraphs the real difficulty of the case is broadly and succinctly stated.

"The splendid success of Mahomet, and the unparalleled rapidity and extent of the propagation of his religion, is the favourite argument of Mahometans themselves in vindication of their creed. Mahometanism, however, possesses an argument in its favour of far greater weight than any which can be drawn from the character of its original promulgation. I speak of its *permanence*; a feature of this extraordinary superstition which has never been accounted for, and which none but the prejudiced or unreflecting can pretend to contemplate without interest. Reasonable explanations have been offered of its other chief phenomena. An

intelligible cause has been assigned for the first establishment of a religion, which is alleged to have founded itself in an artful accommodation to existing systems of belief, and to have addressed itself to the prejudices and passions of mankind: satisfactory grounds have been advanced for the successful progress of a faith which silenced opposition by force, and seconded its pretensions with the sword; but no sufficient account has yet been given or attempted of that character of permanence, which the lapse of twelve centuries has impressed upon Mahometanism. If its duration were commensurate merely with that of the empire to which it gave birth; if its spiritual sway could be measured, in after ages, by the rise and fall of its temporal power, much of the difficulty would be removed. The case, however, admits of no such relief. The whole facts of it, on the contrary, go to demonstrate that the creed of Mahomet possesses an inherent spiritual influence; wholly distinct and separable from its secular domination; and that it is not more remarkable for its despotism over the fortunes, than for its absolute dominion in the minds, of men. The completeness of its mental domination is one of the most noted and best-ascertained facts in the early history of Mahometanism. It is legible in the high enthusiasm which characterized the first Moslems, from the near friends of the prophet to his meanest followers, from the leaders of the Saracen armies to the servile refuse of the camp. But the point which now claims attention, is the durability of that first impression, the permanence of this mental subjection. To determine this point in the affirmative, it will not be enough to consider the effects of Mahometanism upon the mind, in countries where it is dominant as connected with the state; for here it may be contended that the fanatical spirit of the religion is fostered from motives of policy, and factitiously sustained by its alliance with the temporal power. Its genuine and undoubted influence can be seen only in a state of society where its votaries are unshackled by the restraints imposed by a Mahometan government; and where, consequently, neither policy nor personal interest can be supposed to operate. Such a state of society happens to obtain in a quarter of the world where Mahometanism has existed in an unestablished and insulated form, since the times of the first Saracen conquests. In their progress westward, through the deserts of Africa, the primitive Moslems left behind them the seeds of colonies, which continue to the present day thinly sprinkled over that vast wilderness; the Bedoween being naturally attracted and detained by the suitableness of the region to his desultory and predatory habits, and by the similarity of the soil and climate to those from which he had recently emerged. These roving tribes have preserved the purity of their race, with hereditary jealousy, from admixture with the native Africans; and holding little or no intercourse with foreigners, beyond the bare interchange of a few necessary commodities with the Moorish states, they present at this day the most genuine portrait-tendant of the character of their forefathers, the first Moslems. In the great desert of Africa, accordingly, there is a singular opportunity afforded of estimating the influence of Mahometanism, apart from its original and ordinary alliance with political domination. The result establishes, in the fullest extent, the fact of its permanent dominion over the human mind. The Arabs of the western desert graphically exemplify in the nineteenth century the recorded spirit of the Saracen conquerors in the

seventh. The same high enthusiasm and anti-social zeal are strikingly visible, both in their intercourse among themselves, and in their carriage towards strangers. The perpetual maintenance of their independence is still their glory and boast; and they guard with a zealous and unceasing vigilance the traditions and the faith of their Arabian ancestors. Copies of the Koran, written on skins, are carefully preserved, and constantly studied, in each family; and the calamities of shipwreck have recently afforded an opportunity of ascertaining the fanatical avidity with which its lessons are imbibed, and the opinions entertained by these sons of Ishmael respecting the character and situation of Christians. "The heads of their discourse concerning us," says a shipwrecked mariner, who learned the conversation of this savage people through the medium of a negro interpreter, "was, that we were a poor, miserable, degraded race of mortals, doomed to the everlasting punishment of hell-fire after death, and, in this life, fit only for the company of dogs." If he forgets only the intervals of time and place, this language at once transports the reader among "the companions" of the false prophet: its genuine fanaticism might have fallen from the lips of the fiery Kaled, or the ferocious Derar."

Another feature of Mahometanism, scarcely less remarkable than the permanence and completeness of its mental domination, is its power to change alike the creeds and characters of the nations it has subjected to its yoke, and those of its conquerors.

"Under the former aspect, its prompt and effectual extirpation of the idolatry of Arabia, and the unparalleled revolution of mind and manners which the action of the new religion produced among its tribes, were but preludes and precursors to succeeding triumphs, in every clime where Paganism flourished, over Paganism in its best and in its most degrading forms. The rude idolatry of Scythia or of Inner Africa, and the refined and venerable superstition of the Persian Magi, alike fell prostrate before the law of the Koran; while the new converts, bound together as brethren by this common tie, forget their personal prejudices, and national antipathies, as they fought side by side for the propagation of their adopted faith. But the memorable achievements of the followers of Mahomet in subverting idol creeds, sink into insignificance in comparison with another triumph of Mahometanism, the almost utter subversion of Christianity in the East. This divine religion, which originally won its lowly and peaceful way in triumphant opposition to the utmost violence of political power, bowed itself to the dust, in the very regions whence it first emanated, and where for centuries it had most flourished, almost without a struggle, under the sword and law of Mahomet. The strange and startling anomaly, which thus eclipsed the sun of Christendom, and which has left it, at the expiration of twelve hundred years, 'shorn of half its beams,' remains to the present hour unparalleled and unexplained. Every conquering faith beside has merged eventually in the Christian; but the banner of the cross itself has been seen to succumb before the victorious progress of the crescent. Nor is the power of Mahometanism more remarkable, in its influence, as conquering, to subvert, than in its efficacy, as conquered, to absorb, the religions with which it has come in contact. For irrefragable vouchers of this characteristic, the reader needs only be referred to the history of the Turks and Tartars. The successive inva-

sions of the Saracen empire by these Pagan hordes, during the eventful period of its decline, terminated uniformly in the conversion of the barbarian conquerors. The Gaznavide and Seljukian sultans, who shook, and the successors of Genghis Khan, who overthrew, the throne of the Caliphs, vied with one another in their adoption of the Mahometan faith. And the fourteenth century invites the philosophical historian to survey, in the career of the celebrated Tamerlane, the singular spectacle of a Tartar proselyte penetrating into India for the avowed purpose of bowing that vast peninsula to the yoke of the Koran. The enthusiastic zeal of this conqueror for the propagation of the Mahometan religion, thus founded eventually, in India, the Mahometan empire of the Great Mogul."

No prejudice has more extensively prevailed than that which imputes to the Mahometan religion an inherent hostility to the advancement of knowledge, and which confounds all the Mahometan nations under a sweeping censure as illiterate *ultra-Gothic* barbarians. "Every hearer," says White, "whose mind has ever glowed with the love of learning, or melted with the feelings of humanity, must recoil with horror from the savage and brutal barbarity of those caliphs who, not content with discouraging a spirit of inquiry among their subjects, effaced every vestige of the knowledge of former ages, and waged unnatural war against the mind, as well as the arms of their species." In this appalling description, who can detect any traces of the religion and the people which, during six long centuries of European darkness, preserved and propagated the light of knowledge through the world,—the first revivers of philosophy and science,—the link between the literature of Greece and that of modern Europe? Yet so it is, Mr. Forster remarks, that a sweeping induction is formed from the solitary and ill-authenticated fanaticism of Omar, while Mahometanism is denied all benefit from the example of Almamoon and his illustrious successors, and from the conspicuous place held by the Arabs in the history of letters. "The penetrating and enterprising genius of the Saracens is unaccountably lost sight of, and the eye seems to become exclusively fixed upon those barbarians of Mahometanism, the Turks." So completely, indeed, has this been the case, that the word Turk has come to be used as a synonyme for Moslem. A curious proof of this is supplied by the language of our venerable liturgy. In the collect for Good Friday, the church offers up its supplications on behalf of *Turks, Jews, and infidels*,—evidently comprising under those appellations the Mahometan, Jewish, and Pagan world. It could never have been intended to exclude the Persians, the Moors, the Arabs, and the Moguls, from the intercessions of the pious.

In the present inquiry, Christianity and Mahometanism are viewed as "the providential results of a two-fold promise made by God to Abraham in behalf of his sons Isaac and Ishmael; by which promise a prophetic blessing was annexed to the posterity of each; which blessings again linked the fortunes of their descendants with the providential history and government of the whole human race." Of the arguments by which this novel and somewhat startling hypothesis is supported, we cannot attempt even an abstract; but the leading heads of the inquiry are indicated in the following paragraph:—

"The inquiry will embrace the descent of the Arabs from Ishmael; the religious and

customs of the ante-Mahometan Arabs; the lights afforded by prophecy respecting Mahomet and his followers; the historical, moral, doctrinal, and ritual parallels between Judaism and Mahometanism, and between Christianity and Mahometanism; a comparison of the Scriptures of the Old and New Testaments with the Koran; of the Jewish and Christian with the Mahometan sects and heresies; the contemporaneous rise and analogy of Popery and Mahometanism; the providential object and effects of the Crusades; and a comparative view of Christianity and Mahometanism in their influences on national character and civilisation; on industry, manufactures, and commerce; and on the progress of arts, sciences, philosophy, and literature."

The learning, research, and great ability, with which this extensive inquiry is pursued, render these volumes a highly valuable addition to English literature, and entitle the author to take his rank with our Turners and Hallams, our Southseys and Lingards. Among other valuable materials and rare articles to which he has had access, he has availed himself of the *Adversaria* and unpublished manuscripts of the learned Sale. To the theological student the work will be an important acquisition; while the variety of topics which it embraces of an historical and literary kind, will render it not less interesting to the general reader. It has occupied, Mr. Forster informs us, the thoughts and studies of nine years;—in this age of *facile* and rapid production, when literary vegetation springs up with tropical luxuriance, a long and tedious term. But bamboos are not oaks. The quality and durability of productions are generally proportioned to the slowness of their growth. This work will live and last."

2. *The Practice of Cookery, adapted to the Business of every-day Life.* By Mrs. Dalgairns. 12mo. pp. 628. Edinburgh, 1829, Cadell and Co.; London, Simpkin and Marshall.
3. *The Housekeeper's Oracle; or, Art of Domestic Management, &c. &c.* By the late William Kitchiner, M.D. 12mo. pp. 344. London, 1829. Whittaker and Co.

In all publications which affect the stomach, our readers are aware that we take a lively interest; considering, as we do, and which is the reason thereof, that unless the stomach be properly attended to and cultivated, there is no use whatsoever in attempting to cultivate and improve the head. Abilities depend entirely upon food: intellect upon digestion. This was well known to our plain-spoken and honest ancestors, who called the first places of general education boarding schools, and scholars boarders; not employing the new-fangled and fantastical terms of seminaries, pupils, establishments, students, and such-like frippery.

Having these grave considerations staring us in the face, we have taken up the several works at the head of this paper with all the becoming impartiality due to their several importance. And though we will not pretend that upon indifferent or less vitally essential occasions we may not permit our good nature to influence our critical judgment, we fearlessly assert that, in affairs of the table, in eating and in drinking, we never did and never can admit a bias to

seduce us from the stern truth which we owe to our especially confiding readers, and to a generally discerning public—discerning, because so apt to be guided by our opinions. No; may soup maigre and salt-fish be our every-day portion, if we mince matters in a question like this, upon which the comfort, the health, and the happiness of millions of our fellow-creatures depend!

Therefore, ye author, or rather compiler of *Apician Morsels*, look for no mercy at our hands: your performance is not that of a true man. Bad translations from French books, like bad imitations of the French *cuisine*, are intolerable; stale jokes do not do to be served up again, any more than stale merry-thoughts; and, altogether, coarseness and vulgarity in a *code gourmand* are worse than tough meat and ill-seasoned dishes. Let us, however, more patiently examine and dissect this *olla podrida*, which so arrogantly assumes the refined name of *Apician Morsels*. It is dangerous to meddle with foreign or ancient languages which one does not understand; yet this is the vice of the pseudo-fashionable writers of the day. Their style is as full of French or other phrases as a plum-pudding is of plums and currants—you cannot tell which is the radical tongue or the principal ingredient. It might be supposed that the English was copious enough to express all the ideas of learned, imaginative, and highly-gifted, and infinitely too copious to be needed by these literary shrimps, who have neither original thoughts nor ideas of any kind to express; and yet they interlard their home trash with so much of foreign, that it is not easy to perceive, at first sight, in what language they are trying to write. Of these faults our *Apician* scribe affords us plenty of specimens, and we shall point out a few of them as warnings to his long-eared, if not single-tongued, brethren of the mixed-style school.

What do you think of Sanctiorius saying (page 13), "*Celsi sententia non omnibus tutta est*"?—this is the first Latin *tutta* we ever met with, though it is right to a t. But Pliny's Latin is of the same kind (p. 54):

"Nunc mihi fumosum veteris propolis falernum Consul;"

and a pretty *property* he has made, though, as our Scots classics would pronounce, he has left a 'out. It shall be *properate* in the twentieth edition, should the work ever reach that enviable climax.—Matt. Paris could not be expected to be a better Latin scholar than Pliny, and therefore, not having the author for reference, we only mark in italics the words from his pen which puzzle us in the subjoined quotation:

"Et eodem tempore Juvenis Londinensis statuto pavore pro brevius, ad stadium quod quinten vulgariter dicitur, vires proprias et equorum cursus sunt experti."

At page 60 we find Christina *Pilan* quoted; but who she was, we know not; and at 69 Mr. Pegge is mentioned as the editor of the *Forme of Curry*,—meaning, we presume, *curry*, i. e. cookery, and not *curry*, an East-Indian dish, to the form of which, when well made, we have a strong predilection. The latter famous blunder is repeated at p. 74, where the editor sticks to it, that the *cury* mentioned in

"Richard's days of old,
When cury, as it then was styld,
With wise avilement was compild,"

is, *bonâ fide* and literally; the *curry* of our times!

After the "preceding poetical effusion (says he, very wisely, after quoting a poem from the Gentleman's Magazine of 1788, to Pegge, editor of the *Forme of Curry*, and which, if he had read, must have told him what *cury* meant,) in

praise of curry, we deem it a favourable opportunity to lay before our readers a receipt to make the latter famous epicurean dish: "and so he furnishes a recipe for the eastern dish so common at our tables, and which had never been heard of in Europe when the *Forme* was penned!

Floundering on in the same fashion, we hear (p. 78) of an Art of Cookery, by *Edm. King, M.D.*—the same having been written by the celebrated William King, LL.D.;* and at page 81, we are still more astonished by the news that Pliny was "the eminent Roman historian!" Perhaps, however, there is in the intermediate pages (79, 80) a mistake still more ludicrous—" *Seriatim* (says the learned Theban, implying by *seriatim* nothing less or more than seriously!), *seriatim* (says he!), the chief business of the cook being to please the palate and the eye, &c., these objects are best accomplished by the simplest process." It is hardly worth while to enlarge on such blunders,—and we shall only add a few more of this class. Mr. Montmaur is represented as having drunk off a goblet of wine "at a draught, *et negavit se unquam jucundius bibisse*, alluding to that king, who said the same, when he was forced to drink out of the hollow of his hand, for the want of a better mug." He also "called eructating (*ructus*) *inconveniences* of the table." This *inconveniences* shews how well the translator understood French; and his skill is corroborated by his calling *Petron* (*i. e. Petronius*, at p. 200) *Perron*, thus furnishing a sample of a double error in one word. But the whole of this passage is so exquisitely ignorant that we must quote it. "Read, to improve your mind, and enable you to speak learnedly on matters of gastronomy (says this author—alas! that he should never have followed his own advice!) the description which *Perron* has given of the feasts of Trimalcion, that is, of Nero. Read the moral works of Plutarch, his *Propos* of the Table. *Martial's* Epigrams *Julius Caesar, Dilempus, jehadiensis* & *soc. Jesus de Concoivis, Guidoni Pancirolli rerum perditarum, cum Commentariis Sabnahl, titulum de cibi Capiendi mode veteribus usitate*." On the page opposite to this prodigious display of learning we are told of something which *Macrobius* said "at the time the *la familia* existed"?! and have, besides, a charming example of logical precision. The passage is as follows:—

"It was not peas, as was supposed, which *Dentatus* cooked, but positively *radishes*. We have the following facts from history:—*Curius Dentatus* was three times consul, and twice enjoyed the honours of triumph. The ambassadors of the senate having found him cooking peas in an earthen pot, in that part of the country to which he had retired after his victories, offered him vases made of gold to engage him to espouse their interests. The Roman refused them, by telling them haughtily—'I prefer my earthen ware to your golden vases—I will not be rich, contented in my poverty to command those who are so.' Here we find the truth happily re-established. History ought never to be altered, even though it should only be concerning *boiled radishes*."

Now, the deuce take us, after all this happy re-establishment of the truth, if we know whether *Curius Dentatus* was cooking peas or radishes! May be, he was making a vegetable mess of both, a sort of hotch-potch.

"A German (continues our author) named

Martin Schookins wrote a work on this kind of cheese, entitled *De Aversione Casai*. We have not been able to procure this book." No wonder,—asking for it by the *Casai* name would bother the most learned of booksellers: and so would his title of another author, a person (p. 345) whom he calls *Aldus Manifutius*!! But we have exposed these pieces of ignorance enough, and shall now go to other follies. We begin with a riddle. The compiler, attempting to be facetious, declares (p. 105) "that a good dinner is brother to a good poem; with the single exception, that between four and five o'clock the former is more substantial!"?

Chapter V. is a long story, from the French, on breakfasts; and nearly all the rest of the *Morsels* is indebted to the same origin: how ably employed, the annexed notices, caught as we have run over the pages from 150, will shew. Page 153, the celebrated *Rocher de Cancale* is praised; and at page 161, it is said: "A gourmand, and all who aspire to deserve this sacred title, ought then to be punctual in their engagements, and (come to the scratch) precisely at the appointed hour;" which we cite merely for the sake of commending the elegant introduction within the parentheses, the only original part, not in the French!

"Suppose then, (resumes the editor) the dinner be named for five o'clock precisely, you must be at the spot by half-past five, where, either the host (*Amphitriton*) himself, or some of his family, will do the honours of the waiting-room, which should be a well-warmed saloon or chamber, according to circumstances, in which the morning and evening papers ought to be present. The first compliments between gourmands ought to be very laconic; and instead of the common-places salutation of 'how d'ye do?' the first question should be, 'have you a good appetite to-day?' Half an hour after the appointed time, by the note of invitation, the master of the house arrives, a napkin under his arm, to announce that dinner is up." The master of the house here painted, is, no doubt, the "*maitre d'hôtel*" of the Parisian writer; but our English translator stands on no ceremony—on the contrary, he pushes on to a capital bull—"From that time, he who is nearest the door moves on in silence, in order to pass into the dining-room; the others pass in succession, without stopping; the host closes the march, to accelerate those who are to follow." After this happy bit, he even adopts the customs of another country, and treats of them, without a word of doubt, (did he ever dine in London?!) as if they were applicable to his own. Witness—"The *Amphitriton* ought to occupy the centre of the table, as much to be within reach of serving his guests, as that he may superintend their appetites without suffering the plates themselves to direct his attention. After grace has been said, either mentally or in the common way, he distributes the soup, or first *entrée*; it belongs to the *Amphitriton* to bless the table in an audible voice, according to the formula of gourmands. The soup is served in proper soup-plates, which are piled up before him. The first, when filled, he gives to his right-hand neighbour, the second to that on the left; he then returns to the right hand, then to the left, and so on alternately. Every one remains served in his turn, without passing the plate. It is the same in every other respect with the dishes served by the *Amphitriton*. With respect to the side-dishes, every one helps himself, or asks his neighbours who are in proximity with those of which he

wishes to partake; but, be it observed, *always in silence, and sans cérémonie*."

Here the confusion of foreign manners is not more conspicuous than the confusion of language in the stupid translator, till he comes to the secret of every one asking his neighbours what they will take, but always in silence!! Pursuing the course of the French style of living, just as if the matter applied to the habits of England, our perfect gentleman and instructor in good breeding observes—"Whenever it happens that you have the misfortune of being placed by the side of a little girl, or, what is still worse, between two little boys, the best means to be employed to get rid of them is to make them tipsy as soon as possible, that papa or mamma may send them to bed. It is a most shocking inconvenience to leave any liquid behind in your glass, or any thing solid on your plate. At a long meal steer by your nose." A man who committed the first offence here advised, should not only be taken by his, but kicked out of the house into the bargain. The next piece of counsel appears to be equally genteel, judicious, and necessary. During the dessert, "conversation ought to give way to a song, a glee, a catch, or even a pun, although great care must be taken never to touch upon any smutty subject, particularly if there be any ladies present"!! The next paragraph lets us into a secret. "In recommending a song during the dessert, it is advisable to select one, the words of which are witty, gay, and distinctly articulated. None of your semi-demi-quavers, and ha-ha-ha-ing, for an unlimited space of time, like a eunuch panting for breath. Give it mouth in the true English style—suit the action to the words, and manage the muscles of the lips in a natural and unaffected manner, or the best voice will lose its effect, and be heard with an indifference bordering on disgust. A good old stave à la Dibdin, such as—Tom Tough, the Arethusa, Black-eyed Susan, the Chesapeake and the Shamoni, the Le Pique, and the Blanche,—although in the mouth of every hardy tar, might, through the organ of some of our native singers, be better received than the unmeaning effusions of 'Love among the Roses,' and other such couplets, adapted well enough for the female voice, or coxcombs of the first water, but which, in the mouth of a grenadier, a boatswain's mate, or a White-chapel butcher, would be as ridiculous as to hear them chant a lullaby, or an Anacreon in the original."

We thus learn what class of company it is for whom these precious maxims are indited—the mates, the grenadiers, and the butchers, are told what they ought, and what they ought not, to sing! Knowing this, we agree with the expediency of the concluding hint of this Chapter upon "rules between host and guest," viz. "It is considered, we conceive, superfluous to recommend to you to let your linen be always fresh and clean; because, whatever be the dinner he may have given you, it was well worth a shirt; and if you have not a clean shirt, a clean dickey, or, what is less, a false collar, will go off *passablement bien* on such occasions."

The next Chapter is entitled "good advice for good dinners;" but is a miserable failure. It sets out by running a witty tale by the mole of telling it (page 181); and immediately after, gives us a neat and cleanly (and, for this country, very requisite) instruction:—"When you are invited to breakfast, or to dine in town, never take dogs with you. It is

* An author whom the compiler should have known better, seeing he has stolen a great deal from him—we consequently suppose at second hand. See poem, p. 94—quotation murdered, pp. 95, 96, 97, &c. &c.

only the common people and *les dames à la mode* who take such liberties—which, indeed, at all times would be better tolerated in the country. A dog, how well soever he may have been brought up, spoils the furniture, and produces no small embarrassment, should he think proper to do his 'little jobs' before you; but his presence is still worse at table, where he is continually *among your legs*, or *eyeing your plate*."

Further on, in "a tale of the table," we have a dull and vulgar attempt at wit, of which all we need notice is its absurdity. *Er. gr.* At page 236 (the scene is a man of title and his lady dining with a retail shopkeeper) it is said—"My lady exclaimed, '*Lord, Mr. Busy!* how came you to put yourself to so much trouble and expense?' declaring, at the same time, she could never make a tolerable dinner without half-a-dozen things at least; making all the while signs of disgust at Miss P., and calling for brandy and water every third mouthful. Sir John and the captain tossed down half-pint bumpers of Madeira, till their 'wit began to burn'; and from the brisk circulation of the spirituous liquors before them, they soon drank themselves into an inflamed state."

These are the persons of superior manners, in the writer's estimation; and having thus described the disgusting beasts, he says, within thirty lines, "As for myself, being surfeited with the over-acted delicacy of the baronet and his corps"—So that a lady calling for brandy and water every third mouthful, and two gentlemen getting drunk at dinner, is "over-acted delicacy";—considerably over-acted, by Jupiter!

But enough for this course: our meal, we observe, must be prolonged, and we invite our friends to wait for the removes, clean plates, and—let us drink to each other's good healths till Saturday next. Reader, your health!

The Chelsea Pensioners. By the Author of "The Subaltern." 3 vols. 12mo. London, 1822.

THE "Subaltern" is, unquestionably, the most popular military narrative of the present day; and we think that it deserves all the favour with which it has been received. The author, in a great measure, led the way in shewing how military operations might be told, so as at the same time to satisfy the practical soldier, and to interest the unprofessional reader. No man ever exhibited a happier talent for describing what he had seen—a talent in itself of no mean value, nor of very common occurrence. The present book, however, is an attempt in a different way. These are military narratives, in most of which the author has derived no aid from what he has seen; they are in some instances purely fictitious; and such of them as are not fictitious relate to transactions in which he bore no part, which, in fact, are slipping fast from the public memory, partly because they have never been told so vividly as in these volumes, and partly because later events, of deeper interest, have jostled them from recollection. It is true, that not even the victories of Wellington have obliterated the battle of Maida from our memory; but the heroes of that day will read with peculiar interest the narrative of their actions by a soldier of the school of Wellington; and the companions of Burgoyne, in the campaign of 1777 (if any still survive), will recognise in the tale entitled "Saratoga," the best, perhaps the only readable, narrative of that portion of

military history. The disastrous issue of the American war took away from Englishmen all relish for dwelling upon its details: while the issue was uncertain, the progress of events was watched with the deepest interest; but when the stake was irrecoverably lost, it was no pleasing task to return back, and contemplate the vicissitudes of the finished and unfortunate game. This accounts for many of the transactions of that war having fallen into comparative oblivion. The time, however, is now come, when these matters can be regarded with comparative complacency; at least, we can enter into the interest of a tale of the American war, without having our minds lacerated or materially disturbed. We think, however, that narratives of the class to which we have been referring, are in some degree misplaced in a work like the present, which, from its nature, disclaims the authority of history. The author has taken the pains to tell an authentic story; the authenticity of which, however, will never be relied on, because it will not be supposed that truth has been strictly adhered to, where the writer was at full liberty to depart from it, when, by indulging his imagination, he could increase the interest of his narrative. These, however, are, after all, matters of secondary importance; the plan of the work is that of a work of fiction; it pretends to be nothing more; and the whole question is—whether it possesses the interest which gives value to such a work. The stories are supposed to be told by a body of retired military men, who live together in an establishment, or voluntary association, to which they have given the name of "Little Chelsea." The rules of the house require each member to tell a story for the amusement of his companions. The author represents himself as having heard these stories (delivered in conformity with the rules) at the table of these social and narrative veterans. The extracts we shall give will shew that the writer of the "Subaltern" has an imagination to create, as well as an eye to see; and that he flings off a picture with equal vividness and effect, whether it be the mere creation of his fancy, or painted from the recollection of what he has seen. We can discover in the book many marks of haste, and some failures in the delineation of individual character and passion; but the clearness of the style, and the life and vigour of the narrative, never fail. The story called the "Pyrenean Adventure," being by far the shortest, we shall extract it nearly entire.

"At the period when the left column of the British army occupied the pass of Irun, the particular regiment of which I was a member pitched its tents on a sort of platform, or natural terrace, in the side of the Quatracone mountain. The situation of the camp was one of extreme beauty; indeed it was more than beautiful—it fairly deserves to be styled romantic. Sheltered from the rays of the sun by a grove of graceful dwarf-oaks, our background was formed by the bald rocks and giant shapes of the mountain, which, tier above tier, and precipice above precipice, rose in barren majesty into the clouds. On either side of our platform was a ravine: that upon the right, abrupt and of considerable depth, was darkened even to its base, and to the brow of the opposite hill, by the foliage of a dense forest; that upon the left, more gradual in its declivity, afforded room for a few corn-fields and other cultivated spots, as it sloped away into the level country. In front, again, were the mouth of the pass, the high-road, the Bidasoa, Fontarabia, and the ocean, all of them so hemmed in by the

heights of Audaye and San Marcial, as to compose one of the most splendid vistas which it has ever been my good fortune to behold. Whilst the corps was stationed here, and indeed as often as circumstances would allow, it was my custom to wander away from the camp with a gun over my shoulder, and a dog at my heels, for the double purpose of picking up a little *provident* for the mess, and indulging a spirit of roving and adventure which was then natural to me. It seldom happened that these excursions proved unproductive of at least temporary gratification. If it came to the worst, and no other advantage arose out of them, they at all events enabled me to become acquainted with some of the grandest and most sublime of Nature's works; whilst they afforded many opportunities of beholding the dispositions both of our own and of the enemy's army, such as men of more sedentary habits could not possibly obtain. Nor were these the only consequences which attended upon them. On more than one occasion I have found myself thrown into situations upon which even now I cannot look back without experiencing something of the excitement which affected me at the moment. With the circumstances attending one of these excursions, I propose, on the present occasion, to make you acquainted, warning you at the same time, that I possess no powers of description competent to convey any thing like a vivid picture either of my own feelings, or of the events which called them into play. One fine day towards the end of September, in the year 1813, my faithful Juno and her master set out, in high health and spirits, to pursue their wonted occupation. It happened that an extraordinary pressure both of public and private business had so far occupied my attention throughout the previous week, that I had not been able, during the whole of that period, to wander once beyond the bounds of the encampment; and as my fondness for liberty and field sports was then neither blunted by time nor stifled by circumstances, the fact that noon had passed ere the breaking up of a court-martial set me free to indulge my own inclinations, proved no inducement either to remain at home, or to confine my ramble within narrow and well-ascertained limits. On the contrary, having a great deal of lost time to make good, I considered that by seeking out fresh ground, a better chance would be afforded of success, than if I returned to haunts repeatedly visited before; more especially as these haunts lay at a distance from our position, and were familiarly known to other sportsmen as well as to myself. I have said, that on the right of the terrace occupied by our tents was a wooded ravine of considerable depth and steepness. At the bottom of that hollow ran a beautiful rivolet, which, after falling from a sort of detached shoulder of the Quatracone, wound onwards through the valley, till it joined the Bidasoa near the ruined bridge. I had often experienced a desire to trace that stream to its source, partly because I felt satisfied that the labour of the journey would be more than compensated by the magnificence of the scenery to which it must lead, and partly because I longed to shoot one or more of the many eagles which, from their nests among the cliffs, looked down upon us, as if in anxious expectation of the moment when the fortune of battle should consign us to their talons. This morning I resolved at all hazards to gratify that inclination; so, striking off by the rear of the camp, I made at once for the waterfall. I may not so much as attempt a description of the various and magnificent spectacles, which the progress of that toilsome,

and occasionally hazardous excursion, from time to time spread out before me. As long as my route conducted up the face of the cliff, from a basin on the summit of which the rivulet tumbled, I could, as often as I chose to turn round, look down upon towns and villages, corn-fields and meadows, tents and ships, redoubts and cottages; but from the instant that the ridge was passed, every vestige of human skill and human exertion was shut out. A long, narrow, winding vale lay beneath me; gloomy with forests, apparently trackless, and of the growth of ages; and girdled in by rocks and precipices hurled into every variety of fantastic shape. On either hand, and far off in my front, hill rose above hill, and cone above cone, as if a thousand earthquakes had been at work, or the globe had never, in this corner at least, escaped from a state of chaos. But words are wanting to describe such a panorama. If any of the party can imagine the effect which the wildest combinations of mountain scenery are capable of producing, he may, perhaps, arrive at something like a correct notion of the landscape on which I now gazed; if he be incapable of making this mental exertion for himself, I cannot pretend to assist him in it. It is sufficient to observe, that, accustomed as I had been, from childhood, to highland scenery, this perfectly astonished me, inasmuch that I remained for several minutes riveted to the spot, from which it first burst upon me. Nor was I more struck by the objects which affected my sense of sight, than by the sort of preternatural stillness which prevailed. Either the breezes blew not at all, or the trees and shrubs in the valley were entirely sheltered from them; for not a bough or a leaf was in motion. The only sounds, indeed, which reached me, were a sort of indistinct murmur, produced by the water-fall, now many hundred feet below me, and the occasional shrill cry of an eagle, as it sailed over head, at a height which placed it far beyond the reach of danger from any power except that of the storm. Having indulged for some time the feelings which such a scene was calculated to excite, as well as recovered my breath and rested my limbs, I began to look around for the purpose of ascertaining how I might most easily attain the object of my present ambition, by reaching the top of the mountain. You will understand that I was now seated upon a sort of sugar-loaf hill, connected on both sides with other hills, three or four times more lofty than itself. That upon the right seemed peculiarly rough and uneven; that upon the left, besides that the stream trickled down its surface, was more grassy and accessible; so I resolved to scale it. But I found, on putting my determination into force, that even it was far from being devoid of difficulties. Projections, which, when viewed from a distance, appeared trifling and easy of ascent, proved, when attained to, wholly impervious; whilst the grass itself was in many spots so dry and slippery, as to render it exceedingly hazardous to pass along. Nevertheless, I had proceeded too far to return now. I pushed on, winding round the base of such rocks as I found myself unable to scale, and creeping on all fours, when to walk upright became impossible; and I was rewarded, after two hours and a half of severe labour, by beholding what I took to be the last of the ridges. It was a large perpendicular cone; but there seemed to be a pass, or, as a Highlander would call it, a balloch, on one side of it, and to that I directed my steps. I was approaching rapidly to this object of my wishes,

when the cry of an eagle, coming, as it appeared to me, from the opposite side of the brow, attracted my attention. In a whisper I ordered Juno to heel, and putting a ball in one barrel, instead of small shot, I lay down on my belly, and in that position dragged myself towards the summit. I gained it with some difficulty; but you may imagine what my feelings were, when, on peeping over the ridge, I beheld, in a sort of narrow glen or hollow, the diameter of which could not exceed twenty or thirty yards, the bones and mutilated remains of not fewer than forty or fifty human beings. Upon these some dozen or two of eagles were sitting; not in the act of gorging, for in truth nothing now remained upon which they or other carnivorous animals could feed; but scraping and turning the bones about, and with their beaks tearing, as if in mockery, into minute shreds, a few remnants of what had once been military clothing. So little had I anticipated such a spectacle in these wild regions, that surprise, and to a certain extent horror, completely overcame me. I lay with my finger on the trigger, but abstained from firing, till my dog sprang upon the brow, and the alarmed birds, rising in an instant, escaped. Less annoyed at having thus permitted my prey to elude me, than curious to ascertain how so many bodies could have come into a situation so singular, I looked about for some path or sloping declivity, by which I might descend into this place of the dead; but I looked in vain. The skeletons lay in a hole, which I can compare to nothing more nearly than a disused coalpit of extraordinary dimensions; that is to say, they occupied a spot closed in on three sides by perpendicular rocks. The fourth was, indeed, open; but as far as I could judge by examining it from my present position, it was open only to a precipice. Having indulged in a few vague conjectures, therefore, and satisfied myself that I could do nothing more, I turned away, and striking off to the right, soon entered the precincts of a thick wood. Here my dog beginning to quest, I had the satisfaction to find that I had at last arrived where game promised to be abundant. She led the way down the side of the mountain. I followed, and my attention being wholly engrossed, I went on, sometimes firing with success, at other times missing, till the gradual diminution of light warned me that it was high time to think of returning to the camp."

He gets benighted and bewildered in the passes of the mountains, but at last meets with a guide among a body of guerillas. His guide relates that he and his companions had been the happy inhabitants of a secluded mountain valley; that at the close of a rustic holiday, a body of French soldiers broke in upon them, spoiled their property, burnt their cottages, and butchered their women and children. The Spaniard tells the consummation of the story in the following words:—

"Nothing now remained for us but vengeance. We betook ourselves, eighteen in number, to the neighbouring fastnesses, and choosing Francisco for our leader, we became guerillas. But we went not beyond the precincts of our own valley. No; our cry, day and night, was for vengeance; and to obtain it, we hovered round the ruins of our houses, like beasts of prey. Not a Frenchman strayed from his cantonments who returned alive; and many and many a time have we roused the whole band from their unholly slumbers with our war-shout. Exasperated at this behaviour, the

they had begun. Every male, and every aged female, who fell into their hands, perished on the first day; now they butchered and threw out to us our wives and little ones. But there was mercy in this; for how could we again receive those whom the dogs had defiled? You have seen the hollow on the top of that rock. It is called the Fuente; for tradition says that it was once a small lake, and that the ravine, across which we passed, was the channel of the river that flowed from it. I know not whether there be truth in this, but its situation is one of the most remarkable in all these districts. You observed how it is enclosed on three sides; on the fourth there is a fall of many feet; and the rocks stretching out on either hand beyond the fall, render it perfectly inaccessible. At one corner, however, it is separated from the mountain by a chasm of little more than eighteen feet in width: we laid a narrow bridge of plank over the chasm, and made the old lake our fortress. From this point we were in the daily habit of sallying out upon the enemy; and at last we made it the scene of a glorious revenge. At the suggestion of our leader, we determined, if it were possible, to lure the monsters into our den, and to destroy them there. For this purpose, we laboured hard at a huge rock which hung immediately over our bridge, till we had so loosened it as that a push from the arm of a child would roll it down the gulf. That being effected, we proceeded to carry the rest of our scheme into execution, thus. One morning, as usual, we rushed down upon the valley, and having maintained a skirmish rather longer and more animated than usual, the bloodhounds were so enraged as to pursue us up the hill. As soon as we reached the forest, all except Francisco, who was the object of their bitterest hatred, avoided the old channel, and escaped into the woods. Francisco, affecting to be wounded, made for the bridge. He crossed, and forty-five of the miscreants, including their commander, followed. This was all that we desired. Instantly the crag fell, and striking the planks exactly in the middle, it dashed them down into the abyss, cutting off all hope of escape from those within the Fuente. In the mean while we had taken our stations on the ridges, and looked down in savage exultation upon our prey. For Francisco we feared nothing, because we knew his intention, and we shouted aloud in order to give him an opportunity of carrying it into effect. We were successful. Whilst the Frenchmen, paralysed with horror, were gazing upwards upon the death which hung over them, Francisco, uttering a loud cry, ran towards the chasm, and with one desperate bound cleared it. Oh, sir, had you seen the expression of the murderers' countenances then; had you beheld their uplifted hands, and heard their screams for mercy, your blood would have boiled within you, as mine boils now. Our captain answered them. 'Mercy!' cried he, 'ay, such mercy as ye granted. Look down, friends, upon the village ye have destroyed! behold the bodies of the aged and the feeble whom ye have butchered! listen to the cry of those whom ye have violated!—and now take your reward.' This was the signal, and we opened our fire upon them. It was in vain that they ran from side to side, seeking for a place of shelter or escape, or reached the brink of the chasm in hopeless despair. Three wretches only tried the leap, and they were dashed to pieces. The rest died, one after another, as our bullets took effect; and we left them where they fell, that their bones might bleach in the rains of heaven, after their flesh should have been

devoured by the eagles.' The Spaniard here ended his story, and to my astonishment I found that we were already in the camp. I offered him money, but he refused it: indeed he seemed like one beside himself with the recollection of the scenes which he had been describing. Having satisfied me that I was at home, he abruptly turned away, and I could hear the boughs and leaves crash before him, as with the speed of a racehorse he rushed down the glen."

The length of these extracts only leave us room for a single short passage: it will speak for itself.

"Day dawned in due time, and a spectacle was presented to us, of which no man, who has not looked upon the site of a lately fought battle, can form any conception. As far as the eye could reach, the open fields were strewn with broken arms, hats, caps, pouches, bayonets, balls, and pieces of clothing; whilst here lay a tumbril or ammunition waggon dismounted from its axletree, and there a gun, abandoned and upset, as if to hinder it from being removed. In every direction the grass was trodden down; long and deep tracks of wheels cut the meadow across and across; and at frequent intervals the very soil seemed scorched, as if quantities of gunpowder had been exploded upon it. Nor were other and no less striking manifestations of yesterday's drama wanting. The dead lay around us in heaps; Englishmen and Americans, men and horses, mingled indiscriminately together; and such had been the desperation of the contest, that in some places the foot of one foeman touched the very head of another. But the most remarkable objects in this horrid panorama were several American marksmen, who hung lifeless among the branches of trees. These persons, who had mounted for the purpose of securing a good aim, and had done considerable execution, wounding, among others, an aide-de-camp of General Phillips whilst in the act of conversing with Burgoyne, soon drew towards themselves a full share of our riflemen's attention. As they furnished admirable marks, and our men were not ignorant how to strike them, very few escaped; and there they still hung, having been caught by the boughs, among which they waved to and fro like the rocking cradles in use among the Indians."

The last two volumes of the *Chelsea Pensioners* are decidedly the best. On the whole, the work will add to the fame of the author, not that it is better done than the *Subaltern*, but that it shews a sort of talent, for the exercise of which that work afforded no room.

SIGHTS OF BOOKS.

Mirabilia; or, the Wonders of Nature and Art, &c. &c. 12mo. pp. 568. F. J. Mason. A COMPILATION of several hundred extracts relating to curiosities and natural phenomena. A work not remarkable for any extraordinary quality of selection or embellishment, but one of the many which the present improving era produces of publications which furnish a variety of intelligence and amusement.

An Inquiry, What is the one True Faith, &c. Post 8vo. pp. 393 and Index. London, 1838. Whittaker and Co.

"An ounce of mother wit is worth a pound of clergy," is the argument of the writer of this volume, who is "a layman." We asked the opinion of a rather sententious clergyman upon it; and he answered us, "He is indeed a lame one." Not being ourselves skilful in the

theological controversies, we can only say that the Inquiry shews much reading, and is temperate in tone.

Examples of Gothic Architecture. Part III. By Augustus Pugin. Illustrated with historical and descriptive Accounts, by Edward James Wilson, Architect, F.S.A. 4to. London, 1829.

AN admirable, and, to builders, a very useful work of details. This Number is devoted principally to domestic examples, and contains, amongst other subjects, elevations, parts, &c. of East Barham Manor-house, Norfolk—which, although exceedingly curious and pleasing, we take to be less pure, and, from its minute carvings, more expensive, than many others we could name—the Parsonage at Great Snoring, a beautiful specimen, and Oxburgh Hall, Norfolk. We are glad to find that Mr. Pugin has directed his labours to this branch of our own delightful style of architecture—a branch too little studied by architects, and frequently confounded with the ecclesiastical. Nor can we too highly commend the manner in which his plates are executed.

Pugin's Gothic Ornaments, selected from various Buildings in England and France. Drawn on stone by J. D. Harding. 4to. London, 1829.

ANOTHER clever and valuable work of the same class, but confined to embellishments. The plates are of the highest order, and combine the grace and elegance of Mr. Harding's drawing with prodigious accuracy of outline; but we think them somewhat deficient in antiquarian feeling;—still the work is of its kind without a parallel, and deserving of the most liberal encouragement.

Gothic Ornaments, selected from the different Cathedrals and Churches in England. By Thomas and Charles Atkinson. Folio. London. T. Griffiths.

Of this work, although a slight improvement has marked its progress, we cannot yet speak very favourably.

ARTS AND SCIENCES.

ROYAL INSTITUTION.

MAY 1st.—The meetings resumed this evening, after the Easter recess. Mr. Smart, who is known to the public as a lecturer on elocution, and a reader of Shakespeare, entered on an inquiry concerning the audible properties of speech, with the view of throwing some light on the original pronunciation of the classical languages, particularly their long-lost accent. By a quotation from Plutarch, he shewed that, in all languages, there are three things which reach the ear simultaneously,—the sounds of the letters, the tone or accent, and rhythm. Rhythm, which is the same principle in speech that time is in music, he exemplified by the opening lines of the *Paradise Lost*, the *Jerusalem Delivered*, the *Henriade*, the *Aeneid*, and the *Iliad*. The comparative differences are these:—in English, Italian, and all other modern languages except French, the rhythm arises from the fixed or regulated accents, independently of any fixed or regulated quantities. In French there are neither fixed quantities nor fixed accents, and the rhythm arises from the general drift of the sounds: it determines, in some degree, the otherwise floating accents and quantities, but is not determined by them. In the present mode of reading Greek and Latin, the rhythm arises from the accents, as in pronouncing English; the place of the accent

being determined in both languages according to the rules proper to the Latin language; but the lecturer demonstrated that this was not the original rhythm of those languages:—their rhythm arose out of the metrical feet, formed by the quantities independently of the accents; the *arsis*, or rising of the hand, making the beginning of each foot, and the *thesis*, or posing of the hand, its completion. To obtain this rhythm, by pronouncing words with their true quantities, and yet to give them their proper accents, is the great problem which practice has yet to solve. Bishop Horley, in his *Treatise on Ancient Prosodies*, intimates that it would give us all that is really important in the difference between ancient and modern pronunciation. The lecturer then pointed out the means by which the practice might be recovered by any one who is young and persevering; while his own reading of hexameter lines seemed to satisfy (judging from the applause that was bestowed) his audience of the practicability of his theory. Mr. Smart next demonstrated our English accent to be the same as that of antiquity, (acute, circumflex, and grave,) while words are separately pronounced; but so soon as accent is employed to unite words into sentences, and to signify their united meaning by emphasis, (offices which did not belong to it in ancient pronunciation, but devolved on other agents,) it then changes its character continually—a Proteus defying the scrutiny of all but the most practised ears. Hence our learned men, who know more of Greek and Latin than of English, have been entirely misled as to its real nature, supposing it to be merely stress, or long quantity, or, indeed, any thing but what it really is. In the lecturer's opinion, if a fair comparison could be set on foot between accent as now used, and the recorded characteristics of Greek and Roman accent, the true nature of the latter would no longer be a subject of doubt and difficulty. He concluded a very eloquent and interesting discourse, amidst the approbation of a numerous audience; amongst whom we observed the Bishop of Worcester, and several other distinguished persons.

In the library were a curious collection of baggage-boats, paddles, war-clubs, drinking-cups, and drums, of the Javanese, from the collection of Lady Raffles; also some instruments of torture, (hand and finger-screws,) of Dutch construction; together with specimens of German and English lithography, and presents of books.

COLLEGE OF PHYSICIANS.

ANOTHER assembly took place on Monday evening; Sir Henry Hallford, the president of the College, in the chair. Dr. Macmichael read a paper, from the pen of Dr. Seymour, on inflammatory disease of the lungs, apparently brought on by mental distress. The paper was illustrated by reference to the case of an eminent medical man who died a few months ago of consumption, which shewed itself soon after very severe domestic calamity. Our notice of this paper is necessarily short, because it consisted chiefly of professional details, which scarcely admit of analysis, and could only be intelligible to medical readers.

HORTICULTURAL SOCIETY.

THE anniversary of this Society was held on Friday sennight; Henry Moreton Dyer, Esq. in the chair. Mr. Lindley, the assistant-secretary, enumerated a variety of silver medals which had been awarded to sundry individuals, for certain improvements in the art of horti-

culture, during the past year. Mr. Sabine intimated, that in consequence of the backwardness of the season, the annual fête would be postponed, probably to the 27th of June. After some other routine business was disposed of, the Earl of Dartmouth, John Wood, Esq., M.P., Thomas Hoblyn, Esq., and Nicholas Aylward Vigors, Esq., were elected into the council for the ensuing year, and the meeting separated.

LITERARY AND LEARNED.

Oxford, May 2.—On Wednesday last, being the first day of Easter Term, the following degrees were conferred:—
Doctor in Civil Law.—J. W. Buller, late Fellow of All Souls' College.

Bachelors in Divinity.—Rev. C. T. Longley, late Student of Christ Church, now Head Master of Harrow School; Rev. C. D. Blyth, Fellow of St. John's College.

Masters of Arts.—Rev. R. B. Robinson, Rev. H. Demain, Queen's College; Rev. W. Orger, St. Edmund Hall; Hon. Lloyd Kenyon, Christ Church; Rev. P. Hansell, Rev. C. Stone, Scholars of University College; Rev. W. Ives, Balliol College; Rev. W. Blundell, Brasenose College; R. P. Morrell, Fellow of Magdalen College; Rev. J. P. Rhodes, Wadham College; H. J. L. Williams, Rev. J. S. Jenkinson, H. J. Hutton, Magdalen Hall.

Thursday last the following degrees were conferred:—
Doctor in Divinity.—C. T. Longley, late Student of Christ Church.

Bachelors in Divinity.—Rev. W. A. Bouverie, Fellow of Merton College; Rev. C. L. Swainson, Fellow of St. John's College.

ROYAL SOCIETY.

MAY 7. The President in the chair.—John Robert Stuart, Esq. was admitted, and took his seat as a Fellow. Two papers were read: the first was entitled, "Experimental inquiries on the electric theories of galvanism," by William Ritchie, M.A., F.R.S.; the second, "On the composition of the chloride of barium," by Dr. Turner. Among the presents were—statistical works by M. Benoiston de Châteauneuf, received from Paris through Dr. W. F. Edwards, along with his own work on the Physiological Characters of the different Races of Mankind; and M. Brongniart on Fossil Vegetables and the Pollen of Plants, with numerous illustrative plates. The other presents consisted of Sir A. Carlisle's work on the alleged Discovery of the Use of the Spleen and Thyroid Gland; Mr. Curtis's Essay on the Cure of the Deaf and Dumb; Mr. Soane's work on the Public Buildings in Westminster; eleven Numbers of Prof. Schumacher's *Astronomische Nachrichten*; Dr. Lee's translation of the *Travels of Ibn Batuta*, presented by the Oriental Translation Committee;—and the Sixth Report of the Anglo-Chinese College, by Mr. R. H. Davis.

ROYAL SOCIETY OF LITERATURE.

On Thursday the annual meeting of the Royal Society of Literature took place; the Marquess of Lansdowne in the chair. The secretary read the report of proceedings; and the following elections were made, by ballot, for the ensuing year:—

President.—The Lord Bishop of Salisbury.

Vice-Presidents.—The Duke of Rutland, the Marquess of Lansdowne, Lord Bishop of Bath and Wells, Lord Bexley, the Earl of Carlisle, the Earl of Clare, the Right Hon. Charles Yorke, the Hon. George Agar Ellis, Colonel Fitzclarence, the Rev. G. Richards, D.D.

Council.—The Lord Bishop of Ely, Lord Farnborough, the Rev. H. H. Baber (Librarian), R. Blanshard, Esq., John Caley, Esq., the Rev. Richard Cattermole (Secretary), Prince Hoare, Esq., William Jacob, Esq., William Jordan, Esq., A. E. Impey, Esq. (Treasurer), Lieut.-Col. Leake, Sir Gore Ouseley, Lewis Hayes Pettr, Esq. M.P., David Pollock, Esq., William Sotheby, Esq., William Tooke, Esq.

Treasurer.—Archibald Elijah Impey, Esq.

Auditors.—L. A. De la Chamette, Esq., Frederick Madden, Esq.

Librarian.—The Rev. Henry Harvey Baber.

Secretary.—The Rev. Richard Cattermole.

Foreign Secretary.—The Rev. Henry A. De la Motte.

Accountant and Collector.—Mr. Thomas Paull.

Thanks were voted to the noble chairman, on the motion of the Bishop of Bath and Wells.

ROYAL ASIATIC SOCIETY.

MAY 2d.—The Right Hon. Sir Gore Ouseley, bart. V.P. in the chair. Mr. Davis read the first part of his Essay on the Poetry of the Chinese. It treated of versification, or the rules which prevail in the construction of lines, couplets, &c. and the sources whence these derive their melody and rhythm. Mr. Davis divided this part of his subject into the following heads, viz. the sound of the spoken language, the variation of tones as prescribed by rule, the use of poetical numbers, the observance of a regular cesural pause, the use of terminal rhymes, and the rhetorical effect of the parallelism of couplets. The paper was illustrated by specimens of Chinese poetry, and comparisons of it with Greek, Latin, Hebrew, &c. A great variety of very valuable donations were enumerated; amongst them were several volumes of works in Chinese, including a MS. poem descriptive of London; Notices of Mongolia in Russia, by the Monk Yakinff, presented by the imperial ministry of foreign affairs at St. Petersburg, through Prince Lieven; Sir George Staunton presented a large volume of drawings of scarce plants, executed in Paris for the Emperor of China; Mr. Davis presented a candle made entirely from vegetable wax by the Japanese. Mr. Davis has brought to England specimens of the plants from which the wax is obtained, for the purpose of trying to raise them in England. The Transactions of the Royal Society of Literature, and of some other learned and scientific bodies, were also on the table.

Viscount Holmesdale, M.P. and Capt. R. Mignan, were elected members.

FINE ARTS.

EXHIBITION OF THE ROYAL ACADEMY.

It would have been strange indeed if the parent stock of the Fine Arts in this country, from which so many vigorous shoots have sprung, had itself, with all its peculiar advantages of culture, been deficient, either in the amount or in the quality of its annual produce. It gives us great pleasure to see that that is not the case; and that it displays a profusion of blossoms and fruit, glowing in every rich variety of taste and colour. Metaphor apart, we have no hesitation in saying, that the co-joined exertions of the members of the Royal Academy and of their condutors have given to the present Exhibition at Somerset House a rank at least equal, if not superior, to that of most of its precursors of recent date. At the same time, we still wish to impress upon the Royal Academy, as well as upon other Societies, the expediency, in the existing accumulation of art and artists, of exercising a more than ordinary vigilance and discrimination in the selection of works for exhibition; and of excluding those which do not possess qualities that entitle them to the notice of the public. It is not merely that it is degradable not to encourage mediocrity, but that it is desirable to take care that the arrogant demands of mediocrity do not absolutely supersede the modest claims of genius.

But to the matter before us. On entering the great room we immediately fixed our attention on the works of Mr. Wilkie; induced to do so, not only by the expectations derived from his great and acknowledged talents, but because we were curious to remark those changes of style, which, during his late absence from

England, the observation of foreign art, as well as of foreign character, manners, costume, &c., was calculated to produce. The effect is distinctly visible; so much so, indeed, that in some of the beautiful pictures by this highly-gifted artist which adorn the present Exhibition, he appears almost to have identified himself with Spanish art, as well as Spanish feeling. Two of these pictures may be regarded as placing in strong contrast "Thought" and "Action." The first is No. 56. *The Spanish Posado*. It represents, in the words of the Catalogue, "a Guerilla council of war, at which three reverend fathers—a Dominican, a monk of the Escorial, and a Jesuit—are deliberating on some expedient of national defence, with an emissary in the costume of Valencia. Behind them is the posadera or landlady, serving her guests with chocolate, and the begging student of Salamanca, with his lection and segar, making love to her. On the right of the picture a contrabandist of Bilbao enters, upon his mule; and in front of him is an athletic Castilian armed, and a minstrel dwarf with a Spanish guitar. On the floor are seated the goat-herd and his sister, with the muzzled house-dog, and pet-lamb of the family; and through the open portal in the back-ground is a distant view of the Guadarrama mountains." The scene is one of perfect repose and tranquillity; the composition of the group of figures is remarkably good, and the expression in the countenances of those who are engaged in the consultation is finely diversified. The picture which designates "Action" is No. 128. *The Defence of Saragossa*. "The heroine, Augustina, is here represented on the battery, in front of the convent of Santa Engracia, where, her husband being slain, she found her way to the station he had occupied, stooped over his body, took his place at the gun, and declared she would herself avenge his death. The principal person engaged in placing the gun is Don Joseph Palafox, who commanded the garrison during the memorable siege, but who is here represented in the habit of a volunteer. In front of him is the reverend father Consolacion, an Augustin friar, who served with great ability as an engineer, and who, with the crucifix in his hand, is directing at what object the cannon is to be pointed. On the left side of the picture is seen Basilio Boggiero, a priest, who was tutor to Palafox, celebrated for his share in the defence, and for his cruel fate when he fell into the hands of the enemy. He is writing a despatch, to be sent by a carrier-pigeon, to inform their distant friends of the unsubdued energies of the place." Had this picture been shown to us, without our being aware by whom it was painted, we confess that we should have been at a loss to name the artist; so opposite is the singular energy which it displays to the quiet and familiar character of Mr. Wilkie's usual works. Nor is the fearless breadth of colouring and execution less opposed to his former close, careful, minute, and finished imitation of objects. This last remark is equally applicable to No. 110. *Cydnals, Priests, and Roman Citizens, washing the Pilgrims' feet*; No. 224. *A Roman Princess, with her Attendant, washing the Pilgrims' feet*; No. 293. *The Confessional*; No. 298. *The Pifferari*; and No. 403. *The Guerilla's Departure*, all by Mr. Wilkie. But the most striking proof of the versatility of Mr. Wilkie's powers is afforded by No. 91. *Portrait of the Right Hon. the late Earl of Kellie, Lord Lieutenant of the County of Fife*. It is a whole-length portrait of the size of life. Mr. Wilkie has accomplished in it all that he

ever accomplished in figures on a small scale; and those who know the difficulty of passing from the one to the other will be the best judges of the value of his success. Without referring to that consideration, however, it is a delightful and unsophisticated picture; and, with the exception perhaps of a little coolness of hue, is one of the most characteristic and interesting portraits of a venerable old nobleman that we ever saw. We rejoice to find that Mr. Wilkie's health is in a state to permit him to make such efforts; and we hail with great gratification his reappearance in the lists of art.

No. 16. *Beneath*. W. Etty, R.A.—A gigantic performance. It possesses the same grandeur of composition, energy of action, and overwhelming power of colouring, as Mr. Etty's well-known "Combat;" but the subject is very inferior, for it wants the relief and sentiment which woman pleading for the vanquished gave to that work; and is simply an extraordinary exhibition of irresistible muscular force and unsparing animal ferocity. We are sorry to observe, that there is a great disproportion between the upper and the lower parts of the principal figure. The opposition also between the group and the sky is painfully violent. It is, nevertheless, a striking and magnificent picture.

No. 31. *Hero, having thrown herself from the Tower at the sight of Leander drowned, dies on his body*. W. Etty, R.A.—In this beautiful and interesting little work we recognise the blending softness of Correggio.

No. 42. *Ulysses deriding Polyphemus*. J. M. W. Turner, R.A.—Although the Grecian hero has just put out the one eye of the furious Cyclops, that is really no reason why Mr. Turner should put out both the eyes of us, harmless critics! So red-hot a mass has seldom been applied to our visual organs. Justice, however, compels us to acknowledge, that although Mr. Turner thus continues to delight in violating nature and defying common sense, yet that, considering this performance as a gorgeous vision of the imagination, as a splendid dream of poetical fancy, it is highly captivating.

No. 92. *Night*. H. Howard, R.A.—Upon the principle of taking a glass of ice-cream after having been exposed to the blazing noon of one of the dog-days, we recommend visitors to the Exhibition to go immediately from the work which we last mentioned to that now under our consideration; and to allay the fever which Mr. Turner has raised in their blood, by contemplating the appropriately cool tones of Mr. Howard's classical and elegant production.

No. 68. *A Dutch Ferry*. A. W. Callcott, R.A.—A happy medium between the extremes to which we have just been alluding. The still expanse that here meets the view, the simplicity of the subject, and the entire truth with which it is treated, combine to produce the most soothing and delightful feelings in the mind of the spectator. It is needless to dwell upon the fine qualities of art which Mr. Callcott brings to bear upon nature. His powers are too well known to require any eulogy.

No. 10. *The Fountain: Morning*. A. W. Callcott, R.A.—Perfectly fascinating. The freshness of the early day is deliciously depicted; and the tasteful introduction of Grecian architecture and figures forms, if we mistake not, a novel feature in the development of Mr. Callcott's genius.

[To be continued.]

EXHIBITION OF THE SOCIETY OF PAINTERS IN WATER-COLOURS.

"From every point a ray of genius flows."—Rogers.

It must not be supposed from the laudatory and comprehensive motto prefixed to this notice of the Exhibition of the Society of Painters in Water-Colours, which opened on Monday last, that we are not fully aware that there are many splendid stars in other hemispheres of art. Of our conviction of that fact, the pages of the *Literary Gazette* contain abundant proof. But (as might be justly expected in a collection formed exclusively by a body of artists selected for their superior skill in a particular branch of the profession) in the gallery of the Society of Painters in Water-Colours, works of high talent alone meet the eye on every side. There is none of that alloy of mediocrity, the result of either necessity or ill-judging kindness, which is occasionally so debasing and injurious elsewhere. We state this, lest, as our limits will permit us to particularise only a few of these fine productions, it might be imagined that we undervalued those to which it will not be in our power to advert.

No. 22. *A Stag*. G. F. Robson and R. Hills.—It is pleasing to see two masters, each of great and acknowledged talent in his own department, combining their powers in the production of a single composition. This friendly union was frequent among the painters of other days, but is not so common in our times. A drawing similar to the present, and executed by the same able artists, under similar circumstances, was exhibited last year. We are in doubt to which to give the preference;—if to that under our consideration, it is probably only because its predecessor is absent. In both, the wild solitude of nature, and the proud bearing of the noble and vigorous animal, rousing himself from his "heathery couch," and looking as if he were about to exclaim in the words with which Cowper makes Selkirk commence his pathetic apostrophe,

"I am monarch of all I survey,"

are admirably represented.

No. 204. *Durham*. G. F. Robson.—The recent destruction of the choir of York Minster, and the still more recent attempt to destroy Westminster Abbey, must endear to every lover of his country those venerable remains, the proofs of the piety and taste of our forefathers, which are scattered over the land, but of which it is impossible now to tell how soon the hand of some fanatic or base incendiary may deprive us; and must render doubly valuable such beautiful representations of them as this, by Mr. Robson, of that grand and picturesque pile, Durham Cathedral.

No. 117. *Distant View of the World over the Earl of Chichester's Park, from the Downs near Brighton*. Copley Fielding.—One of the most fascinating drawings that we ever saw; and in some respects, such, for instance, as the free and simple sweep of the lines, and the complete notion conveyed of wildness and extent, surpassing any thing of the kind that has heretofore come under our notice.

No. 147. *Elijah*. P. Dewint.—A classical composition, being a new feature in the practice of an artist who has hitherto so successfully devoted his rare talents to the familiar and ordinary character of landscape. Mr. Dewint has evidently brought all his powers to bear on this fine performance; and, while he has preserved the grandeur of his subject, has in the trees, the soil, the passing storm, &c., intro-

duced the results of his long and attentive study of nature.

No. 59. *A Blacksmith's Shop at Strathfield, say, Hampshire*. W. Hunt.—As true as the camera-obscura, and much more spirited and painter-like. Mr. Hunt's eye for nice discrimination of hue and tone is perfect; and his execution is singularly sparkling and brilliant. In parts, the effect is absolutely phosporic.

No. 103. *A Scene from the opening of the Third Book of the Odyssey—Telemachus going in search of Ulysses*. Copley Fielding.—A composition that might be put in competition with any of the paintings of Claude. Every object is bathed in the rich and splendid light which emanates from the setting sun. Much as Mr. Fielding has done in a similar way, we do not think that he ever before produced any thing so glowing and powerful.

[To be continued.]

MR. WEST'S PICTURES.

[Third Notice; conclusion.]

On the merits of the late venerable President of the Royal Academy, as instanced in the historical, classical, and dramatic departments of the art, we have already touched; but

"The greatest is behind."

We allude to the numerous and magnificent works on scriptural subjects which have proceeded from Mr. West's pencil; and the finest of which constitute a principal portion of the collection about to be submitted to the hammer. Now that the prejudices which have so long prevailed on that point among the least enlightened of the ministers of our holy religion appear to be giving way, and that the spirit of tasteless bigotry which prevented the metropolitan cathedral from being gratuitously enriched by the united contributions of the painters of the English school, seems no longer to exist, we trust that some of these great works will be purchased, for the purpose of being rendered the invaluable and appropriate ornaments of the noblest ecclesiastical as well as other public edifices in the country. Imbued with a strong religious feeling himself, and stimulated by a corresponding sentiment on the part of his royal and excellent patron, Mr. West embodied many of the sublime incitements to Christian virtue which abound in the Bible, in a manner calculated to produce the liveliest and most durable impression on the mind of the spectator. Most of these admirable productions are so well known to our readers, that to enter into any detail of them would be superfluous. Simply as one example, we will mention the "Moses receiving the laws on Mount Sinai." On entering the gallery, this picture is seen as through a vista; and the effect of it is grand and striking, perhaps beyond that of any other in the room. The arched approach to the inner apartment serves as a frame or margin to it; separating it from the various objects by which it is surrounded. When the magnitude of the scale on which it is painted is considered, it is difficult to conceive the possibility of filling up a large space with more simplicity. And this is effected without the slightest approximation to tameness, or to an undue expansion of the masses. The conduct of the light is one of the principal features of the work; for it is managed with so much skill as materially to assist the general impression; while it produces the required keeping between the upper and lower groups, without violently severing them: the perspective rising from the bottom to the top of the picture in perfect accordance with the character of the scene, and of the circumstances under

which it may be supposed to have been witnessed. The act of delivering the Divine Tables is represented, without bringing into view the person of the Deity; in any attempt to introduce Whom, it is not surprising that even the genius of a Raffaele or a Michael Angelo was always unsuccessful. The sentiment which peculiarly belongs to the subject, and which Mr. West has most happily imparted to it, is that of awful expectation. This sentiment is repeated in every look and gesture of the assembled group at the foot of the mount. In the centre of this group the light falls upon the head and forehead of one of the elders, and is reflected upon a countenance expressive of the most profound reverence; producing, with the corresponding elevation of the hand, and the half-uplifted eye, one of the most sublime figures that was ever depicted by the pencil of any artist, ancient or modern.

We cannot better conclude our remarks on Mr. West's powers, than by quoting two brief extracts from the elegant discourse delivered by his accomplished successor, Sir Thomas Lawrence, to the students of the Royal Academy, on the distribution of the prizes in 1825:—

"At an era when historical painting was at the lowest ebb (with the exceptions which the claims of the beautiful and the eminent permitted to the pencil of Sir Joshua), Mr. West, sustained by the benevolent patronage of his late Majesty, produced a series of compositions from sacred and profane history, profoundly studied, and executed with the most facile power, which not only were superior to any former productions of English art, but, far surpassing contemporary merit on the continent, were unequalled at any period below the school of the Caracci."—"For myself I can truly say that I never estimated the comprehensive ability of that great master so highly, as when comparing at Rome his labours, in the memory, with many of the most celebrated compositions then before me of the revivers of modern art."

The Catalogue Raisonné of Mr. West's Pictures is a very able and interesting production, and has evidently been drawn up by some one perfectly conversant with the principles and practice of the fine arts.

SALE AT CHRISTIE'S.

AFTER the deluge of picture trash we have so long been accustomed to, and the solemn mockery of invitations to view the collection of this or that eminent individual, it is quite refreshing to be enabled to call the attention of the admirers of pictorial excellence to the truly genuine, as well as capital, assemblage of pictures, the property of the late Lord Gwydir, now selling by Mr. Christie. With what heightened gusto have we looked on this collection, under the certainty of no unworthy trickery having been practised, and in the absence of all attempts to bias the judgment or misdirect the taste, by resorting to those contemptible arts to which the system and continued march of puffing give birth. Our limits will only allow us a brief mention of the most prominent. We begin with a Marine Landscape by Claude, — one of his cold but pearly-tinted pictures; a delightful *chef-d'œuvre*. — A Landscape by Both, with figures by Polemberg: — there is here a lack of harmony and consort, which creates a regret that the figures in this noble production had not been inserted by Andrew Both. Of three by Wouvermans, we have two, known by the titles of the *Abbevoir*, and the *Fêtes, et adieu des Chasseurs*, painted

in his best time, and of his finest execution. Our favourite Teniers is great in number, there being no fewer than five from his pencil; but we do not esteem any of them as capital works. The *Corporal Acts of Mercy* is undoubtedly a fine picture, but parts of it very unequal. We remember having seen more than one picture of this oft-repeated subject, wherein he has been more successful. — A *Farm-Yard with Cattle*; Paul Potter. A lovely portrayal of rural life and its occupations. We heard it whispered that a thousand guineas were offered and refused for this charming specimen, while on view. — A *Girl entering the Bath*; Rembrandt. To our mind a miracle of art; the enchanting effect produced on so small a space by the broad and giant-like touch of this master, is truly wonderful. — An *Interior, with Smoker, &c.*; Dusart. This picture compensates by its unusual excellence for the absence of A. Ostade. — A *Pair of Italian Landscapes, with Figures dancing*; Ferg. These are probably unique specimens of the degree of excellence this artist reached. We must pass over the productions, and mention only the names of Giulio Romano, C. Dold, Murillo, Panini, Cuyp, Wynants, and Berghem, that we may have space to vent our just feeling of national pride and exultation at the sight of our own Reynolds and Gainsborough in such company, bravely putting forth their just claims for admiration; and if they do not bear away, they at least dispute the palm with all we see or hear of pictured excellence. The *Repose of the Holy Family*, by Sir Joshua Reynolds, was painted for Macklin, and engraved for his Bible; the landscape part of this fine picture for richness, the figure of the Virgin and the head of our Saviour for elegance of form and delicacy of colour, have never been surpassed.

For the glorious Gainsborough we can give but a word. "We are all going to heaven, and Vandyke in our company," were the last words uttered by this unrivalled delineator of our rural and domestic scenery; and if excellence in art be the passport to the painter's heaven, this noble *chef-d'œuvre* would alone have secured Gainsborough's admission.

THE SCOTTISH ACADEMY observed an anniversary by dining together at their rooms, Waterloo Place, Edinburgh, on April 27th, — when about a hundred artists and lovers and patrons of the arts assembled. — We observe from the Scots papers, that there were a number of able speeches delivered on the occasion; and that the entertainment went off with great spirit.

NEW PUBLICATIONS.

The Right Hon. Charlotte Isabella, Viscountess Kirkwall. Engraved by Cochran, from a Miniature by Miss Emma Kendrick. Colnaghi.

THE effect of moonlight accords well with the pensive expression of this elegant and pleasing portrait, which forms the fifty-third subject of the Gallery of Female Nobility published in *La Belle Assemblée*.

Fisher's Illustrations of England. Nos. IV. and V.

LIVERPOOL and its neighbourhood furnish the embellishments of these two Numbers. The views of "Knowsley Hall," and those of "Liverpool from the Mersey," are the most striking of the plates, and are very beautiful. The letter-press contains much interesting information respecting this great emporium.

Portraits from the Zoological Gardens. T. Landseer. Colnaghi and Co.

CHARACTERISTIC representations of the reindeer, the brown llama, the Thibet dog, the white llama, and the Wallachian ram. In the background are two of the bears, like brutes as they are, making faces at the ladies, and contending for a bun, which, we confess, is very tantalisingly presented to them.

Animals. Drawn and etched from nature by J. C. Zeitter.

THE Angora goat, the white antelope, the argali, llamas, and the cashmere goat — also from the Gardens of the Zoological Society. The execution is very creditable to Mr. Zeitter's talents.

His Royal Highness the Duke of Clarence. Drawn by A. Wivell; engraved by W. Holl. Sams.

A COMPANION-PRINT to the portrait of his Majesty lately published by Mr. Sams. The resemblance is very striking.

BRITISH DIORAMA, OXFORD STREET.

FOUR beautiful views, three foreign and one English, from the skilful pencils of Messrs. Stanfield and Roberts, are now exhibiting at the Bazar, in Oxford Street. We think them decidedly superior to those of last year. The English view is a remarkably fine one, from the banks of the Ouse, of the city of York, of which the magnificent and venerable Minster forms the principal feature. A faint reddish light betrays itself through some of the windows of the minster; by degrees it increases in vividness, until at length the flame from which it proceeds bursts fiercely forth, illuminating the adjacent towers, and casting its reflection on the water: mingled volumes of smoke, and masses of brilliant sparks, now rapidly ascend to the skies; a great portion of the roof of the building falls in; and the dreadful conflagration is at its height when the scene closes. The effect is altogether exceedingly striking. Of the three foreign views, namely, "The Temple of Apollinopolis, in Egypt," "Entrance to the Village of Virex, in Italy," and "Interior of St. Sauveur, in Normandy, in ruins," the Village of Virex is our favourite. It is a most picturesque composition, and is very powerfully painted.

ORIGINAL POETRY.

CHANGE.

We say that people and that things are changed;
Alas! it is ourselves that change: the heart
Makes all around the mirror of itself.

WHERE are the flowers, the beautiful flowers,
That haunted your homes and your hearts in
the spring?

Where is the sunshine of earlier hours?
Where is the music the birds used to bring?
Where are the flowers? — why, thousands are
springing,

And many fair strangers are sweet on the
air;

And the birds to the sunshine their welcome
are singing —

Look round on our valley, and then question
"Where?"

Alas, my heart's darkness! I own it is summer.
[be:]

Though little 'tis like what it once used to be
I have no welcome to give the new-come;
Strangely the summer seems altered to me.

'Tis my spirits are wasted—my hopes that are weary;

These made the gladness and beauty of yore:
To the worn and the withered even sunshine
is dreary,
And the year has its spring, though our own
is no more.
L. E. L.

BIOGRAPHY.

To the Editor, &c.

SIR,—I request your correction of a mistake in your *Gazette* of Saturday last with respect to Mr. John Reeves, F.R.S. and treasurer to the Literary Fund, who has for several years resided in Parliament Place, Westminster, and who, I am happy to add, is in good health. I am, sir, &c.

Perkins,
5th May, 1829.

JAMES REEVES.*

MUSIC.

THE EISTEDDVOD on Wednesday morning was extremely well attended. Lord Clive, President, awarded the royal Cambrian medals to Henry Davies, Esq., for an essay on the "settlement of the Normans in Wales;" and to Thomas Richards, Esq., for an essay on the same subject. Several poems, &c. had been received, but none of them were deemed of sufficient merit to be entitled to the premiums offered. A concert of national music was performed, in which Miss Paton, Miss Love, Madame Stockhausen, Miss Betts, Miss Byfield, Braham, Broadhurst, Atkins, Collyer, Fitzwilliam, &c. &c., sung; accompanied by an excellent band, led by Mori. The chief novelty, however, was the exquisite performance of a Welsh harper, and *Pennillion* singing by three Cambrians in their native language, which appeared to delight the company. Mrs. Anderson performed an aria on the piano-forte with variation, in the first style of excellence. Mr. Parry was the conductor: his son sung a Welsh melody, "The worth of true friendship," in a manner which gave promise of future celebrity. Fitzwilliam and Parry also sang a very characteristic duet, called "Pretty little Gwennu," which was loudly encored.

MISS CHAMBERS'S Concert, we are well pleased to state, was crowded with elegant company. Her appearance is very interesting, her voice certainly a fine one; and she was much applauded in all her performances. The whole went off with *éclat*; the chief beauties being an aria by Camporese, and a duet, violin and violoncello.

MR. HAWES'S annual Concert at the Argyl Rooms, on Thursday, was also a great musical treat. He was deservedly supported by all the great talent, vocal and instrumental, of the country.

DRAMA.

KING'S THEATRE.

THE school-boy's pugilistic phrase, "one down the other come on," appears to be the adopted motto at the King's Theatre, as among King's scholars: hardly has "time" been allowed o Malibran to complete her "rounds," or o the fashionable "Fancy" to decide upon her "science," before Sontag throws up her op, and appears on the boards to claim the "championship." But whatever the Spanish spli-

* We received our information from a quarter apparently, of unquestionable authenticity; and we hastily rejoice to find we were mistaken. Since the esteemed and worthy treasurer of the Literary Fund has thus retired, we trust that his purse will be more than usually eploped at the anniversary on Wednesday next.—Ed.

rante has gained in personal appearance, the German professor has lost in looks. Sontag is sadly "out of condition:" the hollow cheek and meagre figure she exhibited on Tuesday evening, not only manifest a deficiency in "weight," but betoken symptoms of unskilful "training" during her sojourn in Paris. But to drop metaphor:—since her last appearance in London, the face and form of the "angelic Sontag" have lost much of their heavenly beauty. We know not whether this deterioration in her personal charms is attributable to sickness or sorrow, or to the combined effects of both, but certes she no longer retains those plump proportions which bereaved half her continental admirers of their sober senses. Ner is her "falling off" confined to her person: we think (which, by the by, is but a natural consequence) that her voice has diminished in power. Her style, however, of singing remains unaltered; distinguished for precision in the execution of rapid passages, and the peculiar facility with which she displays her power in accomplishing chromatic runs. But this is all: Sontag is deficient in the art of producing that light and shadow which so few professors can either comprehend or accomplish. Her declamation, if we may be permitted the phrase, is tame and thin-toned, compared with the soul-stirring strains of Pasta,—and her conceptions are poor, and, at most, but instrumental imitations, compared with the mental emanations of the gifted, though now neglected Pisoni. In a word, Sontag may be said to be the most expert performer, the first concerto player living, on the human voice; but, as a vocalist, she never approaches to the sublimity of song.

On Tuesday, the opera (*la Cenerentola*, one of Rossini's most monotonous and worst), on the whole, went off heavily. Mile. Sontag was not sufficiently supported in the female cast. When Blais, and other distinguished vocalists, are to be had, we think it a matter of regret to allow such singers as Castelli and Specchi to fill parts which they can neither adequately act nor sing. We also regret to see Zuchelli descend to buffo parts,—it is like Young playing "Punch:" his admirable style is of a higher class, and not suited to low comedy. On the other hand, we liked Donzelli's singing in this opera better than in any in which we have heard him.

On Thursday, Malibran both sang and acted better than heretofore; she has adopted our advice, and left off the trickery which could not be approved. Sontag and Pisoni played together in the second act of *La Donna di Lago*—the one appeared to draw the other out; but Sontag's tameness was strongly contrasted with the fire of Pisoni—the latter was the only performer honoured with an *encore* during the night.

DRURY LANE.

ACCORDING to long-established practice, the managers of our Theatres-Royal having deliberated upon the policy of producing a piece which has created a great sensation abroad, accepted it,—rejected it,—re-considered—and, finally, abandoned all idea of its performance; some clearer-sighted speculator dashes at once into the arena with it—makes what the Fancy call a "smashing hit," and the whole town having flocked to the fortunate establishment for thirty or forty nights, and sufficiently wondered why the subject had not been caught at by one of the winter theatres, out it comes at last—a copy, when it might have been (here at least) an original—ramped up in haste, in-

stead of being prepared carefully and leisurely—and having killed ten carpenters, two scene-painters, and a proportionate number of tailors—"fretted" the leaders'—internals—"into fiddle-strings"—worked the ballet-master off his legs—dumb-founded the call-boy, and left the prompter scarce breath enough to blow his whistle—the proprietors, if by good luck they escape the shame of defeat, find themselves but gleaners where they might have been reapers—smothered with "odorous comparisons," and bated to death with—"Very well indeed for you;"—"Vastly pretty, if we hadn't seen the other;"—"Pity you didn't do it first;" and so on, *ad infinitum*. As it was with *Der Freyschütz*, so it is with *Masaniello*, or the *Dumb Girl of Portici*; and should it replenish the treasury, which it ought, and we think will—we can only say with our esteemed old acquaintance, Sam Spring—"Providence is very kind to Drury Lane, sir;" for, undoubtedly, if it had not inspired M. Laporte with the idea of producing the ballet, the opera would never have made its appearance. But to speak of the opera, the production of which has given rise to these remarks:—Its adaptation to our stage, by Messrs. Kenney and T. Cooke, has been judiciously performed; the songs, and the few lines of dialogue which are dispersed through the piece, sensibly and feelingly written; the choruses and concerted music executed with most praiseworthy precision; and the dances, generally speaking, much superior to any thing we could have anticipated upon these boards; particularly a national dance, by Oscar Byrne and his clever little daughter. The scenery, by Stanfield, is of course beautiful; and the eruption of Mount Vesuvius is better managed here than in the Haymarket, with the exception that the mountain itself, previous to the darkening of the scene, appears rather dwarfish and insignificant. For splendour of dress and blaze of beauty, the ballet certainly immeasurably outstrips the opera; but it has, notwithstanding, been gotten up upon a liberal, if not an extravagant scale; and, making due allowances for the anticipation of its effects, and taking its own peculiar merits into consideration, it is some time since we have seen a musical piece so much entitled to the patronage of the public. Braham's *Masaniello* is a most chaste and perfect performance, full of fire, grace, and expression; no unmeaning cadences—no unnecessary violence. There is both *heart* and *soul* in every note he sings throughout the opera. His barcarol in the first scene of the second act (the favourite piece, we suspect, with the public) was rapturously encored; a tribute equally due to his delightful execution of the air "Pourquoi pleurez?" introduced by him from *Le Concert à la Cour*, almost immediately afterwards, and only withheld by the very circumstance of its following the barcarol so quickly. In short, upon no occasion have we seen this king of English vocalists displaying truer taste or greater talent. The music of this opera will, we trust, at length obtain for Auber the meed which has been hitherto begrudged him in this country. He has been repeatedly most shamefully underrated by those who set themselves up for musical autocrats here, and imagine that their laudable Molatry of the old masters empowers them "to deal damnation round" upon the new. Those who have studied the scores of Auber's operas, *La Nièce*, *Le Maçon*, *Le Concert à la Cour*, *Marie*, &c., or listened to them as performed at the Feydeau, under his direction,

and by artists who can play and sing his music, will not deny him the very high rank he is entitled to take amongst dramatic composers. The opera of *La Muette de Portici* has added considerably to his reputation abroad; and judging from the genuine applause bestowed on Monday evening upon the overture, the barcarol chorus in the first scene, the clever opening of the market scene, and the prayer at its close, we have little doubt of his becoming equally popular amongst us. We have heard it is the intention of Mr. Arnold to produce another of his operas in the ensuing season; and the success of *Masaniello* will doubtless be an additional inducement. Should any curtailment be deemed necessary, a duet between Miss Betts and Mr. Cooke, and a long song by the latter, neither of which, if our recollection serve us, belongs to the opera, or is even by the same composer, might be spared by the audience,—provided always they are not required by the scene-shifter.

The part of *Fenella* (the dumb girl) introduced to the English public an interesting candidate for their favour in the person of Mlle. Alexandrine, — a beautiful brunette, with a sweet smile, a very dangerous pair of eyes, that took ample vengeance for the restriction imposed upon her tongue, and a pair of sleeves à l'évêque, which, however out of character in a Neapolitan fisher-girl, it would have been, we suppose, an *indignité*, considering her French extraction, to have deprived her of. But that the audience of Drury Lane has little sympathy with that of the King's Theatre, Pauline Leroux might find her an awkward rival. As it is, we may safely say, that were there stalls in the pit of Drury, there would be no lack of tenants for them during the run of *Masaniello*, which we have little doubt, from its reception by a house crammed to the alips, will only terminate with the season.

COVENT GARDEN.—Peake's farce of *Masjer's Rival* has been transplanted from Drury Lane to this theatre; and its success is complete. Keeley and Wrench keep the house in roars of laughter.

VARIETIES.

Roman Camp.—A Roman camp, hitherto unnoticed, has lately been discovered at Saint Valéry-sur-Somme, in France, parts of which are in fine preservation. A plan and a description of it have been presented to the Royal Society of Emulation, at Abbeville.

The British Gallery closes this evening,—so that those who have not seen it have no time to lose.

The Artists' Benevolent Fund holds its Anniversary to-day at Freemasons' Tavern. The attendance promises to be distinguished and numerous.

Sémiramide.—Between Malibran and Sontag it is now a matter of question which is to be the heroine in the opera of *Sémiramide*. The former was announced; but the latter has arrived.

Argyll Rooms.—The concerts at the Argyll Rooms bid fair, we are told, to be fashionable. Like all other competitions, this, in rivalry of the musical entertainments in the King's Concert Room, will, we trust, lead to public benefit.

Lithography.—We have seen some specimens, from Mr. Hulmædel's office, of the application of the ruling machine to the stone, with reference to architectural, ornamental, and other subjects, in which evenness and regu-

larity of line are desirable,—the clearness and sharpness of which much transcend any lithographic production that we have heretofore met with. We understand, also, that this style of lithography is cheaply executed, and is capable of yielding a great number of good impressions.

Honours.—We rejoiced to see in our contemporary (the Government Gazette) of last week, that his Majesty had graciously marked his royal consideration of the enterprise and services of Captains Parry and Franklin, by conferring upon them the honour of knighthood. It seems to us a deficiency in our system, that no distinct order should have been instituted for the reward of high literary and scientific merit: a bit of riband, or a medal, from the hands of a Sovereign of taste, would be a cheap stimulus to the noblest exertions; and surely peace should have its laurels as well as war:—the benefactor of his species is as deserving of distinction as its most glorious destroyer!

New Discovery in the Preparation of Flax.—A French paper states, that an inhabitant of Château-Thierry has discovered a mode of giving to prepared hemp and flax the fineness, softness, and whiteness of cotton, by impregnating those substances with oil, and then exposing them, during fifteen or twenty days, to the action of frost, between two layers of snow. By this means all the inconvenience of the ordinary and tedious process of steeping them in stagnant water will be avoided.

Sculpture in Denmark.—The name of Thorwaldsen is familiar to every lover of the plastic arts. One of his pupils, Hermann Freund, who has spent the last ten years under the tuition of that illustrious sculptor, has recently returned amongst us, and has been called to fill the station of Professor of Sculpture in our Academy of the Fine Arts. A high opinion of his skill and taste has been formed from his colossal statue of St. Luke the Evangelist; and it is said that the first work on which his chisel will be employed, is a baso-relievo from a subject in Scandinavian mythology, which is intended to decorate the palace of Christiansburg. — *Copenhagen, 6th March.*

Fulminating Silver.—It has been ascertained that Bertholet's fulminating silver is formed of oxide of silver and ammonia.

Mode of Preserving Stuffed Animals.—It is stated in the last Number of the *Journal des Connaissances Usuelles*, that a bladder filled with rectified essence of turpentine, closely tied, and placed in the cupboard in which are stuffed animals or birds, will effectually secure them from the ravages of insects. The smell of the turpentine, evaporating through the bladder, destroys any insects which may already exist, and will prevent the approach or production of others.

New Stamp-Office.—Poor Spagnoletti has enough ado to keep his band, especially his horns, in order in the Opera orchestra. He was working away at a furious rate the other night with hands and feet: on which a wag observed, that the famous leader seemed to be establishing a *New Stamp-Office*.

A Freedom.—In the room where the principal singers met previous to being led into the concert at Guildhall, are hung the documents of the *freedom* presented by the city to distinguished personages. Mlle. Sontag, it is said, inquired what they were; and the gentleman who gave her the explanation, pointing accidentally to one of them over the place where she stood, added,—"That, for instance, is *Prince Leopold's freedom*." A little scene ensued.

LITERARY NOVELTIES.

•• We do not think it too much again to request of parties sending us notices for this part of our Journal (which we are happy to devote gratuitously to the diffusion of literary intelligence), to authenticate their communications by their signatures. A score of signatures are this week omitted in consequence of their being anonymous!

The Village Nightingale and other Tales, by Elizabeth Frances Dagley, author of *Fairy Favourites*, the *Birth-Day*, &c.—is nearly ready for publication.

We have before us the second volume of the *Life of Napoleon* (Mr. Murray's Family Library), which we shall notice more at length next week: at present all we shall say is, that it is in every respect equal to the preceding volume; and it is hardly in our power to bestow higher praise.

We have also on our table, and intended for a more detailed report, the second volume of the *Library of Entertaining Knowledge*. Though not, perhaps, of so very entertaining a character as the former, which treated of animal life, it is nevertheless full of amusing information on the subject of "Timber Trees;" the whole being made extremely popular by the judicious introduction of pleasant anecdotes and remarkable facts.

We are glad to see that Mr. Planché, whose proceeding attention to costume has done so much for the stage, has announced a new work—viz. a series of Designs for the Costumes in Richard III. The publication, in quarto, will contain full-length delineations from the best contemporary authorities, drawn on stone by C. F. Tomkins, and the letter-press descriptions, &c. by Mr. Planché. The author of the *Opening of the Sixth Seal* is about to publish a brief Essay, suggesting a more easy and practical mode of acquiring general knowledge, which will include instructions for a course of reading to be pursued by the student.

Poland.—In the year 1837 there were only four printing presses in Galicia, viz. two at Lemberg, where six works in the Polish language, and two in Bohemia, where four works in the same language, were printed during the whole of that year.

From the nineteen printing presses in Warsaw, there issued, in 1838, only 101 publications in the Polish language, exclusively of periodicals, almanacs, &c. Among the former were twenty-two novels, eleven scientific, and thirteen poetical works. The books in foreign languages were—two in Latin, one in French, three in German, and one in Hebrew. The total number of periodicals in Warsaw is at present twenty. — *Reich's Repertorium.*

At Lisbon is now publishing an entire collection of the Portuguese laws, in six volumes folio, two of which appeared last year. — *Ibid.*

Monumenta Sicula.—A programme of the university of Copenhagen, just published by Thorlacius, contains, as a specimen of a collection of "Monumenta Sicula," which he is about to edit, an account of a Greek inscription of fourteen lines upon a piece of antique leather, on which Artemis is represented as goddess of the moon, of nature, and of generation. This literary curiosity is preserved in the Museum of Syracuse. — *Danish Literature Tidende*, No. 6.

The Rev. Dr. Burrow will shortly publish a translation of a German religious work, entitled, *Stunden der Andacht—Hours of Devotion.*

In the Press.—Craig-Millar Castle, and other Poems, by John Gordon Smith, M.D., M.R.S.L.

LIST OF NEW BOOKS.

Bacon on Syphilis, 8vo. 2s. 6ds.—Treatise on the Police and Crimes of the Metropolis, by the editor of the *Cabinet Lawyer*, 8vo. 12s. 6ds.—Tytler's History of Scotland, Vol. II. 8vo. 12s. 6ds.—Curtis on the Deaf and Dumb, 8vo. 10s. 6ds.—Sir Walter Raleigh's Works, with Lives of the Author by Oldys and Bish, 8 vols. 8vo.—Blanc on the Acts of the Apostles, 8vo.—The British Historical Intelligencer, 8vo. 12s. 6ds.—Allwood's Key to the Revelation of St. John, 2 vols. 8vo. 24s. 6ds.—Fuller on Justification, 8vo. 10s. 6ds.—Lushington's Journey from Calcutta to Europe, post 8vo. 2s. 6ds.—Bickerstaff's Christian Student, 12mo. 9s. 6ds.—Lacroix's French Grammar, 12mo. 5s. 6ds.—Sillery's Valley, a Poem, 2 vols. 18mo. 10s. 6ds.—Francœur's Complete Mathematics, Vol. I. 8vo. 15s. 6ds.

THE QUARTERLY REVIEW,

No. LXXVIII. just published.
Contents.—I. Mr. Carr.—II. The New Colony on the Swan River.—III. United States.—IV. History of Durham.—V. Journal of a Naturalist.—VI. Mechanical Philosophy.—VII. The Currency.—VIII. State and Prospects of the Country.
John Murray, Albemarle Street.

A List of Books published by J. Vincent, Oxford.
Maps and Plans, dedicated, with permission, to the Rev. Dr. Russell, Head Master of Charter House School, London.

ATLAS OF ANCIENT GEOGRAPHY,
with Maps and Plans, illustrative of the most popular Grecian and Roman Historians. To which is added, a Synoptical Table, from the Creation of the World to the End of the Populacean War. In 1 vol. 4to. half-bound, price 2s. 12s. 6d. outdied.

The Same, without Illustrations, 4to. half-bound, price 1l. 4s.

The Same, on a reduced Scale, for the Use of Schools, half-bound, price 12s.

Maps and Plans, illustrative of Thucydides, 8vo. boards, second edition, price 12s.

illustrative of Herodotus, 8vo. boards, second edition, price 12s.

illustrative of Livy, 8vo. price 12s. boards.

Nearly ready for publication,
Maps and Plans, illustrative of Polybius.

illustrative of Xenophon's History of Greece.

illustrative of Homer.

In this Work the best Authorities have been consulted, especially the Charts by Captain Smyth, published by the Admiralty.

Questions on Divinity, price 4s. containing Questions on the Old Testament, with References.

Articles of the Church of England.
Answers to the Questions on the Articles.

Questions on Herodotus, 2d edition, price 4s. boards.

Thucydides, 2d edition, price 4s. boards.

Livy, Book 21 to 30, price 1s.

Aldrich's Logic, with References to the most popular Treatises, 12mo. interleaved, 2s. 6d.

Preparing for publication,
Key to the Questions on Logic, 12mo.

Thucydides.
Herodotus.

An Analysis of the Historical Books of the Old Testament, with Notes and References to the most approved Commentators, 12mo. price 6s.

The Articles of the Church of England, with Notes compiled from the Writings of the most eminent Divines of the Church of England, confirmed by Texts of the Holy Scripture, price 2s.

"This little book contains a brief history and orthodox exposition of the Articles, with names from Tomline, Walsingham, Burnett, and Maitland, and a well-chosen selection of scriptures proof. It cannot be otherwise than useful, not only as a book of reference, but as an instructive guide for those who have not leisure for consulting larger works."—*Christian Remembrancer*, Dec. 1838.

Historical Introduction to the several Books of the Old and New Testaments, compiled from the most eminent Divines of the Church of England, price 2s. 6d.

Manual of Divinity, in 2 vols. 18mo. extra cloth boards, price 2s.

"This is a useful and comprehensive Manual, and will be found of considerable advantage for the purpose of general information, as well as for refreshing the memory of the student, by laying before him a comprehensive digest of the more extended researches. It contains a carefully compressed epitome of the authors, subjects, and dates, of the several books in the Bible; with such other topics of its general history, with which every student should be acquainted, though he may have leisure or capacity for the critical examination of its contents."—*Christian Remembrancer*, Dec. 1838.

Natural Theology, by William Paley, D.D. Illustrated by a Series of 41 Plates and Explanatory Notes. By James Paxton, Member of the Royal College of Surgeons. London. 2d edition, with Additional 2 vols. 8vo. illustrated with 41 Engravings, price 1l. 8s.

"Mr. Paxton has executed the task in a manner so satisfactory, as well deserves the thanks of the public."

"We are the more particular in recommending the nature of the illustrations, because we are desirous of recommending Mr. Paxton's work; and knowing the reluctance of most purchasers of a work to take a new edition, which seems thereby to render their former purchase more than useless, but our author has very properly accommodated these unwilling buyers, by publishing a series of his prints, with letterpress descriptions, in a separate form. It is therefore to be hoped that no reader of the original book will be without it."—*Edinburgh Review*, Oct. 1837.

A Series of Thirty-Six Engravings, with descriptive Letterpress, illustrative of Paley's Natural Theology, 8vo. price 12s. boards.

A Series of Thirty-Six Lithographic Plates, with descriptive Letterpress, illustrative of Paley's Natural Theology, 8vo. price 12s. boards.

An Analysis of Aristotle's Ethics, 12mo. price 6s. sewed.

An Epitome of Aristotle's Ethics, with Questions, 12mo. price 6s. sewed.

A Treatise on Logic, on the basis of Aldrich, by the Rev. John Haynes, M.A. of Brasenose College, Oxford, 2d edition, price 2s.

The Bucolics and Georgics of Virgil, with a literal Translation, Explanatory Notes, and illustrative Plates, by John Martyn, F.R.S. Professor of Botany in the University of Cambridge, 12mo. price 10s. 6d. extra boards.

The Same, without the Translation, for the Use of Schools, 12mo. price 6s. extra boards.

The object of the present edition of Martyn's Bucolics and Georgics of Virgil being to combine cheapness with utility, it has been deemed necessary to omit or curtail the numerous quotations from ancient authors, which have been inserted at great length in the former editions; they only are retained which appeared essential to the clear understanding of the author.

Livy's History of Rome, Books 21 to 30, literally translated, with Notes, critical and explanatory. By Graduates of the University of Oxford. 9 vols. 8vo. price 1l. 4s.

In post 8vo. with a Picture, 2s. 6d.

NARRATIVE of a JOURNEY from CALCUTTA to EUROPE, by way of Egypt, in the Years 1827 and 1828.

By Mrs. CHARLES LUSHINGTON.
John Murray, Albemarle Street.

Good's Study of Medicine, new Edition.
In 5 vols. 8vo. price 2l. 15s.

THE STUDY OF MEDICINE.
Third edition.

By JOHN MASON GOOD, M.D. F.R.S. F.R.S.L. Containing all the Author's latest Corrections and Improvements, together with much additional modern Information on Physiology, Practice, Pathology, and the Nature of Diseases in general.

By SAMUEL COOPER, Surgeon to the King's Bench and Fleet Prisons, Surgeon to the Surgeons to the King's Bench and Fleet Prisons, Surgeon to the Forces, Author of the "Dictionary of Practical Surgery," Printed for Thomas and George Underwood, 25, Fleet Street.

BLACKWOOD'S EDINBURGH MAGAZINE, No. CLII. for May 1839.

Contents.—I. Notes Ambrosianae. No. 42.—II. The Christening, by C. Lamb, Esq.—III. For a Young Lady's Album, by C. Lamb, Esq.—IV. Sketches on the Road in Ireland, No. 2.—V. Some of the Affections, by Mrs. Hemans; 4. The Return; 5. The Wish.—VI. Sketches, by Mrs. Hemans; 4. The Return; 5. The Wish.—VII. Sketches, by Mrs. Hemans; 4. The Return; 5. The Wish.—VIII. Sketches, by Mrs. Hemans; 4. The Return; 5. The Wish.—IX. Chapters on Churchyards, Chapter 20; the Grave of the Broken Heart, by Mrs. Hemans; 4. The Return; 5. The Wish.—X. The Irish Church Establishment, by Mrs. Hemans; 4. The Return; 5. The Wish.—XI. The British Colonies; a Second Letter to His Grace the Duke of Wellington, from James M'Queen, Esq.—XIV. Case of East Retford.—XV. Appointments, Promotions, &c.—XVI. Births, Marriages, and Deaths.—XVII. Meteorological Register, &c. &c. Printed for William Blackwood, Edinburgh; and T. Cadell, Strand, London.

On the 1st of May was published, No. V. price 2s. 6d.

THE UNITED SERVICE JOURNAL

and NAVAL and MILITARY MAGAZINE, containing, among other interesting papers, the Campaign in Portugal under Sir Arthur Wellesley, in 1809, by an Officer on the Staff; a History of the service of a young Officer in the Staff; its Practical Use to the Seaman, Sketch of the Battle of Austerlitz, by an Eye-Witness—From Waterloo to Paris in 1814—Encounter with the Arabs at Mecca, in the Red Sea—Recollections in Quarters; Burken in India—Visit to General Jackson at his Cottage—Capt. Owen's Plan for Landing Chronometers—Tales of Military Life—French Naval School—the Siege of Sevastopol, an Historical Legend, exhibiting the narrow Escape of the Princess Mary (afterwards Queen), from Savonarola Hall, when it was besieged by the Protestant Bays of Cambridge—Memor of the late Lieut. Col. Kelly—Sketch of the Battle of Austerlitz, by Sir Howard Douglas—Original Correspondence on a variety of Subjects, interesting to the Two Professions—the Yacht Club—Naval Register—Promotions and Appointments—General Orders—Circulars—Courts Martial—Distribution of the Army—Births, Marriages, and Deaths—Meteorological Register, &c. &c. Printed for Henry Colburn, 6, New Burlington Street; Bell and Bradfute, Edinburgh; and John Cumming, Dublin.

THE NEW MONTHLY MAGAZINE

for May contains—Commercial Relations of the Country—Progress of the London University—Sporting Scenes in India, No. I.; Leaving Contaminants in Hot Waters—Lines by Thomas Campbell, Esq.—Memoirs of the War in Spain, by Marshal Bachelot, Duke d'Albuquerque—Provincial Sketches, No. II.; Ranc Convent of St. Bernard—the Wine of Blood—Portraits of the French Players, No. II.; Mademoiselle Jenny Colon—the Image of the Dead, Owen's Plan for Landing Chronometers—Tales of Military Life—French Naval School—the Siege of Sevastopol, an Historical Legend, exhibiting the narrow Escape of the Princess Mary (afterwards Queen), from Savonarola Hall, when it was besieged by the Protestant Bays of Cambridge—Memor of the late Lieut. Col. Kelly—Sketch of the Battle of Austerlitz, by Sir Howard Douglas—Original Correspondence on a variety of Subjects, interesting to the Two Professions—the Yacht Club—Naval Register—Promotions and Appointments—General Orders—Circulars—Courts Martial—Distribution of the Army—Births, Marriages, and Deaths—Meteorological Register, &c. &c. Printed for Henry Colburn, 6, New Burlington Street.

Price Seven Shillings and Sixpence, No. VII. of

THE FOREIGN QUARTERLY REVIEW.

Contents.—I. Stannard's History of France.—II. Language and Literature of Holland.—III. Ancient National Poetry of Spain.—IV. Scandinavian Mythology.—V. French Criminal Trials.—VI. Mexico.—VII. Victor Hugo's Poems and Novels.—VIII. Von Hammer's History of the Ottoman Empire.—IX. Foreign Views of the Catholic Question. Critical Sketches.—X. Coquerel's History of English Literature.—XI. Bishop Munter's Account of St. John's Gospel.—XII. Fielet's Treatise on Hosts.—XIII. Maitland's Works.—XIV. Guerin's Battle of Benevento, an Historical Romance.—XV. Annals of the Board of Longitude for 1838.—M. Arago's Notice of the Steam Engine.—Miscellaneous Literary Notices, No. VII.—List of new Works published on the Continent from January to March 1839.

No. VIII. will be published in July.
Published by Treuttel and Warts, Treuttel, Jun., and Richter, Foreign Booksellers to the King, 20, John Square.

THE LITERARY GAZETTE to be

SOLD, in Twelve Volumes, complete from its Commencement, in Jan. 1817, to Dec. 1838.

Apply at 61, Wells Street, Oxford Street.
The great difficulty of procuring the early volumes of this highly popular work, renders this Set particularly valuable to the Library of any Nobleman or Gentleman, or Public Institution, or as a unique Present for a Friend abroad. Price Twenty Guineas.

In 18mo. the 4th edition, newly arranged, and very materially improved, with an entirely new Set of Copperplate Engravings, price 2s. handsomely half-bound.

SYLLABIC SPELLING; or, a Summary Method of Teaching Children to Read and Spell with facility and pleasure.

By Mrs. WILLIAMS.

N.B. This edition contains a variety of testimonials in favour of the system, from some of the most respectable professors of the English Language, as well as from several parents, whose children (amused and interested by this novel mode of instruction), have learned in the course of a very few months to read correctly, with perfect ease, the longest and most difficult words in the Boxes, with appropriate Counters, for the amusement of Young Beginners, may be had, if required, of the Publishers. Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

Of whom may be had, by the same Author, The 2d edition, with Additions and Improvements, 6s. half-bd.

Conversations on English Grammar, in a Series of familiar and entertaining Dialogues between a Mother and her Daughters; in which the Rules of Grammar are introduced in a manner calculated to excite the attention of Children, and, at the same time, to convey to their minds clear and comprehensive Ideas of the Principles of Language; with a number of appropriate Questions following each Conversation. Adapted to the Use of Establishments for Young Ladies, as well as to private Tuition.

Published by Mr. Bertinchamp, for Longman and Co.

A NEW THEORETICAL and CACOGRAPHICAL GRAMMAR of the FRENCH LANGUAGE.

By Mr. MUPP'S New Work.

On the 15th instant will be published, in 2 vols. 8vo.

AN ANALYSIS of the PHENOMENA of the HUMAN MIND.

By JAMES MILL, Esq. Author of the "History of British India," and "Elements of Political Economy."

"This Work, on which the author has been employed several years, contains a View, purely Expository, of the Phenomena generally classed under the heads of the Intellectual and Active Powers of the Human Mind. These Phenomena he has endeavoured to resolve into their simple elements, and refer them to their most general laws. The present Work is to be considered as the ground-work of Three Practical Treatises, intended to succeed:—1. The Book of Logic, or, System of Rules for conducting the Human Mind in the Investigation of Truth.—2. The Book of Ethics, or, System of Rules for so regulating the Actions of the Individual as to render them most conducive to the well-being of himself and others.—3. The Book of Education, or, System of Rules for Training the Individual to the highest perfection of his nature—that is, the highest state of efficiency, as the cause of happiness to himself and to his species. London: Baldwin and Crickell."

In a few days will be published,

LESSONS for LOVERS.

By HYPHOCORIDRIS, an UNHAPPY YOUNG LADY, and an ELDERLY GENTLEMAN of considerable Experience.

London: Printing for Hurst, Chance, and Co. St. Paul's Churchyard.

The next Poetical Publication of the Author of the "Opening of the Sixth Seal," will be entitled

A VISION of the WORLDS.

The same Author is preparing, and soon will appear, A Key to the Temple of Knowledge; being a brief Essay on a more easy and practical course of study, suited for all Classes.

Also, just published, the 2d edition of

The Opening of the Sixth Seal, a sacred Poem, price 6s. 6d.

In the course of the following Week will be published,

A MEMOIR of the CATHOLIC RELIEF BILL, passed in 1839; with a Preliminary Memoir of all the Divisions in each House of Parliament on the Catholic Claims since 1778, when they were first urged; being a sequel and conclusion of Mr. Butler's "Historical Memoirs of the English, Irish, and Scottish Roman Catholics."

John Murray, Albemarle Street.

Next week will be published,

THE EDINBURGH REVIEW; or, Critical Journal, No. XXVIII.

Contents.—The Cause of the Populists. Law of Mortality, &c.—Givres de Courlet: Recent State of France—the Game Laws—Stewart's Planter's Guide—Interior of Africa—Library of Entertaining Knowledge—Mill's Essay on Government; Utilitarian Logic and Politics—Law of Legitimacy—the Last of the Catholic Question; its Principle, History, and Effects, &c. &c. Printed for Longman, Rees, Orme, Brown, and Green, London; and Adam Black, Edinburgh.

LONDON: Published every Saturday, by W. A. SCRIPPS, at the LITERARY GAZETTE OFFICE, 25, Abchurch Lane, near Watling Bridge, Strand, and 7, South Molton Street, Oxford Street: sold also by J. Chappell, 56, Royal Exchange; N. Marlborough, Ave Maria Lane, Ludgate Hill; A. Black, Edinburgh; Smith and Son, and Robertson and Atkinson, Glasgow; and J. Cumming, Dublin.
J. MOYER Task's Court, Chancery Lane.

THE LONDON LITERARY GAZETTE;

Journal of Belles Lettres, Arts, Sciences, &c.

AND

This Journal is supplied Weekly, or Monthly, by the principal Booksellers and Newsmen, throughout the Kingdom; but to those who may desire its immediate transmission, by post, we recommend the LITERARY GAZETTE, printed on stamped paper, price One Shilling.

No. 643.

SATURDAY, MAY 16, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

Année of Geierstein.

[Second notice.]

SIR WALTER SCOTT has again broken up untrodden ground, and again a rich harvest rewards the master's toil; and whether it be that he feels peculiarly at home in a land of "mountain wild and rushing flood," this tale of Switzerland is one of his very successful efforts. The period is admirably calculated for historical painting.

"The events are fixed, by historical date, to the middle of the fifteenth century,—that important period, when chivalry still shone with a setting ray, soon about to be totally obscured; in some countries, by the establishment of free institutions; in others, by that of arbitrary power, which alike rendered useless the interference of those redressers of wrongs, whose only warrant of authority was the sword. Amid the general light which had recently shone upon Europe,—France, Burgundy, and Italy, but more especially Austria, had been made acquainted with the character of a people, of whose very existence they had before been scarcely conscious. It is true, that the inhabitants of those countries which lie in the vicinity of the Alps, that immense barrier, were not ignorant, that notwithstanding their rugged and desolate appearance, the secluded valleys which winded among those gigantic mountains nourished a race of hunters and shepherds; men who, living in a state of primeval simplicity, compelled from the soil a subsistence gained by severe labour, followed the chase over the most savage precipices and through the darkest pine-forests, or drove their cattle to spots which afforded them a scanty pasturage, even in the vicinage of eternal snows. But the existence of such a people, or rather of a number of small communities who followed nearly the same poor and hardy course of life, had seemed to the rich and powerful princes in the neighbourhood a matter of as little consequence, as it is to the stately herds which repose in a fertile meadow, that a few half-starved goats find their scanty food among the rocks which overlook their rich domain. But wonder and attention began to be attracted towards these mountaineers about the middle of the fourteenth century, when reports were spread abroad of severe contests, in which the German chivalry, endeavouring to suppress insurrections among their Alpine vassals, had sustained repeated and bloody defeats, although having on their side numbers and discipline, and the advantage of the most perfect military equipment. Great was the wonder that cavalry, which made the only efficient part of the feudal armies, should be routed by men on foot; that warriors sheathed in complete steel should be overpowered by men who wore no defensive armour, and were irregularly provided with pikes, halberds, and clubs, for the purpose of attack: above all, it seemed a species of miracle, that knights and nobles should be defeated by peasants and

shepherds. But the repeated victories of the Swiss at Laupen, Sempach, and on other less distinguished occasions, plainly intimated that a new principle of civil organisation, as well as of military movements, had arisen amid the stormy regions of Helvetia. Still, although the decisive victories which obtained liberty for the Swiss cantons, as well as the spirit of resolution and wisdom with which the members of the little confederation had maintained themselves against the utmost exertions of Austria, had spread their fame abroad through all the neighbouring countries; and although they themselves were conscious of the power which repeated victories had acquired, yet down to the middle of the fifteenth century, and at a later date, they retained in a great measure the wisdom, moderation, and simplicity of their ancient manners; so much so, that those who were intrusted with the command of the troops of the Republic in battle were wont to resume the shepherd's staff when they laid down the truncheon, and, like the Roman dictators, to retire to complete equality with their fellow-citizens, from the eminence to which their talents, and the call of their country, had raised them."

The story opens with the appearance of two travellers, father and son, who, with their guide, are bewildered in the mountains by a sudden storm. To extricate themselves from a situation of such danger and difficulty, the younger attempts to scale a broken path on the side of the precipice; and the following is among our author's most vivid scenes.

"Thus estimating the extent of his danger by the measure of sound sense and reality, and supported by some degree of practice in such exercise, the brave youth went forward on his awful journey, step by step, winning his way with a caution, and fortitude, and presence of mind, which alone could have saved him from instant destruction. At length he gained a point where a projecting rock formed the angle of the precipice, so far as it had been visible to him from the platform. This, therefore, was the critical point of his undertaking; but it was also the most perilous part of it. The rock projected more than six feet forward over the torrent, which he heard raging at the depth of a hundred yards beneath, with a noise like subterranean thunder. He examined the spot with the utmost care, and was led by the existence of shrubs, grass, and even stunted trees, to believe that this rock marked the farthest extent of the slip or slide of earth, and that, could he but round the angle of which it was the termination, he might hope to attain the continuation of the path which had been so strangely interrupted by this convulsion of nature. But the crag jutted out so much as to afford no possibility of passing either under or around it; and as it rose several feet above the position which Arthur had attained, it was no easy matter to climb over it. This was, however, the course which he chose, as the only mode of surmounting what he hoped might prove the last obstacle to his voyage of

discovery. A projecting tree afforded him the means of raising and swinging himself up to the top of the crag. But he had scarcely planted himself on it, had scarcely a moment to congratulate himself, on seeing, amid a wild chaos of cliffs and woods, the gloomy ruins of Geierstein, with smoke arising, and indicating something like a human habitation beside them, when, to his extreme terror, he felt the huge cliff on which he stood tremble, stoop slowly forward, and gradually sink from its position. Projecting as it was, and shaken as its equilibrium had been by the recent earthquake, it lay now so insecurely poised, that its balance was entirely destroyed, even by the addition of the young man's weight. Aroused by the imminence of the danger, Arthur, by an instinctive attempt at self-preservation, drew cautiously back from the falling crag into the tree by which he had ascended, and turned his head back as if spell-bound, to watch the descent of the fatal rock from which he had just retreated. It tottered for two or three seconds, as if uncertain which way to fall; and had it taken a sidelong direction, must have dashed the adventurer from his place of refuge, or borne both the tree and him headlong down into the river. After a moment of horrible uncertainty, the power of gravitation determined a direct and forward descent. Down went the huge fragment, which must have weighed at least twenty ton, rending and splintering in its precipitate course the trees and bushes which it encountered, and settling at length in the channel of the torrent, with a din equal to the discharge of a hundred pieces of artillery. The sound was re-echoed from bank to bank, from precipice to precipice, with emulative thunders; nor was the tumult silent till it rose into the region of eternal snows, which, equally insensible to terrestrial sounds, and unfavourable to animal life, heard the roar in their majestic solitude, but suffered it to die away without a responsive voice."

"The solid rock had trembled and rent beneath his footsteps; and although, by an effort rather mechanical than voluntary, he had withdrawn himself from the instant ruin attending its descent, he felt as if the better part of him, his firmness of mind and strength of body, had been rent away with the descending rock, as it fell thundering, with clouds of dust and smoke, into the torrents and whirlpools of the vexed gulf beneath. In fact, the seaman swept from the deck of a wrecked vessel, drenched in the waves, and battered against the rocks on the shore, does not differ more from the same mariner, when, at the commencement of the gale, he stood upon the deck of his favourite ship, proud of her strength and his own dexterity, than Arthur, when commencing his journey, from the same Arthur, while clinging to the decayed trunk of an old tree, from which, suspended between heaven and earth, he saw the fall of the crag which he had so nearly accompanied. The effects of his terror, indeed, were physical as well as moral, for a thousand colours played before his eyes;

he was attacked by a sick dizziness, and deprived at once of the obedience of those limbs which had hitherto served him so admirably; his arms and hands, as if no longer at his own command, now clung to the branches of the tree, with a cramp-like tenacity, over which he seemed to possess no power, and now trembled in a state of such complete nervous relaxation, as led him to fear that they were becoming unable to support him longer in his position. An incident, in itself trifling, added to the distress occasioned by this alienation of his powers. All living things in the neighbourhood had, as might be supposed, been startled by the tremendous fall to which his progress had given occasion. Flights of owls, bats, and other birds of darkness, compelled to betake themselves to the air, had lost no time in returning into their bowers of ivy, or the harbour afforded them by the rifts and holes of the neighbouring rocks. One of this ill-omened flight chanced to be a *lammergeier*, or Alpine vulture, a bird larger and more voracious than the eagle himself, and which Arthur had not been accustomed to see, or at least to look upon closely. With the instinct of most birds of prey, it is the custom of this creature, when gorged with food, to assume some station of inaccessible security, and there remain stationary and motionless for days together, till the work of digestion has been accomplished, and activity returns with the pressure of appetite. Disturbed from such a state of repose, one of these terrific birds had risen from the ravine to which the species gives its name, and having circled unwillingly round, with a ghastly scream and a flagging wing, it had sunk down upon the pinnacle of a crag, not four yards from the tree in which Arthur held his precarious station. Although still in some degree stupified by torpor, it seemed encouraged by the motionless state of the young man to suppose him dead, or dying, and sat there and gazed at him, without displaying any of that apprehension which the fiercest animals usually entertain from the vicinity of man. As Arthur, endeavouring to shake off the incapacitating effects of his panic fear, raised his eyes to look gradually and cautiously around, he encountered those of the voracious and obscene bird, whose head and neck denuded of feathers, her eyes surrounded by an iris of an orange tawny colour, and a position more horizontal than erect, distinguished her as much from the noble carriage and graceful proportion of the eagle, as those of the lion place him in the ranks of creation above the gaunt, ravenous, grisly, yet dastard wolf. As if arrested by a charm, the eyes of young Philipson remained bent on this ill-omened and ill-favoured bird, without his having the power to remove them. The apprehension of dangers, ideal as well as real, weighed upon his weakened mind, disabled as it was by the circumstances of his situation. The near approach of a creature not more loathsome to the human race, than averse to come within their reach, seemed as ominous as it was unusual. Why did it gaze on him with such glaring earnestness, projecting its disgusting form, as if presently to alight upon his person? The foul bird, was she the demon of the place to which her name referred? and did she come to exult, that an intruder on her haunts seemed involved amid their perils, with little hope or chance of deliverance? Or was it a native vulture of the rocks, whose sagacity foresaw that the rash traveller was soon destined to become its victim? Could the creature, whose senses are said to be so acute, argue from circumstances the stranger's approaching death; and wait, like a raven or

hooded crow by a dying sheep, for the earliest opportunity to commence her ravenous banquet? Was he doomed to feel its beak and talons before his heart's blood should cease to beat? Had he already lost the dignity of humanity, the awe which the being formed in the image of his Maker inspires into all inferior creatures? Apprehensions so painful served more than all that reason could suggest, to renew, in some degree, the elasticity of the young man's mind. By waving his handkerchief,—using, however, the greatest precaution in his movements,—he succeeded in scaring the vulture from his vicinity. It rose from its resting-place, screaming harshly and dolefully, and sailed on its expanded pinions to seek a place of more undisturbed repose, while the adventurous traveller felt a sensible pleasure at being relieved of its disgusting presence."

"But, as he looked around him, he became more and more sensible how much he was enervated by the bodily injuries and the mental agony which he had sustained during his late peril. He could not, by any effort of which he was capable, fix his giddy and bewildered eyes on the scene around him;—they seemed to reel till the landscape danced along with them, and a motley chaos of thickets and tall cliffs, which interposed between him and the ruinous Castle of Gelestein, mixed and whirled round in such confusion, that nothing, save the consciousness that such an idea was the suggestion of partial insanity, prevented him from throwing himself from the tree, as if to join the wild dance to which his disturbed brain had given motion. 'Heaven be my protection!' said the unfortunate young man, closing his eyes,—in hopes, by abstracting himself from the terrors of his situation, to compose his too active imagination, 'my senses are abandoning me!' He became still more convinced that this was the case, when a female voice, in a high-pitched but eminently musical accent, was heard at no great distance, as if calling to him. He opened his eyes once more, raised his head, and looked towards the place from whence the sounds seemed to come, though far from being certain that they existed saving in his own disordered imagination. The vision which appeared had almost confirmed him in the opinion that his mind was unsettled, and his senses in no state to serve him accurately. Upon the very summit of a pyramidal rock that rose out of the depth of the valley, was seen a female figure, so obscured by mist, that only the outline could be traced. The form, reflected against the sky, appeared rather the undefined lineaments of a spirit than of a mortal maiden; for her person seemed as light, and scarcely more opaque, than the thin cloud that surrounded her pedestal. Arthur's first belief was, that the Virgin had heard his vows, and had descended in person to his rescue; and he was about to recite his Ave Maria, when the voice again called to him with the singular shrill modulation of the mountain halloo, by which the natives of the Alps can hold conference with each other from one mountain ridge to another, across ravines of great depth and width. While he debated how to address this unexpected apparition, it disappeared from the point which it at first occupied, and presently after became again visible, perched on the cliff out of which projected the tree in which Arthur had taken refuge. Her personal appearance, as well as her dress, made it then apparent that she was a maiden of these mountains, familiar with their dangerous paths. He saw that a beautiful young woman stood before him, who

regarded him with a mixture of pity and wonder. 'Stranger,' she at length said, 'who are you, and whence come you?' 'I am a stranger, maiden, as you justly term me,' answered the young man, raising himself as well as he could. 'I left Lucerne this morning, with my father and a guide. I parted with them not three furlongs from hence. May it please you, gentle maiden, to warn them of my safety, for I know my father will be in despair upon my account?' 'Willingly,' said the maiden; 'but I think my uncle, or some one of my kinsmen, must have already found them, and will prove faithful guides. Can I not aid you?—are you wounded—are you hurt? We were alarmed by the fall of a rock—ay, and yonder it lies, a mass of no ordinary size.' As the Swiss maiden spoke thus, she approached so close to the verge of the precipice, and looked with such indifference into the gulf, that the sympathy which connects the actor and spectator upon such occasions brought back the sickness and vertigo from which Arthur had just recovered, and he sunk back into his former more recumbent posture, with something like a faint groan. 'You are then ill?' said the maiden, who observed him turn pale; 'where and what is the harm you have received?' 'None, gentle maiden, saving some bruises of little import; but my head turns, and my heart grows sick, when I see you so near the verge of the cliff.' 'Is that all?' replied the Swiss maiden. 'Know, stranger, that I do not stand on my uncle's hearth with more security than I have stood upon precipices, compared to which this is a child's leap. You, too, stranger, if, as I judge from the traces, you have come along the edge of the precipice which the earth-slide hath laid bare, ought to be far beyond such weakness, since surely you must be well entitled to call yourself a cragsman.' 'I might have called myself so half an hour since,' answered Arthur; 'but I think I shall hardly venture to assume the name in future.' 'Be not downcast,' said his kind adviser, 'for a passing qualm, which will at times cloud the spirit and dazzle the eyesight of the bravest and most experienced. Raise yourself upon the trunk of the tree, and advance closer to the rock out of which it grows. Observe the place well. It is easy for you, when you have attained the lower part of the projecting stem, to gain, by one bold step, the solid rock upon which I stand, after which there is no danger or difficulty worthy of mention to a young man whose limbs are whole, and whose courage is active.' 'My limbs are indeed sound,' replied the youth; 'but I am ashamed to think how much my courage is broken. Yet I will not disgrace the interest you have taken in an unhappy wanderer, by listening longer to the dastardly suggestions of a feeling which till to-day has been a stranger to my bosom.' The maiden looked on him anxiously, and with much interest; as, raising himself cautiously, and moving along the trunk of the tree, which lay nearly horizontal from the rock, and seemed to bend as he changed his posture, the youth at length stood upright, within what, on level ground, had been but an extended stride to the cliff on which the Swiss maiden stood. But instead of being a step to be taken on the level and firm ground, it was one which must cross a dark abyss, at the bottom of which a torrent surged and boiled with incredible fury. Arthur's knees knocked against each other, his feet became of lead, and seemed no longer at his command; and he experienced, in a stronger degree than ever, that unnerving influence which those who have been overwhelmed by it

in a situation of like peril never can forget, and which others, happily strangers to its power, may have difficulty even in comprehending. The young woman discerned his emotion, and foresaw its probable consequences. As the only mode in her power to restore his confidence, she sprang lightly from the rock to the stem of the tree, on which she alighted with the ease and security of a bird, and in the same instant back to the cliff; and extending her hand to the stranger, 'My arm,' she said, 'is but a slight balustrade; yet do but step forward with resolution, and you will find it as secure as the battlement of Berne.' But shame now overcame terror so much, that Arthur, declining assistance which he could not have accepted without feeling lowered in his own eyes, took heart of grace, and successfully achieved the formidable step which placed him upon the same cliff with his kind assistant."

Such a heroine as this must not pass undescribed:—

"An upper vest, neither so close as to display the person—a habit forbidden by the sumptuary laws of the canton—nor so loose as to be an encumbrance in walking or climbing, covered a close tunic of a different colour, and came down beneath the middle of the leg, but suffered the ankle, in all its fine proportions, to be completely visible. The foot was defended by a sandal, the point of which was turned upwards, and the crossings and knots of the strings which secured it on the front of the leg were garnished with silver rings. The upper vest was gathered round the middle by a sash of parti-coloured silk, ornamented with twisted threads of gold; while the tunic, open at the throat, permitted the shape and exquisite whiteness of a well-formed neck to be visible at the collar, and for an inch or two beneath. The small portion of the throat and bosom thus exposed was even more brilliantly fair than was promised by the countenance, which last bore some marks of having been freely exposed to the sun and air—by no means in a degree to diminish its beauty, but just so far as to shew that the maiden possessed the health which is purchased by habits of rural exercise. Her long fair hair fell down in a profusion of curls on each side of a face whose blue eyes, lovely features, and dignified simplicity of expression, implied at once a character of gentleness, and of the self-relying resolution of a mind too virtuous to suspect evil, and too noble to fear it. Above these locks, beauty's natural and most beseeching ornament—or rather, I should say, amongst them—was placed the small bonnet, which, from its size, little answered the purpose of protecting the head, but served to exercise the ingenuity of the fair wearer, who had not failed, according to the prevailing custom of the mountain maidens, to decorate the tiny cap with a heron's feather, and the then unusual luxury of a small and thin chain of gold, long enough to encircle the cap four or five times, and having the ends secured under a broad medal of the same costly metal. I have only to add, that the stature of the young person was something above the common size, and that the whole contour of her form, without being in the slightest degree masculine, resembled that of Minerva, rather than the proud beauties of Juno, or the yielding graces of Venus. The noble brow, the well-formed and active limbs, the firm and yet light step; above all, the total absence of any thing resembling the consciousness of personal beauty, and the open and candid look, which seemed desirous of knowing nothing that was hidden, and conscious that she herself had no-

thing to hide, were traits not unworthy of the goddess of wisdom and of chastity."

The character of Arnold Biederman is a sketch as excellent as it is original: the clear judgment, the severe simplicity, the kindness, the authority of the noble Swiss, are brought out so finely. His little history will illustrate this. After relating the exploits of his grandfather in the wars with Austria, at Sempach, &c., he goes on to say:

"My father, Count Williewald, followed the same course, both from inclination and policy. He united himself closely with the state of Unterwalden, became a citizen of the Confederacy, and distinguished himself so much, that he was chosen landamman of the Republic. He had two sons, myself and a younger brother, Albert; and possessed, as he felt himself, of a species of double character, he was desirous, perhaps unwisely (if I may censure the purpose of a deceased parent), that one of his sons should succeed him in his lordship of Geierstein, and the other support the less ostentatious, though not in my thought less honourable condition, of a free citizen of Unterwalden, possessing such influence among his equals in the canton as might be acquired by his father's merits and his own. When Albert was twelve years old, our father took us on a short excursion to Germany, where the form, pomp, and magnificence, which we witnessed, made a very different impression on the mind of my brother and on my own. What appeared to Albert the consummation of earthly splendour, seemed to me a weary display of tiresome and useless ceremonials. Our father explained his purpose, and offered to me, as his eldest son, the large estate belonging to Geierstein, reserving such a portion of the most fertile ground as might make my brother one of the wealthiest citizens in a district where competence is esteemed wealth. The tears gushed from Albert's eyes—'And must my brother,' he said, 'be a noble count, honoured and followed by vassals and attendants, and I a home-spun peasant among the gray-bearded shepherds of Unterwalden? No, my father, I respect your will, but I will not sacrifice my own rights. Geierstein is a fief held of the empire, and the laws entitle me to my equal half of the lands. If my brother be Count of Geierstein, I am not the less Count Albert of Geierstein; and I will appeal to the emperor, rather than that the arbitrary will of one ancestor, though he be my father, shall cancel in me the rank and rights which I have derived from a hundred.' My father was greatly incensed. 'Go,' he said, 'proud boy, give the enemy of thy country a pretext to interfere in her affairs—appeal to the will of a foreign prince from the pleasure of thy father. Go, but never again look me in the face, and dread my eternal malediction.' Albert was about to reply with vehemence, when I entreated him to be silent and hear me speak. I had, I said, all my life loved the mountain better than the plain; had been more pleased to walk than to ride; more proud to contend with shepherds in their sports than with nobles in the lists; and happier in the village dance than among the feasts of the German nobles. 'Let me, therefore,' said I, 'be a citizen of the republic of Unterwalden; you will relieve me of a thousand cares; and let my brother Albert wear the coronet and bear the honours of Geierstein.' After some farther discussion, my father was at length contented to adopt my proposal, in order to attain the object which he had so much at heart. Albert was declared heir of his castle and his rank, by the

title of Count Albert of Geierstein; and I was placed in possession of these fields and fertile meadows amidst which my house is situated, and my neighbours call me Arnold Biederman.' 'And if Biederman,' said the merchant, 'means, as I understand the word, a man of worth, candour, and generosity,—I know none on whom the epithet could be so justly conferred.'

Sir Walter Scott's are the very *beau ideal* of executioners; and a most Rembrandt-like portrait of one is introduced.

"A faint stream of light through one of the numerous and narrow slits, or shot-holes, with which the walls were garnished, fell directly upon the person and visage of a tall swarthy man, seated in what, but for the partial illumination, would have been an obscure corner of this evil-boding apartment. His features were regular, and even handsome, but of a character peculiarly stern and sinister. This person's dress was a cloak of scarlet; his head was bare, and surrounded by shaggy locks of black, which time had partly grizzled. He was busily employed in furbishing and burnishing a broad two-handed sword of a peculiar shape, and considerably shorter than the weapons of that kind which we have described as used by the Swiss. He was so deeply engaged in his task, that he started as the heavy door opened with a jarring noise; and the sword, escaping from his hold, rolled on the stone floor with a heavy clash. 'Ha! Scharfgerichter,' said the knight, as he entered the folterkammer, 'thou art preparing for thy duty?' 'It would ill become your excellency's servant,' answered the man, in a harsh, deep tone, 'to be found idle. But the prisoner is not far off, as I can judge by the fall of my sword, which infallibly announces the presence of him who shall feel its edge.' 'The prisoners are at hand, Francis,' replied the governor; 'but thy omen has deceived thee for once. They are fellows for whom a good rope will suffice; and thy sword drinks only noble blood.' 'The worse for Francis Steinerherz,' replied the official in scarlet; 'I trusted that your excellency, who have ever been a bountiful patron, should this day have made me noble.' 'Noble!' said the governor; 'thou art mad—thou noble!' 'And wherefore not, Sir Archibald Hagenbach? I think the name of Francis Steinerherz von Blut-acker will suit nobility, being fairly and legally won, as well as another. Nay, do not stare on me thus. If one of my profession shall do his grim office on nine men of noble birth with the same weapon, and with a single blow to each patient, hath he not a right to his freedom from taxes, and his nobility by patent?' 'So says the law,' said Sir Archibald; 'but rather more in scorn than seriously, I should judge, since no one was ever known to claim the benefit of it.' 'The prouder boast for him,' said the functionary, 'that shall be the first to demand the honours due to a sharp sword and a clean stroke. I, Francis Steinerherz, will be the first noble of my profession, when I shall have despatched one more knight of the empire.' 'Thou hast been ever in my service, hast thou not?' demanded De Hagenbach. 'Under what other master,' replied the executioner, 'could I have enjoyed such constant practice? I have executed your decrees on condemned sinners since I could swing a scourge, lift a crow-bar, or wield this trusty weapon; and who can say I ever failed of my first blow, or needed to deal a second? Tristrem of the Hospital, and his famous assistants, Petit André and Trois Echelles, are

novices compared with me, in the use of the noble and knightly sword. Marry, I should be ashamed to match myself with them in the field practice with bowstring and dagger; these are no feats worthy of a Christian man who would rise to honour and nobility.' 'Thou art a fellow of excellent address, and I do not deny it,' replied De Hagenbach. 'But it cannot be—I trust it cannot be—that when noble blood is becoming scarce in the land, and proud churls are lording it over knights and barons, I myself should have caused so much to be spilled.' 'I will number the patients to your excellency by name and title,' said Francis, drawing out a scroll of parchment, and reading with a commentary as he went on:—'There was Count William of Elvershoe—he was my assay-piece, a sweet youth, and died most like a Christian.' 'I remember—he courted my mistress,' said Sir Archibald. 'He died on St. Jude's, in the year of grace 1455,' said the executioner. 'Go on—but name no dates,' said the governor. 'Sir Miles of Stockenborg—' 'He drove off my cattle,' observed his excellency. 'Sir Louis of Riesenfeldt—' continued the executioner. 'He made love to my wife,' commented the governor. 'The three Jung-herrn of Lammerbourg—you made their father, the count, childless in one day.' 'And he made me landless,' said Sir Archibald; 'so that account is settled. Thou needest read no farther,' he continued; 'I admit thy record, though it is written in letters somewhat of the reddest. I had counted these three young gentlemen as one execution.' 'You did me the greater wrong,' said Francis; 'they cost three good blows of this good sword.' 'Be it so, and God be with their souls,' said Hagenbach. 'But thy ambition must go to sleep for a while, Scharfgerichter; for the stuff that came hither to-day is for dungeon and cord, or perhaps a touch of the rack or strappadoe—there is no honour to win on them.' 'The worse luck mine,' said the executioner. 'I had dreamed so surely that your honour had made me noble; and then the fall of my sword!' 'Take a bowl of wine, and forget your auguries.' 'With your honour's permission, no,' said the executioner; 'to drink before noon were to endanger the nicety of my hand.'

"The cars, so lately placed to obstruct the passage of the street, were now joined together, and served to support a platform, or scaffold, which had been hastily constructed of planks. On this was placed a chair, in which sat a tall man, with his head, neck, and shoulders bare, the rest of his body clothed in bright armour. His countenance was as pale as death, yet young Philipson recognised the hard-hearted governor, Sir Archibald de Hagenbach. He appeared to be bound to the chair. On his right, and close beside him, stood the priest of Saint Paul's, muttering prayers, with his breviary in his hand; while on his left, and somewhat behind the captive, appeared a tall man, attired in red, and leaning with both hands on the naked sword, which has been described on a former occasion. The instant that Arnold Blederman appeared, and before the landman could open his lips to demand the meaning of what he saw, the priest drew back, the executioner stepped forward, the sword was brandished, the blow was struck, and the victim's head rolled on the scaffold. A general acclamation and clapping of hands, like that by which a crowded theatre approves of some well-graced performer, followed this feat of dexterity. While the headless corpse shot streams from the arteries, which were drunk up by the saw-

dust that strewed the scaffold, the executioner gracefully presented himself alternately at the four corners of the stage, modestly bowing, as the multitude greeted him with cheers of approbation. 'Nobles, knights, gentlemen of free-born blood, and good citizens,' he said, 'who have assisted at this act of high justice, I pray you to bear me witness that this judgment hath been executed after the form of the sentence, at one blow, and without stroke missed or repeated.' The acclamations were reiterated. 'Long live our Scharfgerichter Steinerherz, and many a tyrant may he do his duty on!' 'Noble friends,' said the executioner, with the deepest obeisance, 'I have yet another word to say, and it must be a proud one.—God be gracious to the soul of this good and noble knight, Sir Archibald de Hagenbach. He was the patron of my youth, and my guide to the path of honour. Eight steps have I made towards freedom and nobility on the heads of free-born knights and nobles, who have fallen by his authority and command; and the ninth, by which I have attained it, is upon his own, in grateful memory of which I will expend this purse of gold, which but an hour since he bestowed on me, in masses for his soul. Gentlemen, noble friends, and now my equals, La Farette has lost a nobleman and gained one. Our Lady be gracious to the departed knight, Sir Archibald de Hagenbach, and bless and prosper the progress of Stephen Steinerherz von Blutsacker, now free and noble of right!' With that he took the feather out of the cap of the deceased, which, soiled with the blood of the wearer, lay near his body upon the scaffold, and, putting it into his own official bonnet, received the homage of the crowd in loud huzzas, which were partly in earnest, partly in ridicule of such an unusual transformation."

We have no room for further extract this week; though the scenes in which the secret tribunal of the Vehme, Charles the Bold, and Margaret of Anjou, make their appearance, tempt us to further selection. The whole story is one of extreme interest, which we hope rather to have excited than impaired by our selections; as we have taken care they should be such as would not develope the mystery so loved by novel readers. In conclusion: the imagination of Scott appears here in its youthful vigour; and we predict that this will be one of his popular productions.

Fetawai Abdur-rahim; or, the Fetwabs of Abdur-rahim. 2 vols. folio. Printed at the Constantinopolitan Press, under the supervision of Ibrahim Ssaib. *Rebiulachir* 1243 (November 1827).

To many of our readers it may prove a novelty to know that the Ottoman metropolis possesses a press, as well as the capitals of Christendom. The present is by no means a solitary specimen of that press; and we promise ourselves no few thanks, hereafter, for the fund of instruction and amusement it is our purpose to extract from its productions. In the meanwhile there are few to whom a word or two on the progress of the art of printing in Turkey will be unacceptable. The first press at Constantinople was set up by Jews, and its labours were limited to works in the Hebrew tongue: their example was followed by the Greeks and Armenians, but found no imitators among the natives themselves until the year 1720, when Mehemet Effendi was sent on an embassy to Paris. His son, Said, who accompanied him on this occasion, visited every work of art in

that mart of human ingenuity; but none of them excited his admiration so forcibly as the printing-houses. On his return to the Turkish capital, seven years afterwards, he therefore solicited and obtained permission from the Grand Signior to set up a similar establishment, which he placed under the superintendence of Ibrahim Effendi, a Hungarian renegade, who conducted it with great zeal and success, and had his types cut out under his own directions. This press slowly emitted dictionaries, grammars, voyages and travels, and historical works;—nay, in spite of the Koran's injunction against pictorial symbols, it produced a work on America, which was accompanied by *engravings*. After Ibrahim's decease it gradually lapsed into a state of almost total inactivity; but its energy has been re-awakened in a remarkable manner of late years; and the reigning master of the Seven Towers is the first Ottoman sovereign by whom the mighty influence of "the press" has been felt, acknowledged, and brought into action. We should add, that it is a mistake to conceive the Turks slight the art of printing altogether, or do not look upon it with a friendly eye: they undoubtedly prefer written works, on account of their superior beauty; but this is the whole "front and bearing" of their prejudices in this particular.

Having refreshed our memory with this scrap of fitting reminiscences, we now take up *Abdur-rahim* as our index to the "march of jurisprudential intellect" within the infidel walls of Byzantium.

In the whole range of Turkish literature there is probably no work of greater importance, and certainly none on which a higher value is set, than the present Collection of Judgments. It is the compilation of the celebrated mufti,* Mentesch sade Abdur-rahim Effendi, who filled the highest dignity of Ottoman judicature for a space of many years, and died, in the enjoyment of his countrymen's veneration as a mufti, in November 1717. It consists of judgments given at different times and by various muftis; and, in fact, contains a general exposition of the oral law of Mahomedan jurisprudence. Some of the judgments are his own, though he has not designated them as such. This code of "fetwabs" immediately preceded an edition which issued from the Turkish press seven years back, of the code composed by the mufti, Durri sade Mohammed Arif, formerly the director of the Turkish chancery, and whose compilation embraced about 2000 judgments, delivered between the years 1730 and 1773. The collection on which we are about to dwell is, however, of tenfold extent, and contains nearly 20,000 "wise saws and instances" propounded by the Ottoman chancellor. The classification of subjects, in accordance with the nature of their objects, is precisely the same in this as in other well-known works relating to Turkish law:—it is divided into 944 sections, of which our limits preclude us from rendering any further account than noticing the principal heads of the forty-three books under which these sections are ranged, and extracting from each a pertinent illustration.

* The mufti, or sheik-ul-islam, i. e. "chief of the elect," is the great expounder of the Koran in all judicial proceedings, especially such as are of a criminal nature; and announces his decision with such commendable laconism, as never to vouchsafe any exposition of their grounds, though he has the modesty, in intricate cases, to wind them up with a—"God knows what is better!" and subscribe himself the poor slave of God. It is this written judgment which is styled "fetwah," whence he derives the title of Sahib-fetwa, or lord of the judicial decisions.

Begin we then with No. 1. the book of *purification*.—"If a hare fall into Seid's well and become putrid, is it necessary to empty out the whole of the water and purify the well?—Answer, Yes.

"2. Book of *prayer*.—What measure ought lawfully to be dealt towards Seid, who omits to pray five times a-day?—Chastisement and imprisonment.

"3. Book of *alms-giving*.—Is it allowable that the Moslem, Hind, Seid's wife, should bestow alms on the poor monks of a Christian church?—Yes;" (and we add,—blush, ye Christian advocates of intolerance! Go, and do likewise!)

"4. Of *fasting*.—[An Asiatic canon not fit for quotation in a European periodical.]

"5. Of *pilgrimage*.—If the Moslem, Hind, possess no husband, or male personage (*mahrem*) who is privileged to enter the harem, is it permitted to her to enter upon a pilgrimage, accompanied by some steady females of good repute?—No."

Between this and the succeeding book is inserted a long digression on tithes, duties, taxes, houses, gardens, vineyards, mills, sheep, brides, slaves, subjects, fiefs, farms, fisheries, mines, planting, bee-hives, tobacco, and so forth.

"6. The book of *seir, or campaigns*.—When the unbelieving Albanians, who are for ever warring against the Moslems, may obtain the upper hand, is it lawful to dispose of their captured men and girls, and take the latter to wife?—Yes."

There is a most extraordinary chapter interposed between this and the seventh book: it concerns offences and blasphemies against God, the Koran, learned scribes, wives, &c., and breathes the spirit of Islamism in all its purity. Take this instance in proof:—"If Seid says the Koran is not God's word, but Othman's invention, what is fit to be done?—Put the unbeliever to death." This judgment is worthy of attention in an *historical* point of view, as proving that Othman, commonly called Dschamiol-kuran, or collector of the Koran, is its real editor; a point which Hamaker has disputed in his *Bibliotheca Critica*. We resume:—"If the unlettered Seid should wax wroth with the learned Amru, and abuse him, saying,—A fig for your learning; 'tis all filth and dirt!' how is Seid to be dealt with?—Let him be scourged; and if Amru be a learned scribe, and Seid has thereby scandalised the light of the law, let him be held to renew the formularies of his faith and marriage."

"7. Of *punishments*.—If Seid do violence to the maiden, Hind, in what manner is he to be treated?—Let him be stoned.

"8. Of *theft*.—If Hind, the Moslem, have stolen valuable articles belonging to Amru out of a place of safe custody; and if, after confessing the theft, she do not restore the property, what is right to be done with her?—Let her hand be cut off.

"9. Of *those things which the law approves and disapproves*. (To wit, as to eating and drinking, dancing and music, touching and bedding, &c.)—Are the dance of the Sofi and the circular reel of the Mewlewis, accompanied by kettledrums and flutes, allowable by law?—There is nothing inherently evil in these; but they produce such evil consequences, that his majesty the padishah, the extinguisher of the prohibited, and preserver of the pure egg of Islamism, has done himself great honour by forbidding and banishing such disgraceful practices." It appears by the peroration of this

fetwah, that the flock of the prophet is not without its pharisaical leaven; which prompts our Minos to the following rebuke:—"The Sofis, who permit themselves disgraceful actions whilst they are pronouncing God's name, must in future pronounce that name with becoming reverence for the law; and the Mewlewis must wholly abandon the dance with flute and kettledrum accompaniments, and must listen like their neighbours to lectures and sermons.

"10. Of *killing and hunting animals*.—When Seid, the Moslem, on occasion of the sacrificial festival, orders Rajah Amru to slay the offering and pronounce the solemn formula, 'In the name of God,'—is this a valid act?—Yes.

"11. Of *sowing and watering*.—If Seid have an ox and possess a field, which he cultivates, and Hind contribute an ox and seed, is it a binding contract, when they agree to divide the produce between them?—No.

"14. Of *marriage*.—If Seid say, in the presence of witnesses, 'I give Hind, my youthful daughter, to Bekir, the youthful son of Amru, in marriage,'—does Hind really become the betrothed of Bekir?—Yes."

We find, between this and the succeeding book, a chapter on daughters, mothers, and degrees of kindred not admissible into the harem. The 15th book is of *suckling*; and then a chapter on marriage-portions and legal descent intervenes.

"16. Of *divorce*.—When Seid marries Hind, and waxing wroth with her before the marriage is consummated, pronounces the words, 'She shall depart thrice untouched and divorced from me,'—is she thence thrice divorced?—Yes." Under this head is introduced an exposition of the term "*lawful maintenance*," which is worthy of forming "part and parcel" of the law of England, or any other Christian land: to wit,—If destitute Hind stand in need of support, in what proportions is this to be provided by her children, the son of Amru, and her daughters, Seineb and Chaidische?—Each of the three shall contribute an equal portion."

The next, or seventeenth book, lays down a very cheap and easy mode of manumission; not found, it is true, in Bryan Edwards or Clarkson, but not on that account to be withheld from the ken of a Wilberforce or Buxton. In this book "*of manumission*," it is asked, "If Seid say of Amru, his slave, that Amru is his son,—is Amru free?" And the answer is, "YES"! Again, in the next chapter, "*of previously promised manumission*," the following question is put: "If Seid says, my maid, Hind, shall become free forty days before my death, and if he die a twelvemonth afterwards,—is Hind to be set apart as not forming a portion of Seid's chattels?" And again the mufti says, "YES."

"19. Of the *penal inflictions*.—If Seid designedly wound Amru with a sharp instrument and slay him,—what ought to follow?—The atonement of like with like."

We recommend our excerpt from the twenty-first book, "*of persons lost*," to the attention of the commissioners for reforming abuses in the Court of Chancery: our friend Abdurrahim is, beyond dispute, a scion of the old Lincoln's Inn stock. "What age must a lost individual have attained before he can be pronounced dead in the eye of the law?—NINETEEN YEARS"! More "new light" is in store for them. The twenty-second book, "*of commercial co-partnership*," recites, *inter alia*,—"If Seid and Amru are partners, and

Seid buy any article that is not stipulated in the articles of partnership, can Seid make that partnership liable?—No."

The twenty-third book, which is the most bulky of all, treats of "*ecclesiastical endowments*," and fills 180 pages, whereof a portion terminates the first volume, and the remainder occupies eleven pages of the second. Passing over the book on "*buying and selling*," we come to somewhat debatable ground, "*the rights of pre-sale*" (Schufaat); at all events, the application of such a right as is allowed under the subsequent dictum, would provide abundant food for Mr. Peel's new petty sessions. "If Seid sell a vineyard to Amru, and make it over to him, and Bekir be owner of a vineyard abutting upon the same,—can he, upon fulfilling all covenants binding upon Amru, possess himself of Seid's vineyard?—Yes!"

"28. Of *lending*.—If Amru, when going upon service, borrow a horse of Seid, on condition that two-thirds of all booty shall accrue to himself, and the other third shall be reckoned for the horse, and the horse be ruined without blame attaching to him,—is Amru bound to make good the loss?—No."

It would appear, by a decision we are about to quote from the twenty-ninth book, "*of pledging*," that in certain circumstances the Turkish owner becomes the heir of his slave's effects. "If Seid's slave, Amru, pledge 500 piastres with Bekir, and Amru die,—can his master claim the said sum from Bekir?—Yes."

The tongue is a more potent weapon in Turkey than in Christendom. *Ex. gr.* "If Seid ask Hind to give him one of her vineyards, has he admitted that the vineyard is Hind's property?—Yes." Vide p. 235, in the thirty-second book, "*of admissions*" (Ikrar).

The "statute of limitations" is unknown at Constantinople, as we gather from a case and opinion given in the thirty-sixth book, "*of demands and claims*." "If legal demands, founded on legal grounds, have not been urged during a space of fifteen years, can they be brought before the courts?—Yes."

"38. Of *evidence*.—How many witnesses are requisite to support a case of incontinency? Four."

We observe, that neither *blind men* can be clothed with judgeships, nor idiots or madmen make a will; and shall now abandon the foregoing specimens of Turkish jurisprudence to the cogitations of the inquisitive, with a valedictory citation from the *olla podrida* contained in the forty-third and last book, "*of partition walls*" (Haitan); where we find fetwahs on bridges, cessations, chimneys, baths, trees, *et eis dissimilissima*, heaped together in most admired confusion. "Can the inhabitants of a village expel Hind for treading unseemly ways?—No; because it belongs to magistrates alone to decide in cases of immoral deportment."

Narrative of a Journey from Calcutta to Europe, by way of Egypt, in the Years 1827 and 8. By Mrs. Charles Lushington. 12mo. pp. 284. London, 1829. Murray.

THE unaffected grace, intelligence, and literary neatness, by which this little volume is characterised, must recommend it to the most favourable regards of the public, independently of its novelty as being written by a lady, the first (we understand) who has performed the overland journey from India to England. We talk prodigiously of the *march of mind*, and pay it all our tributes in books, pamphlets, and

journals; but surely this period is distinguished as much by the march of female beauty and enterprise, talent, and genius, as by the boasted advances in masculine education, and, to adopt more of the cant phraseology, the "spread of knowledge!" Here is a lady braving the storms and pirates of the Red Sea, the fatigues of Egyptian deserts, the alarms of wild Arab and despotic Turk,—investigating, on the banks of Nilus, the tombs and ruins of the ancient world, and ascending the pyramids; and at the end of her interesting travel giving an account of what she has seen and done, in a style and manner which would do honour to the best-informed of the other sex. Indeed, we ought to say, that her narrative possesses a superior charm in its simplicity, and the freshness with which it describes the route itself and the objects on the way. This it owes to its origin; for, after Fitzclarence, Johnson, and other recent travellers' descriptions of the same journey, it is probable that no other male author could present us with so much that is new and pleasing as has been presented by Mrs. Lushington.

Having thus briefly introduced her to our readers, we shall proceed to extract some of the passages in her work which have chiefly contributed to produce these impressions upon us. We pass over the Indian portion of the tour, and the voyage up the Red Sea, and come to preparations for passing the desert at Cosseir.

"Some time elapsed (says our fair countrywoman) before so large a party as ours could be accommodated with camels; they were procurable in any number, though they could not be collected without a little delay. They were white and black, besides the usual dun colour. I may here remark, that the distinction between dromedary and camel is no further known in Egypt, than that the former is used for the purposes of riding and despatch, the latter for the conveyance of burthens. Our cavalcade consisted of ninety-six camels, besides many asses,—no great number, when it is to be recollected we carried with us tents, clothes, wine, water, and provisions." Amongst her fellow-travellers Mrs. L. had the good fortune to reckon Mr. Elphinstone, the distinguished Governor of Bombay, whose high personal character and extensive information, no less than his public eminence and esteem, rendered him perhaps the most valuable friend and guide which such a party could acquire. Of this a slight proof is afforded by our next quotation.

"Anniversaries passed in strange countries, and at a long distance from home, are generally celebrated by travellers with extraordinary zeal and cordiality; and though I am apprehensive of being considered tedious in dwelling upon what indifferent persons may deem uninteresting, yet I will venture to describe the fête which Mr. Elphinstone gave us on New-year's-day 1828. Ill as I was, and fatigued by pain rather than the journey, I wished on this day to join the gentlemen in the dinner tent; and I confess I was amused by the contrast of the narrative which I had been reading, with the appearance of the table and party before me. The author of the book in question described the delight of the traveller on arriving at the wells where we were then encamped, and his satisfaction, after all his privations, at quenching his thirst with plenty of water; and, in short, would have impressed us with the notion that the Desert he had passed, and in which we then were, was such a one as depicted by Burckhardt,—abounding in sand, hunger, and thirst. But

behold our party, consisting of ten persons, sitting in a comfortable tent lined with yellow baize, and cheerfully lighted up; a clean tablecloth, and the following bill of fare:—roast turkey, ham, fowls, mutton in various shapes, curry, rice, and potatoes, damson tart, and a pudding; Madeira, claret, sherry, port, and Hodgson's beer. For the dessert, Lemann's biscuits, almonds and raisins, water-melons, pumplenose (or shaddock), and a plumcake as a finale! What astonished me, was the ease with which the whole arrangement of our meals was conducted: however, I believe this was principally to be attributed to the skilful superintendence of Mr. Elphinstone's head servant, Antonio. He was active and strong; a good tailor and a good cook; speaking a little of most languages, but being master of Arabic, French, and Italian. He mended my harness like a practised saddler; and, in short, could do any thing and every thing as it was required. The cook, dining-tent, and apparatus, were sent forward early in the morning, before we started ourselves; and at six in the evening our dinner was ready."

Among the scenes witnessed by Mrs. L. she mentions the exhibition of the Almehs.

"My tukhte rowan was assailed by five or six dancing-girls, called Almehs. I immediately lowered the silk blind, which, however, I thought they would have torn off in the same clamour and struggle for *bucksees*. I could not help seeing them as I strove to keep down the curtain; and it was impossible to behold them without disgust. Their countenances appeared inflamed by drinking, their persons were greatly exposed; and altogether they more resembled common robust English women under the influence of liquor, than what I had fancied of the delicate and elegant Egyptian females. They wore the same full petticoat as the nautch-girls of India. I may seem capriciously affected by the customs of the inhabitants amongst whom I travelled, but to me these women appeared doubly bold and degraded from the absence of the veil. It is so entirely contrary to the prejudices of the country for a female to appear without it, that the lowest peasant's wife will not allow any one to pass without drawing her muffler of coarse blue cloth closer round her face; and to expose it thus must be the height of abandonment."

Having reached and crossed the Nile, Mrs. L. saw or explored Luxor, Carnac, Goornoo, the Memnonium, Medinet Haboo, and other celebrated places with which the European world are now becoming so familiarly acquainted; and her account of the spot where the party encamped is very picturesque.

"We were (she states) close to the banks of the river, commanding a fine view of Luxor, Carnac, Goornoo (the great repository of the dead), the Memnonium, Medinet Haboo, and the two colossal statues seated on the plain, like brother genii, in solitary grandeur. These two statues seem to have formed the side pillars or entrance of some enormous gateway. I understand the learned are much puzzled to discover which of the two is the one from which the sound is said to have proceeded every morning at sunrise; but I, who do not enter deeply into these discussions, am content to believe the vocal Memnon to be that which bears so many Greek inscriptions on its foot, stating that certain persons had heard the sounds, and specifying the day and the hour on which the prodigy took place. Unless these names be considered as fabrications, I do not perceive how the doubt could have arisen. While view-

ing these two statues one morning, the sight of a gentleman-like looking Turk coming towards us, (Turks are seldom to be seen in such a lonely place as we were then in,) surprised me a good deal. He made the usual Mahomedan salutations, and I was for the moment startled at hearing him address us in good English. The enigma, however, was soon solved, when the stranger introduced himself as Major Temple of the 15th Hussars, lately returned from Nubia. He, with Mr. Wilkinson, who was also attired in a Turkish dress, had fitted up two tombs, in one of the Goornoo mountains, for their residence. The Turkish garb may command some respect among the Arabs of Upper Egypt, but certainly has not the same effect in the lower provinces, where the English and French nations are so much esteemed, that a Frank dress is considered the best protection. The villagers in our vicinity, and who chiefly live in the caves of Goornoo, had a wild and resolute appearance. Every man was at this time armed with a spear, to resist, it was said, the compulsory levies of the pasha, who found it vain to attack them in their fastnesses. I, who was so delighted with the beauty and peace of our new abode, felt quite disturbed to discover that the very spot where we were encamped had, four years before, witnessed the massacre of many hundreds of Arabs, then in resistance against this recruiting system, and who were blown from guns, or shot, while endeavouring to make their escape by swimming across the river. The poor people around, however, behaved with civility to us, and I felt no apprehension at going among them with a single companion, or even alone. To be sure, we were obliged to take especial care of our property, for which purpose the chief of Luxor assisted us, by furnishing half a dozen men to watch by night round the encampment. Nevertheless, once after I had gone to sleep, I was awakened by the extinguishing of the light, and felt my little camp-bed raised up by a man creeping underneath: he fled on my crying out, and escaped the pursuit, as he had the vigilance, of our six protectors."

Nor was this the only personal adventure to which our heroine was exposed. Afterwards, at Dendera, she tells us—

"On our return from the temple I was nearly meeting with an awkward adventure. After a long ride, we found we had missed the place where we had left the ferry-boat; and that we had to cross a quicksand before we could reach our maash. In a minute my donkey sank up to the saddle, and one second more saw me off its back and thrown across the shoulder of an Arab: no sack of corn could have been treated with less ceremony. At any other time I should have shuddered at the approach of his garment to within a yard of my person: but when I had recovered from my first surprise, my ridiculous position would have made me laugh stupidly, had I not been fearful that, if the man had caught the contagion, he might have let me fall into the stream. Fortunately, I did not reflect at that moment the confession of an Arab boatman with whom I remonstrated on his want of cleanliness, and who, on my questioning him how often he washed, answered, with apparent simplicity, that he had only done so three times in his life, when the ceremonies of his religion peremptorily required it. What a contrast to the practice of the Hindoos, who never allow a day to pass without plenary ablution; and who, in the coldest weather, bathe their shivering limbs in the Ganges, allowing

the clothes, which they wash with themselves, to dry on their persons!"

And again, in ascending the great pyramid, a feat, our readers may remember, previously achieved by Lady Belmore, as Dr. Richardson relates, with "perfect ease," Mrs. L. found it more difficult—for she thus describes her exploit:—

"On my arrival I saw some persons nearly at the top, and some just commencing the ascent. They were all at the very edge; and certainly their apparently perilous situation justified me in the conviction that I should never be able to mount. However, determining to make the attempt, I commenced outside from where the entrance has been formed, and walked along the whole length of one side of the square, about forty feet from the ground, to the opposite corner; the ledge being narrow, and in one place quite broken off, requiring a long step to gain the next stone. As the pyramid itself formed a wall to the right hand, and consequently an apparent defence, I felt no want of courage till I reached the corner where the ascent is in many places absolutely on the angle, leaving no protection on either side. About this time I began to be heartily frightened; and when I heard one gentleman from above call to me to desist, and another tell me not to think of proceeding, right glad was I to return, and to attribute my want of success to their advice rather than to my own deficiency of spirit. Each of the gentlemen as they descended told me the difficulty and fatigue were great, and they evidently were heated and tired; but, at length, in answer to my question a hundred times repeated, of, Do you think I could go? they proposed to me to try at least, and kindly offered to accompany me. Away I went; and by the assistance of a footstool in some places, and the aid of the guides, and the gentlemen to encourage me, I succeeded in arriving half-way, all the time exclaiming I should never get down again; and, indeed, my head was so giddy, that it was some minutes after I was seated at the resting-stone half-way before I could recover myself. Being a little refreshed, I resumed the ascent; but the guides were so clamorous that I turned back, finding their noise, and pushing, and crowding, as dangerous as the height. The gentlemen at length brought them to some degree of order, partly by remonstrance, and partly by carrying the majority to the top, and leaving only two with me. This quiet in some degree restored my head; and the footing as I advanced becoming more easy, I reached the summit amidst the huzzas of the whole party. It was a considerable time, however, before I gained confidence to look around, notwithstanding I was on a surface thirty feet square. The prospect, though from so great an elevation, disappointed me. I saw, indeed, an immense extent of cultivated country, divided into fields of yellow flax and green wheat, like so many squares in a chess-board, with the Nile and its various canals which cause their luxuriance, and a vast tract of desert on the other side; I must, however, acknowledge that this scenery I enjoyed on recollection—for I was too anxious how I was to get down, to think much of the picturesque. A railing even of straw might give some slight idea of security, but here there was absolutely nothing; and I had to cross and recross the angle, as the broken ledges rendered it necessary—for it is a mistake to suppose there are steps: the passage is performed over blocks of stone and granite; some broken off, others crumbling away, and

others which, having dropped out altogether, have left an angle in the masonry; but all these are very irregular. Occasionally the width and height of the stones are equal; but generally the height greatly exceeds the width: in many parts the blocks are four feet high. Once the stone was so high, that as I slipped off I feared that my feet would shoot beyond the ledge on which they were next to rest, and which certainly was but a few inches wide. Another time I was in great peril: I had stretched one foot down with much exertion as far as it could reach, and as the other followed, the heel of the shoe caught in a crevice of the rock, and I had nearly lost my balance in the effort to extricate myself. In a few places the width of the ledges enabled me to use the footstool, which considerably diminished the fatigue; but the greater number were far too narrow for its three feet to rest upon, and I thought it too insecure to allow an Arab to support it with his hands while I stepped upon it. After all this, it may be supposed I was glad when I had accomplished the undertaking; for, to tell the truth, the greatest pleasure I felt in ascending the pyramid was to be enabled to say at some future time that I had been at its summit."

(A continuation in our next.)

SIGHTS OF BOOKS.

Richelieu. 3 vols.

A COPY of the novel under this title has reached us too late for review this week, even if we had not already devoted as large a proportion of our space as is desirable in a single number to works of that class. We cannot, however, be so ungrateful for the pleasure this book has afforded us, as to pass it over utterly in silence; though we have only room to say, that it belongs to the Scott school in the best sense of the word, and is (with perhaps a slight reservation on the score of want of character) one of the cleverest that has been produced. The author is, as yet, we believe, little known to the literary world; but we will venture to prophesy that he cannot long remain either unknown or his talents unappreciated.

Life and Times of Francis I. 2 vols.

London, 1829. Bull.

THE press of more temporary matter prevents our doing that justice to this work which its merit demands. But what was a desideratum in the historical literature of a time replete with interest is supplied by a most full and animated account of Francis—a most chivalrous monarch. We shall, probably, return to it.

Chapters on Churchyards. By the Authoress of "Ellen Fitzarthur," "Widow's Tale," "Solitary Hours," &c. 2 vols. 12mo. Edinburgh, 1829. Blackwood.

FROM the first appearance of Ellen Fitzarthur—one of the very sweetest poems that ever emanated from a female pen—to the simple and pathetic *Widow's Tale*, and the *Solitary Hours*, varied by so many moods of mind and feeling—down to the *Chapters on Churchyards*, two very charming little volumes now before us—our critical office to Miss Caroline Bowles has been a very pleasant one,—that of continued and well-deserved praise. But though we generally pique ourselves upon our priority, yet in this instance the voice of public favour has forestalled ours; for these *Chapters* have long been favourites in Blackwood's Magazine, whose readers will be glad to see them in this connected form. We make no extract from pages already so extensively circulated; but

we must bestow great praise on the talent which has given such animation to the pictures of actual and every-day life. "*Broad Summerfield*" is a most delightful sketch; and "*Andrew Cleaves*" displays a degree of deep and fearful interest, which is a striking contrast to its lighter and livelier companions. Altogether, we can cordially recommend this work to our readers—to our fair ones, especially: it is the very thing for a lady's library.

Shreds and Patches of History, in the form of Riddles. 2 vols. London, 1829. Rodwell.

A GREAT number of amusing anecdotes are here collected, and in a manner very likely to impress them on the mind; for the names being omitted, the young reader has to look in the second volume to find who is the person in whose courage, generosity, &c. he has just been interested. We doubt, however, whether this does not cultivate the memory rather than other faculties; and also whether thus turning information to amusement does not weaken that industry of application, the habit of which is even more valuable than the knowledge it acquires. It is not from insulated incidents, however entertaining, that the understanding is led to weigh those causes and effects, reflection on which can alone form the judgment. Still these little volumes are very entertaining; and the selection of anecdotes has been most judicious.

ORIGINAL CORRESPONDENCE.

Paris.

WE have seriously commenced amending our ways, though not our doings, in this city of cities—the streets are paving rapidly, and in a few years English ladies may venture to walk with firm tread, instead of that elastic bounding step which excites such severe criticism amongst the amateurs of graceful movements. Another improvement of considerable importance is also promised to the public—that of establishing drains, which are to communicate with the river. The execution of such a project would be truly beneficial to society, for the vapours which arise from stagnant pools are even less supportable than English fogs and sea-coal smoke, though the impurities of the former may not equally give rise to splenetic affections, or prove as efficacious as provocatives to drowning, hanging, and poisoning.

Rather a ludicrous incident occurred the other day to a hero of the whip (a son of the Green Isle). Contrast, it appears, is one of the laws of equipment: milord determined, therefore, to observe it, not only with regard to the colour of his horses, but also to that of his servants; and for this purpose he hired a negro of blackest hue to perform the part of second lounge in the *arrière* currie seat of his barouche. Unfortunately, the African was totally ignorant of civilised customs; and growing weary of his sinecure post and the slow motion with which he was driven, he called out to his master, in an audible voice, to quicken his pace. Milord supposed the negro insane; but on the poor fellow explaining that he was not aware he was placed behind for shew, but that he imagined "massa" was coachman for the day, the mistake was pardoned. As this adventure took place *en plein jour*, at the Bois de Boulogne, it occasioned much merriment, and has given a new subject for a caricature.

I understand that M. Victor Hugo is going to give to the world some new poetical conceptions. His *Pegasus* has latterly taken the

mors aux dents; therefore I hope he will rein him in a little for the future; otherwise, we poor mortals can never follow the poet in his fanciful flights. The greater part of his late productions are totally incomprehensible to vulgar minds.

As a proof of what are the expectations of some ladies when they shall be re-animated, a fair Parisian who, *malgré elle*, was obliged to bid adieu to the pleasures of life, gave orders that a box, containing a pot of rouge, two sets of teeth, and several bands of hair, should be put in the coffin with her: she left the sum of a thousand francs to make these purchases; and then, as a balance to vanity, gave an equal sum to the poor of the parish. Charity, of course, covers foibles as well as sins; therefore, her calculation proved she had weighed the *pour et contre*.

A naturalist has just published a treatise on animals, in which he contends that cows, pigs, geese, &c. feel no pain when put to death by butchers, cooks, &c. These gentlemen would do well to reveal to their readers by what means they gain the confidence of the quadruped and feathered race: until then, we must doubt the assertions of animal historians, or rather the historians of animals.

A Spaniard has invented a new machine for building, which is (*dit on*) to accelerate the erecting of walls, laying of floors,—so that a house may be habitable in a fortnight. I rather think the inventor is more in need of “raising the wind” than houses, and that his quickly constructed edifices will turn out to be *des châteaux en Espagne*.

ARTS AND SCIENCES.

ROYAL INSTITUTION.

MAY 8th.—The arrangement and powers of that beautiful collection of mechanical contrivances in the Dock-yard at Portsmouth, constituting “Brunel’s Block Machine,” were illustrated this evening by Mr. Faraday, before one of the fullest audiences we have seen in the Institution for several years. His Grace the Duke of Somerset in the chair.

Mr. Faraday stated that the machine was for the purpose of forming ships’ blocks with rapidity, accuracy, and economy. It was first tried at work in Portsmouth dock-yard in 1805, and has done duty from that time to the present, supplying every demand made upon it. The cost of its erection, and of part of the mill-house in which it stands, amounted to £46,000: for some years afterwards, during the war, the saving, after all expenses were paid, and interest allowed for the outlay, amounted to £25,000 per annum! It forms blocks of all sizes, up to the largest which can be made, out of one piece of wood; and when in full work with thirty men, its rate of production is about one hundred blocks per hour. It is now, after a lapse of twenty-four years, at a time, too, when machinery altogether is highly improved, still accounted a perfect specimen, and has never required any repairs but those which a small smith’s shop on the premises has been able to supply. It is impossible to describe properly all the interesting and original points belonging to this invention; Mr. Faraday, however, gave such a view of the whole as shewed the divisions of labour by the various parts of the apparatus, and succeeded in impressing on the minds of his auditory the high value of the whole, and the perfection with which it attained its objects. The lecturer illustrated his subject by means of the set of perfect models belonging to the Navy Board, which were very obligingly

lent by that department of the government to the Institution for the evening. These models were constructed by Messrs. Maudsley and Field, as was also the original apparatus: they were in working-order during the evening, under the care of Messrs. M. and F.’s men, and excited a great deal of interest and attention. They are upon the scale of an inch to a foot, and carried a block of wood, about three inches long, through the various operations of boring, mortising, cornering, shaping, scoring, &c. &c.; and had not an hour been far too short a time, the block could have been completely finished by the apparatus.

In the library were a number of interesting articles brought from the East by Capt. Waite, including exceedingly beautiful specimens of Damascus blades and Persian armour; curious shields made from the hide of the rhinoceros, and very large drinking-cups and vases from the horn of the same animal; also many presents of fine crystals, of different substances, books, maps, engravings, &c.

SOCIETY OF ARTS.

MAY 12.—A meeting of the Society took place at their house in the Adelphi, for the purpose of distributing the premiums voted in the class of polite art,—his Royal Highness the Duke of Sussex, President, in the chair. The Secretary stated the reasons that had induced the Society to recur to their former practice of holding the distribution at their own house, instead of at the Opera House, as has been of late the practice. He then proceeded to make some observations on the two classes of amateurs and artists, in which the successful candidates were respectively arranged. The medals were distributed by his Royal Highness, with the kindness and interest that so eminently distinguish him when addressing the young; and the whole proceedings went off much to the gratification of a large assembly that filled the great room of the Society. The distribution of rewards in mechanics and the other practical arts will take place on Monday the 8th of June.

THE MAGNETIC POLE.

[Important Communication.]

Christiana, April 28.

LETTERS have been received from Professor Hansteen and his companions to 19th February. On the 12th of September they left Tobolsk, and travelled on sledges, the cold being at 40 deg. of Réaumur; so that the frozen quicksilver could be cut with a knife. On the 31st they arrived at Tomsk; on the 21st of January 1829 at Krasnojarsk; and on the 7th of February at Irkutsk, which is about 4000 versts from Tobolsk. They afterwards visited Kiachta, and crossed the frontier of China: but the most agreeable result is, that the desired object of the journey is accomplished, as the observations have proved perfectly satisfactory—and the magnetic pole is found. Centuries will perhaps elapse before Siberia will be again so thoroughly observed. When the letters were despatched, it was resolved that the journey should be extended to Nertchinsk, from which place Professor Hansteen would return to Krasnojarsk. His companion, Lieutenant Due, was to go alone to Jakutzk, 2,700 versts N.E. of Irkutsk, and perhaps proceed down the river Lena to the Frozen Ocean; and they intended to meet again at Jeniseisk in September or October.

While on this subject, we may observe that M. Arago communicated to the Academy of Sciences at Paris, at a late sitting, the result of some scientific experiments made by M. Humboldt on the magnetic needle, from

which it appears that its diurnal variation is by no means the same at Berlin and Paris. At Berlin on the 29th of January last the variation was three times greater than on the 27th; whereas at Paris, on the 29th, it was much greater than that of the 27th at Berlin. At the latter place the variation on the 11th of the same month was twice that of the 10th. At Paris that of the 10th was greater than that of the 11th. From a comparison of the tables, it is clear that this circumstance did not originate in any error of observation, but that the phenomenon of the diurnal variation is influenced by local causes. By experiments made at the mouth and lowest part of the Freyberg mines, it is ascertained that a depth of 798 feet in the earth has no sensible influence upon the power of inclination.

ANCIENT AND MODERN EGYPT.

Tenth Letter of M. Champollion.

Ypsamboul, Jan. 12, 1829.

ON a second view of the colossi which so worthily indicate the most magnificent excavation in Nubia, they appeared to me as admirable for their workmanship as they did on a first inspection. Every thing is colossal here, not excepting the labours which we have undertaken; and all who are acquainted with the spot know well what difficulties must be overcome in order to copy a single hieroglyphic in this great temple.

I quitted Ouadi-Halfa and the second cataract on the first of this month. We slept at Gharbi-Serré; and the following day, at noon, I landed on the right bank of the Nile to examine the excavations of Maschakit, a little to the south of the temple of Thoth at Ghebel-Addeh, of which I spoke in my last letter. I was obliged to ascend an almost perpendicular rock upon the Nile, to reach a small chamber hollowed in the mountain, and ornamented with sculptures which are very much damaged. I, however, succeeded in discovering that it was a temple dedicated to the goddess Anoukis (Vesta) and to the other divinities, the protectors of Nubia, by an Ethiopian prince named Polri, who, being governor of Nubia under the reign of Rhameses the Great, prays to the goddess that the conqueror may tread the Libyans and the Nomads under his sandals for ever.

On the 3d, in the morning, we moored our vessels before the temple of Hathor, at Ypsamboul. I have already given a note of this pretty temple: I will add, that on its right there is sculptured upon the rock a very large design, representing another Ethiopian prince who presents to Rhameses the Great the emblem of victory (this emblem is the ordinary badge of the princes or sons of kings) with the following inscription in beautiful hieroglyphic characters:—“The royal son of Ethiopia has said: Thy father Amon-Ra has endowed thee, O Rhameses, with a stable and pure life; may he grant thee length of days to govern the world and to keep in check the Libyans for ever.”

It seems, then, that from time to time the Nomads of Africa disturbed the peaceful cultivators of the valleys of the Nile. It is very remarkable that on the monuments of Nubia I have hitherto found only names of Ethiopian and Nubian princes as governors of the country, even under the reigns of Rhameses the Great and of his dynasty. It appears, therefore, that Nubia was so united with Egypt, that the kings wholly trusted the natives of the country itself with the command of the troops. I may mention as a proof, a stela sculptured on the rocks of Ypsamboul, in which a person of the name of Mai, commander of the troops of the king in Nubia, and born in the country of Onaou, one of the cantons of Nubia, sings the praises of the Pharaoh Mandouei I., the fourth successor of Rhameses the Great, in very emphatic terms. It appears, also, from several other stelae, that

divers Ethiopian princes were employed in Nubia by the heroes of Egypt.

On the 3d, in the evening, our labours at Ypsamboul commenced in the great temple, which is covered with such large and beautiful bas-reliefs. We have resolved to have drawings of the full size, and coloured, of all the bas-reliefs which decorate the great hall of the temple, the other chambers containing only religious subjects. [Here Mr. C. describes the intense heat to which they are exposed, till they are quite exhausted, and do not cease work till their legs can no longer support them.]

To-day, the 12th, our plan is nearly accomplished. We already possess six great pictures, representing—

1. Rhameses the Great in his car, with the horses in full gallop: he is followed by three of his sons, also in war chariots, and puts to flight an Assyrian army, and besieges a fortress.

2. The king on foot, who has just thrown down an enemy's general, and is piercing him a second time with his spear. The design and composition of this group are admirable.

3. The king is seated amidst his officers, when news is brought to him that the enemy is attacking his army. The king's car is prepared, and servants are checking the ardour of the horses, which here, as elsewhere, are drawn to perfection. Further on is seen the attack made by the enemy in war chariots, charging without order a line of Egyptian cars, ranged regularly. This part of the picture is full of life and action, and may be compared to the most beautiful battles on the Greek vases, of which these pictures constantly put us in mind.

4. The triumph of the king, and his solemn entry (into Thebes, doubtless), standing upright in a magnificent car, drawn by horses richly caparisoned, proceeding at a slow pace. Before the car are two lines of African prisoners: one of the Negro, and the other of the Barabra race, forming groups perfectly designed, and full of effect and life.

5 and 6. The king presenting captives of different nations to the gods of Thebes and Ypsamboul.

We have to finish the drawing of an enormous bas-relief, which covers almost the whole right wall of the temple: an immense composition, representing a battle; an entire camp; the tent of the king; his guards, his horses, the cars, the baggage of the army, the military games, punishments, &c. &c. In three days, at the most, this great drawing will be completed, but without colours, because the damp has entirely effaced them. This is not the case with the above-mentioned six pictures; the whole are coloured and copied in the minutest details with the most scrupulous care. Thus people will have an idea of the magnificence of the costume, and of the cars of the ancient Pharaohs, 1500 years before the Christian era; they may then comprehend the astonishing effect of these beautiful bas-reliefs, painted with so much care. I wish I could conduct into the great temple of Ypsamboul all those who refuse to believe the elegant richness which painted sculpture adds to architecture; I will answer for it, that in less than a quarter of an hour they would have perspired away all their prejudices, and that their preconceived opinions would ooze away through their pores!

Rosellini and myself have reserved to ourselves the hieroglyphic legends, often of great length, which accompany each figure or group in the historical bas-reliefs. We copy them on the spot, or from casts when they are placed at

too great a height. I compare them several times with the originals; I make a fair copy of them, and give them to the draughtsmen, who have already drawn and preserved the columns which are to receive them. I have also copied at full length the inscription on a great stela, placed between the two colossi on the left in the interior of the great temple; it contains no fewer than thirty-two lines, and is nothing less than a decree of the God Phtha in favour of Rhameses the Great, on whom he lavishes praises for his labours, and his benefits to Egypt: then follows the king's answer, conceived in terms equally polite. It is a very curious monument, and of a very peculiar kind. So far we have advanced in our memorable campaign of Ypsamboul; it is the most difficult and glorious that we can make during the whole journey. Our French and Tuscan companions rival each other in zeal; and I hope that on the 15th we shall set sail for Egypt with our historical treasures.

LITERARY AND LEARNED.

Oxford, May 9.—On Thursday the following degrees were conferred:—

Bachelor in Civil Law.—Rev. J. F. Howard, M.A. Trinity College.

Masters of Arts.—T. Brown, Magdalen Hall; Rev. W. C. Kitson, Rev. J. Hadley, Scholar, Worcester College; G. Clive, Brasenose College; W. R. Bernard, Balliol College.

Bachelors of Arts.—D. V. Durell, Christ Church, incorporated from Trinity College, Cambridge, Grand Compounder; W. Flisher, St. Edmund Hall; R. Fawcett, Lincoln College; J. Swainson, Brasenose College.

CAMBRIDGE, May 9.—At a congregation on Wednesday last the following degrees were conferred:—

Doctor in Divinity.—The Rev. J. Allen, Trinity College, Prebendary of Westminster.

Bachelors in Divinity.—Rev. J. Blomfield, Emmanuel College; Rev. C. Wesley, Christ College.

Masters of Arts.—H. Ashington, H. Elphinstone, Trinity College; W. Keeling, W. H. Miller, Fellows of St. John's College; Rev. H. W. Crick, Jesus College; H. A. Brown, T. Kenyon, Christ College, Compounder; Rev. A. H. Small, Fellow of Emmanuel College.

Bachelor in Civil Law.—Rev. F. Ashmore, Christ College.

Bachelors of Arts.—G. H. Feachem, R. Devey, C. P. Hamlyn, C. H. Templeton, W. H. Tudor, Trinity College; T. Moore, W. G. Nott, T. Storer, St. John's College; F. J. Courtenay, W. Ludlow, T. Moore, H. P. Shewell, St. Peter's College; T. Heathcote, Clare Hall; E. Ethelstone, Pembroke College; C. F. Chawner, J. Hooper, G. W. Stratton, J. K. Went, Corpus Christi College; R. B. Boyes, J. M. Brown, J. Brown, C. Clark, J. H. Steble, R. Taylor, Queen's College; B. S. Broughton, J. Penfold, Christ College; A. A. Young, Magdalen College; T. J. Locke, Downing College.

At the same congregation Dr. C. R. Elrington, Professor of Divinity in the University of Dublin, was admitted D.D. *ad eundem*.

ROYAL SOCIETY.

MAY 14th. The President in the chair.—The remainder of Dr. Turner's paper on the composition of the chloride of barium, and a very curious paper from the pen of Dr. Spurzheim, on the organisation of the brain, communicated by Mr. Chenevix, were read. On the table, amongst the donations to the Society, were Professor Airy's Astronomical Observations, made at the Observatory of Cambridge, presented by that University; Mr. Green's Numismatic Atlas of Ancient History, with descriptive text; the 9th part of Professor Littrow's Astronomical Observations, made at the Imperial Observatory of Vienna, presented by the Emperor of Austria; a print of La-grange, presented by M. De Prony; the Ordnance Map of Cirencester; and a variety of other works of art.

April 30th.—A paper was read, entitled, "on the spontaneous purification of Thames water," by John Bostock, M.D., F.R.S., &c.

In the report which the author made of the result of his examination of Thames water to the commissioners appointed by his Majesty to inquire into the supply of water for the metro-

polis, one of the specimens, taken near the King's Scholars' Pond sewer, was described as in a state of extreme impurity. This water had remained in the laboratory unattended to; and after an interval of some weeks, it was observed to have become clear, while nearly the whole of the former sediment had risen to the surface, forming a stratum of half an inch in thickness, and still emitting a very offensive odour. In process of time this scum separated into large masses or flakes, with minute air-bubbles attached to them. At the end of two months longer these masses again subsided, leaving the fluid almost totally free from any visible and extraneous matter. On analysis, the water was found to contain lime, sulphuric and muriatic acids, and magnesia, in much larger quantities than in the specimens of Thames water previously examined; the proportion of saline matter being increased fourfold. The proportion of the muriates is nearly twelve times greater; that of carbonate of lime, between two and three times; and that of sulphate of lime five and a half times greater. The water, in its foul state, had given very obvious indications of both sulphur and ammonia; but neither of these substances could be detected after its spontaneous depuration. The source of these new saline bodies is referable to the organic substances, chiefly of an animal nature, which are so copiously deposited in the Thames. The depurating process may be denominated a species of fermentation, in which the softer and more soluble animal compounds act as the ferment, and are themselves destroyed; while the salts that are attached to them are left behind. Hence, the more foul the water, the more complete the depuration; and it is on this principle that the popular opinion of the peculiar fitness of Thames water for being used at sea may be explained; its extreme impurity inducing a sufficient degree of fermentation to effect the removal of all those substances which might induce any future renewal of that process.

SOCIETY OF ANTIQUARIES.

At the meetings of Thursday, May 7th, and the preceding Thursday, a paper was read from Mr. Britton, on Celtic or Druidical antiquities, accompanying a series of beautiful drawings from the author's sketches, representing several cromlechs and circles: the latter were divided into two classes—simple and compound. Among the latter were some interesting representations of the immense monument at Avebury, and that called Stonehenge, both in Wiltshire. Mr. Nichols communicated a paper on, and representations of, the very curious tapestry in St. Mary Hall, Coventry.

THE LITERARY FUND.

The anniversary of this noble charity, on Wednesday, was, though most respectably, by no means so highly or so fully attended as it ought always to be, and as it would always be under different circumstances. Without imputing the slightest blame in any quarter, we can only attribute the languor of such a meeting to the lassitude which too often creeps into corporate bodies, and usurps the energy and activity of less favoured, but younger and more variable, associations. The company were about a hundred or a hundred and twenty in number; and not a few were distinguished by great literary talents and consideration in life;—but this is not enough for a Fund with objects of so general a claim to human sympathy and patronage—admirable in its principle, excellent in its administration, and universal in its benevo-

lence. It is true, that the Duke of Somerset, the President, was in the chair, and (we regret to say) that several foreign ministers were present; but it unfortunately happened, in so far as it might be necessary to impress their minds with an idea of the character of this Institution, for no less a purpose than the relief of literary distress, that of twenty Vice-Presidents, only one (Mr. Fitzgerald) supported it by his presence,—that of a Council of twenty, but seven appeared,—and that even of the Committee to whom the distribution of the Fund is intrusted, no more than eight out of nineteen were present.* On this proportion of countenance we cannot but observe, that sixteen out of sixty of the individuals who constitute the government of the society, is an attendance, upon its annual festival, so inadequate as to leave no cause of surprise when we see it greatly surpassed by institutions of less public interest, and directed to more limited purposes. Surely if the same spirit and management were employed, the Literary Fund, embracing the misfortunes of the whole wide world of literature, would not lag so much behind the anniversaries on behalf of particular and numerically small classes,—such as the destitute performers of a theatre, artists, and other similar deserving, but, in comparison, confined applicants to the common feeling of beneficence. Knowing the inestimable value of this Fund, and being well acquainted with the immeasurable good it does, these remarks are written more in sorrow than in anger;—not to depreciate the society, but to suggest its increased exertion and advancement. We are well aware, that it would be folly to expect from a body of noblemen and gentlemen, engaged in the most elevated and laborious pursuits which our free and glorious country offers to honourable ambition, a constant personal appearance, year after year, at these festivals, which more peculiarly invite the co-operation of rising rank and talent; and the enthusiasm of undrained sympathies. No field, however fertile, can fairly be expected to go on producing perpetual supplies; and in philanthropy, as in farming, it is certainly well to endeavour to bring fresh patronage, like fresh lands, into cultivation, for the benefit of the poor and the afflicted. In our opinion, eligible means might very readily be devised to effect this in the Literary Fund. Beyond a reasonable point it ought not to task its old and generous benefactors,—it ought not to press on the time and purses of its long-continued and constant friends; but it might render homage to their past services by honorary distinctions, while it filled up the ranks, in which circumstances had made them only nominal auxiliaries, with others of the same liberal dispositions, and effective in the cause as well as on the muster-roll. But we have stated enough on this point, and trust the hint may meet with the consideration of the managers of the Fund.

At the dinner every thing went off very pleasantly. Speeches were delivered by the noble chairman, by Mr. Barbour the American ambassador, by the Mexican Minister, by Sir G. Duckett, by Sir E. Carrington, by Sir R. H. Inglis on behalf of the University of Oxford, by Dr. Paris for that of Cambridge, by Dr. Lardner for the London University, by Mr. H. N. Coleridge for the King's College, by Alderman Crowder for the city, and by others on various occasions. Dr. Yates, one

of the treasurers, read a very favourable report of accessions made within the year to the permanent fund, besides granting relief to distressed authors, their widows and their orphans, to an amount exceeding any former year; and also a very considerable list of subscriptions. After the chair was vacated, about forty of the staunch supporters of the charity remained, and spent a social hour together in furthering the future views of the Fund.

PINE ARTS.

EXHIBITION OF THE ROYAL ACADEMY.

[Second notice.]

No. 20. *An illicit Whisky-Still in the Highlands.* E. Landseer, A.—Judging from its frequent appearance in our exhibitions, an illicit still is as favourite a subject with the artist, as its produce is with the Highlander, whose very existence, if Burns is to be believed, is linked with the enjoyment of the “mountain dew.” The truth is, that the local circumstances which attend such a subject,—the vessel itself, with its accompaniments, the sheltered nook of country in which it is usually placed, and the character of the people engaged in the secret and hazardous speculation,—are all singularly picturesque. Of those various circumstances, Mr. Landseer has most happily availed himself in the work under our consideration, of which it is high but deserved praise to say, that it is one of the most interesting and masterly productions that we have seen from his pencil.

No. 28. *Waterfall near Vallagunta, in the Peninsula of India, in the Mountains that divide the Coasts of Coromandel and Malabar; its height between five and six hundred feet.* W. Daniell, R.A.—In order to feel the full effect of this fine display of nature, in one of her grandest and most beautiful forms, it may be well to advert to No. 210, *the Tago Mah'l at Agra, viewed from the opposite side of the river Jumna*, also by Mr. Daniell, in which we are presented with as fine a display of art, in one of its grandest and most beautiful forms. We are unable to determine in which of these representations Mr. Daniell has been the more successful; but it is evident that he must have found more difficulty, and drawn more upon the resources of his judgment and taste in the latter, than in the former.

No. 132. *Don Quixote and Sancho Panza, after their Rencontre with the Yanguesian Carriers.* W. F. Witherington.—There has been palpable injustice in placing this exceedingly clever cabinet picture—than which, in conception and execution, there is nothing better in the room—in the unfavourable situation which it occupies. Another of Mr. Witherington's pictures, No. 149, *The Soldier's Wife*, is as disadvantageously hung; although we should have thought that, independently of its own merits, the subject of it, a well-known but highly creditable anecdote of his Royal Highness the late Duke of York, might have obtained for it a more honourable station. When to present facts such as these, we add the recollection of the scandalous manner in which poor Bonington was treated last year, we feel it impossible to refrain from charging the Academy with, at least, and to use the mildest expression, a great and reprehensible neglect of duty.

No. 181. *Queen Margaret of Anjou, being defeated at the Battle of Hexham, flies with the Young Prince into a Forest, where she meets with Robbers, to whose protection she confides her Son.* M. P. Briggs, A.—We regret that

in his choice of subjects, this able artist, who has already so highly distinguished himself, both in the historical and in the imaginative classes of the art, does not seem to be sufficiently aware of the charm of novelty. However, it is but justice to him to say, that he has treated the story of his present picture in a manner which differs from any management of it that we recollect; for, instead of making the prince cling to his mother for protection, he has represented him as confronting the robbers with a sort of childish sturdiness and defiance. The picture is powerfully painted; but, as in some of Mr. Briggs's preceding works, the group appears to be compressed into a space too small for it to act freely in.

[To be continued.]

EXHIBITION OF THE SOCIETY OF PAINTERS IN WATER-COLOURS.

[Second notice.]

No. 107. *An Otter.* J. F. Lewis.—A singularly beautiful drawing. But where is the otter? Aha! Mr. Lewis, you are a wag. We have discovered the animal; and a fine old picturesque otter he is; and many noble trout have no doubt fallen victims to his piscivorous propensities. When we contemplate this venerable “brother,” or rather “grandfather of the angle,” and carry our imagination back to his youthful days, we are induced to recommend “the first and the last fly” as a subject to the able writer who is at present enriching Blackwood's Magazine with a series of striking papers on “firsts and lasts.”

No. 246. *The Bachelor—Oxford.* J. F. Lewis.—At least as beautiful a drawing as that just mentioned, but of quite a different character. In composition and in execution, in its breadth and in its details, in its chiaroscuro and in its colouring, nothing can be more fascinating. The enjoyments with which Mr. Lewis has surrounded his hero,—the luxurious couch on which he is reposing and examining the lock of his Manton, the still more luxurious breakfast which is spread out before him, the cheerful fire imparting to him its genial warmth, the hookah on his mantle, the books—Sophocles side by side with the *Sporting Magazine*—and, as the climax, the miniature, indicative of his indulgence in the tender passion,—form altogether an assemblage very captivating to the imagination. When the ancient conqueror of the world observed the sturdy and scornful independence of the cynic philosopher, he exclaimed, that if he were not Alexander, he would wish to be Diogenes. When we regard this charming picture of Mr. Lewis's, we are disposed to parody the mighty Macedonian, and to declare, that if we were not a married man, we would wish to be a bachelor! This is, we believe, a portrait of Mr. Evans, an artist highly distinguished by his own works in this Exhibition.

No. 325. *The Corsair's Isle—the Parting of Medora and Conrad: Evening.* D. Harding.—We know not whether the artist who has produced this fine composition has had the advantage of a personal study of the classic scenery of Italy and Greece; but this is not the first occasion on which he has shown that his mind is thoroughly imbued with its grandeur and beauty.

No. 238. *The old Park at St. Donat's Castle, Glamorganshire.* J. Byrne.—In striking contrast to the united sublimity and loveliness of the last-mentioned performance, is the wild

* To this insufficient list of attendants from among the illustrious heads and effective officers of the Literary Fund, we may add, that not one of the three auditors was at the meeting.

* We are glad to see a work in three vols. entitled the “Five Nights of St. Alban's,” announced by Blackwood, and, as report says, from the same able pen—Ed. L. G.

magnificence of this local view; the contemplation of which carries the imagination back to past ages and the romantic events connected with them. It does infinite credit to Mr. Byrne's talents.

No. 358. *The Wedding*. Miss L. Sharpe.—A charming drawing. Execution in water-colours has never, in any instance that we remember, been carried further than in this beautiful performance. There is a delicacy and purity in the expression of the bribe quite delightful; and the curiosity and interest of the surrounding spectators are very happily depicted. We confess, however, that we wish the little episode of the deserted fair-one had been omitted. It gives to what would otherwise have been a perfect scene of truth and nature somewhat of the air of one of those mawkish and miserable novels, by the intense study of which so many of our young ladies unfit themselves for the duties and enjoyments of real life.

NEW PUBLICATIONS.

Select Views of Windsor Castle, and the adjacent Scenery. Drawn and engraved by William Daniell, R.A. Moon, Boys, and Graves.

WHEN eight of these beautiful views made their appearance, some months ago, they were noticed in the *Literary Gazette* with the praise which they deserved. Mr. Daniell has now published the four which were wanting to complete the set; namely, "the Royal Lodge, Windsor Park," (in which the manly and graceful figure of our gracious Sovereign, reposing on a garden-seat, is very happily introduced), "Windsor Castle from the Brocas Meadows," "the Quadrangle, Windsor Castle," and "Windsor Castle from the north-west." They are in every respect worthy of their predecessors.

Draught Horses. Painted by A. Cooper, Esq. R.A.; engraved by W. Giller. Moon, Boys, and Graves.

Two fine animals; well painted and well engraved.

Benedictine Monks at their private Festivities during Carnival-time. Painted by J. Cawse; engraved by W. Giller. P. G. Moon.

A RIGHT merry party. If the character of the group be as faithful an imitation of nature as the effect of light and shade, (which is exceedingly skilful,) the "Regula Monachorum" of the celebrated founder of the order are entirely forgotten by his descendants.

ARTISTS' GENERAL BENEVOLENT FUND.

—At the anniversary of this truly excellent charity on Saturday, about two hundred sat down to dinner, and the Duke of Somerset in the chair was supported by many distinguished individuals. The subscription amounted to £600. The day passed off in much festivity, highly gratifying to the numerous party of well-wishers to the charity who attended.

SKETCHES OF SOCIETY.

PICTURE OF CHINA.—NO. IV.

WE are glad to find that this series of Chinese sketches are so much relished by our readers, and trust they will be pleased to hear that we are provided with materials for prolonging them through a considerable number of our *Gazettes*.

"*Divorce*.—The Oanchasse, or criminal judge of Canton province, has issued the following proclamation: 'Chow, by imperial appointment the criminal judge of Canton, here-

by strictly prohibits the putting away of wives for slight causes, husbands conniving at the wife's adultery, or selling her to another man. His object is to support the public morals. The relation of husband and wife is the first of the five social bonds. The domestic female apartment is the source of all moral renovation. Husband and wife should respect each other as host and guest, and live in constant harmony, like two well-attuned instruments of music. Thus, together, they should water their own garden, and eat the fruit of their labour. No dislikes should be allowed to arise from poverty or want. The wife should look up to her husband as her heaven, and not be allowed at her pleasure to desert him. For vile practices there is no place so bad as Canton. Sometimes prosperity makes men forget a former affection. Sometimes want, induced by a disposition addicted to gaming, and a lack of food and clothes, produces sudden repudiation, without regret. Then the ejected wife, deceived by covetous go-betweens, is hired for clandestine purposes. Some sell their wives to sing and play, and submit to the embraces of others. Some invite profligate men to their own houses, and give up their wives to prostitution. Such practices inflict a deadly wound on public morals; and, therefore, Chow issues this proclamation to prohibit them. And he commands all persons, both the military and people, for the time to come, to obey the laws of decorum. Even if in deep poverty, still let them submit tranquilly to Heaven's decree. Diligence and economy must produce a competence. All should know that legitimate posterity depends upon a lawful wife; and she ought not to be lightly rejected, and sold for lewd purposes, to the disgrace of the family. Nor should there be the least connivance. If ye adulterers and adulteresses persist, and reform not, it is resolved to prosecute with the utmost rigour of the law. Under the luminous heaven and renovating sun of his present majesty's reign, it is impossible to endure you, ye wondrous and destroyers of the public morals. Let each tremblingly obey this mandate, and not induce a too late repentance.' The law of divorce is, that whoever puts away his wife, excepting for one of the seven legal causes, shall be punished with eighty blows. The seven causes are, having no son, lewdness, not serving her husband's parents, loquacity, theft or robbery, envy and malice, some noxious disease. Of husband and wife, the first bond should be kindness; the union, righteousness; the continuance, decorum. Breaches of decorum may be overlooked; but unrighteous acts, such as a wife's striking her husband, or a husband his wife, and wounding each other, make it necessary to insist on a separation; as much so as a man's forcing his wife to cohabit with another man, or hiring her out for the same purpose. To modify the seven legal causes of divorce, which are rather sweeping, there are three exceptions. Some causes may not be alleged during the three years of mourning for a parent; nor if the parties were first poor and afterwards rich; nor if the wife was received into a house at the time of marriage, but had none to return to.

"*Kiangsi Province*.—The Hoakune, or President of Literati in the province, having sold degrees clandestinely, a secret report was sent to the emperor, and he ordered two commissioners to proceed forthwith and search Fokshin the president's house. They found a hoard, amounting to 400,000 taels—a sum which a doctor of letters could not have acquired by any fair means. Ashamed, disgraced,

and beggared, poor Fokshin went and hanged himself.

"*Abuses*, against which his Excellency the Governor of Canton has issued a proclamation, forbidding their continuance, and threatening those concerned.—First abuse: the clerks and writers in public offices combine to act in concert and extort money, at which the local magistrates connive; and without distinguishing 'black from white' (i. e. the innocent from the guilty), determine after hearing only one side of the question. Second abuse: larger clans, in villages, insult smaller ones. In Canton it is the custom for kindred of different names to associate themselves, and live together in clans. The larger clans presume on their numerical strength, and seize the best lands and the most useful streams. They insult both the men and women of the smaller clans, whenever they go in or out. And when disputes arise about graves and debts, they proceed to barbarous violence, and the destruction of property, till the weaker party, from constant insult and injury, is compelled to remove from the neighbourhood. Extreme cases occur in which the two clans commence a sort of private warfare, and kill numbers on both sides. Third abuse: originating a criminal accusation against innocent persons for the sake of extorting money. This, in the slang of the public offices, is called *planting a fir-tree*. Abroad there is a class of swindlers who connect themselves with the police, and find out rich timid people, against whom they originate an accusation of housing gamblers, or keeping a brothel, or of harbouring banditti; or they bring a charge of fighting and robbing. Then they make out a list of names, and repair openly to the police, obtain, without inquiry, a warrant to bring the criminals up for trial, and forthwith proceed to seize their innocent prey. They perhaps bind them fast in the hold of a boat, or shut them up in an empty room, where they ill-use them in a hundred ways to compel them to pay for their liberation. The ignorant and simple, being afraid of appearing before a magistrate, submit to become fish and flesh to these beasts of prey. A few, perhaps, have courage to appear and state their case; then the accuser disappears, and the business sinks, or is laid on the shelf. These proceedings deserve the deepest detestation. Fourth abuse: the police runners, on receiving a warrant to summon witnesses, put themselves into a chair, attach a number of false attendants, and away they go, sometimes a great distance, to deliver the summons. On their arrival, whether the cause be trivial or important, they first demand fees for wine and flesh, and payment for the chair-bearers. Then comes the fee for the summons. If the least resistance to their demands be made, they and the chairmen begin to break the furniture, raise a clamorous disturbance, insult the women, or drag away by violence the domestic animals, and sell them to pay themselves. His excellency, therefore, disallows chairs to police runners, and commands them to travel on foot. Fifth abuse: in Canton province, of late years, a great many dikes have been raised on the banks of the rivers, to take in shallows and convert them to the purposes of agriculture. There is a class of country sharpers called sand swindlers, who connect themselves with government clerks, raise litigations on false pretences and false depositions, by which means they get the produce of new lands during the whole term of litigation, which lasts sometimes for tens or scores of years. They have been known to cut down the real owners' grain by force, and possess themselves

of it. Sixth abuse: the police, to extort money, detain people in private houses and apply every means of annoyance and illegal torture before they bring them up to the magistrate. This is done not only in cases where great crimes are alleged, such as murder and robbery, but also in questions about landed property, marriage, &c. Occasionally they cause the death of their prisoner, and then pretend he committed suicide, or died of acute disease; and to slur it over, compel the kindred to receive the remains of their murdered relation and inter them. Seventh abuse: this last abuse refers to the exacting, by violence, disallowed fees, chiefly in collecting the land-tax. One detestable mode of extorting by the government agents is to scratch and wound their heads a little, and then to impeach for refusing the land-tax and wounding his majesty's officers sent to collect it, which is a capital crime, &c. &c."

MUSIC.

PHILHARMONIC CONCERTS.

THE fifth Philharmonic Concert on Monday the 27th, from various causes, happened to be rather inferior to its predecessors; and if we except for unconditional approbation the overture to the "Magic Flute," it would not be very difficult to find more or less fault with all the other pieces. Even the charms of Haydn's *sinfonia*, letter R, in C, were considerably lessened by the blunders of the oboe, particularly in the imitative part between the flute and that instrument. The last movement was, nevertheless, encored most loudly by the professional part of the audience! Haydn's recitative and air, "Now heaven in fullest," Signor Zuchelli used to sing with enviable *éclat*—not so this evening; and the difference in the applause must have made him sensible of the difference of his performance. Mr. Schlesinger played Hummel's pianoforte concerto in B minor; and if the impression which this performance produced was but feeble, we leave it undecided whether this was to be attributed to the composition or to the player: as soon as Mr. S. shall have cultivated his style as much as his execution, there will be no room for such doubts. Madame Camporese and Signor Curioni's duet, "Ricciardo! che veggo?" we might have passed over unmentioned. It is the *lower* notes of Madame Camporese, which, (as is usual with singers advancing in age,) tell that her voice is not what it was some years since. Beethoven's *sinfonia* in D, one of the most beautiful and perfectly intelligible of these compositions, did not go off so well as we have heard it on former occasions. One great reason was, that the allegros were taken a great deal too fast, just as in the *sinfonia* of Haydn. Mr. Lindley's concertante, violin and violoncello, by him and Mr. Weichsel, could not possibly have given the least gratification even to his warmest admirers. Is there any necessity to state, that our remarks solely apply to the composition, and not in the least to his playing? Rossini's "Cruda sorte!" written for two sopranos and one tenor, was sung by Madame Camporese, Curioni, and Zuchelli; the latter having transposed his part an octave lower, as being more agreeable to the nature of his voice than to the composition. The concert concluded with Beethoven's overture to "Fidelio." The whole was under the direction of Mr. Loder, of Bath, and Dr. Crotch.

THE MELODISTS' CLUB.—We omitted in our last *Gazette* to mention the last monthly meeting of this club, which, though deprived

of the aid of Braham, afforded a delightful treat to the lovers of English melody. Among the episodes of the evening was an exquisite performance on the violin by Master Artot. Several foreigners of musical fame were present, and expressed themselves much delighted with the entertainment. H. R. H. the Duke of Sussex is expected to preside at the next meeting.

ARGYLL ROOMS.

The announcement of Velluti, together with Sontag and her sister, attracted a highly fashionable assemblage at these rooms, on Monday morning last. Velluti was in excellent voice: his singing with the German siren was an exquisite treat; nor do we think *she* has ever been heard to such advantage. The younger Sontag sung "Sull'aria" with her sister, which was unanimously encored. Curioni, Pellegrini, and Begrez, performed some admirable concerted pieces; and Blasis' voice blended beautifully with Velluti's in Nicolini's duet, "Quale arcano." The young Artot delighted the auditors by his astonishing performance on the violin. Only thirteen years of age, this boy is already master of this difficult instrument.

Among the many benefit Concerts of this season, none was, perhaps, more fashionably and numerously attended than Mrs. Anderson's, on Wednesday morning. Well she deserved so full a room, considering her excellent bill of fare. She played herself, with her usual brilliancy and taste.

DRAMA.

KING'S THEATRE.

ON Tuesday evening Malibran performed the part of *Ninetta* in *La Gassa Ladra*; and, in some instances, gave us quite a new reading of it—but whether that reading was the correct one may, we think, be questioned. Her early scenes were too *hoydenish* to be in keeping with her subsequent sensitiveness, and presented too violent a contrast to be at all natural. Her predilection for perpetually "making points" is too apparent; and she is still too much disposed to "tear a passion to rags." In love-scenes she often outsteps the modesty of her sex, and seems to forget, that "woman should be wooed, and was not made to woo." With her, however, it is quite the reverse; and the manner in which she sometimes *paws* about the person of her lover is really indelicate:—so much so, that we can never say of her that "a soul feminine saluteth us." It is one of the attributes of female love to conceal the passion—not to make an openly indecorous display of it. But, with all its faults, this is the best character in which she has yet appeared. Let her rant less, and leave more to nature, and she may make the part entirely her own; though, on the whole, the performance of Blasis, particularly in the second act, was truer to nature. In Malibran you never could divest yourself of the impression that she was on the watch for a clap-trap:—her singing, however, was admirable, and in concerted pieces her voice was powerfully effective. Her "Di Piacer" was rather slow; and the second movement, strange to say of her, was somewhat tamely sung.

On Thursday Pisaroni took *Sémiramide* for her benefit, and had, as she richly deserved, an overflowing house. As *Arace*, Madame P. displayed greater powers than on any former occasion, and delighted her audience by the magnificence of her voice and the excellence of

her acting. She was ably supported by Sontag, Zuchelli, and Bordogni.

M. Laporte's benefit, announced for next Thursday, promises great novelty and attractions: we hear of French scenes and English farce, besides the best of Italian song. Should all this variety be realised, we shall certainly try to "be first in the throng."

DRURY LANE.

AT this theatre nothing goes down but *Masaniello*, *Masaniello*—and *Masaniello* every night to bumper houses. Braham is, as we before stated, the great support of this most successful opera, both by his singing and his acting. Play-goers have been surprised of late by the rather extraordinary improvement which seemed suddenly to have taken place in this always unrivalled vocalist, in the latter respect; and the secret of it is worth telling, being much to the credit and honour of all concerned. Our readers are aware, from several notices in the *Literary Gazette*, with what remarkable success Mr. Jones (of the same theatre) cultivates the study of declamation and public speaking. We are ourselves acquainted with instances in which gentlemen have been accomplished, under his tuition, for distinction in the senate, in the pulpit, and at the bar—in short, have seen bad readers and worse speakers speedily converted into impressive readers and orators. Also aware of these facts, it seems that Mr. Braham, with all his musical fame and long standing in popular opinion, has not been above becoming the pupil of his brother performer; and the result is what the public now witness with so much pleasure. We trust this anecdote will not be offensive to any of the parties; and we are sure it may serve as a useful and precious hint to many men of various professions, who will hereafter thank this journal for throwing it out.

COVENT GARDEN.

MISS SMITHSON has at length re-appeared in this country,—an exceedingly injudicious step on her part, and, we fear, an unprofitable one on that of the management. That no curiosity had been awakened concerning her in the public mind, was but too apparent by the box-book and the state of the pit benches on the rising of the curtain. It was not as if some young person from the chorus or ballet of one of our theatres had been thrown by accident into better business upon the Anglo-Parisian boards, and had there proved her capability to sustain first-rate characters. Miss Smithson had held for years a situation of some importance at Drury Lane; had occasionally played some of Miss Kelly's most favourite and effective parts, such as *Mary* in the *Innkeeper's Daughter*, &c. during the illness or the absence of that lady; and her merits and defects had long been freely canvassed and duly appreciated by a London audience. That the mere crossing the Channel should have the power of conferring genius, or twelve months acting in a foreign land even that of strengthening and sweetening a weak and not an agreeable voice, was scarcely to be expected; and the truth is, that Miss Smithson has returned to England the same melodramatic actress she left it; her pantomime, perhaps, a little improved by studying Madame Montesu or Madame Dorval; but as far as ever from the throne of Siddons, or the coronet of O'Neil. The French public are, however, to be fully acquitted of any want of discrimination. As far as they had the power of judging, Miss Smithson was undoubtedly a good actress. An

English tragedy was a pantomime to the greater portion of a Parisian audience. The situations of *Juliet* and *Desdemona* were unknown in their drama. When the former stabbed herself and writhed in her dying agonies upon the stage—when the latter struggled under the fatal pillow, the spectators absolutely mingled their shrieks with those of the mimic victim, and rushed out of the boxes into the lobbies and saloons, completely overpowered by the novel and terrible excitement. The person of Miss Smithson was fascinating, her action undoubtedly graceful and expressive, the want of *physique* in their small theatres not so apparent,—and how could they detect false emphasis, mispronunciations, provincialisms, &c. &c.? how decide even upon the correct conception of a character, the finer shades of which must of course escape them in the bald translations or brief programmes, circulated by the lenders of *lorgnettes*, or the fruit-women of the Favart and the Odeon? Much has been said respecting the choice of *Jane Shore* for an opening part. We suspect, however, that, disagreeable, unattractive, and feeble, as the tragedy may be, Miss Smithson was right in her selection, as her appearance in *Juliet* or *Belvidera* will prove. We have no doubt, in short, that confined to melo-drama, Miss Smithson might become an exceedingly useful member of any dramatic corps; but as a first-rate tragic actress, even in these degenerate days, she can never, in our humble opinion, hold her ground in England. Mr. Charles Kemble's *Hastings* was a most spirited performance; and Miss Lacy won frequent and deserved applause in her personation of *Alicia*. The less we say of the rest of the *dramatis personæ* the better.

A very clever little girl (Miss Coveney) played *Euphrosyne* here on Tuesday evening, in Milton's revived *Mask of Comus*. She was one of the juvenile operatic company at the Surrey last season, and is likely, with good instruction, to make a rapid progress in the profession she has chosen. The masque was exceedingly well got up and performed throughout.

While on the chit-chat of the stage, we may mention, that at the Literary Fund anniversary, when between forty and fifty of the company rallied for an hour round a second chair; on the health of Mr. Price, and success to Drury Lane Theatre, being toasted, that gentleman, in a neat speech, stated, among other topics, he had reason to hope for some advance in the dramatic literature of the day, as, in consequence of the success of Miss Mitford's *Rienzi*, two tragedies of very high character had been put into his hands by eminent writers. He expressed his expectation of the example being followed by others, whose efforts would redeem the Dramatic Muse from the stigma under which she had too long lain.

We see that Sontag, and her sister, the pretty little Nina, are to sing at Covent Garden on Wednesday (Mr. C. Kemble's night); thus affording the *more English* public an opportunity of being charmed with their fine talents.

Kean, it is now stated, has been able to return to the stage. It is strange that the cases of actors (with too few exceptions) are so apt to be exaggerated as to deprive them, when really suffering, of public sympathy. We would recommend the fable of the boy and the wolf to their earnest consideration: we are again told, in later papers, that Mr. K. has relapsed.

VARIETIES.

Whale.—A large whale, of a novel description, was lately thrown on the shore of the commune of St. Cyprien, in France. The state of decomposition in which it was found, rendered the examination of it not quite so satisfactory as could have been wished; but it is believed to belong to the species "Boops," of Linneus.

Architecture.—Mr. Naah and Buckingham Palace have undergone a merited *jobation* in the House of Commons this week; and we trust the time has arrived when public discussion will prevent the further perpetration of deformities, under the specious name of improvements, upon the British metropolis. So detestable, indeed, to the eye of taste are most of the things already done, that we really consider the lavish waste of money to be by far the least evil.

Entomology.—A very curious and extensive collection of insects, consisting of about 30,000 individuals, with their duplicates, all scientifically arranged, and in perfect preservation, is, we are told, expected to arrive in a short time from Sweden. They are the property, brought together with great care and expense, of a celebrated Swedish naturalist, and will prove worthy of the attention of collectors and students in this branch of zoology.

Zoological Society.—We lately noticed the occupation of a piece of land near Kingston by the Zoological Society, for the more convenient rearing of foreign animals, &c. There is some talk of having a fête here during the summer, similar to the Horticultural entertainments of that fresco kind.

Earthquake.—On the night of March 18th, soon after midnight, the shocks of an earthquake were experienced in various parts of Sweden. Their direction was N.W. and S.E., and they were accompanied by a noise in the air, like the hurdling of a hail-storm.

York Cathedral.—The late Mr. Carter made a series of large and elaborate drawings of this celebrated church, for Sir Mark Sykes. They were some years in progress, and during their execution the worthy baronet died. He had, however, advanced (as reported) £500 to the artist; and as there was a demand for £400 or £500 more, the executors declined to complete the purchase. The volume came to the hammer, with the artist's immense collection of drawings, MSS., antiquarian fragments, &c. and was knocked down for £337. It has since been purchased by John Broadley, Esq., of South Ella, Yorkshire, who has thus enhanced his very valuable and very choice library with one of the finest collections of architectural drawings ever executed. There are 24 drawings of plans, elevations, sections, and minute details, of every part of this much-famed minster; and Mr. Broadley has very generously sent this volume to London, subject to the custody of his old friend Mr. Britton, that Mr. Smirke may profit by the authentic evidence it affords in rebuilding and fitting up the choir.

Grease Spots.—The following method of removing grease and oil spots from silk and other articles, without injury to the colours, is given in the *Journal des Connaissances Usuelles*: Take the yolk of an egg and put a little of it on the spot, then place over it a piece of white linen, and wet it with boiling water: rub the linen with the hand, and repeat the process three or four times, at each time applying fresh boiling water: the linen is to be then removed, and the part thus treated is to be washed with clean cold water.

LITERARY NOVELTIES.

Picture Sale.—So decided is the feeling in this country for the lower styles of art, as we hold the Dutch and Flemish schools to be, that it becomes almost superfluous to mention that Mr. Christie is this week selling a very valuable collection of *Italian pictures*, many of them from the Orleans Gallery, the properties of Mr. Udney and the late Lord Ranelagh, with a mixed assemblage belonging to Mr. Birch. However, a grand Landscape by Cyp, lot 24 in Lord Ranelagh's collection, and a charming composition by the two Bottis, will fully compensate the exclusive collectors of Dutch and Flemish names for any *ennui* they may endure on beholding the preponderating influence of the neglected Italians.

Mr. Northhouse announces The Present State of the principal Debtors' Prisons of the Metropolis: comprising the King's Bench, the Fleet, Whitecross Street Prison, Horsemonger Lane Prison, the Marshalsea, and the Borough Compter: with a variety of anecdotes illustrative of the impolicy and inhumanity of imprisonment for debt, &c.

Travels in Turkey, Egypt, Nubia, Palestine, &c., are announced, by R. R. Madden. The author is stated to be a physician, and to have been sojourning for four years in these countries.

A volume of *Stories of Popular Voyages and Travels*, with illustrations; containing Abridged Narratives of recent travels of some of the most Popular Writers on South America, is announced for speedy publication.

There is preparing for publication, under the superintendence of Mr. George Don, A.L.S., a new edition of Miller's Gardener's and Botanist's Dictionary; the plants, &c. arranged according to the natural system of Jussieu; and comprising all the modern improvements and discoveries which have been made in the sciences of botany, horticulture, and agriculture, to the present time.

In the Press.—A Series of Dissertations, preliminary to a New Harmony of the Gospels, by the Rev. E. Gresswell, M.A., and Fellow of C. C. C. Oxford.

Captain Brooke, who is already known as a traveller by the works he has published on the northern parts of Europe, is about to present to the world an Account of an interesting Tour he has recently been making in Barbary and Spain.

The forthcoming Historical Romance, entitled Geraldine of Desmond, is founded on the Desmond Rebellion in the Reign of Elizabeth, and delineates the customs, manners, and the leading public characters of England at that interesting epoch.

A work under the title of *Three Years in Canada* is announced for publication, written by Mr. Macgartt, the engineer who was sent out by government to superintend the works at the Rideau Canal.

Mr. Wm. George Meredith, A.M., of Brasenose College, Oxford, is about to publish Memorials of Charles John, King of Sweden and Norway, illustrative of his character, of his relations with the Emperor Napoleon, and of the present state of his Kingdoms; with a Discourse on the Political Character of Sweden.

A new edition of the pleasant Voyage of Captain Popanilla is in the press, with illustrations by Daniel Macleae.

LIST OF NEW BOOKS.

Mavor's Miscellanies, 8vo. 15s. bds.—Stephens on Irrigation, 8vo. 7s. 6d. bds.—Fearn on the Mind, 8vo. 7s. 6d. bds.—Margaret Coryton, 3 vols. post 8vo. 1l. 7s. bds.—Hinton's Natural History and Zoology, 4to. 5s. hf.-bd.—Wilson's Manual for Infant Schools, 12mo. 7s. bds.—Crawford's Embassy to Ava, 4to. 3l. 13s. 6d. bds.—Romance of Real Life, 3 vols. post 8vo. 1l. 11s. 6d. bds.—Life of Belisarius, 8vo. 12s. bds.—Cunningham's Examination of Faber on Prophecy, 8vo. 6s. bds.—Fraser's Sermons, 8vo. 8s. bds.—Malcolm's Tales of Field and Flood, 12mo. 7s. 6d. bds.—Armistead's Epitome of the Game of Whist, 18mo. 2s. 6d. bds.—Hervey's Poetical Sketch-Book, post 8vo. 10s. 6d. bds.—The Bengalee, 8vo. 10s. 6d. bds.—Grindley's Views in India, Part V, 4to. 2l. 2s.—Martin on Lord Tenterden's Act, 18mo. 6s. bds.—Essay on the Pursuit of Truth, post 8vo. 8s. bds.—Foccarini, or the Patrician of Venice, 2 vols. post 8vo. 1l. bds.—East India Directory, 1829, 10s.—Judson's Memoirs, 12mo. 5s. bds.—The Universe as it is, plates, 8vo. 10s. 6d. bds.—Nathan's Fugitive Pieces of Lord Byron, post 8vo. 8s. 6d. bds.—Edwards's Narrative and Thought, 12mo. 5s. 6d. bds.—The School of Fashion, 3 vols. post 8vo. 1l. 7s. bds.—Smyth's Life of Captain Beaver, 8vo. 8s. 6d. bds.

TO CORRESPONDENTS.

63 The pressure of novelties upon us this week is so great, that we are compelled to postpone many interesting articles, to make room for which, at this busy season, we shall probably give an extra sheet, *gratuitously*, next No. We therefore request our advertising friends to send early, in order to prevent disappointments. The advertisements already over are of course entitled to precedence.

We are obliged to defer our second course of Apician Morrels and other cookery.

In answer to the inquiry respecting Captain Ross's projected expedition, we have to state that we visited, and, as well as circumstances allowed, inspected his steamer, the *Victory*, last week. An experiment on her capabilities has been tried on the Saturday preceding, which, we are informed, fully answered the sagacious and ingenious commander's expectations, but alterations were suggested, which were in progress when we saw the vessel. It was then supposed that the expedition would be all ready to start in good time.

A LETTER to a YOUNG PIANO-FORTE PLAYER. Price 2s.

London: N. Hallé, 108, Piccadilly.

BOOKS PUBLISHED THIS DAY.

HISTORY OF RUSSIA and of PETER the GREAT.

By GENERAL COUNT PHILIP DE SEGUIR, Author of the "History of Napoleon's Expedition to Russia." Handsomely printed in 1 vol. 8vo. price 10s. 6d. boards.

Also in French, 8s.

"Count Segur has here done for the general reader, what the latter would scarcely have done for himself. He has gone over the lengthy volumes of Karamzin, Laveque, and others, and presents us with the essence of Russian history in a brief but spirited abridgement, which even a busy man may read during the snatches of leisure he can find in a single week. It is executed, we think, with care and judgment. The matter is well selected, and the relations interlined with brevity and good sense. The style displays vivacity and taste, but is not quite free of the false brilliancy into which the example of Montesquieu has seduced many French writers. We confess that a work like this gives us just as much information on the subject of Russian annals as we desire, or have time to make use of; and we are well pleased to have it presented in so attractive a form. The translation seems to be upon the whole well executed."—*Scotsman*.

"If the history of such a country in all its details were yet to be written, Count Segur is not exactly the person we should choose for that task. But when it is desirable to condense those details, to strip them of all that is obscure or doubtful, to pass lightly over that which lacks sufficient interest, and to present in strong and vivid colours, events likely to excite curiosity and rivet attention, the author of the 'History of Napoleon, and of the Grand Army in 1812,' is a far more judicious and judicious retreat, to which nothing of its kind, in ancient or modern times, can be compared, is precisely the writer whom we should expect to be able and successfully to execute so important an undertaking. In this sense, therefore, we are glad that Count Segur has written the history of Russia, and still more gratified are we that he has compressed it into a single volume."—*Weekly Review*.

"Count Segur's candid and liberal Narrative of Napoleon's Expedition to Russia in 1812, has made his name favourably known in the republic of letters. The work now before us, which is on a subject of far greater extent and difficulty, will not diminish his reputation."—*Edinburgh Literary Journal*.

"Count Segur professes to give a rapid sketch of the rise and progress of Russia, of the characters of the men that conducted to her alternate debasement and elevation. He has redeemed his pledge, leaving those who would seek for a minute description to consult the pages of more verbose authors. The style of Segur, as will readily be conceded by those who have read his History of the great Russian Campaigns, is full of vigour and animation; his pen paints a character in a sentence, gives a scene, full of stir and bustle, breathless rest, and freedom, in half a page; then passes rapidly on to a new subject, casting abroad scintillations of a fervid, acute, and elastic spirit. The author's account of Peter is very beautifully written."—*Weekly Times*.

"These spirited pictures will sufficiently indicate the ability and talent of the author, and when we consider his volume to that extensive popularity which it is sure to enjoy."—*Literary Gazette*.

Printed for Trevellick and Wurtz, Trowell, Jun. and Richter, 20, Soho Square, London.

Price 5s. 6d. No. V. of

A TREATISE ON THE EQUITY JURISDICTION OF THE HIGH COURT OF CHANCERY.
By GEORGE J. JERMY, Esq. of the Inner Temple, Barrister-at-Law.
London: J. and W. T. Clarke, Law Booksellers and Publishers, Portugal Street, Lincoln's Inn.
The Author's design has been to explain the principles upon which this highly important jurisdiction is exercised, and to point out in a comprehensive and familiar manner, with special reference to the jurisdiction of the courts of law, the instances in which its doctrines are applied. And with the view of rendering the work perfectly useful, he has made most copious references to the authorities, including those of the latest date, and has subjoined a very full index to its contents.

THE CHRISTIAN'S DEFENCE against INFIDELITY, consisting of Leslie's short and easy Method with the Deists—Lord Lyttleton's Observations on the Conversion and Apostasy of St. Paul—Doddridge's Evidences of Christianity—Bates on the Divinity of the Christian Religion—Owen on the Self-evidencing Light and Power of the Scriptures—Baxter on the Folly and Danger of making light of Christ. With an Introductory Essay, by Thomas Chalmers, D.D. 8s. 6d. boards.

Baxter's Reformed Pastor, with an Introductory Essay, by the Rev. Daniel Wilson, London, 4s. boards.
Edwards's Narrative of the Revival of Religion in New England, with Thoughts on that Revival. With an Introductory Essay by John Fy Smith, D.D. 6s. 6d. boards.

Doddridge on Regeneration, with an Introductory Essay by Ralph Wardlaw, D.D. 4s. boards.

The Olney Hymns, with an Introductory Essay by James Montgomery, 6s. 6d. boards.

Shaw's Emmanuel; or, True Religion as it imparts a living Principle to the Mind of Man. With an Introductory Essay by Robert Gordon, D.D. 8s. 6d. boards.

Judge Hale on the Knowledge of Christ Crucified, and other Contemplations. With an Introductory Essay by the Rev. David Young. 6s. boards.

Published by William Collins, Glasgow; and Whittaker, Treacher, and Co. London.

In 2 vols. post 8vo.
THE NAVAL OFFICER; or, Scenes and Adventures in the Life of Frank Midway.
"This is the most sea-like composition that has yet issued from the press. We recommend it to all who 'live at home at sea,' and need scarcely say, that no man-of-war's-man should remain an hour without it."—*Atlas.*

 Μουσῶν. — Theocritus.
 London: Printed for William Mason, 10, Piccadilly Street, Strand.

Popular Books for Schools and Private Tuition.
 Just published, by John Harris, Corner of St. Paul's Churchyard,
 new editions of

THE ABBE GAULTIER'S COMPLETE
 COURSE OF GEOGRAPHY, by means of Instructive
 Games: embracing Simple Geography, a concise Treatise on the
 Astronomical Sphere, and a Geographical Game, illustrative of An-
 cient and Modern History. One vol. folio, with 15 Maps for
 Exercises and Reference at the end, price 1l. 1s. Also a Set of
 Counters to the same, price 10s. 6d.

2. Familiar Geography, by the Abbé Gaultier.
 Square 16mo. bound in cloth, with coloured Maps, price 3s.
 That portion of the larger work which is necessary to be com-
 mitted to memory, is here printed in a smaller form, and accom-
 modated to the use of the youngest Pupil.

3. Infantine Knowledge; a Spelling Book
 on an improved plan, by Mrs. Lovechild, Author of the "Child's
 Grammar," &c. 3d edition, considerably enlarged and improved,
 with 150 Plates, bound in cloth, price 3s. plain, or 3s. 6d. coloured,
 half-bound.

This book contains a larger portion of Progressive Lessons than
 is usually to be met with in publications of the same nature.
 Sketches of English History in Rhyme, the Multiplication Table
 in Rhyme, and a Geographical Game, &c. &c. and
 every subject of early information suited to the capacities of a
 child.

4. The Child's Grammar, by the late Lady
 Penn, under the assumed name of Mrs. Lovechild, Author of the
 "Mother's Grammar," "Infantine Knowledge," &c. 34th edit.
 price 9d. sewed, or 1s. bound. The extensive Circulation, to
 the amount of above 100,000 Copies since the first appearance of
 this little book, is a striking proof of its excellence.

5. The Mother's Grammar; a Sequel to the
 Child's, by the same Author. 17th edition, price 1s. sewed, or
 1s. 3d. bound.

In 8vo. price 7s. 6d. boards,
A LETTER to the LORD BISHOP of
LONDON, in REPLY to MR. PUSEY'S WORK on the
CAUSES of RATIONALISM in GERMANY: comprising some
Observations on Confessions of Faith, and their Advantages.

 ness in Early Infancy always followed by Dumbness—Treatment
 —Cases—Dr. Hamel's Decent in a Diving Bell—Case of a Clergy-
 man born with Two Tongues—Mr. Symond's Ascent in a Balloon
 —Acoustic Tubes, &c. &c.
 Printed for Longman, Rees, Orme, Brown, and Green.

Second Part of
THE TENANCY of LAND, and STATE
of the WOOL-GROWERS in the HIGHLAND and
GRAZING DISTRICTS of GREAT BRITAIN. In 1 vol.
 8vo. with Plates, 16s.
 By L. KENNEDY and T. B. GRAINGER.

Just published, the First Part of
Tenancy of Land in the Agricultural Coun-
 ties, by the same Authors.

Also,
On the Cultivation of Waste Lands by the
 unemployed Paupers, and the Introduction of a modified Poor-
 Rate into Ireland. By L. Kennedy, Esq.
 The above Works to be had of J. Ridgway, Piccadilly; the
 Booksellers in Edinburgh and the Country.

In 2 vols. 8vo. price 1l. 1s. extra cloth boards,
THE HISTORY of the HUGUENOTS
 during the SIXTEENTH CENTURY.
 By W. S. BROWNING, Esq.

This Work contains a clear and concise Narrative of the Suf-
 ferings of the French Protestants during the 16th Century. It
 shows that the Massacre of St. Bartholomew was premeditated,
 and that the severity exercised towards the Protestants was insti-
 gated by the Court of Rome.

The author's object has been to vindicate the Reformation from
 the accusations of some modern writers. He has studiously
 avoided all theological discussion: at the same time the work
 comprises the substance of numerous Memoirs and Narratives
 of Contemporary Writers.
 London: Printed for William Pickering, 87, Chancery Lane.

In post 8vo. with a Plate, 8s. 6d.
NARRATIVE of a JOURNEY from
CALCUTTA to EUROPE, by way of Egypt, in the
 Years 1837 and 1838.
 By MRS. CHARLES LUSHINGTON.
 John Murray, Albemarle Street.

In 8vo. 5s. 6d.
THE LIFE and SERVICES of CAPTAIN
PHILIP BEAVER, late of H. M. S. Niobe.
 By Captain W. H. SMYTH, R.N. K.S.F. F.R.S. and F.S.A.
 John Murray, Albemarle Street.

Mr. Malcolm's New Prose Work.
 In small 8vo. 7s. 6d. boards,
TALES of FIELD and FLOOD, with
 Sketches of Life at Home.
 By JOHN MALCOLM,
 Author of "Scenes of War," "Reminiscences of a Campaign
 in the Pyrenees and South of France," &c.
 Printed for Oliver and Boyd, Edinburgh; and
 Simpkin and Marshall, London.

Also, lately published, by the same Author,
Scenes of War, with other Poems. Fools-
cap 8vo. 7s. boards.

Published by Hearn, 81, Strand.
 In imperial 4to. boards, 30 Plates, price 3l. 3s.
ARCHITECTURE of the MIDDLE
AGES in ITALY, illustrated by Views, Plans, Eleva-
 tions, Sections, and Details of the Cathedral, Baptistery, Leaning
 Tower or Campanile, and Campo Santo, at Pisa, from Draw-
 ings and Measurements taken in 1817; accompanied by Descrip-
 tive Accounts of their History and Construction.
 By EDWARD CRESY and G. L. TAYLOR,
 Architects, and F.S.A.

Also, in imperial 4to. 30 Plates, price 1l. 1s. boards,
Plans, Elevations, Sections, Details, and
Views, of the Great Hall of the Royal Palace of Eltham, in Kent,
 measured and delineated by H. Dunning and C. Laver, Archi-
 tects.

Dr. Paris on Diet.
 3d edition, enlarged, in 8vo. price 10s. 6d.
A TREATISE on DIET, with a View to
 establish, on Practical Grounds, a System of Rules for
 the Prevention and Cure of the Diseases incident to a Disordered
 State of the Digestive Functions.
 By J. A. PARIS, M.D. F.R.S.
 Fellow of the Royal College of Physicians.
 Printed for Thomas and George Underwood, 25, Fleet Street.

BOOKS in THE PRESS.
 On the 20th will be published, in 3 vols. post 8vo.
THE FIVE NIGHTS of ST. ALBANS.
 Printed for William Blackwood, Edinburgh; and
 T. Cadell, Strand, London.

Waverley Novels.
 On the 1st of June will be published, inscribed, by permission, to
 the King's Most Gracious Majesty, Volume First, of a new
 edition of
THE WAVERLEY NOVELS. To be
 continued in Monthly Volumes, revised and corrected,
 with a general Preface, an Introduction to each Novel, and Notes,
 Historical and Illustrative.
 By the AUTHOR.
 Embellished with Frontispieces and Vignette Titles, from De-
 signs executed expressly for the present edition, by the most emi-
 nent Artists.

Notice by the Publishers.
 There are few circumstances in the history of letters more re-
 markable than the rise and progress of the Waverley Novels.
 Unlike most other productions of genius, they had no infancy to
 struggle with, but reached at once the highest point of public
 favour—a station which they have ever since maintained with
 undiminished popularity.

The circulation of these works having been hitherto confined,
 in a great degree, to the wealthier ranks of society, the Proprietors
 have resolved to place them within the reach of readers of
 all classes, by republishing them in a less costly, but at the same
 time more elegant shape, and with the additional advantage of a
 periodical issue.

The Publishers have therefore the honour of announcing the
 speedy commencement of a new edition, to be published in
 monthly Volumes.

In this undertaking they have had the cheerful co-operation of
 the author himself, who has not only revised every one of the
 novels, but has added explanatory notes, and a new introduction
 to each of them.

This edition will not only be improved in the manner just
 stated, but also enriched by the pencils of the eminent artists
 who have been engaged to embellish it. Among these may be named—

David Wilkie, R.A.—Edwin Landseer, R.A.—C. B. Leslie,
 R.A.—Abraham Cooper, R.A.—A. S. Chalmers, R.A.—G. S. New-
 ton, R.A.—F. P. Stephanoff—H. Corbould—William Kidd—
 J. Stanfield—John Burnet—and R. P. Bonington.

The Engravings will be executed on Steel, by Charles Heath,
 William Pile, Charles Rolis, James Mitchell, F. Eggleston,
 Ambrose Warren, Robert Graves, J. C. Edwards, W. J. Cooke,
 W. Ensom, Davenport, Shenton, Duncan, Miller, and other emi-
 nent Engravers.

Plan of the Work.
 I. The size to be royal 16mo. printed in the very best manner,
 and each present volume to contain about 400 pages, price
 5s. done up in cloth.

II. The publication to commence on 1st June next, and to be
 continued regularly, on the 1st day of each month, till the whole
 is completed.

III. Each volume to have a Frontispiece and Vignette Title-
 page, both containing subjects illustrative of the novel to which
 they are attached.

IV. The work will be completed in forty volumes, commencing
 with Waverley, and closing with Woodstock. The author's addi-
 tions will form about two of these forty volumes.

* * * The edition is so far advanced at press, that regularity of
 publication may be depended on; and, to such Subscribers as
 may wish to have some of the novels complete on the appearance
 of the first volume of each respectively, the Publishers have to
 state, that the whole of Waverley may be had on the 1st of June,
 in 2 vols. for 10s.

And, in like manner,
Guy Mannering, in 2 vols. on the 1st of
August.

The Antiquary, in 2 vols. on the 1st of
October.

Rob Roy, in 2 vols. on the 1st of December.

As well as such others, during the progress of the edition, as
 its arrangement enables the Publishers to deliver in complete
 Tales.

The public are respectfully requested to inspect the Designs
 and Engravings, at the Premises of the Publishers, and at Messrs.
 Boys, and Graves, Printers to His Majesty, 5, Pall Mall, Lon-
 don, by whom they will be sold separately, as will be afterwards
 announced.

Printing for Cadell and Co. Edinburgh; Simpkin and Marshall,
 London; and to be had of every Bookseller throughout the
 Kingdom.

In a few days, in 2 vols. post 8vo.
THE CHELSEA PENSIONERS.
 By the Author of the "Subaltern."
 Printed for Henry Colburn, 8, New Burlington Street.

Also, lately published,
The Naval Officer; or, Scenes and Adven-
tures in the Life of Frank Midway, 3 vols.

Tales of Military Life. Containing Van-
deleur and Gentleman Gray. By the Author of the "Military
Sketch Book." In 3 vols.

Sailors and Saints. By the Authors of the
"Naval Sketch Book." In 3 vols. post 8vo. 5s. 6d.

The Second Number of
THE LONDON REVIEW,
 Edited by Rev. BLANCO WHITE,
 Will be published in a few days.

In the press, and will be published in a few days,
 with Maps, 8vo.

A DISSERTATION on the COURSE and
PROBABLE TERMINATION of the NIGER.
 By Lieut.-General SIR RUFANE DONKIN,

No. 644.

SATURDAY, MAY 23, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

A Chronicle of the Conquest of Granada: from the MSS. of Fray Antonio Agapida. By Washington Irving. 2 vols. 8vo. London, 1829. Murray.

THIS is another pleasant fruit of Geoffrey Grayson's pilgrimage in the romantic land of Spain. The Spanish Moors are, we need not say, about the most interesting race to be met with in European history: during several centuries they were by far the most elegant and enlightened nation in the world, and they exhibited in their minds and manners a total want of all that we are accustomed to consider as the inalienable blots of the Mussulman character—being as chivalrous in bower as in battle; or, to use the words of a famed Spanish poet, Garcilasso de la Vega—

“Caballeros aunque Moros.”

The Chronicle of the Cid, by Mr. Southey, with Mr. Frere's admirable versions for the old epic poem *Del Cid*, in the appendix, and the preface and notes to Mr. Lockhart's translations of the Ancient Spanish Ballads, afford considerable information, both as to the warlike and the peaceful manners of this singular people; and one of the noblest of the old songs called forth by the final catastrophe of their state and power, has been rendered familiar to all Europe by Lord Byron. But as yet we have had nothing like a distinct history of the Spanish Moors—even of any one considerable tract of their history; and we hail these volumes as the first essay of Mr. Irving on a field equally rich and extensive, and which, it is to be hoped, he will not quit until he has exhausted the whole of it.

The author professes to have built this narrative chiefly on the MS. annals of one Father Antonio Agapida.

“It may be asked,” says he in his preface, “who is this same Agapida, who is cited with such deference, yet whose name is not to be found in any of the catalogues of Spanish authors? The question is hard to answer: he appears to have been one of the many indefatigable writers, who have filled the libraries of the convents and cathedrals of Spain with their tomes, without ever dreaming of bringing their labours to the press. He evidently was deeply and accurately informed of the particulars of the wars between his countrymen and the Moors, a tract of history but too much overgrown with the weeds of fable. His glowing zeal, also, in the cause of the Catholic faith, enables him to be held up as a model of the good old orthodox chroniclers, who re-echoed with such pious exultation the united triumphs of the cross and the sword. It is deeply to be regretted, therefore, that his manuscripts, deposited in the libraries of various convents, have been dispersed during the late convulsions in Spain, so that nothing is now to be met of them but disjointed fragments. These, however, are too precious to be suffered to fall into oblivion, as they contain many curious facts not to be found in any other historian. In

the following work, therefore, the manuscripts of the worthy Fray Antonio will be adopted, whenever they exist entire, but will be filled up, extended, illustrated, and corroborated, by citations from various authors, both Spanish and Arabian, who have treated of the subject. The manuscripts themselves are carefully preserved in the library of the Escorial.”

The following sketch of the state of the kingdom of Granada, as existing when the warfare sprung up, may be quoted as a fair specimen of Mr. Irving's method of using Father Agapida's MSS.

“The history of those desperate and bloody wars, observes Fray Antonio Agapida, which have filled the world with rumour and astonishment, and have determined the fate of mighty empires, has ever been considered as a theme worthy of the pen of the philosopher and the study of the sage. What then must be the history of a holy war, or rather a pious crusade, waged by the most Catholic of sovereigns, for the restoration of the light of the true faith to one of the most beautiful but benighted regions of the globe? Listen, then, while from the solitude of my cell I narrate the events of the conquest of Granada, where Christian knight and turbaned infidel disputed hand to hand every inch of the fair land of Andalusia, until the crescent, that symbol of heathenish abomination, was cast into the dust, and the blessed cross, the tree of our redemption, erected in its stead. Upwards of eight hundred years were past and gone since the Arabian invaders sealed the perdition of Spain by the defeat of Don Roderick, the last of her Gothic kings. From the period of that disastrous event, kingdom after kingdom had been gradually recovered by the Christian princes, until the single, but powerful, territory of Granada alone remained under the domination of the Moors. This renowned kingdom was situate in the southern part of Spain, bordering on the Mediterranean sea, and defended on the land side by lofty and rugged mountains, locking up within their embraces, deep, rich, and verdant valleys, where the sterility of the surrounding heights was repaid by prodigal fertility. The city of Granada lay in the centre of the kingdom, sheltered, as it were, in the lap of the Sierra Nevada, or chain of snowy mountains. It covered two lofty hills, and a deep valley that divides them, through which flows the river Darro. One of these hills was crowned by the royal palace and fortress of the Alhambra, capable of containing forty thousand men within its walls and towers. There is a Moorish tradition, that the king who built this mighty pile was skilled in the occult sciences, and furnished himself with gold and silver for the purpose by means of alchemy. Certainly never was there an edifice accomplished in a superior style of barbaric magnificence; and the stranger who, even at the present day, wanders among its silent and deserted courts and ruined halls, gazes with astonishment at its gilded and fretted domes and luxurious decorations, still retaining their brilliancy and beauty, in defiance of the

ravages of time. Opposite to the hill on which stood the Alhambra was its rival hill, on the summit of which was a spacious plain, covered with houses, and crowded with inhabitants. It was commanded by a fortress called the Alcazaba. The declivities and skirts of these hills were covered with houses, to the number of seventy thousand, separated by narrow streets and small squares, according to the custom of Moorish cities. The houses had interior courts and gardens, refreshed by fountains and running streams, and set out with oranges, citrons, and pomegranates; so that, as the edifices of the city rose above each other on the sides of the hill, they presented a mingled appearance of city and grove, delightful to the eye. The whole was surrounded by high walls, three leagues in circuit, with twelve gates, and fortified by a thousand and thirty towers. The elevation of the city, and the neighbourhood of the Sierra Nevada, crowned with perpetual snows, tempered the fervid rays of summer; and thus, while other cities were panting with the sultry and stifling heat of the dog-days, the most salubrious breezes played through the marble halls of Granada. The glory of the city, however, was its vega, or plain, which spread out to a circumference of 37 leagues, surrounded by lofty mountains. It was a vast garden of delight, refreshed by numerous fountains, and by the silver windings of the Xenil. The labour and ingenuity of the Moors had directed the waters of this river into thousands of rills and streams, and diffused them over the whole surface of the plain. Indeed they had wrought up this happy region to a degree of wondrous prosperity, and took a pride in decorating it, as if it had been a favourite mistress. The hills were clothed with orchards and vineyards, the valleys embroidered with gardens, and the wide plains covered with waving grain. Here were seen in profusion the orange, the citron, the fig, and pomegranate, with large plantations of mulberry trees, from which was produced the finest of silk. The vine clambered from tree to tree, the grapes hung in rich clusters about the peasant's cottage, and the groves were rejoiced by the perpetual song of the nightingale. In a word, so beautiful was the earth, so pure the air, and so serene the sky of this delicious region, that the Moors imagined the paradise of their prophet to be situate in that part of the heaven which overhung the kingdom of Granada. This rich and populous territory had been left in quiet possession of the infidels, on condition of an annual tribute to the sovereign of Castile and Leon of two thousand doblas or pistoles of gold, and sixteen hundred Christian captives, or, in defect of captives, an equal number of Moors to be surrendered as slaves; all to be delivered in the city of Cordova. At the era at which this chronicle commences, Ferdinand and Isabella, of glorious and happy memory, reigned over the united kingdom of Castile, Leon, and Arragon, and Muley Aben Hassan sat on the throne of Granada. This Muley Aben Hassan had succeeded to his father

Ismael in 1465, while Henry IV., brother and immediate predecessor of Queen Isabella, was king of Castile and Leon. He was of the illustrious lineage of Mohammed Aben Alamar, the first Moorish king of Granada, and was the most potent of his line. He had, in fact, augmented in power in consequence of the fall of other Moorish kingdoms, which had been conquered by the Christians. Many cities and strong places of the kingdoms which lay contiguous to Granada had refused to submit to Christian vassalage, and had sheltered themselves under the protection of Muley Aben Hassan. His territories had thus increased in wealth, extent, and population, beyond all former example; and contained fourteen cities, and ninety-seven fortified towns, besides numerous unwall'd towns and villages, defended by formidable castles. The spirit of Muley Aben Hassan swelled with his possessions. The tribute of money and captives had been regularly paid by his father Ismael, and Muley Aben Hassan had, on one occasion, attended personally in Cordova at the payment. He had witnessed the taunts and sneers of the haughty Castilians; and so indignant was the proud son of Afric at what he considered a degradation of his race, that his blood boiled whenever he recollected the humiliating scene. When he came to the throne he ceased all payment of the tribute, and it was sufficient to put him in a transport of rage only to mention it. 'He was a fierce and warlike infidel,' says the Catholic Fray Antonio Agapida; 'his bitterness against the holy Christian faith had been signalised in battle during the lifetime of his father, and the same diabolical spirit of hostility was apparent in his ceasing to pay this most righteous tribute.'"

We have no desire to interfere with our readers' laudable curiosity; nor shall we fill our pages with extracts from a book which all will read who desire historic knowledge, invested with the graces and charms of romance. But there is one episode in the tale which we may make prize of, as it is the only part in which one of our own old English knights appears to take his share in the Christian war (for such it was honestly considered) against the Moors of Granada. While Ferdinand of Arragon was mustering his host at Cordova, there appeared in his camp many adventurous cavaliers, from France and Germany, and other regions.

"The most conspicuous of the volunteers, however, who appeared in Cordova on this occasion, was an English knight of royal connexion. This was the Lord Scales, Earl of Rivers, related to the Queen of England, wife of Henry VII. He had distinguished himself, in the preceding year, at the battle of Bosworth Field, where Henry Tudor, then Earl of Richmond, overcame Richard III. That decisive battle having left the country at peace, the Earl of Rivers, retaining a passion for warlike scenes, repaired to the Castilian court, to keep his arms in exercise in a campaign against the Moors. He brought with him a hundred archers, all dexterous with the long bow and the cloth-yard arrow; also two hundred yeomen, armed *cap-à-pie*, who fought with pike and battle-axe; men robust of frame, and of prodigious strength.

"The worthy Padre Fray Antonio Agapida describes this stranger knight and his followers with his accustomed accuracy and minuteness. 'This cavalier,' he observes, 'was from the island of England, and brought with him a train of his vassals; men who had been hardened in certain civil wars which had

raged in their country. They were a comely race of men, but too fair and fresh for warriors; not having the sunburnt, martial hue of our old Castilian soldiery. They were huge feeders, also, and deep carousers; and could not accommodate themselves to the sober diet of our troops, but must fain eat and drink after the manner of their own country. They were often noisy and unruly, also, in their wassail; and their quarter of the camp was prone to be a scene of loud revel and sudden brawl. They were withal of great pride; yet it was not like our inflammable Spanish pride: they stood not much upon the *pundonor* and high punctilio, and rarely drew the stiletto in their disputes; but their pride was silent and contemptuous. Though from a remote and somewhat barbarous island, they yet believed themselves the most perfect men upon earth; and magnified their chieftain, the Lord Scales, beyond the greatest of our grandees. With all this, it must be said of them, that they were marvellous good men in the field, dexterous archers, and powerful with the battle-axe. In their great pride and self-will, they always sought to press in the advance, and take the post of danger, trying to outvie our Spanish chivalry. They did not rush forward fiercely, or make a brilliant onset, like the Moorish and Spanish troops, but they went into the fight deliberately, and persisted obstinately, and were slow to find out when they were beaten. Withal, they were much esteemed, yet little liked, by our soldiery, who considered them stanch companions in the field, yet coveted but little fellowship with them in the camp. Their commander, the Lord Scales, was an accomplished cavalier, of gracious and noble presence, and fair speech. It was a marvel to see so much courtesy in a knight brought up so far from our Castilian court. He was much honoured by the king and queen, and found great favour with the fair dames about the court, who, indeed, are rather prone to be pleased with foreign cavaliers. He went always in costly state, attended by pages and esquires, and accompanied by noble young cavaliers of his country, who had enrolled themselves under his banner, to learn the gentle exercise of arms. In all pageants and festivals, the eyes of the populace were attracted by the singular bearing and rich array of the English earl and his train, who prided themselves in always appearing in the garb and manner of their country; and were indeed something very magnificent, delectable, and strange to behold."

The campaign opened at the siege of Loxa; and there Lord Rivers made a gallant display.

"This was the first time he had witnessed a scene of Moorish warfare. He looked with eager interest at the chance medley fight before him,—the wild career of cavalry, the irregular and tumultuous rush of infantry, and Christian helm and Moorish turban intermingling in deadly struggle. His high blood mounted at the sight; and his very soul was stirred within him, by the confused war-cries, the clangour of drums and trumpets, and the reports of arquebuses, that came echoing up the mountains. Seeing the king was sending a reinforcement to the field, he entreated permission to mingle in the affray, and fight according to the fashion of his country. His request being granted, he alighted from his steed. He was merely armed *en blanco*; that is to say, with morion, back-piece, and breast-plate; his sword was girded by his side, and in his hand he wielded a powerful battle-axe. He was followed by a body of his yeomen, armed in like manner, and by

a band of archers, with bows made of the tough English yew-tree. The earl turned to his troops, and addressed them briefly and bluntly, according to the manner of his country. 'Remember, my merry men all,' said he, 'the eyes of strangers are upon you; you are in a foreign land, fighting for the glory of God and the honour of merry old England!' A loud shout was the reply. The earl waved his battle-axe over his head. 'St. George for England!' cried he; and, to the inspiring sound of this old English war-cry, he and his followers rushed down to the battle with manly and courageous hearts. They soon made their way into the midst of the enemy; but when engaged in the hottest of the fight they made no shouts or outcries. They pressed steadily forward, dealing their blows to right and left, hewing down the Moors, and cutting their way with their battle-axes, like woodmen in a forest; while the archers, pressing into the opening they made, plied their bows vigorously, and spread death on every side. When the Castilian mountaineers beheld the valour of the English yeomanry, they would not be outdone in hardihood. They could not vie with them in weight and bulk, but for vigour and activity they were surpassed by none. They kept pace with them, therefore, with equal heart and rival prowess, and gave a brave support to the stout islanders. The Moors were confounded by the fury of these assaults, and disheartened by the loss of Hamet el Zegri, who was carried wounded from the field. They gradually fell back upon the bridge; the Christians followed up their advantage, and drove them over it tumultuously. The Moors retreated into the suburb, and Lord Rivers and his troops entered with them pell-mell, fighting in the streets and in the houses. King Ferdinand came up to the scene of action with his royal guard, and the infidels were all driven within the city walls. Thus were the suburbs gained by the hardihood of the English lord, without such an event having been premeditated. The Earl of Rivers, notwithstanding he had received a wound, still urged forward in the attack. He penetrated almost to the city gate, in defiance of a shower of missiles, that slew many of his followers. A stone, hurled from the battlements, checked his impetuous career. It struck him in the face, dashed out two of his front teeth, and laid him senseless on the earth. He was removed to a short distance by his men; but recovering his senses, refused to permit himself to be taken from the suburb. When the contest was over, the streets presented a piteous spectacle, so many of their inhabitants had died in the defence of their thresholds, or been slaughtered without resistance. Among the victims was a poor weaver, who had been at work in his dwelling at this turbulent moment. His wife urged him to fly into the city. 'Why should I fly?' said the Moor, 'to be reserved for hunger and slavery? I tell you, wife, I will abide here; for better is it to die quickly by the steel, than to perish piecemeal in chains and dungeons.' He said no more, but resumed his occupation of weaving; and, in the indiscriminate fury of the assault, was slaughtered at his loom. The Christians remained masters of the field, and proceeded to pitch three encampments for the prosecution of the siege. The king, with the great body of the army, took a position on the side of the city next to Granada. The Marquis of Cadiz and his brave companions once more pitched their tents upon the height of Santo Albohacin; but the English earl planted his standard sturdily within the suburb he had taken."

The closing scene of the whole Chronicle, when the unfortunate king of Granada is at length compelled to yield the last fragment of his authority to the victorious sovereigns of Castile and Arragon, is told in Irving's best and simplest manner. With that we shall conclude our quotations.

"The sun had scarcely begun to shed his beams upon the summits of the snowy mountains which rise above Granada, when the Christian camp was in motion. A detachment of horse and foot, led by distinguished cavaliers, and accompanied by Hernando de Talavera, bishop of Avila, proceeded to take possession of the Alhambra and the towers. It had been stipulated in the capitulation, that the detachment sent for this purpose should not enter by the streets of the city. A road had, therefore, been opened outside of the walls, leading by the Puerta de los Molinos (or the gate of the mills) to the summit of the Hill of Martyrs, and across the hill to a postern gate of the Alhambra. When the detachment arrived at the summit of the hill, the Moorish king came forth from the gate, attended by a handful of cavaliers, leaving his vizier, Josef Aben Comixa, to deliver up the palace. 'Go, signior,' said he, to the commander of the detachment; 'go, and take possession of those fortresses which Allah has bestowed upon your powerful lord, in punishment of the sins of the Moors!' He said no more, but passed mournfully on, along the same road by which the Spanish cavaliers had come; descending to the vega, to meet the Catholic sovereigns. The troops entered the Alhambra, the gates of which were wide open, and all its splendid courts and halls silent and deserted. In the mean time, the Christian court and army poured out of the city of Santa Fé, and advanced across the vega. The king and queen, with the prince and princess, and the dignitaries and ladies of the court, took the lead; accompanied by the different orders of monks and friars, and surrounded by the royal guards, splendidly arrayed. The procession moved slowly forward, and paused at the village of Arzulla, at the distance of half a league from the city. The sovereigns waited here with impatience, their eyes fixed on the lofty tower of the Alhambra, watching for the appointed signal of possession. The time that had elapsed since the departure of the detachment seemed to them more than necessary for the purpose; and the anxious mind of Ferdinand began to entertain doubts of some commotion in the city. At length they saw the silver cross, the great standard of this crusade, elevated on the Torre de la Vela, or great watch-tower, and sparkling in the sunbeams. This was done by Hernando de Talavera, bishop of Avila. Beside it was planted the pennon of the glorious apostle St. James; and a great shout of 'Santiago! Santiago!' rose throughout the army. Lastly was reared the royal standard, by the king of arms; with the shout of 'Castile! Castile! For King Ferdinand and Queen Isabella!' The words were echoed by the whole army, with acclamations that resounded across the vega. At sight of these signals of possession, the sovereigns fell upon their knees, giving thanks to God for this great triumph. The whole assembled host followed their example; and the choristers of the royal chapel broke forth into the solemn anthem of *Te Deum laudamus!* The procession now resumed its march, with joyful alacrity, to the sound of triumphant music, until they came to a small mosque, near the banks of the Xenil, and not far from the foot of the Hill of Martyrs, which edifice remains to the present day, consecrated

as the hermitage of St. Sebastian. Here the sovereigns were met by the unfortunate Boabdil, accompanied by about fifty cavaliers and domestics. As he drew near, he would have dismounted, in token of homage; but Ferdinand prevented him. He then proffered to kiss the king's hand, but this sign of vassalage was likewise declined: whereupon, not to be outdone in magnanimity, he leaned forward, and saluted the right arm of Ferdinand. Queen Isabella, also, refused to receive this ceremonial of homage; and, to console him under his adversity, delivered to him his son, who had remained as hostage ever since Boabdil's liberation from captivity. The Moorish monarch pressed his child to his bosom with tender emotion, and they seemed mutually endeared to each other by their misfortunes. He then delivered the keys of the city to King Ferdinand, with an air of mingled melancholy and resignation. 'These keys,' said he, 'are the last relics of the Arabian empire in Spain. Thine, O king, are our trophies, our kingdom, and our person! Such is the will of God! Receive them with the clemency thou hast promised, and which we look for at thy hands!' King Ferdinand restrained his exultation into an air of serene magnanimity. 'Doubt not our promises,' replied he; 'or, that thou shalt regain from our friendship the prosperity of which the fortune of war has deprived thee.' On receiving the keys, King Ferdinand handed them to the queen. She, in her turn, presented them to her son, Prince Juan, who delivered them to the Count de Tendilla; that brave and loyal cavalier being appointed alcaide of the city, and captain-general of the kingdom of Granada. Having surrendered the last symbol of power, the unfortunate Boabdil continued on towards the Alpuzarras, that he might not behold the entrance of the Christians into his capital. His devoted band of cavaliers followed him in gloomy silence; but heavy sighs burst from their bosoms, as shouts of joy and strains of triumphant music were borne on the breeze from the victorious army. Having rejoined his family, Boabdil set forward with a heavy heart for his allotted residence, in the valley of Porchena. At two leagues distance, the cavalcade, winding into the skirts of the Alpuzarras, ascended an eminence commanding the last view of Granada. As they arrived at this spot, the Moors paused involuntarily, to take a farewell gaze at their beloved city, which a few steps more would shut from their sight for ever. Never had it appeared so lovely in their eyes. The sunshine, so bright in that transparent climate, lighted up each tower and minaret, and rested gloriously upon the crowning battlements of the Alhambra; while the vega spread its enamelled bosom of verdure below, glistening with the silver windings of the Xenil. The Moorish cavaliers gazed with a silent agony of tenderness and grief upon that delicious abode, the scene of their loves and pleasures. While they yet looked, a light cloud of smoke burst forth from the citadel; and, presently, a peal of artillery, faintly heard, told that the city was taken possession of, and the throne of the Moslem kings was lost for ever. The heart of Boabdil, softened by misfortunes and overcharged with grief, could no longer contain itself. 'Allah achbar! God is great!' said he; but the words of resignation died upon his lips, and he burst into a flood of tears. His mother, the intrepid sultana Ayxa la Horra, was indignant at his weakness. 'You do well,' said she, 'to weep like a woman, for what you failed to defend like a man!' The vizier Aben Comixa endeavoured to console his royal master. 'Consider,

sire,' said he, 'that the most signal misfortunes often render men as renowned as the most prosperous achievements, provided they sustain them with magnanimity.' The unhappy monarch, however, was not to be consoled. His tears continued to flow. 'Allah achbar!' exclaimed he, 'when did misfortunes ever equal mine!' From this circumstance the hill, which is not far from Padul, took the name of Fex Allah Achbar; but the point of view commanding the last prospect of Granada is known among Spaniards by the name of *el ultimo suspiro del Moro*, or, 'the last sigh of the Moor.'

On the whole, this work will sustain the high fame of Washington Irving. It fills a blank in the historical library which ought not to have remained so long a blank. The language throughout is at once chaste and animated; and the narrative may be said, like Spenser's Fairy Queen, to present one long gallery of splendid pictures. Indeed, we know no pages from which the artist is more likely to derive inspiration; nor perhaps are there many incidents in literary history more surprising, than that this antique and chivalrous story should have been for the first time told worthily by the pen of an American and a republican.

Richelieu: a Tale of France. 3 vols. 12mo. London, 1829. Colburn.

BEFRIENDED by all our earliest associations—association, the poetry of memory,—and gratifying that innate desire of seeing beyond the deed—passing from the mind's presence-chamber of action to its private one of motive,—no wonder that historical romance, "that fairy web of night and day," should be one of the most popular branches of popular literature. In former times, when facts and fancies, costumes and characters, were mingled together with most masquerade-like confusion—when every page was a false impression,—the utility of these productions might be questioned; but now, thanks to our Luther of literature, Scott, the novelist is as well prepared to "shew cause" as the historian; the eminent characters introduced are as accurate as elaborate; and manners, customs, &c. are portrayed with the truth of contemporary memoirs. The great error into which the followers of this new school have fallen, has been overloading their pages with details—supplying by research what they wanted in invention—black-letter MSS. printed for novels. Not being able to make their Helen interesting, they made her learned; instead of the dress illustrating the character, the character seemed but a peg whereon to hang divers curiously cut garments, slashed doublets, out-of-the-way cloaks, and other strange and antique habiliments. Our present author has no pedantry of this worst species; equally free is he from imitation; his characters are no soulless masks taken from the dead face; but he is of this school, even as the Italian painters studied the models of some great masters, which, while it fixed their judgment and refined their taste, yet left themselves with unfettered fancies to make their own originality. The eventful days of Richelieu are an admirable period, quite untrodden ground, and abounding in events of every species of the picturesque, the terrible, the mysterious, and the romantic. The female influence, which has ever been like the *maître de palais* to the Salique law, however destructive to the views of the politician, is most excellent for those of the novelist; and we congratulate Mr. James no less on the judgment which has chosen the subject, than on the talent which has developed it. We cannot do better than introduce his hero and heroine,

even as they are first introduced to the reader.

"When the carriage arrived at the *abreuvoir*, by the side of which Philip had placed himself, the footmen took the bridles from the horses' mouths to give them drink; and a small white hand, from within, drew back the taffeta curtain, displaying to the woodman one of the loveliest faces he had ever beheld. The lady looked round for a moment at the forest scene, in the midst of whose wild ruggedness they stood, and then raised her eyes toward the sky, letting them roam over the clear deepening expanse of blue, as if to satisfy herself how much daylight still remained for their journey. 'How far is it to St. Germain, good friend?' said she, addressing the woodman, as she finished her contemplations; and her voice sounded to Philip like the warble of a bird, notwithstanding a slight peculiarity of intonation, which more refined ears would instantly have decided as the accent of Roussillon, or some adjacent province: the lengthening of the *i*, and the swelling roundness of the Spanish *u*, sounding very differently from the sharp precision peculiar to the Parisian pronunciation. 'I wish, Pauline, that you would get over that bad habit of softening all your syllables,' said an old lady who sat beside her in the carriage: 'your French is scarcely comprehensible.' 'Dear mamma,' replied the young lady, playfully, 'am not I descended lineally from Cleopatra, the patroness of song and chivalry? And I should be sorry to speak aught but my own *langue d'oc*—the tongue of the first knights and first poets of France.—But hark! what is that noise in the wood?' 'Now help, for the love of God!' cried the woodman, snatching forth his axe, and turning to the horsemen who accompanied the carriage; 'murder is doing in the forest. Help, for the love of God!' But as he spoke, the trampling of a horse's feet was heard, and in a moment after, a stout black charger came down the road like lightning; the dust springing up under his feet, and the foam dropping from his bit. Half falling from the saddle, half supported by the reins, appeared the form of a gallant young cavalier; his naked sword still clasped in his hand, but now fallen powerless and dragging by the side of the horse; his head uncovered and thrown back, as if consciousness had almost left him, and the blood flowing from a deep wound in his forehead, and dripping amongst the thick curls of his dark-brown hair. The charger rushed furiously on; but the woodman caught the bridle as he passed, and with some difficulty reined him in; while one of the footmen lifted the young gentleman to the ground, and placed him at the foot of a tree. The two ladies had not beheld this scene unconcerned, and were descending from the carriage, when four or five servants in hunting livery were seen issuing from the wood at the turn of the road, contending with a very superior party of horsemen, whose rusty equipments and wild, anomalous sort of apparel, bespoke them free of the forest by not the most honourable franchise. 'Ride on, ride on!' cried the young lady to those who had come with her: 'ride on and help them;' and she herself advanced to give aid to the wounded cavalier, whose eyes seemed now closed for ever. He was as handsome a youth as one might look upon: one of those forms which we are fond to bestow upon the knights and heroes that we read of in our early days, when unchecked fancy is always ready to give her bright conceptions 'a local habitation and a name.' The young lady, whose heart had never been taught

to regulate its beatings by the frigid rules of society, or the sharp scourge of disappointment, now took the wounded man's head upon her knee, and gazed for an instant upon his countenance, the deadly paleness of which appeared still more ghastly from the red streams that trickled over it from the wound in his forehead. She then attempted to stanch the blood, but the trembling of her hands defeated her purpose, and rendered her assistance of but little avail. The elder lady had hitherto been giving her directions to the footmen, who remained with the carriage, while those on horseback rode on towards the fray. 'Stand to your arms, Michel!' cried she. 'You take heed to the coach. You three, draw up across the road, each with his arquebuse ready to fire. Let none but the true men pass.—Fie! Pauline, I thought you had a firmer heart.' She continued, approaching the young lady, 'Give me the handkerchief. That is a bad cut in his head, truly; but here is a worse stab in his side.' And she proceeded to unloose the gold loops of his hunting-coat, that she might reach the wound. But that action seemed to recall, in a degree, the senses of the wounded cavalier. 'Never! never!' he exclaimed, clasping his hand upon his side, and thrusting her fingers away from him with no very ceremonious courtesy—'never, while I have life.' 'I wish to do you no harm, young sir, but good,' replied the old lady: 'I seek but to stop the bleeding of your side, which is draining your heart dry.' The wounded man looked faintly round, his senses still bewildered, either by weakness from loss of blood, or from the stunning effects of the blow on his forehead. He seemed, however, to have caught and comprehended some of the words which the old lady addressed to him, and answered them by a slight inclination of the head, but still kept his hand upon the breast of his coat, as if he had some cause for wishing it not to be opened."

There is also a most powerfully written scene, where the Queen, Anne, is examined before the council touching her correspondence with Philip of Spain. Louis says:

"But who will vouch that those letters contained nothing treasonable? We have but your word, madam; and you well know that we are at war with Spain, and cannot procure a sight of the originals." 'Luckily,' replied Anne of Austria, her countenance brightening with a ray of hope, 'they have all been read by one whom your majesty yourself recommended to my friendship. Clara de Hauteford, you have seen them all. Speak! Tell the king the nature of their contents without fear and without favour.' Mademoiselle de Hauteford advanced from behind the queen's chair; and the king, who, it was generally believed, had once passionately loved her, but had met with no return, now fixed his eyes intently upon the pale, beautiful creature, that, scarcely like a being of the earth, glided silently forward and placed herself directly opposite to him. Clara de Hauteford was devotedly attached to the queen. Whether it sprang from that sense of duty which in general governed all her actions, or whether it was personal attachment, matters little, as the effect was the same, and she would at no time have considered her life too great a sacrifice to the interest of her mistress. She advanced then before the council, knowing that the happiness, if not the life, of Anne of Austria might depend upon her answer; and clasping her snowy hands together, she raised her eyes towards heaven, 'So help me God at my utmost need!' she said, with a clear, slow, energetic utterance, 'no line that I have

ever seen of her majesty's writing—and I believe I have seen almost all she has written within the last five years—no line that I have seen, ever spoke any thing but the warmest attachment to my lord the king; nor did any ever contain the slightest allusion to the politics of this kingdom, but were confined entirely to the subject of her domestic life;—nor even then,' she continued, dropping her full blue eyes to the countenance of the king, and fixing them there, with a calm serious determined gaze, which overpowered the glance of the monarch, and made his eyelid fall—'nor even then did they ever touch upon her domestic sorrows.'"

We will not enter into any detail of the plot,—it is too interesting to be spoiled;—but one or two of the characters are so well drawn as to merit particular commendation. Chavigni, at once politic and generous, candid by nature, but dissimulative on principle, with such opposites of character, so well shaded together, is a masterpiece; and Cinq Mars is quite a Vandyke. In fine, we dismiss Mr. James with most cordial commendation for having produced a very superior work, and one well calculated for extensive popularity. That we do not illustrate it by farther extracts, must be excused on account of our numerous claims at this productive season, which even an additional sheet is insufficient to satisfy. We have only to add, that the excellence of *Richelieu* must not be estimated by the length of our review.

Zoological Researches and Illustrations; or, Natural History of Nondescript or imperfectly known Animals. By John V. Thompson, Esq. F.L.S., Surgeon to the Forces. Parts I. and II. 1829. Cork, King and Ridings; London, Treuttel and Co.

JUDGING from the opportunities which Mr. Thompson has had for extensive observation, and the number of remarkable discoveries which have been the reward of his zeal and industry, we may even now pronounce the *Zoological Researches* to be one of the most interesting and important works of our time. The plan of Mr. Thompson's publication takes in the whole range of the animal kingdom; but his views appear to be more particularly directed to the marine invertebrate animals, which of all others are the less generally and perfectly known to naturalists. The graphic illustrations given in each Part are ample; they are drawn and etched by the author himself, with great minuteness of detail, and are thus stamped with a kind of authority superior to that of most similar works. In the prosecution of this department Mr. Thompson does not appear to have been sparing of his eyesight, from the numerous dissections made under the power of the microscope,—a difficult and dangerous task when attempted upon very small subjects.

We are glad to see that the author has adopted the plan of most of the continental zoologists, in writing in the vernacular tongue, without any unnecessary introduction of technical language; so that he appears to aim at being as popular and intelligible as the nature of the subject and the actual state of the science will permit. Another circumstance calculated to recommend Mr. Thompson's *Zoological Researches* to more general attention, and to such as may not be immediately conversant with the particular subject under discussion, is, that in place of treating of the animals which come under his observation abstractedly, he points to the groups with which they have the greatest affinity, and connects and compares the new

facts which he has been enabled to bring forward with what had been previously known.

The first memoir, on the *Metamorphoses of the Crustacea* (a fact of which we have been hitherto wholly ignorant), is of first-rate importance, and shews us that those curious and anomalous creatures, the *zoëæ*, are crustacea in the first stage of their existence, in which they are swimming animals, adapted to aquatic life alone; and it affords a satisfactory reason why the land crabs of hot climates annually resort to the sea-shore, in despite of every obstacle, that they may deposit in the sea their young progeny, which would otherwise be lost, and the race become extinct. To the *zoëæ* already known, Mr. Thompson has added three others discovered by himself; viz. two in the Atlantic Ocean, and one in the Cove of Cork: the last is very remarkable, and is admirably illustrated in his second plate.

The second memoir, on the *Opossum Shrimp (Mysis)*, develops, in the fullest and most satisfactory manner, the structure and habitudes of the individuals of this singular family, so very distinct from the true shrimps, and yet so strongly resembling them in their general form. Independent of the variety of new matter embodied in this memoir, and the satisfactory display of the structure of the opossum shrimp in the accompanying plates, the paper appears to have been called for by the circumstance of Mons. Risso (one of those amongst the French zoologists who have devoted most of their attention to the crustacea, and who has written upon them) having mistaken animals of a totally different kind for those of this genus.*

"When (says Mr. Thompson) we take into account the extraordinary peculiarities of structure which these animals present to our notice, in being provided with a quadruple row of feet or members, and with hands vastly more complicated and beautiful than in man or any known creature, there could hardly be found a subject more worthy to engage our contemplation, or more capable of inspiring us with admiration of the Divine Perfection, as manifested in the minuter works of creation. * * * It will hardly be credited (continues the ingenious writer) that such interesting peculiarities could have remained unnoticed, when it is known that the opossum shrimps are in these climates the most common of all the crustacea, that they abound to such a degree as to astonish by their countless myriads, and that (unlike all other animals of their class) they offer themselves freely to our view when we stroll along the margin of our estuaries, where, particularly in spring and summer, they may be observed forming an almost contiguous band or column of some feet in breadth, extending along either margin of the tide, from the sea up to where the water becomes almost fresh. If we stop to consider so singular a piece of negligence, it only furnishes a proof of the little attention that has hitherto been paid to this class of animals. * * * Hitherto the opossum shrimps have not been observed farther south than the precincts of the English Channel; but they occur as far to the north as the icy seas of the polar regions, where they must exist in very great abundance during the summer season, as they are said by O. Fabricius to constitute one of the principal sources of nutriment to the whale, which, taking in myriads at a gulp, separates them from the water by means of its complicated strainers, and swallows the congregated pabulum which they now form at leisure. We should hardly give credence to the fact that

an animal so disproportioned should constitute the food of this leviathan, did we not perceive that the peculiar structure of the mouth and smallness of the gullet in these enormous creatures (the mysticete whales) is in perfect accordance, and fits them for separating small and soft animals of every kind from the sea-water, while it precludes the power of masticating or of swallowing bodies of even moderate size. Abundance in this instance makes up for the individual smallness of the prey, and these little animals must be allowed to be a much more substantial food than the medusæ, upon which the whales are also understood to feed. In these climates the opossum shrimps serve as food to the herring and pilchard, and probably to many other fishes. * * * The opossum shrimps, in common with all the smaller crustacea, are animals which require the best eyes and instruments to observe properly, and the most detailed sculpture to represent; if, therefore, the accompanying figures seem minute, they are rude when compared with the originals. It is in looking closely into the structure of these little animals, that we see the perfection of the Divine Artist: Nature's greater productions appear coarse indeed to these elaborate and highly finished master-pieces; and in going higher and higher with our magnifiers, we still continue to bring new parts and touches into view. If, for instance, we observe one of their members with the naked eye—which may be the utmost stretch of unassisted vision—with the microscope it first appears jointed, or composed of several pieces articulated together; employing a higher magnifier, it appears fringed with long hairs, which on further scrutiny gain a sensible diameter, and seem to be themselves fringed with hairs still more minute; many of these minute parts are evidently jointed, and perform sensible motions. But what idea can we form of the various muscles which put all these parts in motion, and the vessels which supply them with the nutrition essential to their growth and daily expenditure, all of which we know from analogy they must possess?"

The third memoir by Mr. Thompson, on the *Luminosity of the Ocean*, blends the information hitherto obtained upon this curious subject with the proper observations of the author himself, and furnishes details of several new luminous marine animals which had escaped those who had preceded him in the same field, or rather ocean, of inquiry. It adds, therefore, considerably to our knowledge of this phenomenon, without having entirely exhausted the subject, and points out the manner in which this investigation ought to be carried on. Describing a species of luminosity of comparatively rare occurrence, and that which is the most alarming in appearance, Mr. Thompson writes thus:—"I had but once an occasion to witness and to investigate it as it occurs in the Mediterranean. Returning from a fishing party late in a still evening across the Bay of Gibraltar, in a direction from the Pomones river to the old Mole, in company with Dr. Drummond (now professor of anatomy to the Belfast Institution) and a party of naval officers, the several boats, although separated a considerable distance, could be distinctly traced through the gloom by the snowy whiteness of their course, while that in which we were seemed to be passing through a sea of melted silver; such at least was the appearance of the water displaced by the movement of the boat and the motion of the oars. The hand, a stick, or the end of a rope, immersed in the water, instantly became luminous and all their parts visible; and when with-

drawn, brought up numerous luminous points, less than the smallest pin's-head, and of the softest and most destructible tenderness, appearing on a closer inspection, out of water, like hemispheric masses of a colourless jelly, evidently, however, organised and included within an enveloping tunic."

The forthcoming No. (III.) of Mr. Thompson's work is to include a memoir on the *Cerripedes* or *Barnacles*; and from the nature of the new facts and discoveries which it embraces, it will, we doubt not, be still more interesting than the first, which contains an account of the *Metamorphoses of the Crab* tribe.

If we were inclined to institute a comparison between these memoirs and those miscellaneous periodicals which have appeared in the same department of knowledge, we should find that this work differs from all of them in recording discoveries made by the author himself, in furnishing complete details, and in its popular character. Most of the others put forward representations of objects from public museums or private cabinets, remarkable for their form or colouring, and accompanied simply by the generic and specific characters, but of which even the native country is uncertain or unknown. Works of this latter class have their use, and are adapted to the tables and pockets of the opulent; while such as Mr. Thompson's are calculated to make natural history a popular study, and to conduce to the advancement of scientific inquiry.

THE WAVERLEY NOVELS: NEW SERIES

WE have, as might have been expected from a journal like ours, in consequence of the popular interest of the subject, taken frequent opportunities to lay before the public such intelligence respecting, and such extracts from, this publication, as our intimate intercourse with literary affairs and priority of information enabled us to offer for the gratification of our readers. Thus they have been made acquainted with the general scope of the work, and have learnt the character of its additional notes and illustrations. We have now on our table the first two volumes, or the novel or *Waverley* complete, clothed in its neat crimson coat,—with its handsome vignettes and frontispieces,*—and above all, for our purpose, after what we have already done, with the *Advertisement* and *General Preface* of its author. From these ingenious and interesting documents we will therefore do our best for the present occasion, though we feel that we can do them but scant justice by any epitome.

The *Preface* and the *Introductory Notices to Waverley*, as well as to each of the other separate Tales, contain an account of such circumstances as appear to Sir Walter Scott to be worthy of being communicated to the public; and every syllable which we have yet seen authorises us to say that the public will gratefully appreciate the favour. The various legends, family traditions, obscure historical facts, which have formed the ground-works of these celebrated novels; ancient customs, superstitions, and descriptions of the places where their many scenes are laid, are to finish the design, and will, we are sure, from the first example, be equally well relished.

The author sets out by expressing his fears

* Of the embellishments we also gave some account in a preceding *Literary Gazette*: these volumes contain *Flora* singing to *Waverley*, by E. P. Stepanoff, and *Bradwardine* reading the Church Service to his Troop, by Newton. (frontispieces); and the vignettes, *Davie Gellatley* with *Dogs*, by E. Landseer, and another scene by J. Stepanoff,—all sweetly engraved by R. Graves, C. Rolla, and W. Raddon.

* Risso, *Hist. Nat. des Crustacés des Environs de Nice*.

that in his introductory account of these compositions he may be led to speak more of himself and his personal concerns than is graceful or prudent:—we can assure him that he is an object of too deep and universal interest to admit of the slightest incident connected with himself or his writings being aught but most acceptable, not only to the British public, but to the civilised world, throughout which the productions of his pen have been so justly and greatly admired. "In this particular (he proceeds, in his good-humoured fashion) he runs the risk of presenting himself to the public in the relation that the dumb wife in the jest-book held to her husband, when, having spent half of his fortune to obtain the cure of her imperfection, he was willing to have bestowed the other half to restore her to her former condition. But this is a risk inseparable from the task which the author has undertaken, and he can only promise to be as little of an egotist as the situation will permit."

Of his juvenile days we are next presented with some delightfully naïve memoranda:—"I must (he says) refer to a very early period of my life, were I to point out my first achievements as a tale-teller—but I believe some of my old schoolfellows can still bear witness that I had a distinguished character for that talent, at a time when the applause of my companions was my recompense for the disgraces and punishments which the future romance-writer incurred for being idle himself, and keeping others idle, during hours that should have been employed on our tasks. The chief enjoyment of my holidays was to escape with a chosen friend, who had the same taste with myself, and alternately to recite to each other such wild adventures as we were able to devise. We told, each in turn, interminable tales of knight-errantry and battles and enchantments, which were continued from one day to another as opportunity offered, without our ever thinking of bringing them to a conclusion. As we observed a strict secrecy on the subject of this intercourse, it acquired all the character of a concealed pleasure, and we used to select, for the scenes of our indulgence, long walks through the solitary and romantic environs of Arthur's Seat, Salisbury Crags, Braid Hills, and similar places in the vicinity of Edinburgh; and the recollection of those holidays still forms an oasis in the pilgrimage which I have to look back upon. I have only to add, that my friend still lives, a prosperous gentleman; but too much occupied with graver business, to thank me for indicating him more plainly as a confidant of my childish mystery."

To childhood, thus impressed, succeeded a long illness and a weakly constitution; during two years of which the principal occupation of the invalid was the perusal of the miscellaneous tomes of fiction, from the folios of *Cyrus* and *Cassandra* down to the most approved works of modern times, furnished by an Edinburgh circulating library. "Accordingly," he tells us, "I believe I read almost all the romances, old plays, and epic poetry, in that formidable collection, and, no doubt, was unconsciously amassing materials for the task in which it has been my lot to be so much employed."

From this period, renovated health and strength, and severer professional studies, occupied our author in the usual manner of young men entering upon the busy scene of the world. He goes on—"It makes no part of the present story to detail how the success of a few ballads had the effect of changing all

the purpose and tenor of my life, and of converting a pains-taking lawyer of some years' standing into a follower of literature. It is enough to say, that I had assumed the latter character for several years before I seriously thought of attempting a work of imagination in prose, although one or two of my poetical attempts did not differ from romances otherwise than by being written in verse. But yet, I may observe, that about this time (now, alas! thirty years since) I had nourished the ambitious desire of composing a tale of chivalry, which was to be in the style of the *Castle of Otranto*, with plenty of Border characters and supernatural incident. Having found unexpectedly a chapter of this intended work among some old papers, I have subjoined it to this introductory essay, thinking some readers may account as curious the first attempts at romantic composition by an author who has since written so much in that department. And those who complain, not unreasonably, of the profusion of the Tales which have followed *Waverley*, may bless their stars at the narrow escape they have made, by the commencement of the inundation which had so nearly taken place in the first year of the century being postponed for fifteen years later. This particular subject was never resumed; but I did not abandon the idea of fictitious composition in prose, though I determined to give another turn to the style of the work. My early recollections of the Highland scenery and customs made so favourable an impression in the poem called the *Lady of the Lake*, that I was induced to think of attempting something of the same kind in prose. I had been a good deal in the Highlands at a time when they were much less accessible, and much less visited, than they have been of late years, and was acquainted with many of the old warriors of 1745, who were, like most veterans, easily induced to fight their battles over again, for the benefit of a willing listener like myself. It naturally occurred to me, that the ancient traditions and high spirit of a people, who, living in a civilised age and country, retained so strong a tincture of manners belonging to an early period of society, must afford a subject favourable for romance, if it should not prove a curious tale marred in the telling. It was with some idea of this kind, that, about the year 1805, I threw together about one-third part of the first volume of *Waverley*. It was advertised to be published by the late Mr. John Ballantyne, bookseller in Edinburgh, under the name of 'Waverley; or, 'tis Fifty Years since,'—a title afterwards altered to 'Tis Sixty Years since,' that the actual date of publication might be made to correspond with the period in which the scene was laid. Having proceeded as far, I think, as the seventh chapter, I shewed my work to a critical friend, whose opinion was unfavourable; and having then some poetical reputation, I was unwilling to risk the loss of it by attempting a new style of composition. I therefore threw aside the work I had commenced, without either reluctance or remonstrance. I ought to add, that though my ingenious friend's sentence was afterwards reversed on an appeal to the public, it cannot be considered as any imputation on his good taste; for the specimen subjected to his criticism did not extend beyond the departure of the hero for Scotland, and, consequently, had not entered upon the part of the story which was finally found most interesting. Be that as it may, this portion of the manuscript was laid aside in the drawers of an old writing-desk, which, on my first coming to

reside at Abbotsford, in 1811, was placed in a lumber garret, and entirely forgotten. Thus, though I sometimes, among other literary avocations, turned my thoughts to the continuation of the romance which I had commenced, yet as I could not find what I had already written, after searching such repositories as were within my reach, and was too indolent to attempt to write it anew from memory, I as often laid aside all thoughts of that nature. Two circumstances, in particular, recalled my recollection of the mislaid manuscript."—These circumstances were, the publication of Miss Edgeworth's *Irish Tales*, and Mr. Scott's being called on by Mr. Murray, the bookseller, to edit the posthumous papers of Strutt, the antiquary, including the unfinished romance of *Queen-Hoo-Hall*.*

The accident by which the long-missing commencement of *Waverley* (the scene whence so many charming productions have sprung) was recovered, we heard years ago: it is now confirmed by the author's own statement.

"I happened (he relates) to want some fishing-tackle for the use of a guest, when it occurred to me to search the old writing-desk already mentioned, in which I used to keep articles of that nature. I got access to it with some difficulty; and, in looking for lines and flies, the long-lost manuscript presented itself. I immediately set to work to complete it, according to my original purpose. And here I must frankly confess, that the mode in which I conducted the story scarcely deserved the success which the romance afterwards attained. The tale of *Waverley* was put together with so little care, that I cannot boast of having sketched any distinct plan of the work. The whole adventures of *Waverley*, in his movements up and down the country with the Highland cateran *Bean Lean*, are managed without much skill. It suited best, however, the road I wanted to travel, and permitted me to introduce some descriptions of scenery and manners, to which the reality gave an interest which the powers of the author might have otherwise failed to attain for them. And though I have been in other instances a sinner in this sort, I do not recollect any of these novels, in which I have transgressed so widely as in the first of the series."

Sir Walter then refutes the reports that this novel was ever offered for sale to any London booksellers: it was published in 1814. "Its progress was for some time slow; but after the first two or three months, its popularity had increased in a degree which must have satisfied the expectations of the author, had those been far more sanguine than he ever entertained. Great anxiety was expressed to learn the name of the author, but on this no authentic information could be attained. My original motive for publishing the work anonymously, was the consciousness that it was an experiment on the public taste which might very probably fail, and therefore there was no occasion to take on myself the personal risk of discomfiture. For this purpose considerable precautions were used to preserve secrecy."

These are detailed; and the author proceeds to say why the incognito was so strenuously preserved. "I am sorry (he says) I can give little satisfaction to queries on this subject. I have already stated elsewhere, that I can render

* The concluding chapter of this romance is given as an appendix to the introduction, "for the reason (says the writer) already mentioned regarding the preceding fragment. It was a step in my advance towards romantic composition; and to preserve the traces of these is, in a great measure, the object of this essay."

little better reason for choosing to remain anonymous, than by saying, with Shylock, that such was my humour. It will be observed, that I had not the usual stimulus for desiring personal reputation, the desire, namely, to float amidst the conversation of men. Of literary fame, whether merited or undeserved, I had already as much as might have contented a mind more ambitious than mine; and in entering into this new contest for reputation, I might be said rather to endanger what I had, than to have any considerable chance of acquiring more. I was affected, too, by none of those motives, which, at an earlier period of life, would doubtless have operated upon me. My friendships were formed,—my place in society fixed,—my life had attained its middle course. My condition in society was higher, perhaps, than I deserved, certainly as high as I wished, and there was scarce any degree of literary success which could have greatly altered or improved my personal condition. I was not, therefore, touched by the spur of ambition, usually stimulating on such occasions; and yet I ought to stand exculpated from the charge of ungracious or unbecoming indifference to public applause. I did not the less feel gratitude for the public favour, although I did not proclaim it,—as the lover who wears his mistress's favour in his bosom, is as proud, though not so vain of possessing it, as another who displays the token of her grace upon his bonnet. Far from such an ungracious state of mind, I have seldom felt more satisfaction than when, returning from a pleasure voyage, I found Waverley in the zenith of popularity, and public curiosity in full cry after the name of the author. The knowledge that I had the public approbation, was like having the property of a hidden treasure, not less gratifying to the owner than if all the world knew that it was his own. Another advantage was connected with the secrecy which I observed. I could appear, or retreat from the stage at pleasure, without attracting any personal notice or attention, other than what might be founded on suspicion only. In my own person, also, as a successful author in another department of literature, I might have been charged with too frequent intrusions on the public patience; but the Author of Waverley was in this respect as impossible to the critic as the Ghost of Hamlet to the partisan of Marcellus. Perhaps the curiosity of the public, irritated by the existence of a secret, and kept alive by the discussions which took place on the subject from time to time, went a good way to maintain an unabated interest in these frequent publications. There was a mystery concerning the author, which each new novel was expected to assist in unravelling, although it might in other respects rack lower than its predecessors. I may perhaps be thought guilty of affectation, should I allege as one reason of my silence, a secret dislike to enter on personal discussions concerning my own literary labours. It is in every case a dangerous intercourse for an author to be dwelling continually among those who make his writings a frequent and familiar subject of conversation, but who must necessarily be partial judges of works composed in their own society. The habits of self-importance, which are thus acquired by authors, are highly injurious to a well-regulated mind; for the cup of flattery, if it does not, like that of Circe, reduce men to the level of beasts, is sure, if eagerly drained, to bring the best and the ablest down to that of fools. This risk was in some degree prevented by the mask which I wore; and my own stores of self-sensit were left to their natural course,

without being enhanced by the partiality of friends, or adulation of flatterers. If I am asked further reasons for the conduct I have long observed, I can only resort to the explanation supplied by a critic as friendly as he is intelligent; namely, that the mental organisation of the novelist must be characterised, to speak craniologically, by an extraordinary development of the passion for delicacy! I the rather suspect some natural disposition of this kind; for, from the instant I perceived the extreme curiosity manifested on the subject, I felt a secret satisfaction in baffling it, for which, when its unimportance is considered, I do not well know how to account. My desire to remain concealed, in the character of the Author of these Novels, subjected me occasionally to awkward embarrassments, as it sometimes happened, that those who were sufficiently intimate with me would put the question in direct terms. In this case, only one of three courses could be followed. Either I must have surrendered my secret,—or have returned an equivocating answer,—or, finally, must have stoutly and boldly denied the fact. The first was a sacrifice which I conceive no one had a right to force from me, since I alone was concerned in the matter. The alternative of rendering a doubtful answer must have left me open to the degrading suspicion that I was not unwilling to assume the merit (if there was any) which I dared not absolutely lay claim to; or those who might think more justly of me, must have received such an equivocal answer as an indirect avowal. I therefore considered myself entitled, like an accused person put upon trial, to refuse giving my own evidence to my own conviction, and flatly to deny all that could not be proved against me. At the same time I usually qualified my denial by stating, that, had I been the author of these works, I would have felt myself quite entitled to protect my secret by refusing my own evidence, when it was asked for to accomplish a discovery of what I desired to conceal. The real truth is, that I never expected or hoped to disguise my connexion with these Novels from any one who lived on terms of intimacy with me. The number of coincidences which necessarily existed between narratives recounted, modes of expression, and opinions broached in these Tales, and such as were used by their author in the intercourse of private life, must have been far too great to permit any of my familiar acquaintances to doubt the identity between their friend and the Author of Waverley; and I believe they were all morally convinced of it. But while I was myself silent, their belief could not weigh much more with the world than that of others; their opinions and reasoning were liable to be taxed with partiality, or confronted with opposing arguments and opinions; and the question was not so much, whether I should be generally acknowledged to be the author, in spite of my own denial, as whether even my own avowal of the works, if such should be made, would be sufficient to put me in undisputed possession of that character."

In the remaining portion of this interesting paper, Sir Walter refers to the rumours touching his brother, Mr. Thomas Scott, of the 70th regiment, who had once entertained the intention of entering upon a similar field of literature, but who never had the least connexion with the Waverley Novels. "The volumes, therefore, (he continues) to which the present pages form a preface, are entirely the composition of the author by whom they

are now acknowledged, with the exception, always, of avowed quotations, and such unpremeditated and involuntary plagiarisms as can scarce be guarded against by any one who has read and written a great deal. The original manuscripts are all in existence, and entirely written (*horresco referens*) in the author's own hand, excepting during the years 1818 and 1819, when, being affected with severe illness, he was obliged to employ the assistance of a friendly amanuensis."

"I have (he adds) some reason to fear that the notes which accompany the tales, as now published, may be thought too miscellaneous and too egotistical. It may be some apology for this, that the publication was intended to be posthumous; and, still more, that old men may be permitted to speak long, because they cannot, in the course of nature, have long time to speak. In preparing the present edition, I have done all that I can do to explain the nature of my materials, and the use I have made of them; nor is it probable that I shall again revise or even read these tales."

Such is the best history we can make of an essay which we confess has affected us extremely; and, to close, we shall simply quote a few of the most remarkable traits from the Appendices. (I. Fragment of Thomas the Rhymer; II. Chapters of Queen-Hoo-Hall; and III. Anecdotes of School Days.)

Of Appendix I.—"The author's purpose was, that it should turn upon a fine legend of superstition, which is current in the part of the Borders where he had his residence; where, in the reign of Alexander III. of Scotland, that renowned person Thomas of Hersildoune, called the Rhymer, actually flourished. This personage, the Merlin of Scotland, and to whom some of the adventures which the British bards assigned to Merlin Caledonius, or the Wild, have been transferred by tradition, was, as is well known, a magician, as well as a poet and prophet. He is alleged still to live in the land of Faery, and is expected to return at some great convulsion of society, in which he is to act a distinguished part,—a tradition common to all nations, as the belief of the Mahomedans respecting their twelfth Imam demonstrates. Now, it chanced many years since, that there lived on the Borders a jolly, rattling horse-cowper, who was remarkable for a reckless and fearless temper, which made him much admired, and a little dreaded, amongst his neighbours. One moonlight night, as he rode over Bowden Moor, on the west side of the Bilton Hills, the scene of Thomas the Rhymer's prophecies, and often mentioned in his story, having a brace of horses along with him which he had not been able to dispose of, he met a man of venerable appearance and singularly antique dress, who, to his great surprise, asked the price of his horses, and began to chaffer with him on the subject. To Canobie Dick, for so shall we call our Border dealer, a chap was a chap, and he would have sold a horse to the devil himself, without minding his cloven hoof, and would have probably cheated Old Nick, into the bargain. The stranger paid the price they agreed on; and all that puzzled Dick in the transaction was, that the gold which he received was in unicorns, bonnet-pieces, and other ancient coins, which would have been invaluable to collectors, but were rather troublesome in modern currency. It was gold, however, and therefore Dick contrived to get better value for the coin than he perhaps gave to his customer. By the command of so good a merchant, he brought horses to the same spot more than once; the purchaser only stipulating that he should always

come by night, and alone. I do not know whether it was from mere curiosity, or whether some hope of gain mixed with it but; after Dick had sold several horses in this way, he began to complain that dry bargains were unlucky, and to hint, that since his chap must live in the neighbourhood, he ought, in the courtesy of dealing, to treat him to half a mutchkin. 'You may see my dwelling if you will,' said the stranger; 'but if you lose courage at what you see there, you will rue it all your life.' Dickens, however, laughed the warning to scorn; and having alighted to secure his horse, he followed the stranger up a narrow foot-path, which led them up the hills to the singular eminence stuck betwixt the most southern and the centre peaks, and called from its resemblance to such an animal in its form, the Lucken Hare. At the foot of this eminence, which is almost as famous for witch meetings as the neighbouring wind-mill of Kippilaw, Dick was somewhat startled to observe that his conductor entered the hill-side by a passage or cavern, of which he himself, though well acquainted with the spot, had never seen or heard. 'You may still return,' said his guide, looking ominously back upon him; but Dick scorned to shew the white feather, and on they went. They entered a very long range of stables; in every stall stood a coal-black horse; by every horse lay a knight in coal-black armour, with a drawn sword in his hand, but all were as silent, hoof and limb, as if they had been cut out of marble. A great number of torches lent a gloomy lustre to the hall, which, like those of the Caliph Vathek, was of large dimensions. At the upper end, however, they at length arrived, where a sword and horn lay on an antique table. 'He that shall sound that horn and draw that sword,' said the stranger, who now intimated that he was the famous Thomas of Herildoune, 'shall, if his heart fail him not, be king over all broad Britain. So speaks the tongue that cannot lie. But all depends on courage, and much on your taking the sword or the horn first.' Dick was much disposed to take the sword; but his bold spirit was quailed by the supernatural terrors of the hall, and he thought to unsheathe the sword first, might be construed into defiance, and give offence to the powers of the mountain. He took the bugle with a trembling hand, and a feeble note, but loud enough to produce a terrible answer. Thunder rolled in stunning peals through the immense hall; horses and men started to life; the steeds snorted, stamped, grinded their bits, and tossed on high their heads—the warriors sprang to their feet, clashed their armour, and brandished their swords. Dick's terror was extreme at seeing the whole army, which had been so lately silent as the grave, in uproar, and about to rush on him. He dropped the horn, and made a feeble attempt to seize the enchanted sword; but at the same moment a voice pronounced aloud the mysterious words:

'Wo to the coward, that ever he was born,
Who did not draw the sword before he blew the horn!'

At the same time a whirlwind of irresistible fury howled through the long hall, bore the unfortunate horse-jockey clear out of the mouth of the cavern, and precipitated him over a steep bank of loose stones, where the shepherds found him the next morning, with just breath sufficient to tell his fearful tale, after concluding which he expired. This legend, with several variations, is found in many parts of Scotland and England."

Of Appendix II. a minstrel ballad, sung under the castle windows of a chivalrous party.

"Waken, lords and ladies gay,
On the mountain dawns the day;
All the jolly chase is here,
With hawk and horse, and hunting spear:
Hounds are in their couples yelling,
Hawks are whistling, horns are knelling,
Merrily, merrily, mingle they,
'Waken, lords and ladies gay.'
Waken, lords and ladies gay,
The mist has left the mountain gray:
Springlets in the dawn are streaming,
Diamonds on the brake are gleaming,
And foresters have busy been,
To track the buck in thicket green:
Now we come to chant our lay,
'Waken, lords and ladies gay.'
Waken, lords and ladies gay,
To the green-wood haste away:
We can shew you where he lies,
Fleet of foot and tall of size;
We can shew the marks he made,
When 'gainst the oak his antlers frayed;
You shall see him brought to bay,
'Waken, lords and ladies gay.'
Louder, louder chime the lay,
Waken, lords and ladies gay:
Tell them youth, and mirth, and glee,
Run a course as well as we.
Time, stern huntsman! who can baulk,
Stanch as hound and fleet as hawk?
Think of this, and rise with day,
Gentle lords and ladies gay."

A bridal song (we rather think this has appeared elsewhere):—

"And did you not bear of a mirth befell
The morrow after a wedding day,
And carrying a bride at home to dwell?
And away to Tewin, away, away!
The quintain was set, and the garlands were made—
'Tis pity old customs should ever decay;
And wo be to him that was horsed on a jade—
For he carried no credit away, away!
We met a consort of fiddle-de-dees;
We set them a cockhorse, and made them play
The winning of Bullen, and Upsey-fires,
And away to Tewin, away, away!
There was ne'er a lad in all the parish
That would go to the plough that day;
But on his fore-horse his wench he carries,
And away to Tewin, away, away!
The butler was quick, and the ale he did tap,
The maidens did make the chamber full gay;
The servants did give me a fuddling cup,
And I did carry't away, away!
The smith of the town his liquor so took,
That he was persuaded that the ground look'd blew;
And I dare boldly be sworn on a book,
Such smiths as he there's but a few.
A posset was made, and the women did sip,
And simpering said they could eat no more;
Full many a maiden was laid on the lip,
'I'll say no more, but give o'er, give o'er.'"

Of Appendix III. we can only quote the feeling conclusion, (leaving the school story of Green-Brecks to be found in the volume itself).

"Perhaps (says Sir Walter) I ought not to have inserted this schoolboy tale; but, besides the strong impression made by the incident at the time, the whole accompaniments of the story are matters to me of solemn and sad recollection. Of all the little band who were concerned in those juvenile sports or brawls, I can scarce recollect a single survivor. Some left the ranks of mimic war to die in the active service of their country. Many sought distant lands, to return no more. Others, dispersed in different paths of life, 'my dim eyes now seek for in vain.' Of five brothers, all healthy and promising, in a degree far beyond one whose infancy was visited by personal infirmity, and whose health after this period seemed long very precarious, I am, nevertheless, the only survivor. The best loved, and the best deserving to be loved, who had destined this incident to be the foundation of literary composition, died 'before his day' in a distant and foreign land; and trifles assume an importance not their own, when connected with those who have been loved and lost."

And here, too, we must end. This edition is worthily dedicated to the King; and these two beautiful volumes cost only two crowns!

The Life and Times of Francis the First, King of France. 2 vols. 8vo. London, 1829. Bull.

We have often wondered, that, amid the many memoirs which have lately added so much to our knowledge, no writer should before have chosen a monarch who from his situation played so prominent a part in the political history of his eventful period, and whose personal character added all the interest of a hero of romance. The present volumes deserve much praise: the language is good, the interspersed remarks often very judicious; and a great mass of information is most pleasantly condensed, and enlivened by a variety of anecdote. We shall select a few specimens illustrative of the author's manner.

"A peasant, who is called by the contemporary writers indiscriminately Attendulo, or Giacomuzzo, was ploughing in a field of Cotignola when some troops passed by. The spirit within him prompted him to leave the servile pursuit in which he was engaged, for one which, if not less laborious, would be more distinguished. Yielding to a common superstition, he threw his ploughshare into a tree, with the resolution, if it should fall again to the earth, to continue his toils; if not, to seek his fortunes as a soldier. The share remained among the branches, and Attendulo renounced his peaceful avocations. His valour and his prodigious strength soon gave him some consideration among the soldiers whom he joined, and procured him the name of Sforza, which he made one of the most illustrious of his time. His genius for war developed itself; he rose rapidly to command; seven thousand volunteers marched under his banners, whose services he sold to such of the intriguing and quarrelsome potentates of Italy as loved war, but loved better to carry it on with the arms of others than with their own. Wealth and distinction flowed upon him in a full current. An accidental fall from his horse, while he was yet in full vigour, terminated his life. He left legitimate sons who inherited none of his talents, and one natural son, whose skill was equal, and whose good fortune was superior to his own. Francesco Sforza, by being the protector of Milan against the invasions of the neighbouring powers, became the master of it. The emperor, who pretended that it was a fief of the empire, and had reverted to him, offered to give him the investiture on payment of a certain sum. Sforza despised his offer, and expressed his determination of keeping with his sword that which his sword had won."

A speech of the Maréchal de Gié is curious, from its coincidence with the famous declaration of Cardinal Wolsey.

"In replying to the depositions of the countess, the maréchal conducted himself with great adroitness. He laid aside all his ferocity; and without alluding to the obvious fact, that his present accusation arose out of a desire to serve her and her cause, and without seeming to insinuate a reproach, he said to her, 'Si j'avois toujours servi Dieu, comme je vous ai servi, madame, je n'aurais pas grande compte à rendre à la mort.'"

"Among the nobles who repaired to the court, was the Count de Chateaubriant: he was related by marriage to the younger branch of the house of Foix, three of the brothers of which family were in the army, and had already shewn that they were worthy representatives of a name which had long stood eminent in the martial annals of France. The Count de Chateaubriant had married their

sister, whose extraordinary beauty had made up for her want of a dowry; and with a caution, in which the event proved he was too well justified, he had declined bringing her to court. The report of her charms had, however, reached the ears of the king, who invited her husband to let her visit the metropolis. The count made various excuses; but finding that he could not resist the importunities of the king, he endeavoured to put an end to them, by assuring Francis that his wife loved her retirement too well to quit it; and that as hitherto all his persuasions had failed, he felt unwilling to repeat them, or to force her inclinations. He had foreseen that all kinds of stratagems would be resorted to for the purpose of making him display his hidden beauty; and had adopted a precaution which he believed would effectually protect him against the artifices of the king, and those minions of the court who he knew, not less from a love of mischief than from a desire of accomplishing the king's will, would endeavour to thwart his intentions. He had procured two rings, the exact counterparts of each other, one of which he had given to his countess, and the other he kept in his own possession. He told her that he should perhaps, when at court, be compelled to ask her to come thither; but he enjoined her to pay no attention to his letters, however importunately he might write, until she should receive one from him in which his ring should be enclosed. The young and innocent lady, who had always lived at a great distance from the court, who was happy in the love of her husband, and who found in his castle, situate in a remote part of Brittany, all the splendour she then desired, unhesitatingly promised him obedience. The count again appeared at court, and again encountered the half-jesting reproaches of Francis, for not having brought his wife with him. He assured the king that her own wish alone kept her at home; and, in proof of his veracity, he offered to write in such terms as the king might dictate, a request that she would join him. The ring not accompanying the letter, he received from his countess such an answer as he expected, and he triumphantly produced her epistle to the king; thus for a time relieving himself from solicitations which his jealous fears rendered extremely irksome. The mischievous perseverance of some of the courtiers, however, helped them to a discovery of his secret. He had a servant whose fidelity and attachment had gained him the entire confidence of his master. This man, who had observed the extraordinary care which the count took of his ring, asked him the reason of his solicitude; and to him the count did not hesitate to explain it, in the belief that it was of all things the least likely that he would ever divulge it. The servant was bribed by some persons about the court, for the purpose of gaining intelligence respecting the countess; and the story of the ring being thus known, it was not difficult to get him to steal it. A skillful goldsmith made a fac-simile of the jewel with great despatch; and the original, after a short absence, was placed where the count, who had been very much distressed at missing it, found it again, and believed he had mislaid it. He was then urged once more to write to the countess, which he did with unhesitating confidence. The false ring was inserted into his letter and despatched into Brittany; and his first knowledge of the fraud that had been practised upon him was derived from the sudden appearance of his obedient wife, who im-

mediately upon the receipt of the letter had hastened to Paris. Here the romance of the story ends. The king saw the countess, and was struck with her beauty. She fell beneath the artifices which were employed for her ruin; and her husband retired to his castle to hide his misery and dishonour in the scene of his former happiness, but which her frailty had made a solitude.

"Francis Sickinghen was one of those extraordinary spirits who seem born for the purpose of proving what individual activity and genius can achieve. He was a gentleman of Germany, of small fortune and obscure family; but by his courage, his eloquence, and his intelligence, he had raised himself to a position of great importance. He was acquainted with all the influential persons of Germany, and had engaged most of them in his interests. His exploits would seem a fitter subject for romance than for history, but that history is sometimes the most marvellous kind of romance. He had raised a small force, which he kept constantly on foot, and with which he carried on war against the emperor and such of the independent states as had not engaged his alliance. He traversed Germany with a rapidity which defied pursuit. He had at different periods attacked the Duke of Lorraine, the town of Metz, the Landgrave of Hesse, and had reduced them to pay him a tribute. When a force with which he could not cope was directed against him, he and his army disappeared, until, by his intrigues, he had provoked the attack of some more powerful enemy against the emperor, and thus drawn off his resentment from himself, when he returned with unabated resolution to the prosecution of his former designs. Fleuranges, who knew his value, presented him to Francis as a man whose assistance might be made of the greatest service to his projects upon the empire. The king was struck with the extraordinary talents which the German displayed, treated him with distinction, granted him a pension of one thousand crowns, and made presents to the train of gentlemen whom Sickinghen always led with him, and who, in point of birth and fortune, were infinitely his superiors. Francis, however, treated him with a reserve which wounded the pride of this haughty adventurer. He engaged him to serve in Germany; but he did not think fit to explain to him the real point at which he aimed. Sickinghen, before he departed, told his friend Fleuranges that he was grateful for the generosity, and delighted with the reception he had met with from the king, to whom he promised to devote his best services against all the world, excepting only the house of la Mark, to whom he was under indelible obligations. 'But he does not know me,' he added, 'if he thinks that I am more easily to be attached to him by his bounty than by his confidence. I see through his plans, although he and you have thought fit not to avow them—he aims at the empire. I demanded certain troops from him, and he has refused my request; he thought, perhaps, I wanted them for myself; but they were solely for the purpose of gaining for him a body of German gentlemen. Tell him that he will never be well served but by simple gentlemen such as I am. If he deals with princes and electors they will take his money and deceive him afterwards.' Sickinghen returned to Germany and exercised again the free warfare to which he was accustomed. Some traders of Germany who had been unjustly dealt with by certain Milan merchants, applied to him for assistance; and he did them right by seizing

property of the value of 25,000 francs belonging to the Milanese. The latter carried their complaints to Francis as their liege lord, and he demanded restitution from Sickinghen, who replied, that when the Germans under his protection should have had justice done to them, he would give up the effects he had seized. The king's council, who had no notion of the sort of man they had to deal with, punished the haughtiness of his answer by suspending his pension; and Sickinghen, thus freed from his engagements with Francis, became a party to those which his friends of the house of la Mark had formed with the King of Spain. He afterwards put himself at the head of a body of Suabian troops, whose services Francis might have secured, but neglected; and his presence with this force in the neighbourhood of Frankfort when the diet was assembled there, was believed to have contributed in no small degree to influence the election."

We are informed that these volumes have been concocted by a legal gentleman; and we can fairly say that they do him great credit. He has produced a pleasant history, in many places very like a pleasant romance.

Apician Morsels.

Dalgairns' Cookery.

Kitchiner's Housekeeper's Oracle.

OUR second course with the modern Apicius will not, we trust, nauseate persons of good taste; though we confess it may be unpalatable to feed too long on bad dishes. And what can be more disgusting than your inferior order of book-making?—in all things offensive, in cookery abominable. Therefore, it is probably the impertinence of the following passages, combined with the indelicacies of the Apician morsels, which has excited our anger against the volume that presents them. "Dinner (says the bold fellow who has committed this outrage) is the most interesting daily action of our lives; as being that which is performed with most eagerness, pleasure, and appetite. Sooner would a coquette *renounce* to please, a poet *to be* praised, a blackleg *to be* believed upon his oath, a comedian *to be* applauded, a rich citizen *to be* flattered, than seven-eighths of the Londoners to make a good meal. We have always been much surprised that in this diversified, book-making age, no author has ever taken upon himself the task of treating this subject with the gravity it deserves, or to have written on dinners in a philosophical manner."

To mention "book-making" in such a book, is indeed a high stretch of audacity; but our compiler has an uncommonly large stock of imperturbable effrontery, for he elsewhere tells the public to its face,—"It is a common complaint amongst the learned, that booksellers love to print trifling productions in preference to works of real value. They should not, however, complain of the booksellers, but of their readers; for, if the publishing of valuable books was as lucrative as that of those insignificant scrawls, no doubt the booksellers would prefer good works to bad ones."*

How the matter stands between the writer, his publishers, and his conscience, we cannot determine; but we will venture to predict that "the learned" will be no parties to this im-

* This passage, we surmise, lets us into the secret of this paltry book; for it is clear that on the ground here laid down the author has taken his chance: if bad works succeed in proportion to their demerits, we congratulate him on having produced a volume likely to be the most popular of any that ever was published on the subject of cookery.

posture. Yet we must divert ourselves with a few more of the gastronomic exhibitions of this precious phoenix.

"Nothing paralyses a good appetite so much as the presence of valets, or *Johns*, at table. They ought only to enter when they bring fresh dishes; after that immediately to retire; the female servants necessary to the course running with plates. It would still be better to bring in each dish in its turn, one of the guests, at the same time, getting up to go and take it from the bearer at the door." (Only fancy this, in a London party!!!) What is meant by the next reflection, we confess we are utterly unable to guess. "It is essential that a dining-room be warmed in every part. A stove effects this purpose very well; but the precaution should never be forgotten, to shelter the legs of the guest from the external air.—It is no less necessary to preserve the feet warm during the time of eating. This may be effected by various means, according to convenience, which every gourmand who has the well-being of his guests at heart will know how to contrive: the ladies—that's enough, the cold seldom strikes downwards."

It is, however, as far as we can fancy from analogy, very like cutting up an ass, to attempt the dissection of this wiseacre; and so we shall rather let him appear in his own natural hide and likeness.

"To leave any thing for *manners* on your plate, is rather a breach, than an observance, of common politeness towards your host!"

"In a leg of beef, two things are distinguished—namely, the parish-priest's piece, and the parish-clerk's. The last is the least tender; as, indeed, it ought to be, for there is scarcely any thing so *stiff* as an old humping of this caste."

"The tail of a rabbit, or of a hare, is the most delicate morsel; and is always offered to the most distinguished guest."

The tail of a rabbit or hare!—the man must be as mad as the latter in March: may-be he means the ear; but it is not easy to divine. At page 263, after telling, at pages 261-2, a very nasty story, and spoiling it by omitting the wittiest part of it, we are treated with a woodcut of Domitian convoking the senate to ascertain the mode of cooking a turbot, in which print the usual felicity of the ingenious doer of the work prevails—for he represents the emperor, who, every schoolboy could tell, was bald, with a good stock of black hair upon his imperial head! In the next page (oh, the classical dog!) he states, that every meal Vitellius took with his friends cost ten thousand crowns!—but what Roman coin that was, we have not yet ascertained.

Now pass we on rapidly through the pages, for our miscellaneous notes on a few "morsels" of exquisite gusto. Page 290 mentions "Audebonte, a king of England, who died at table from eating too much;" and we immediately asked ourselves who the dickens is this fine king? At last we (see what conjurers we are) found out that our friend with the strange name, *Audebonte*, could be no other but *Hardicanute*: the French, who make a rule of misprinting every English proper name, having so *transmogrified* that worthy monarch, and our clever translator having, in one instance at least, faithfully followed his original! The same learned page speaks of *Peson* as a Roman person who was made a prætor by Tiberius; but we have not

been so fortunate in discovering who this ancient tippler was. Lempriere knows him not, and the archives of the famous Pease or Pestle family of Calpurnia have him not in catalogue. (Vide *Piso*.)

A chapter entitled "Personal Vexations; or the Miseries of dining abroad, as well as at home," is full of foreign ills, not in the least applicable to English manners. For example, a bachelor on returning home finds he has lost the key of his street door, and must call in a blacksmith "to break in the porte," p. 296; of course this bachelor can have no servant, and only an empty house. The three following are purely Parisian and not London miseries:—

"IV. To be obliged to pass by the servant at the moment she is sweeping the staircase, and to get all over dust, because you have not time to wait. V. To take a hackney coach, that you may keep yourself clean, and on getting out of the coach, to place your foot in a heap of mud, which covers your shoes, and then to be reduced to the necessity of wiping them with your pocket handkerchief. VI. Having arrived in a hurry, although a little too late and as hungry as a hunter, in the expectation of finding the guests already seated at table, to pass the dining-room and see that the cloth is not even laid."

To what state of society the next belongs we cannot guess:—

"To be regaled during the dinner with the agreeable and polite noise of the master and the mistress of the house alternately scolding their servants, calling them names, and being called upon to be the judge between them." "To eat too fast, and, without thinking, to use the knife instead of the fork (*à l'Anglaise*), lose the road to your mouth, and wound your cheek with a sharp-pointed knife (*à la Française*)." [Mistaken!] "The small bone of a herring, or of a carp, sticking in your palate, you try all you can to get it up by coughing and spitting; at length your stomach revolts, and you serve up your dinner again in rather an unusual way." [Cleanly!!] "Having discoursed during dinner with well-informed people, and to recollect, at tea-time, that you made two grammatical errors in combating their assertions." [Important!!] "During the first quadrille or country dance with a young and pretty dancer, (the mistress of the house, for instance,) to be taken with a severe and unyielding colic, the tardy and unexpected effect of some purgative pills which you now recollect to have taken in the morning." [Very cleanly!!!] "To disturb your false collar in raising up your cravat; to be forced to do penance at some innocent game, to take off your coat, and to expose a coarse dirty shirt, full of holes about the shoulders." [Very genteel!!]

"Lastly, to return home at two o'clock in the morning, wet and dirty, because you have not been able to procure a coach; to find you have got the devil's own appetite, in consequence of coming away before supper; to be obliged to wait a quarter of an hour at the street door, before you are let in; when you do get in, there is no light, and you break the wash-hand basin, with all its appurtenances, which are upset: you can't find your night-shirt; the bed is not made; the blankets are too short, and leave your shoulders uncovered: being thus exposed to the cold, you pull up the clothes, and uncover your feet; you then knock and kick about, trying to put things to right, and, hooking in the curtains, pull down the top of the bed upon your head; lose your equilibrium, and tumble out in the middle of the floor, with the mattress, bed clothes, &c.

and upset the table with your watch upon it: at length you succeed, by dint of groping, to lay your hand upon the tinder-box, you strike a light, but find no matches; get into bed again, as well as you can, in the dark, and during the remainder of the night never once close your eyes for cold and a violent headache; at the same time, you are agreeably charmed with a neighbour in the adjoining room 'driving his pigs to market,' who has gone to sleep upon a hearty supper."

Very pleasant manners altogether, and a vastly pleasant picture of society. Assuredly the author is the man to paint them—for

He best can paint them who has felt them most.

The next chapter, a collection of gourmand receipts, is plundered from a little book called *Oxford Nightcaps*, without acknowledgment; and yet there is, p. 315, an impudent charge against Dr. Kitchiner for compiling "*shop works*" from the *Almanach des Gourmands*; and against the incomparable Ude for borrowing from *La Cuisinière Bourgeoise*. Now, without saying that the worthy Doctor did not avail himself of previous French writers, or that the inventions of the immortal Ude are altogether original—we will venture to assert, that for a single line which the one, or a single hint which the other, has taken from former authorities, their accuser has pilfered fifty; and, what is worse, has spoiled what he has stolen. With this consolation, we dismiss the modern Apicius—and a finale of two neat hits which he has made:—p. 332, we are told of "Doctor Sangrado (not our esteemed Sancho Panza), in his government of Barataria;" and, p. 320, are indulged in the neat bull, "that unusual feasting, frequently repeated, brings on a bad state of health!"

If the public can digest this stuff, they are an ostrich public, and may digest any thing; and of an appetite fit for the feat we shall append in a note, the individual being one of the public mass.*

* We find our illustrative story in the first Number of a clever little quarterly periodical called the *Provincial Medical Gazette*, which, among other interesting articles, has a case of *bulimia*, or canine appetite; and the description seems to be precisely that of a person who might have relished these Apician Morsels. The circumstances happened at Portsea, and are vouched for by Dr. Porter. "William Faircloth, æt. 19, a pale, emaciated subject, received into the Racon, Convict Hospital ship. His pulse is small and frequent, tongue furred, skin cold and pallid, eyes glassy, abdomen enlarged. Has a small carbuncle on the posterior part of the neck, and an induration on the outer side of the right leg. This latter terminated in a small abscess, which was cured under the usual treatment.—Aug. 22d. On this day the medical attention was directed to his immoderate appetite."

We are not going into the other details, which, fitting for a medical report, are not quite the literature of a *Literary Gazette*—therefore we confine our extracts to what William Faircloth consumed. "Aug. 22. Solids and spoon victuals, 95lb. 8oz., drink (by weight), 22lb. 12oz.; total, 49lb. 6oz. Pulse 68 and languid, tongue white, temperature of the surface of the body below the natural, exhaling a disagreeable odour. He takes his food in small quantities, but very often, and his call for drink is incessant. Has a pain and hardness in the region of the liver.—25th. No alteration in symptoms or treatment. Food consumed in twenty-four hours—solid, 19lb. 8oz., fluid, 23lb. 12oz.—Sept. 3d. Food, 17lb. 8oz., drink, 11lb. 12oz. From this date a diary was kept, specifying the particular articles of diet; but for brevity we shall select those dates where symptoms or treatment varied.—7th. For the first time since his admission into the hospital, perspired profusely in the night. Food, 15lb. 8oz., drink, 10lb. 8oz.—10th. On examining him minutely, we find he has gained flesh since admission, though still much emaciated. Food, 14lb. 12oz., drink, 12lb. Has had no perspiration since the night of the 7th.—15th. Food, 24lb. 12oz., drink, 12lb. 8oz.—22d. Food, 37lb. 8oz., drink, 11lb. He was put into the scale and found to weigh 105lb.—28th. Supply of animal food considered insufficient for his insatiable appetite. In addition to his mutton, beef, or other animal food, bullock's liver was procured, of which he devoured six pounds while the

† March 1. Published at Winchester by Robbins and Wheeler; London, Whittaker and Co.

* Four pages on, this memorable maxim is repeated. "It would be an insult offered to the master of the house, to leave any thing eatable on your plate, or any wine in your glass."

Mrs. Lushington's Journey from Calcutta to Europe.

HAVING devoted our former paper to the particular adventures of our fair traveller, we must step back a little, for more general subjects, to Thebes, where Mrs. L. gives a curious history of mummy-hunting.

"I accepted the invitation of Signor Piccinini, a Lucchese, in the service of the Swedish Consul at Alexandria, who had resided about nine years at Thebes, to see the opening of a mummy, that I might myself take out the scarabæus, or any such sacred ornament as might be found in the coffin. The signior's dwelling was nothing more than a mud-hut on the hills of Ghorroo. I ascended to the only apartment by a few steps; this room contained his couch, his arms, his wine, his few drawings, and all his worldly goods. The window-shutters,

cook was frying it. Vegetable diet ordered to be discontinued, as increasing the diabetic symptoms.—30th. His drink is ordered to be confined to one gallon of water mixed with two drachms of diluted sulphuric acid. Food totally animal.—Oct. 6th. Considerably better; complains of nausea at night. Food, 6lb. 15oz.; drink, 12lb. 8oz.—9th. Weighed 106lb. Opium increased to 6 grains quotide. He appears more lively and alert, and expresses himself better. Food (animal), 6lb. 12oz.; drink (acidulated), 12lb. 4oz.—16th. Weighed, fasting, 99lb. Food, 7lb. drink, 14lb.—20th. Food, 6lb. 8oz.; drink, 10lb. 8oz.—24th. Weighed, after breakfast, 106lb.—26th. Food (animal), 5lb.; drink, 10lb. 8oz.—31st. Though apparently stronger, his weight is but 96lb. Continue in diet and medicine as before.—Nov. 7th. Food, 5lb. 8oz.; drink, 8lb. 4oz.—14th. Food, 5lb.; drink, 9lb. 8oz.—17th. Complaints of headach. Food, 7lb.; drink, 10lb. 8oz.—21st. Symptoms of drowsiness disappeared. Food, 8lb. 4oz.; drink, 6lb. 4oz.—29th. Food, 3lb. 15oz.; drink, 6lb. 4oz.—Dec. 9d. Increased in weight 2lb.; viz. 97lb.—6th. Food, 4lb. 13oz.; drink, 5lb. 13oz.—8th. Weighs 98lb.—13th. Food, 6lb. 12oz.; drink, 5lb. 13oz.—19th. Increased 1lb. in weight.—20th. No alteration.—23d. Has lost 2lb. in weight.—1877, Jan. 2d. He is found this day 6lb. reduced in weight (91lb.). Food, 4lb. 12oz.; drink, 6lb. 10oz.—10th. Complaints of drowsiness occasionally. Food, 3lb. 12oz.; drink, 6lb. 15oz.—16th. Symptoms of pleurisy have supervened from exposure to cold on deck. The appetite is decreased.—20th. Symptoms grew daily worse, and on the 30th he died. The body weighed 81lb." "It will not (continue the narrative of this extraordinary case) be improper to add his own statement previous to his coming to the Hulk, corroborated by the gaoler who accompanied him from Stafford, and some fellow-prisoners who knew him before conviction. He is a native of a small village near Wolverhampton, in Staffordshire, and was commonly engaged in husbandry as a labourer. His labours were, he states, with fever and pain in the right side about five years ago, which confined him to bed six months, and incapacitated him from work for eighteen months longer. During his illness he was salivated, but does not recollect how long he was under the influence of pyalism; and from the time of his convalescence he has had a ravenous appetite. About twelve months since, while in the service of a surgeon, he had severe pains in the head, for which he was bled. Many disgusting facts are related of this man's voracity, many even revolting to nature. He would pilfer all sort of food, clean or otherwise, even from the dunghill or hog-tub. He was once found making a luxurious repast on the carrion of a dead horse; nor would he quit this *bonne bouche* till compelled by blows. At another time he stole a sheep's head and pluck from a butcher's shop; and while the owner was pursuing him he contrived to eat the whole of it! The butcher, struck with the fact, and supposing hunger and want had induced the lad to commit the theft, took him charitably into his house, and supplied him with boiled and broiled mutton, till, astonished at the immense quantity he devoured, he at last drove him out, declaring to the crowd assembled on the occasion, that 'the chap would eat a whole sheep.' At the house of a reverend gentleman he devoured a very large turkey, besides bread, potatoes, and other vegetables. On another occasion he ate five pounds of fat bacon and forty-two pounds of potatoes in the space of ten hours. During his confinement in gaol for stealing a watch from one of the canal barges, for which offence he was afterwards transported, the surgeon ordered him three men's allowance; and one day, while in the infirmary in the gaol, he consumed twenty-one pounds of bread and forty pints of water in six hours, as also the remains of thirty pounds of potatoes. Even while in the Convict Hospital ship, where ample allowance was made of good food, as per hospital journal, he would extinguish the light at night, and pilfer every morsel which he had previously turned his eye on; and in the night of October 4 he stole a jar of smelts just put into salt, and ate the whole raw, weighing about six pounds. He had an extraordinary propensity to steal dirty, not only articles of food, but even useless things; and after concealing them, would vow and declare most strenuously he had never had them, or even seen them."

steps, and floor, were composed of mummy coffins, painted with hieroglyphical figures, perhaps four thousand years old; and it was curious to observe the profuse expenditure of materials to which I had been accustomed to attach ideas of value, from seeing them only in museums and collections of antiquities. I had accompanied Signor Piccinini with great glee, thinking what a fine thing it would be to tell my friends in England. What my notions of opening a mummy were I cannot define,—something, however, very classical and antique—certainly any thing but what it proved in reality. Half a dozen Arabs were standing around, panting under heat, dust, and fatigue. They had only just brought in their barthen, and were watching with eager look the examination of its contents, (their profits depending upon the value of the prize,) while the candles which they held to assist the search lighted up their anxious countenances. The outside case of the mummy was covered with hieroglyphics, and the inner one consisted of a figure as large as life, with the face and eyes painted like a mask. On lifting up this cover, nothing was seen but a mass of dark yellow cloth, which though it must have consisted of at least fifty folds, yielded like sand to the merciless hand of the operator, and the skeleton appeared to view. It was some time before I could recover from the horror with which the scene impressed me: I saw no more, but this little was sufficient to make me consider the employment as disgusting as that of a resurrection-man, and the manner of performing it not less unfeeling. It may be called the pursuit of science, but to me it appeared nothing more than rifling the dead for the sake of the trifling ornaments with which the corpse is generally buried. This, indeed, was the fact; for the moment it was ascertained that the mummy contained no ornament, the skeleton, together with the papyrus, on which were inscribed numerous distinct hieroglyphics, and the other materials, was cast forth as worthless rubbish. Sufficient papyrus and relics have been procured for the interests of science; and I think it would redound to the pasha's credit if he were to issue an edict, to clear his country from these mummy-scavengers. He had, indeed, ordered all the corpses to be reinterred; but, according to evident demonstration, this order was habitually disregarded. Scarabæi are scarce; a few were brought us by the Fellahs, while wandering about the ruins, though none of value. Ancient coins are procurable in abundance, but they were too numerous to prove curious, and they had certainly no beauty to attract us to be purchasers. Signor Piccinini had found on a mummy some bracelets, about an inch wide, of small coloured beads, which were remarkable, from resembling so much the fashion of the present day, yet, from the absence of all device, not nearly so pretty. The beads, which were of coral, cornelian, garnets, amethysts, and vitreous porcelain of a bright blue colour, were strung together, and separated at every inch by a gold wire, or link, to which they were attached, in order to keep the bracelets flat on the arm. The signior thought them very handsome; but they appeared to me of no value, except for their antiquity. During the many years he had resided at Thebes, he had only discovered one mummy likely to indemnify him for the labour of excavation. Passing through his miserable kitchen, the shelves of which were also made of ancient coffins, we entered a tomb, where lay the mummy in question, supposed to be that of a high priest. It was placed in a stone case, the lid of which

was removed, and enclosed in three coffins, each having a gilt mask at the upper end. The entire lid of the last coffin was also covered with gilding, in vivid preservation, and the body was wrapped in a garment curiously wrought with gold lace, and apparently of a tough texture. The whole figure seemed as fresh as if it had been prepared a few months before, but the envelopment remained unfolded. Signor Piccinini said he might obtain five hundred dollars for this mummy at Alexandria, but he considered it of such value, that he thought of taking it himself to Tuscany. Whether or not this appreciation was to excite the cupidity of purchasers, I pretend not to determine. The mountains in this neighbourhood, called Ghorroo, have for centuries been the cemeteries for the dead; and notwithstanding the havoc which during some years has been made amongst them, their contents appear inexhaustible. It would scarcely be an exaggeration to say, the mountains are merely roofs over the masses of mummies within them. The coffins serve as fire-wood to the whole neighbourhood: I saw nothing else burnt. At first I did not relish the idea of my dinner being dressed with this resurrection-wood, particularly as two or three of the coffin-lids, which, as I said before, were in the shape of human figures,—were usually to be seen standing upright against the tree under which the cook was performing his operations, staring with their large eyes as if in astonishment at the new world upon which they had opened. The coffins were usually made of sycamore wood, which may serve in some degree to account for the almost total extinction of that tree in Upper Egypt, that under which my tent was pitched being the only one in the neighbourhood. This extinction, perhaps, may also be explained by the increasing aridity of the soil. As numerous pits full of mummies have been discovered in the heart of the mountains, without coffins and merely embalmed, it may be inferred that these were the bodies of the poorer classes, who could not afford that expensive mode of interment."

Her remarks on Thebes, or rather on what was Thebes, are also very interesting.

"The soil of Egypt may truly be called luxuriant, and the surprising variety of the crops gave a pleasing novelty to our rides. Plains of the richest clover, in which the cattle revelled uncontrolled, besides fields of wheat, maize, beans of the sweetest scent, indigo, cotton, flax, (and I must not omit the blue lupine, which is here used as an article of food,) were to be seen extending in every direction. Still, amidst all this fruitfulness, I could not help remarking the loneliness of Thebes itself (if I may so denominate Carnac and Luxor), and how few animals and birds, pigeons alone excepted, broke the universal stillness. To my eye, accustomed to the swarming multitudes of Calcutta, the paucity of inhabitants here was very conspicuous. The absence, also, of all fishermen on the Nile was yet more remarkable. On the Ganges, hundreds of fishermen may be observed, and vessels are frequently obliged to alter their course, to avoid injuring the numerous nets; but at Thebes I never perceived any persons engaged in that employment; and the Nile flows silently and tranquilly along, undisturbed by a single boat. Meditating on this diversity, my imagination, rapidly passing over the occurrences of many weeks, transported me back to India, and forced upon me the contrast of Calcutta, the city of palaces, in the very pruriency of traffic and population, with the once magnificent Thebes, the city of a hundred gates,

devoid of inhabitants, without commerce, and lying waste, in all the desolation of ruined majesty."

At Cairo Mrs. L. visited many of "the lions," and her details respecting them are very entertaining; but we can afford room for but little more, and even that little must wait a week.

SIGHTS OF BOOKS.

Margaret Coryton. By Leigh Cliffe, Esq., Author of "Parga," &c. 3 vols. London, 1829. R. and S. A. Belfield; Paris, Galignani.

WERE it not that 1829 is legibly impressed on the title-page, we should have thought some chance had placed before us one of those novels in which our grandmothers delighted; when a little scandal and a little personality supplied the place of any thing like merit. It is a meagre imitation of a school long out of date—that whose model was Surr's *Winter in London*; and, moreover, we cannot but think what little story there is, very objectionable in a moral point of view. The names of the Prince (now our king), Sheridan, Mara, and other characters, are given plainly and without disguise; while disreputable anecdotes are told of them.

Leonora; or, the Presentation at Court: being the first of a Series of Tales called Young Ladies' Tales. By the Author of "Private Education," &c. 2 vols. London, 1829. Longman and Co.

As Miss Appleton, Mrs. Lachlan has been a very valuable contributor to the juvenile library; and the little volumes now before us are among those we can cordially recommend. The story is very amusing, and the principles it inculcates such as should be deeply impressed on the minds of every young person. We know of no writer *en or for* education practically superior to this lady.

We regret that a notice of Sir Rufane Donkin's volume, containing a very curious investigation and theory of the northern course of the Niger, must be deferred till next week. Meanwhile we can only warmly recommend the work to all who are interested in the solution of this great geographical problem.

ORIGINAL CORRESPONDENCE.

Paris, 17th May.

THE Tuilleries gardens are now in their full spring attire, and the *coquet d'ail* of their luxuriant verdure and blossom, almost remunerates visitors for the noise, bustle, and ennui of this dusty city. On entering these courtly grounds it might seem as if we were suddenly transported into some enchanted region, were it not for the chattering, whistling, coughing, sneezing, and antic tricks of those beings said to be "little lower than the angels." At half-past four o'clock, the *commencement* world arrive; what a rush of transcendents inundate the beaux walks at this hour—strutting, bowing, bending, sliding, and twirling their canes! also ladies' crape bennets, stiffened sleeves and flounces, are sacrificed without mercy to the flourishes of these—I suppose I must call them gentlemen. Those candidates for public admiration appear, however, to form a very just estimate of their intrinsic value; to exterior glitter they seem aware that they are alone indebted for the effect produced in *ecstasizing* ladies; consequently gold chains, rings, brooches, and waistcoat-buttons of precious stones, are essential to their sweep; so that the dandies of high ton resemble so many pedlars, who sport their trinkets on their own persons.

Mr. Scribe has fallen into great disgrace with papas, mammas, guardians, uncles, and all wise people, since the representation of his "Suite," to the *mariage de raison*. But, *en revanche*, sentimental demoiselles have restored him to their good graces, and forgiven his former desertion of Cupid's cause.

A poet of some fame has announced his intention of publishing a dictionary of crime and virtue. This will be a really charitable work, for our poor consciences know not where to cast anchor in the present confusion of morals. It would be easier to decide on the colour of the chameleon, than to define what is *vice*—so varied are the opinions on this question: and (as one person is gibbeted for that for which another is honoured) it will be truly delightful to possess a little pocket manual to look into as temptation presents itself.

ARTS AND SCIENCES.

ROYAL INSTITUTION.

MAY 15.—This evening a practical discourse upon "Xylography," or engraving on wood, was delivered by Mr. Mason.

The discourse was divided into a variety of heads; viz. tools, wood, drawings, mode of engraving, white and black surfaces, tinting, ancient and present manner of holding the block, proofs, &c. &c. Of woods, the earlier artists used the apple, pear, beech, now only used by calico printers. As the arts improved, these soft woods were abandoned, and the box-tree of Turkey, brought to England, in blocks of two feet long, as ballast, on account of its superior texture and compactness, was adopted, and is now in general use amongst wood engravers. Mr. Mason next pointed out the great advantage the copper engraver possessed over the engraver on wood, as regarded his drawings; the former being enabled to present progressive proofs of his works, retaining his original drawing as a guide, unimpaired, till his work is completed; while, on the contrary, so fast as the workmanship of the wood engraver proceeded, so fast and as surely was his original cleared away. The tools also of the wood engraver were far more numerous than those of the engraver on copper, the former requiring eighteen, the latter only three! We pass over the merely mechanical parts of the art, which were practically illustrated by Mr. Mason before the audience. The mode of obtaining proofs of wood engravings, however, is simple, and a trial may be amusing. We describe the process:—A small ball covered with silk, by repeated "dabbings," is made to take up a certain quantity of fine ink, previously spread on a polished surface of marble, &c.; the ink is transferred to the block by continued beating, till the raised parts are covered; a piece of Chinese paper is then laid over the inked surface; over this again is placed a bit of hot-presser's board, which is carefully rubbed over with a steel burnisher, or skewer; the pressure being regulated as required by the various parts. Mr. Mason illustrated his subject by a vast variety (almost to the confusing of himself) of rare and very old specimens of wood engravings, obtained from the libraries of his Royal Highness the Duke of Sussex, Earl Spencer, Mr. Otley, the East India Company, and various others.

In the library of the Institution were a few beautiful specimens of crystals and vegetable alkali, together with works of literature and art.

COLLEGE OF PHYSICIANS.

ON Monday evening we attended another meeting at the Hall of the College; Sir Henry Hallford, Bart. presided. The first paper read was written by Dr. Turner; it was on what is called *metastasis* of diseases, illustrated by the transition of asthma into mania. Amongst the many cases related, the author mentioned one which had occurred in the practice of Sir Henry Hallford and the late Dr. Bailey. These two eminent physicians had attended a lady in the year 1802, during the prevalence of the epidemic influenza, who laboured under severe asthma, which suddenly ceased, and was followed by an attack of derangement; this latter continued for some weeks, when it gave way to a return of the old complaint of difficulty of breathing.

Previous to the second paper being read, the President informed the assembly, that he had hoped to be able to lay before the meeting the report of the late fever at Gibraltar; but that government had not yet received it: Sir George Murray, however, had promised that as soon as it arrived it should be sent to the College.

The second paper read was entitled "Suggestions for preventing the spread of contagion at Gibraltar," by Mr. Jeffery, whose plans for making the new approaches to London Bridge, we believe, have been adopted by the government. It appears that the drains of Gibraltar, for want of a more adequate supply of water, are not sufficiently active to clear the town: to remedy his defect, the author proposes that a steam-engine of ten-horse power should be erected at Europa Point, by which the sea-water might be raised into a reservoir, whence it should be conveyed by pipes into the houses. New drains should also be made, and a portion of the fluid conveyed through the streets as surface-water. He further states, that the heat on the western side of the rock, where the town is situated, is so oppressive as to be scarcely tolerable; and that the guns on the batteries remain sensibly hot till three or four o'clock in the morning. Besides suggesting a plan for procuring water to an unlimited extent, Mr. Jeffery proposes that fresh air should be obtained by one or more galleries being cut in the rock, from east to west, so as to cause a proper ventilation, and thus convey to the parched inhabitants a refreshing breeze.

On the table lay a curious cast of the celebrated John Wilkes, taken immediately after his death.

MEDICO-BOTANICAL SOCIETY.

MAY 12th.—The president, the Right Hon. Earl Stanhope, in the chair.—Letters were read from their Royal Highnesses the Archduke Rudolf of Austria (Archbishop of Olmutz), and the Grand Duke of Mecklenburg Strelitz, desiring their admission to the Society as honorary members. A splendid collection of dried plants indigenous to the Kingdom of Wirtemberg's dominions, presented by his majesty the King of Wirtemberg; a collection of nearly 400 packages of seeds of the medicinal plants of the Brazil, presented by Lord Viscount Strangford; and the eleventh volume of the Transactions of the Horticultural Society of Berlin; and several other valuable donations, were enumerated by the assistant secretary.—Sir F. Baker and Mr. W. Marsden were elected Fellows.

Mr. Barbour, the American minister, stated, that he had written to the steward of his estates in N. America, for a plant used by his tenants as a general nostrum in the cure of diseases. Mr. Barbour assured the Society, that he would take every opportunity of being the organ of

communication between it and the learned men of his country, and thereby promote a science which his usual avocations had not permitted him to study with that attention which such pursuits demanded.

Dr. Sigmond delivered some very interesting observations on the science of toxicology.

LONDON PHRENOLOGICAL SOCIETY.

MAY 4th. Edward Wright, M.D., V.P., in the chair.—Dr. Epps called the attention of the Society to a pamphlet,* read before the Royal Medical Society of Edinburgh, by their President, Thomas Stone, Esq., entitled, "Observations on the Phrenological Development of Burke, Hare, and other atrocious Murderers." The doctor pointed out numerous errors into which, he alleged, the author had fallen, from his ignorance of the subject; and maintained that he had not adduced a single fact in opposition to the science of phrenology. Mons. P. H. T. Baume, an eccentric Frenchman, who styles himself the *Reforming Opticist*, presented a cast of his own head. An original mask of Mr. John Wilkes was presented by Mr. Behnes.

INSTITUTION OF CIVIL ENGINEERS.

APRIL 28th.—Mr. Jopling presented a specimen of brick, of a handsome stone colour, and possessing the requisite qualities of hardness, weight, and sound texture; with a letter from Sir Claude Scott, descriptive of the strata in which this excellent material has been discovered. Mr. James Walker enumerated several valuable facts, obtained in a course of experiments on stone rail-ways. The granite wheel-track, when well constructed and free from dust, is found to possess advantages similar to those of iron edge-rails; the superior hardness of the latter being compensated by the *vis inertiae* of material, and the increased diameter of wheels in the former. Mr. Frost described the results to his researches on the comparative resistance to abrasion, exhibited by various minerals: this quality is possessed by flint† in a degree superior to that of granite or rock-crystal.

May 5th.—Mr. Walker's interesting paper was the subject of an animated discussion. Mr. Mills compared the calculations advanced on stone rail-ways with his observations during a late survey of the Liverpool edge-rail road, and contended that the expense of constant repair must eventually decide the comparison in favour of iron. Mr. Jardin mentioned various trials of wheel-tracks, both of iron and stone, on public roads. Iron plates, diagonally grooved, he considered preferable, in some instances, as the stone-tracks had not lasted three years. Mr. Walker mentioned the prices of the materials on the Commercial Road; to which he has lately devoted considerable attention; and, in conclusion, adduced numerous instances of the durability of good paving-stone.

Dr. Pearson, an honorary member, on his introduction to the Institution, presented his new treatise on Astronomy.

FERNANDO PO.

THE latest arrival from this new settlement in the *Bight of Biafra*, on the western coast of

Africa, informs us that a great number of mechanics had lately arrived, with other settlers, from Sierra Leone, together with a quantity of building materials. A number of the Native Regiment had also arrived, and were garrisoned on the outskirts of the town, where their services had already proved a valuable acquisition to the labourers employed in building and clearing away the trees and vegetation, in shielding them from the annoyance of innumerable bodies of natives. The king had not yet returned from the mountain, whither he had gone and had secreted himself, with a Spaniard and a number of his subjects, soon after the landing of Captain Owen. The natives were providing themselves with spears and other warlike implements, by means of bartering their fine growth of yams for pieces of iron hoops.—They are a treacherous set, and are most likely only waiting for an opportunity to make a bold incursion. Much praise appears to be due to that indefatigable officer, Captain Owen, governor and commander on the first and favourable formation of this settlement, for his endeavour to establish civilisation and the most friendly disposition among the natives and the new settlers; for his strict attention to the welfare of those under his command, and for the generous feeling of humanity evinced in the capture of so many slave-vessels, the cargoes of which have been sent to Sierra Leone for adjudication, after which they are received at the new settlement, and kindly treated. The Europeans were greatly annoyed by the sting of a species of fly which infested the island; and several, through sickness, had been invalided home. The seamen were not allowed to land without a sufficient clothing, and the Arab fashion had again been introduced (as upon Captain Owen's late survey of Africa), and the beard and mustachio had already grown to an enormous length, which, when washed, tends greatly to refresh and keep cool the *upper story* for the remainder of the day. It is generally thought that this settlement will not answer present expectation, especially while the Portuguese government have so extensive a slave-factory (in St. Paul de Leondo) a few degrees southward. However, we have reason to believe that a fuller explanation will shortly be published of this interesting part of Africa, by one of the officers belonging to the squadron, together with other interesting parts of the eastern and of the western coast of Africa, from the Persian Gulf to the River Gambia, collected during the late nautical survey, and now nearly brought to a close.

NEW PROJECT.

AMONG the plans consequent upon the Strand improvements, we have before us that of a Society for erecting and maintaining a considerable building in the metropolis, for the meetings of Religious, Charitable, and Scientific Institutions. At the head of this is Sir T. Baring, and we remark the names of many influential noblemen and gentlemen in the list of thirty vice-presidents and directors. The site obtained is in the Strand, between Burleigh Street (at the end of Exeter 'Change) and a new street which is to run towards the north, on the city side of Southampton Street; so that the Institution will have all the advantages of a central and convenient position. On looking at the plan, we observe that the entrance to the hall is by a grand staircase, between two houses which front the Strand; for the building itself is behind these, with an open area to divide them. The frontage appears to be about 110

feet. The ground floor occupied by offices, committee rooms, a secondary room for smaller meetings (58 feet by 31 feet 6 inches), and a coffee-room (46 by 26). Above, if we understand the plan correctly, is the principal room for numerous assemblages (136 by 76), and other apartments.

Approving very highly as we do of this design, and considering it likely to be very useful to the multitude of societies which exist without a local habitation in our immense metropolis, we rejoice to learn that no fewer than fourteen religious institutions are already connected with it, and that the fifty pounds shares are going off rapidly.

THE INFLUENCE OF CLIMATE ON NATIONAL CHARACTER.

[An oration pronounced by Professor Schouw, at the solemn opening of the Winter Session, 1828-29, of the University of Copenhagen.]

IN order to eradicate the common error, which induces us to consider nature as the almost exclusive modeller of the character of nations, it is of paramount importance we should carefully keep in view, that even in the physical world, however obvious an influence they may produce, the climate, soil, and natural constitution of a country, are by no means capable of explaining all the appearances which will claim the inquirer's attention. This observation applies with peculiar force to the distribution of the various families of the vegetable and animal kingdoms over the surface of the earth. It is impossible to explain on such a datum, why England and Van Diemen's Land, though similarly circumstanced as to climate, should differ so widely in respect of their animal and vegetable productions; or why the Flora of southern Africa should possess so distinct a character from that of the northern parts of the African continent, or the flowers of New Holland be so essentially peculiar to its own soil. Much less will climate or soil enable us to account for the corporeal distinctions which characterise the several races or families of mankind. We know it is customary to ascribe the dark complexion of the negro to the extraordinary heat of the solar ray in his native clime; but do not the olive-coloured Hindoo and the fairer-complexioned tenant of the isles of the South Seas inhabit similar latitudes? or does the negro's skin become less sable when exposed to the less scorching skies of Jamaica or the Floridas? Though surrounded by the same meteorological circumstances, there is a striking dissimilarity in the complexional characteristics of the European, the Asiatic, and the aboriginal Indian of North America: the natives of Greenland and Lapland possess a darker skin than their European brethren, and the inhabitant of Van Diemen's Land, though living beneath a temperate sky, is of a complexion not far removed from black. We shall find ourselves at a similar loss in the attempt to deduce other variations from the customary premises to which I have alluded: the woolly locks of the negro, the lofty stature of the Patagonian, the slender frame of the Papu, or the little twinkling eye of the Chinese, can in nowise be charged to the account of the climate, or referred to the nature of the soil. If we follow up the influence of physical causes on isolated individuals, we shall find ourselves equally sinning against every rational assumption, should we venture to deduce the mental attributes of any one human race from such causes. In the same country, in the same spot, nay, under the same roof, we meet with individuals entirely differing from each other in their intellectual features; but it would be

* We have this pamphlet before us, and entertain an opinion of it widely different from Dr. Epps: but as we intend to make it and another clever satirical publication (*Travels in Phrenology*, 8vo. Saunders and Otley), the subject of a separate paper on Phrenology, we shall not at present say more.—Ed. L. G.

† The roads around London are testimonials that mere friction without momentum is implied.

ridiculous to ascribe the dissimilitude to the effects of climate, food, or beverage. Intellect does not resemble the anana; it can neither be nurtured nor called into existence by artificial heat.

In looking at the characteristics of nations, it is impossible not to observe the marked shades of diversity which sever one people from another, even where the climate is precisely similar, or not essentially different. The Europeans cultivate the soil, dwell in towns, live under regular forms of government, and, in general, are devoted to the arts and sciences; whereas most of the Asiatic regions, where the circumstances of climate are similar, are tenanted by nomadic tribes, who derive their livelihood from rearing cattle, are entire strangers to social polity, and have no conception of a more advanced state of civilisation; whilst the aborigines of North America are untutored savages, wandering from spot to spot, from wood to plain. The feeble, peaceable, thrifty Hindoo lives beneath a climate scarcely differing from that which is breathed by the athletic, fierce, and lazy negro, or the miserable indigenes of South America, whose wild exterior and uncouth gestures excite both pity and aversion. The Chinese are, in every respect, strikingly dissimilar from any other nation surrounded by the same natural circumstances; and the proud and ingenious Briton possesses few characteristics in common with the poor, timid inhabitant of Van Diemen's Land. We find the most discordant masses intermixed and living together under the same sky; in the innermost parts of Africa the Arabian dwelling with the negro, and far surpassing the latter in every mental endowment; in its southern districts, the Caffre hording with the Hottentot, with whom he has no earthly similitude; and towards the northernmost confines of Scandinavia, the Laplander hutting with the Swede and Norwegian.

If we weigh the effect of physical circumstances, to which is usually attributed the formation of national character, it will be found to depend neither necessarily nor demonstrably upon the influences ascribed to them: on the contrary, we shall frequently find the closest affinity of character existing where those circumstances wear the most widely diverse of aspects. A clear atmosphere is held to foster gentleness of manners, and give vitality to art and science; and Greece and Italy are cited in proof of the justness of this inference. The surface of the globe, however, will shew us many a country where the atmosphere is more rarefied than in those regions; and such are the islands of the South Seas, or the elevated plains of Peru, Quito, or Mexico: yet in these, where shall we discover the manners and intellectual energy of the olden Greeks? Whilst under the dense and humid sky of England, man has reached a state of intellectual advancement to which few other nations have attained. Again; large rivers are esteemed conducive to the interchange of social relations, and, consequently, to human civilisation; and the proofs of this argument are drawn from the Nile and the Indus. Now, the largest streams which exist are those of South America, along whose banks the uncivilised Indian toils for a bare and miserable existence; whilst the Dane, who is scarcely inferior to the most intelligent of his contemporaries, treads a soil unfertilised by a single stream. The Mediterranean is brought forward to exhibit the propitious influence attending large masses of water encompassed by land; yet where shall we discover the minutest traces

of civilisation along the capacious lakes of North America, around the Caspian, or among the numberless thickly-studded isles of the Indian seas? The coasts of the Cattegat, where social intercourse is impeded by storms, and sand-banks, and floating fields of ice, are ennobled by those civil institutions and mental energies, which will be sought after in vain among the islands of that ocean, on which the name of "the Pacific" has been appropriately bestowed.

The slender influence derivable from climate will become still more apparent, when it is recollected, that nations which have abandoned their native soil, and sought a home under stranger skies, have undergone no change whatever in their character. Among the colonists who have settled in the interior of the colony at the Cape of Good Hope, there is no difficulty in recognising the Dutchman; yet his dwelling stands upon an elevated plain, which is celebrated for the dryness of its soil and atmosphere, whilst his ancestors toiled in a land, damp as it was flat and low, and enveloped in a dense atmosphere of fog. In India we shall find as little difficulty in detecting the Englishman, as the Spaniard in South America, or the descendant of the Gaul and Briton in the Canadas or United States; whilst the Jews, dispersed over the face of every nation, and scattered beneath every various sky, afford an interesting proof, that the peculiar characteristics of an individual race may be faithfully retained under the most striking dissimilarities of physical circumstances.

The lapse of time will be frequently marked by a deterioration in the national character, though soil and climate remain unchanged. In vain should we seek to discover, among the Greeks of the present day, those traits of character and expressions of intellectual greatness which distinguished their forefathers in the hour of their noblest splendour; and yet the Grecian sky is not less translucent, nor its atmosphere less kindly, than they were in former ages; and if ever this unfortunate race should succeed in raising themselves from their present low estate, one circumstance, at least, is placed beyond a doubt,—they will not owe their elevation to any revolution of their climate. The Scandinavian sky has undergone little or no alteration, yet the Scandinavian himself has risen from the depths of barbarism to a state of civilised prosperity.

Let it not be imagined that we are inclined altogether to deny the influence of climate, and other physical causes. There are regions where these operate with so sinister an effect, that the inhabitants, though incessantly contending against them, are incapacitated from attaining any eminent degree of mental refinement: and such must be the event, where the climate is overcharged with cold or heat, or where the atmosphere is loaded with unwholesome vapours. The Icelanders afford, however, a signal instance of the extent to which the inward powers of man are capable of overcoming such obstacles as these.

The effects of what are termed "moral causes" on national character are beyond the limits of the present discourse: yet we cannot refrain from observing, that in this particular, also, too great a stress has been laid upon isolated appearances. One party will profess to resolve such effects into the influence of legislation and political institutions; another will refer them to that of education; and a third, to the impulses of religion. All these causes are undoubtedly co-operative; nay, they are far more influential than any physical im-

pulses; yet are they of trivial moment, when placed by the side of those powerful agents which exist in the innate qualities of the human mind: for what are called "moral causes" are usually the immediate results of national character; and on this principle, despotism is the consequence of popular depravity and avarice.

Under every view of the subject, we are warranted, therefore, in assuming, that God has endued every nation, as well as every single individual, with a peculiar character, the expansion of which is favoured or retarded by external circumstances, though it can never become the subject of direct and unerring calculation.

LITERARY AND LEARNED. ROYAL SOCIETY.

APRIL 30th.—A paper was read, entitled "On the respiration of birds," by Messrs. W. Allen and W. Hasledine Pepys, F.R.S.

The inquiries of the authors on human respiration, and on that of the Guinea pig, and of which they communicated the details to the Royal Society in former papers, are here extended to the respiration of birds. Pigeons were the subjects of these experiments, and the same apparatus was employed as the one used for the Guinea pig, described in the *Philosophical Transactions* for 1809.

The object of the first experiment was to ascertain the changes which take place in atmospheric air when breathed by a bird in the most natural manner. For this purpose a pigeon was placed in a glass vessel, containing about 62 cubic inches of air, and communicating with two gasometers, one of which supplied from time to time fresh quantities of air, and the other received portions which become vitiated by respiration. The experiment lasted 60 minutes, and was productive of no injury to the bird except a slight appearance of uneasiness whenever the supply of air was not sufficiently rapid. On examining the air at the end of the experiment, no alteration had taken place either in the total volume of air or the proportion of azote which it contained; the only perceptible change being the substitution of a certain quantity of carbonic acid for an equal volume of oxygen gas, amounting to about half a cubic inch per minute, and being equivalent to the addition of 96 grains of carbon in twenty-four hours.

Two experiments were made on the respiration of oxygen gas, obtained from chlorate of potash, and containing in the one case two, and in the other only one, per cent of azote. Under these circumstances, it was found that the volume of the gas was unaltered, and that a similar quantity of oxygen gas had been abstracted, but that a much smaller quantity of carbonic acid had been formed than in the last experiment, the remaining portion being made up by azotic gas which had been given out from the lungs of the bird, and the volume of which was just equal to that of the oxygen absorbed. The bird was somewhat disturbed during the experiment, but recovered immediately and perfectly on being released from its confinement.

In the fourth experiment, in which a pigeon was made to respire a mixture of oxygen and hydrogen with a small proportion of azote (the oxygen being in the same proportion as in common air), it was found that there was no loss of oxygen; but that a quantity of hydrogen disappeared, and was replaced by an equal volume of azote. The authors observe, that birds have a quicker circulation of blood than

other animals; and also, that they are more sensible to the stimulating effects of oxygen.

April 21. The President in the chair.—A paper was read, entitled "on the action of grooved surfaces on light;" by Dr. Brewster, LL.D., F.R.S., &c. The Rev. James Farquharson and George Douglas, Esq., were proposed as Fellows. The presents consisted chiefly of Professor Plana's *Observations* made at the Royal Observatory at Turin, together with several other mathematical treatises by the same author, and Dr. John Johnstone's *Medical Essays*.

ROYAL SOCIETY OF LITERATURE.

In a late No. we promised an outline of Dr. Nolan's able paper on the use of ancient cycles; and we only regret that it must, of necessity, be so short and imperfect.

The writer begins the introductory part of his memoir by stating that the ancient cycles all refer to a common principle, founded on periodical revolutions, by which all nations that have left historical records have marked the progress of time; by proving the antiquity, and tracing the connexion of the cycles, with reference to which principle, the main differences of chronologists may be adjusted.

An objection against the antiquity of the cycles, by the learned Dedwell, from the supposed necessity of a previous knowledge of astronomy among those nations by whom they were made use of, is answered by shewing that the knowledge of the heavenly bodies required to fix those periods was no more than ordinary observers might acquire. The cycles are coeval with the earliest celebrations of the religion of the classical notions of antiquity; the calculation of them depended rather upon their superstitions than their science. Those divisions of time which were adopted in civil affairs were derived from the national worship, and were regulated by the hierarchy. In contravention of some objections of Allin and Des Vignolles, it is shewn that the ancients, besides the public or civil year, had one which was secret or ecclesiastical; and that while the former contained only 360 days, the latter agreed in length with the Julian or bissextile. It is this secret year of the ancients, or our Julian year, which is taken as the standard of time in the present memoir.

Our first inquiries are directed to those times which form the earliest subject of historical record, beginning with the patriarchal ages.

The epoch determined by the authority of an ancient tradition, for the commencement of the earliest cycles, is A.M. 271; which, reduced to the Julian period, presents, as a corresponding elementary date, the year 981. But the period thus obtained, though preserved by a Greek tradition, when it is reduced to the chronological system of the writers of that nation, relinquishes its elementary characters. It possesses inherently superior advantages to the arbitrary epoch devised by the Talmudists, corresponding with 963 of the Julian period; while the epoch of the Samaritan chronology, whose scriptural dates have caused one of the great schisms in the science, is altogether destitute of those qualities which are required to form an elementary date.

In proceeding to apply the ancient cycles to the practical purposes of chronology, we are first directed to the *semitah*, or sabbatical cycles. That this period was observed in the patriarchal ages, is a supposition which alone furnishes a solution to several anomalies in the Jewish mode of reckoning time; and in par-

ticular the fact is traced in the uniform choice of the return of a sabbatical year for the periods of the highest solemnities of religion, such as the erection and dedication of altars. Having illustrated this circumstance by three tables, each containing six examples of the most remarkable incidents in patriarchal history, arranged according to the systems of the most celebrated chronologists, and having gone into a variety of further details in this division of his subject, the writer concludes, that in the portion of chronology which embraces the patriarchal times, the evidence of an early cycle in the sabbatical period is fully established; and that it forms an adequate instrument for deciding the points contested by chronologists. The great planetary year, from which the preceding inquiries are deduced, affords likewise the best introduction to the chronology of the Chaldees. That system is founded on a grand planetary cycle, including a period when the great conjunctions of the planets returned, associated in Chaldaic tradition with a time when the frame of the universe had suffered a violent derangement, and with an early prediction which foretold its destruction, as the effect of a similar planetary conjunction, introductory to a great restitution of nature. This great cycle is stated by Berosus to consist of 120 *sori* (an ambiguous and disputed term, shewn to have been twelve years); it therefore included 1440 years.

This calculation agrees with the explanation of Scaliger, who considers the great year of the Chaldees as the product of the genethliacal period of twelve years; and the *seculum*, or age of 120 years, given on the authority of Moses, as the time from which the epoch of the Chaldeans is deduced. Hence their great year becomes identified with the "*magnus seculorum ordo*" of the sibyl in Virgil's fourth eclogue, where the poet evidently is referring to oriental notions, and where each *seculum* is considered as a great month: now twelve months of 120 years are equivalent to 1440 years.

The writer then proceeds to the consideration of the proper epochs of the Assyrian chronology, in the period subsequent to the Deluge. Having exhibited these in a comparative table, expressing the dates which are assigned them in the schemes of the three great chronologists in whose works his principles are verified, he applies the test by which the respective merits of their systems may be determined; and the process ends in establishing the superiority of the scheme adopted by Scaliger. As the earliest epochs in the Assyrian chronology were determined on arbitrary and theoretical principles, and as the later epochs which mark the great revolutions in the history of that ancient people were effected through astrological phenomena,—the connexion became established between the system of their chronology and the scientific principle which the writer suggests for adjusting its contradictions. From the precise concurrence of those epochs in the system of that great chronologist who was the founder of the science, with the returns of the earliest cycles, particularly of the sabbatical period used by the Hebrews, and of the genethliacal period employed by the Chaldees, the writer deduces a conclusion in favour of the system of Assyrian chronology proposed by Scaliger, as contrasted with that suggested by Usher or Des Vignolles, and his followers the Benedictines.

ROYAL ASIATIC SOCIETY.

MAY 16th.—Sir George Staunton, Bart. vice-president, in the chair. Monsieur Théologue, a foreign member of the Society, read a paper, in French, on the Mewlewis, or dancing dervishes of the East. The communication comprises many very curious details of the peculiarities belonging to this singular sect of men; they are Mahomedans, but when in the company of Christians do not scruple to eat and drink meats and liquors forbidden by the Koran,—particularly wine, of which they are fond in their praises. The Lord Bishop of Calcutta, Colonel D. Broughton, and A. Leslie, Esq., were elected members; Colonel Vans Kennedy was proposed, and being a member of the Bombay branch of the Society, was immediately ballotted for, and elected a non-resident member. A splendid list of donations was read; it embraced a MS. copy of the Russian translation of Vachtang's Collection of Georgian Laws; and a Russian translation of the Chinese Code of Laws for Mongolia, presented by the imperial government, department of foreign affairs, through his Excellency the Prince de Lieven; also Dr. Buckland's Account of the Fossil Remains brought from Ava by Mr. Crawford; and others from Professor Newmann, Baron Schilling, Dr. Mall, Lieut. Alexander, &c. &c.

The chairman intimated that the anniversary of the Oriental Translation Fund would take place on the 30th instant, and that his Royal Highness the Duke of Sussex would preside.

KING'S COLLEGE.

WE have been accustomed anxiously to watch the progress of education in this country, as well as amongst our continental neighbours; and we have seen, with deep regret, that the struggle to accomplish mere intellectual proficiency has been gradually abstracting men's minds and attention from the accomplishment of that higher, nobler, and, in every sense, more indispensable task—the cultivation of the heart. In a Christian, and, above all, in a Protestant country like ours, we therefore hail with grateful cordiality every attempt to restore to education that legitimate character by which alone it is possible to render individual integrity the means and corner-stone of national happiness. Out of this feeling has arisen our frequent advocacy of the present Institution; and out of this feeling springs the gratification with which we briefly record the result of the general meeting of its founders, held at the Freemasons' Tavern on Saturday last, the 16th inst.

We shall first observe, that if the stamp of example were requisite to recommend the cause of the College to the support of our fellow-countrymen, the following nomenclature of a few of the good and great who took part in this meeting would be sufficient to establish its claims to their munificence. The Archbishop of Canterbury presided over its proceedings as visitor; and was supported by the Archbishop of York, the Bishops of London, Durham, Winchester, Chester, Salisbury, Bath and Wells, Lichfield, Bristol, Landaff, &c.; the Marquesses of Bute and Camden; the Earls of Abingdon, Dartmouth, and Brownlow; the Lords Seley, Rolle, and Bexley; Archdeacons Cambridge and Pott; the Dean of Peterborough; Sirs C. Price, R. H. Inglis, M.P., T. D. Acland, M.P., H. Martin, C. Forbes, M.P., and W. Blizard; Hon. H. Eden, M.P., J. Capel, M.P., T. G. Eatcourt, M.P.; the Rev. Dr. D'Oyly, Dr. G. Shep-

herd, Dr. Yates; Messrs. Joshua Watson, W. Cotton, W. Sotheby, B. C. Brodie, J. D. Powles, John Atkins, M.P., Rev. J. Lonsdale, J. H. Markland, &c.

The business of the day was opened by the reading of a summary of the proceedings of the provisional committee. As the contents of this report are fully before the public, we shall confine ourselves to an enumeration of the subjects to which it referred. The first of these was the amount of the funds contributed, 126,974l. 3s. 6d.; 2. The grant, from his Majesty's government, of ground on the eastern side of Somerset House; 3d. The preparation, by Mr. Smirke (the architect), of the ground plans,—which include a chapel and public hall, library and museum, ten lecture-rooms, house for the principal, apartments for the professors, &c.; 4th. Institution of two departments for senior and junior students; 5th. Residence of students in the houses of tutors, and subject to a prescribed course of discipline; 6th. Grant of a charter of incorporation to the College, "as a seminary of sound learning and religious education, according to the doctrines of the united Church of England and Ireland;" 7th. Outline of regulations; 8th. Approximative estimate of outlay to complete the College to its fullest extent, 170,000l. independently of books, apparatus, &c.; but until the raising of an amount adequate to accomplish the whole design, the expenditure will be limited to the actual means at command; and, 9th. An appeal to the public, which the committee close in terms expressive of their firm persuasion, "that the friends of a sound education, on the principles of the Church of England, will continue their most zealous exertions in promoting a work which will secure to the rising generation in this metropolis and its vicinity the benefits of an *economical, a scientific, and a religious* course of instruction."

It is impossible for us, consistently with our limits, to attempt even a sketch of the eloquent and argumentative addresses with which the Bishops of Durham, Lincoln, and London, supported resolutions approving the proceedings of the committee, and recommending the Institution to the continued exertions and liberality of its friends. The Marquess Camden, Lord Bexley, and Sir R. H. Inglis, made similar appeals to a very numerous audience, amongst whom one general feeling of satisfaction was openly and repeatedly manifested.

Several additional donations and subscriptions were made at the close of the meeting.

PSEUDOMENOS.

To the Editor, &c.

SIR,—Having, in your *Gazette* of the 7th February, published a solution of the Grecian Dilemma, I shall endeavour, in this second letter, to solve a difficulty not less known—namely, *Pseudomenos*. Various authors have, more or less clearly, described this celebrated puzzle; but as the account given by Beattie in his *Essay on Truth* is both clear and concise, I shall here be quoted.

"There was a famous problem among the Stoics, called the *Pseudomenos*, which was to this purpose: 'When a man says, "I lie," does he lie, or does he not? If he lies, he speaks truth; if he speaks truth, he lies.' Many were the books that their philosophers wrote in order to solve this problem. Chrysippus favoured the world with no fewer than six; and Philotas studied himself to death in his attempts to solve it."

Beattie leaves *Pseudomenos* exactly as he found it, not even attempting a solution. Nor am I aware that a solution has been given by any other author.

Pseudomenos, it is clear, involves a contradiction; making the proposition, "I lie," both false and true. The knot of the question hinges on this—that the proposition "I lie" contains two declarations—i. e. the declaration described as well as the declaration describing; which declarations destroy each other. "I lie": if the declaration described is false, the declaration describing is true; if the declaration described is true, the declaration describing is false. The knot of the question, I repeat,

hinges on this—that these two contradictory declarations are contained in the proposition "I lie," which proposition is therefore contradictory. Now, the difficulty will be solved, if it be shown that these two declarations cannot be contained in one proposition, but necessarily imply two propositions—i. e. an anterior and a posterior:—that in saying "I lie," the speaker must describe a former proposition of his—that two propositions are concerned necessarily, a past and a present; the declaration described being the proposition past, and the declaration describing, i. e. "I lie," being the proposition present.

As there are two propositions standing to each other in the relation of correlatives, we shall perhaps throw light on the subject by stating them in juxtaposition. 1. "I lie—i. e. I speak falsely, i. e. I make a false proposition." 2. "I speak truth—i. e. I speak truly, i. e. I make a true proposition." The first serves to form *Pseudomenos*, by appearing to involve a contradiction; the second can serve no such purpose, involving no contradiction even in appearance. "I speak falsely;" if one speaks falsely, one speaks truly; if one speaks truly, one speaks falsely; "I speak truly;" if one speaks truly, one speaks truly; if one speaks falsely, one speaks falsely. Both propositions, however, equally suppose a prior proposition, which they describe. In the second case, as in the first, two propositions are concerned necessarily, a past and a present; the declaration described being the proposition past, and the declaration describing, i. e. "I speak truth," being the proposition present.

The argument proving that each of the two correlative propositions supposes a prior proposition, is this:—if a prior proposition be not supposed, a proposition exists ere it exists—which is absurd. "I lie—i. e. I speak falsely, i. e. I make a false proposition." I here describe a proposition of mine as false. "I speak truth—i. e. I speak truly, i. e. I make a true proposition." I here describe a proposition of mine as true. If the proposition described be the same as the proposition describing, it existed ere it existed; for it existed ere it was described, and yet it existed not till it was described. 1. It existed ere it was described. A nothing, a nonentity, cannot be described. If you describe, you describe a something; and a something implies existence. You make a description about something—and yet this something did not exist till the description was made!—that cannot be. If the something described did not exist till the description was made, about what was the description? about nothing! The object of a description must be antecedent to the description. 2. It existed not till it was described. It existed not till the proposition describing, i. e. the description, existed; and the proposition describing, i. e. the description, did not exist till it did exist. Thus, as the proposition described, its existence has prior to its description; while as the proposition describing, its existence was coeval with its description. This being absurd, it follows that the proposition described cannot be the same as the proposition describing, but is necessarily a prior proposition. A proposition cannot describe itself. If it could, its existence would be both prior to, and coeval with, its description: prior to, as the proposition described; coeval with, as the proposition describing; And if a proposition cannot describe itself, if must describe another proposition. Thus, each of the two correlative propositions supposes a prior proposition.

Two things may be here briefly noticed: 1. *Pseudomenos* is not confined to the words "I lie;" other words producing a similar result. For instance: instead of the proposition "I lie," let us take the proposition "I speak ill;" and we shall have the same contradictory appearance. When a man says—"I speak ill," does he speak ill, or does he not? If true speaks ill, he speaks well; if he speaks well, he speaks ill. 2. We should perhaps see the nature of *Pseudomenos* more clearly, by considering judgments instead of propositions; judgments implying ideas only, and propositions implying ideas and words. When a man forms the judgment expressed by this proposition—"I think incorrectly," does he think incorrectly, or does he not? If he thinks incorrectly, he thinks correctly; if he thinks correctly, he thinks incorrectly. The solution given in the case of propositions is equally good in the case of judgments.

Having thus given my solution of *Pseudomenos*, I will thank you to publish it in your *Gazette*. I am, sir, &c.
13, New End, Hampstead, JOHN ROGERS.
Feb. 14, 1859.

FINE ARTS.

EXHIBITION OF THE ROYAL ACADEMY.

(Third Notice.)

No. 166. *The Morning after a Storm*. W. Collins, R.A.—Who that looks upon this picture of separating clouds, and upon the wide expanse of ocean over which they are closely hovering, but must be conscious that the demon of destruction has been making clear work of it? The telescope, elevated to the eye of the experienced mariner, "gives no sign;" and the straining gaze of the sad and anxious female at his side in vain seeks for some faint indications on which to found hope. It is cheering to pass from this scene of gloom and apprehension, to the exquisite little groups of peaceful innocence and happiness executed

by Mr. Collins, in the finest style of his true and skilful pencil.—No. 103, *Scene in a Kentish Hop-Garden*, and No. 116, *Fisher Children*.

No. 134. *Sir Roger de Coverley and the Gipsies*. C. R. Leslie, R.A.—Gipsies and a green lane are of themselves sufficient materials for a painter; but when the well-remembered and favourite character of Addison is added to the pictorial drama, it would have been strange if, in the hands of so skilful an artist as Mr. Leslie, the result had not been what it is—highly attractive.

Our readers will begin to suppose that we have forgot there are portraits in the great and other rooms of the Royal Academy, and portraits of high character and interest. First in the rank of the subject, and in the talent of the artist, is

No. 57. *Portrait of H. R. H. the Duke of Clarence*. Sir T. Lawrence, P.R.A.—The same manly plainness and unaffected simplicity pervade this fine whole-length, as are to be found in the President's portrait, recently engraved, of our most gracious Sovereign. Easy, yet dignified, the gentleman and the prince are seen throughout.

No. 102. *Portrait of the Duchess of Richmond*. Sir Thomas Lawrence, P.R.A.—Manifestly resembling some of the portraits by Vandyke; and to what better source can an artist resort for hints to aid him in his own productions? There are few, however, who can avail themselves with so much judgment and success of the works of others. In the hands of an ordinary painter such assistance too frequently serves only to shew more distinctly the mediocrity of his powers; in the hands of such an artist as Sir Thomas Lawrence, whatever is derived from the great masters, blends and assimilates with what his kindred genius perceives in nature; and the result is a graceful and harmonious whole.

No. 193. *Portrait of the Marchioness of Salisbury*. Sir Thomas Lawrence, P.R.A.—Here we recognise only the taste and character of Sir Thomas's own pencil; with perhaps a little too much of its occasional glitter.

No. 143. *Portrait of Thomas Stothard, Esq.* R.A. J. Jackson, Esq. R.A.—We own that we do not greatly admire the view which Mr. Jackson has taken of this "time-honoured" artist. The portrait of him by Harlowe, and still more the bust of him by Bailey, give an elevated but just idea of his latent genius. This portrait shews us the shell indeed; but where is the kernel? Nevertheless, no one who knows Mr. Stothard can mistake it; and in point of execution it is an excellent work of art.

No. 122. *Portrait of Mrs. Vernon Smith*. J. Jackson, R.A.—We have sometimes heard Mr. Jackson's talents for female portraiture doubted. This charming head must surely set that question at rest.

No. 127. *Portrait of Jeremy Bentham*. H. W. Pickersgill, R.A.—Whatever differences of opinion may exist with respect to Mr. Bentham's political theories, whoever reads his works must acknowledge that he is no common man. A similar conviction must strike every one, however unacquainted with the original, who looks at the venerable figure which Mr. Pickersgill has here so ably and happily depicted.

No. 47. *Portrait of Sir Thomas Strange, late Chief Justice of the Supreme Court at Madras*. Painted for Christ Church College, Oxford. M. A. Shee, R.A.—It is fortunate for the painter of portraits when the cha-

racter and costume of his subject give him an opportunity of displaying his talents and taste. Mr. Shee has availed himself admirably of these advantages in the fine picture under our consideration; and has produced that which, independently of its resemblance, is valuable and interesting simply as a work of art. Nor are Mr. Shee's powers less conspicuous in several of his other portraits in the present Exhibition.

No. 43. *The Lady in St. Swithin's Chair.* From the first volume of *Waverley*. Sir W. Beechey, R.A.—Finely imagined and vigorously painted.

No. 100. *Portrait of Mr. Pratt.* E. Coleman.—A favourable specimen of the talents of a rising young artist.

No. 70. *Rebecca, a Study.* H. Howard, R.A.—Every well-painted picture must be a study, and this is one. It is a beautiful and highly-wrought production, and is evidently a close and careful imitation of the model in all its parts. Mr. Howard does not belong to the school of those dashing artists who make certain scratches and touches stand, like the arbitrary characters of a short-hand writer, for the things they profess to represent.

EXHIBITION OF THE SOCIETY OF PAINTERS IN WATER-COLOURS.

(Third notice.)

No. 365. *Juliet.* Miss L. Sharpe.—A lovely creature; but not the Juliet of Shakespeare.

No. 153. S. Prout.—Although this is "a deed without a name," it requires no explanatory title. It is the representation of one of those stupendous vessels, those mighty monsters of the main, which, having long "braved the battle and the breeze," are at last compelled to yield to all-conquering time. Mr. Prout has always shewn himself remarkably successful in subjects of this description; and in the present instance he has exhibited his usual richness of tone, and his usual skill in contrasting the huge bulk that

"Amidst the breakers lies astrand,"

with the pigmy beings around it.

No. 163. *A Pastoral Scene.* J. Cristall.—When Mr. Cristall employs his cultivated powers on subjects of the classic-pastoral, he manifests a talent and a taste which may justly be termed unrivalled; but when he applies the *beau idéal* to representations of the ordinary peasantry of this country, and gives to English, Scotch, or Welsh village-girls the character of Grecian nymphs, the result is, in our opinion, heterogeneous and unsatisfactory.

No. 37. *The Sempstress.* W. Hunt.—We prefer this example to some others by the same clever artist, because it unites taste with the magic of light which he throws over all his performances. No. 45, *A Recess in a Drawing-Room*, also by Mr. Hunt, is admirable in point of effect.

No. 50. *Cologne on the Rhine; arrival of boats with fruit.* S. Austin.—Interesting to the untravelled spectator, from the novelty of the lively scene represented; interesting to the amateur of the arts, from the light, transparent, and masterly style of the execution.

No. 334. *Peasants, with their Children, in the neighbourhood of Gensano.* P. Williams.—A charming group; highly picturesque both in character and in costume. The clearness, solidity, and beauty, of Mr. Williams's mode of finishing his drawings will not admit of description. They must be seen to be duly appreciated. No. 284. *A Roman Beggar-woman, with her Child, in the Costume of Subiaco.* P. Williams.—Equal to the last-mentioned

work in other respects, although the subject is less fascinating.

No. 279. *Fruit.* Miss Byrne.—A delicious and highly-finished gem. The representation is as great a feast to the eye as the reality would be to the palate; and it has the advantage of permanency.

No. 40. *View in the Isle of France.* J. Varley.—This extensive and singularly-featured country is treated by Mr. Varley in his own peculiarly bold and striking style; of which another fine example will be found in No. 140, *Harlech Castle, Composition.*

No. 162. *Twilight.* S. Jackson.—We have been so accustomed to associate with the hour of twilight all that is tranquil and soothing, that it seems a violence done to our recollections to find any representation of it fraught with images of destruction and woe. In the pallid and death-like gloom, however, which Mr. Jackson has thrown over his work, he has shewn a deep poetical feeling.

No. 252. *Wild Ducks surprised by a Fox.* J. F. Lewis.—In this highly spirited drawing, the expression of the wily and voracious animal, who, while he has succeeded in securing one of his birds, is looking with a grin of disappointed malice at that which has escaped, is admirably depicted.

NEW PUBLICATIONS.

The Passes of the Alps. By W. Brockedon. No. X.

THE route from Inspruck to Verona by the pass of the Brenner is the subject of Mr. Brockedon's tenth No. This is the lowest of all the roads across the great chain of the Alps, having an elevation of only 4,700 feet above the level of the sea. The route lies directly through the Tyrol,—a country, the history of which, especially its fearful and unequal contest, under the conduct of the celebrated Hofer, with the French and Bavarians in 1809, can never be recollected without strong feelings of interest. The following anecdote shews that the Tyrolese retain their ancient character of skilful marksmen:—

"When the author first visited the Tyrol in the year 1822, he witnessed a curious scene at Sterzing. While waiting at the inn, the sound of drum and fife, and a bustle in the street, announced a procession of the successful marksmen of the day. The Tyrolese practise every Sunday afternoon, and all holidays, the use of the rifle; and there are few houses in the Tyrol which are not ornamented with targets, the trophies of success, which are suspended beneath the overhanging roofs, in front of the residences of the victors. The target of the day is the prize of the best shot; and that which was won at Sterzing was borne through the street on the back of a friend of the winner, preceded by a drum and fife, and followed by the successful marksman, who, dressed out with flowers and ribands as fantastically as a May-day sweep in England, expressed his joy by dancing and pirouetting amidst his friends, who congratulated and cheered him. What degree of skill the constant use of the rifle has given to the Tyrolese may be inferred from the following fact. One of those who had been unsuccessful in the contest of that day was overtaken by the author's party near Sterzing, and offered a ride on his way home, which he accepted: he complained bitterly of his ill-luck, and attributed his failure to the weather, which had been hazy; but to shew that he had some claim to distinction as a marksman, he pointed out a young tree on the side of the road, at a considerable distance, levelled his rifle at it, and

drove a ball through the trunk, though he fired from the char in which he was riding."

The plates of this number of Mr. Brockedon's work are, as usual, very picturesque and beautiful. "The Valley of Stubay," "the Post-House on the Brenner," "the Chateau of Trostberg," "Trent," "Scene from Monte Porgine," and "Bassano," are all admirable; as are also the vignettes of "Scene near Primolano Val Sugana," and "Castle of Salurn, near Newmarkk."

The Union; Thistle, Rose, Shamrock. Painted by W. C. Ross; engraved by D. Lucas. Brookes.

AN ingenious and pleasing mode of combining the portraits of three friends or sisters.

Elizabeth, Duchess of Devonshire. Drawn by Sir T. Lawrence, P.R.A.; engraved by F. C. Lewis. Moon, Boys, and Graves.

IN general, we are enthusiastic admirers of the taste and beauty of Sir Thomas's chalk drawings; but we cannot say that we consider this as a favourable specimen of his powers.

Picturesque Views on the River Clyde. Engraved by Joseph Swan, from Drawings by J. Fleming. Parts 6, 7, and 8.

"VIEW from Dalmotter Hill," "Dunglass Castle and Bowling Bay," "Dumbarton Castle and Town," "Port Glasgow," "Hellensburgh," "Rosenath House," "Greenock," "Gourock," and "Laven Castle," form the embellishments of these three Parts. With a few exceptions, we confess we do not think that, as the work proceeds, the execution of the plates improves.

PICTURE SALES.

Sale at Christie's.—The sale of Lord Gwydir's collection, which we noticed a fortnight ago, from the sums obtained, seemed to prove that pictures are in some degree recovering from their late depression. We give a short abstract of prices and purchasers:—1st day. Lot 71. Landscape with Figures, Isaac Ostade, 206 guineas; bought by Mr. Woodin. Lot 73. Harbour, with Fleet of Ships, W. Van de Velde, 365 guineas; Mr. Yates. Lot 75. Perseus exhibiting the Head of Medusa, N. Poussin, only 100 guineas; Mr. Foster. 2d day.—Lot 71. Grooms watering Horses, Wouvermans, 305 guineas; Mr. Zachary. Lot 72. A Girl entering the Bath, Rembrandt, 165 guineas; Mr. Holwell Carr. Lot 73. Peasant with Cattle, Berghem, 225 guineas; Mr. T. Emmerson. Lot 74. Return from the Chase, Wouvermans, 680 guineas; Mr. Foster. Lot 75. The Corporal Acts of Mercy, D. Teniers, 360 guineas; Mr. Nieuwenhuys. Lot 76. Group of Cows and Farmyard, P. Potter, 1,205 guineas; Mr. Nieuwenhuys. Lot 81. Landscape, Claude, 2000 guineas; his Majesty. Lot 83. Landscape, Both, 460 guineas. Lot 86. Holy Family, Sir Joshua Reynolds, 1,900 guineas. Lot 87. Landscape, Gainsborough, 1,050 guineas; the two last purchased by the Directors of the British Institution, with the munificent intention of bestowing them on the National Gallery. The gross amount of the two days' sale exceeded 14,600*l.*

The charming picture by Paul Potter is, we rejoice to hear, still destined to ornament this country, through the liberality of Mr. Peel, who has re-purchased it of Mr. Nieuwenhuys.

Mr. Udney's and Lord Ranelagh's Pictures.—Our foreboding as to the little feeling for the Italian schools of art received a melancholy verification at the sale on Friday. The

well-known *Noli me tangere*, by Correggio, from the Orleans Gallery, was bought in at 135 guineas. The *Triumph of Love*—Cupid on the back of a couchant lion, with landscape—an exquisite specimen of Titian, who has in this picture caught the classic spirit, and even improved the charming subject of the celebrated Florentine gem,—285 guineas; bought in. *Holy Family*, Parmigiani, an Orleans picture, 150 guineas; bought in by Mr. Johnson. *Holy Family*, with saints in a romantic landscape, Pietro Perugino, a noble picture, 100 guineas; Mr. Woodin. *Virgin nursing the Infant Lord*, Caracci, 161 guineas; Mr. Peacock.—The Dutch and Flemish masters on the succeeding day had their triumph. The *Battle of Maxentius*, Rubens, after much competition, was awarded to Mr. G. Rogers at 165 guineas. The *Gazette*, D. Teniers, 250 guineas; Mr. Buchanan. *Grand Landscape*, Cuypp, 1,010 guineas; Mr. Peacock: and the *Farewell*, by John and Andrew Both, was knocked down at 355 guineas.

The collection of the late premier, the amiable Earl of Liverpool, with the exception of the portraits and pictures of the British school, which are reserved by the present lord, will be sold on Monday by Mr. Christie. We notice, among the rest, some fine specimens of *Wouwermans*, *Berghem*, *W. Van de Velde*, *Van de Capella*, *Beckhuysen*, a splendid sea-piece by *Jacob Ruysdael*, no less extraordinary for this master in subject, than it is admirable in power and general excellence; and also, what will not be the least attractive, the noble landscape with figures of *Mercury* and the *Woodman*, by *Salvator Rosa*, which was purchased for the sum of 2,100 guineas by Lord Durham, at Sir Mark Sykes' sale, in 1824, is to be submitted to the ordeal of public valuation at the same time.

The large picture by Rembrandt of *Hamam before Esther and Ahasuerus*, which was sold three weeks ago for 860 guineas, is said to have been purchased by its late owner, Mr. Mortimer, in 1796, at a sale of the effects of the celebrated *M. de Calonne*, when ambassador in this country, for 56*l*. Since the purchase, very few persons had been allowed by Mr. Mortimer to see it; but at his death, the agents of three sovereigns were supposed to be in treaty for it; and it was expected, notwithstanding the injury which it has sustained from time and ill-usage, to fetch at least 2000*l*. Considering its state, however, the price is allowed to have been liberal. The *Morning Scene*, by Cuypp, although the anatomy of the horses was much out of drawing, sold for 440 guineas, on account of the scarcity of this artist's pictures.

ORIGINAL POETRY.

THE SIBYL.

Would thy young inquiring eye
Pierce the dark futurity—
Read the awful book of Fate,
Oft so sad and desolate?
Mortal! ask not me to shew
What of weal or what of woe;
I, the Sibyl, there can see
Writ against thy destiny—
By the past, th' unerring past,
I thy future lot will cast.
List to me, then, whilst I tell—
Time will shew or ill or well,
Whether smiles or whether tears
Gild or shade thine after years;
So thou wilt but answer me
Simple questions, one, two, three.

When the houseless sought thy door—
When the hungry begg'd thy store—
When the lonely widow wept—
When the orphan houseless slept—
Did the homeless find a home?
Didst thou bid the famished come?
Didst thou calm the widow's grief?
Give the fatherless relief?
If thy conscience answer yes,
Great shall be thy share of bliss;
If thy conscience answer no,
Deep the measure of thy woe!
When that one, who, side by side,
In his days of joyous pride
Walk'd with thee, his bosom-friend,
Found, alas! his glories end—
Didst thou look with pitying eye
On his sad adversity?
As his misery deeper grew,
Grew thy friendship deeper too?
If thy conscience answer yes,
Great shall be thy share of bliss;
If thy conscience answer no,
Deep the measure of thy woe!

When the love that bound thine heart
To that one, as ne'er to part—
Though no crabbed law had prest
Rule or fetter on thy breast,
'Mid the sorrow and the strife,
Ebb and flow of human life,
Sorrow gain'd, and pleasure gone,
Was it still true to that one?
If thy conscience answer yes,
Great shall be thy share of bliss;
If thy conscience answer no,
Deep the measure of thy woe!

THE wandering bird that left the Ark,
(Tired of its fancied slighted lot),
And skimmed the waste of waters dark,
Nor found on earth one little spot,
One hermit-bough, whereon to rest
Its wearied foot and drooping wing,
Flew back to its forsaken nest—
A wiser, more contented thing:—
So will thy love, by fancy wiled
Far from the heart it blest'd before,
When none have pleased, though all have
smiled,
Return, nor wish to wander more.

Look on the ore of the golden mine—
Look long as thou wilt, it shall never be thine;
For the wealth of this world is a treacherous
snare,
And the wealth of this world thou art doom'd
not to share.

And look where Love weaves his web with such
glee— [thee;
Look long as thou wilt, he's not weaving for
For who, with a soul above that of a fly,
Would be caught in his meshes, to flutter and
die?
Look on those who are dazzled by Fashion's
false gem;
Why look, and thank God thou art not one of
them:
The bird for the air, and the fish for the sea,
And fashion for foplings and fools—not for thee.
But look to the peace of mind wealth never
bought;
And look to the friendship by love never sought;
Look to humble content, by no fashion apprest;
Look on these, and be wise—look on these,
and be blest.

F. I. G.

SKETCHES OF SOCIETY.

PICTURE OF CHINA.—NO. V.

It seems that there are abuses in China, as in England, on the score of prison discipline: perhaps their gaols are worse managed than ours have even been accused of being by philanthropic reformers. *Ex. gr.*

"*A Chinese Prison.*—Prisoners who have money to spend can be accommodated with private apartments, cards, servants, and every luxury. The prisoners' chains and fetters are removed from their bodies, and suspended against the wall, till the hour of going the rounds occurs. After that ceremony is over, the fetters are again placed where they hurt nobody. But those who have not money to bribe the keepers are in a woful condition. Not only is every alleviation of their sufferings removed, but actual infliction of punishment is added, to extort money to buy 'burnt offerings' (of paper) to the god of the jail, as the phrase is. For this purpose the prisoners are tied up, or rather hung up, and flogged. At night they are fettered down to a board—neck, wrists, and ankles, amidst ordure, and filth, whilst the rats, unmolested, are permitted to gnaw their limbs! This place of torment is proverbially called in ordinary speech *Te-yuk*, a term equivalent to the worst sense of the word Hell."

The next extract possesses literary interest.

"*Dialects of China.*—In an empire so large, every province of which is equal to a little kingdom, it is natural to expect a variety of dialects. In this part of China we meet with three that are spoken extensively—the Mandarin, the Canton, and the Fokien dialects. The Mandarin is the language of the court, of government officers, and of the learned, throughout the empire. It is spoken by the people generally, in Peking, in Nanking, in Tszee-chuen, and other provinces. There are considerable varieties in it. The reigning family of Tartars have introduced a Tartar-Chinese pronunciation. They use *ch* soft for *k*, so as to make the name of the capital of China *Pei-ching*, and sometimes *Peitsing*, instead of *Pekin* or *Peking*. And there is a sort of cockney slang spoken by all those who inhabit the metropolis, which is imitated by the fashionable throughout the empire. The Fokien dialect, or that spoken by the inhabitants of Fokien province, and by most of the settlers in Java, and in the straits of Malacca, is very peculiar. They not only pronounce the Chinese characters differently from the Mandarin tongue, but have a number of peculiar words and phrases. Mr. Medhurst, an English missionary in Java, who speaks Chinese admirably, has written a Dictionary of this dialect, which the late Sir Stamford Raffles intended to have printed at the Singapore Institution; but his death, and the consequent failure of the Institution, has put an end to that design. The Canton dialect, or that of the province in which we live, differs from the Mandarin chiefly in a different pronunciation of the same words or characters. There are also some local phrases and idioms; but the Canton dialect approaches nearer to the general language of the empire than the Fokien. We have debated with ourselves whether to use, in the Canton Register, the Mandarin pronunciation of words, or the Canton dialect, and feel greatly inclined to prefer the latter; because the people who come mostly in contact with Europeans speak only this dialect. And should Dr. Morrison succeed in reducing the Canton dialect to writing, which he is attempting in an alphabetic dictionary, to be printed in Roman letters at the

Honourable Company's press, the acquisition of it will become comparatively easy. For the names of places in China and Tartary, the spelling of D'Anville and Du Halde had probably better be retained. But in the province of Canton, the names of places in the common dialect of the neighbourhood seems best."

In March 1828, the governor of the two Kwong provinces issues a strong proclamation against the smoking of opium.

"The use of drink and food (says the governor) is to induce harmony in the system,—the gulping of luscious things must be with a desire to obtain strength: but if there exists a drug destructive of life (and which, instead of possessing any pleasant taste, is 'spit out by every one with disgust), incessant efforts should be made to keep it at a distance. How is it that men, though well aware of this, still offend, with the conviction of it upon their minds; desirous, as it were, to bury themselves alive? Now, as the drug opium, bought in foreign countries, and whose nature is originally poisonous, is both offensive in taste and flavour, and debilitating to the constitution,—I am at a loss to imagine who originally conceived the idea of adapting it to the purpose of smoking, and seduced others to inhale it. He who, grasping at gain, could open a shop to yield an inexhaustible supply of poison, must have been a most worthless vagabond." [This reminds us, strikingly, of King James's famous counter-blast against tobacco;—but his excellency proceeds:] "Formerly there existed a respect for fixed regulations. There is no want of severity in the enactment of the laws. But Canton being a place where people are collected from all quarters promiscuously, both good and bad, idle vagabonds will be found, who mutually invite each other to this practice of opium-smoking, and forming themselves into groups and crowds, they sit in rings all day. Having used the drug some time, the habit is termed *sheong-yun* (i. e. subject to the drawing), for at last they must have recourse to it every day, and can by no means whatever relinquish it, till finally the poison flows in their inmost vitals. Their faces become as sharp as sparrows, and their heads sunk between the shoulders in the form of a dove. Physic cannot cure their disease: repentance comes too late for reform. In addition to all this, opium being a contraband article, and sold clandestinely, its price is necessarily high, and the use of it is succeeded by an additional longing for luscious and savoury food. People in general are not possessed of large property, and thus, in a few years, both their purses and constitutions are ruined. Although they become stupid in an excessive degree, they cannot leave off the habit. Further, it is proper to examine into the consequences of smoking opium, which are, to raise the spirits to an unusual degree,—a most stupid expedient of worthless people to excite a desire of w—g and gambling. Their substance having dwindled away, and being possessed of neither food nor raiment, they resort to stealing, picking pockets, housebreaking, and joining gangs of robbers. There is no crime that they will not commit. Injuring both themselves and others, they become involved in endless calamities. I must inquire into the affair secretly, and severely seize the offenders. It is proper to send forth a strictly prohibitory edict. I therefore publish this proclamation, that all those under my jurisdiction, military, civil, and others, may be aware. After this let every one rouse himself to attention, feel remorse, and alter his ways. Leave off your former evil courses, and avoid the de-

struction of your health and lives. Those who have dissipated their property must have recourse to trade. Do not oppose my decree by setting up shops secretly to buy and sell opium. If you persist in your wickedness, without regard to my injunctions, you will be seized and apprehended. When I receive information, I shall, in a twofold degree, punish the offenders in conformity with the laws. In examining the affair, I shall not shew any lenient treatment. Feel awe, and pay attention. Do not oppose. A special edict."

MUSIC.

PHILHARMONIC CONCERTS.

THE sixth Philharmonic Concert, on Monday the 11th, under the able direction of Mr. Potter and Mr. Mori, commenced with Beethoven's symphony in B flat, numerically the fourth; and so highly were the wishes of the audience gratified by the masterly execution of this magnificent work, that for the whole of the evening there seemed to have been no room left for a murmur. An *encore* for an adagio like that of this symphony, is hardly a compliment, inasmuch as no praise can be adequate to such a composition. The subject alone is the most beautiful conception which, perhaps, ever entered any composer's mind—to say nothing of the extraordinary harmony produced by the most ingenious use of a variety of instruments. Signor Bordogui's "Fra tante angoscie," by Caraffa, might please those well enough whose expectations were not pitched too high; but a greater treat was looked for from Mr. Cramer's pianoforte concerto, as might be perceived by the cordial reception he received on making his appearance. The grace and elegance of his style, especially in slow movements, have suffered no diminution with the increase of years, and are to this day quite unequalled. Madame Stockhausen's voice, neither of great power, compass, nor flexibility, possesses yet an extreme sweetness; and she never fails to use it in a manner, that, like Mr. Cramer's playing, she is sure to delight, though not to astonish. Thus she sang "Deh! per questo," from Mozart's "La Clemenza di Tito." A. Romberg has written two orchestral works, which, at least in Germany, have placed him in the first rank of composers for a band, viz. a symphony and an overture, both in D, and both admitted to the Philharmonic. The overture, very characteristic, by the introduction of a fugue, would have been encored but for the lateness of the evening. The same applies to Mozart's delightful symphony in C; at least the audience. Seldom is the Philharmonic audience so lavish with applause as they were this evening, after Mr. Phillips had finished "The people that walked," from the Messiah. He never sang better. Mr. Hauman, not a German, as the name would indicate, but a Belgian, appeared here, for the first time, with two concerto fragments from Rode and Mayader. His bow immediately shews him to be of the Parisian school; which, however famous for execution, precision, and a certain dexterity in the management of the instrument, is greatly inferior to the English and German school for tone. He was deservedly received with flattering encouragement. After a tertetto by Madame Stockhausen, Bordogni, and Phillips, Beethoven's last overture in C, beginning with a march, closed this delightful concert.

CONCERTS.

THESE entertainments are now so numerous, so incessant, that it is out of our power to par-

ticularise them all, or pay detailed attention to any. Yet they are generally pleasing, and some of them of rare attraction. To the latter class belonged that of De Bagnis, on Wednesday, when the performances, vocal and instrumental, were of uncommon excellence, and combined most of the highest talent at present assembled in the British capital. There was of course a crowd. On Wednesday next, Made. Stockhausen's concert promises a treat of a similarly delightful kind. On Wednesday evening, Mrs. Hammond had an evening concert at the house of Mr. Penn, in Spring Gardens; which gave great pleasure to a numerous auditory. On Wednesday, also, M. Cipriani Potter's concert took place at the Argyle Rooms: Blasius, Sontag, Camporese, and Nicholson, shone in it, and M. Potter himself was much applauded.

A Prima Donna, from Vienna, with a hard Russian name (which we cannot remember), but very amiable manners, and a high reputation, makes her *début* at the Philharmonic on Monday.

DRAMA.

DRURY LANE.

A SUPERIOR and most successful play, called *the Partisans*, was produced here on Thursday: it is from the never-failing and prolific pen of Mr. Planché, and will raise his reputation far above that standard at which slight observers have sometimes been inclined to rate it. This has perhaps been the consequence of his often (for we do not speak of his clever revivals of old English comedies) bringing out little pieces and grafting them on foreign stocks; the critic overlooking the concomitant facts, that much ingenuity and talent have been displayed at the same time, and much judgment evinced in the superstructure of a drama from meagre materials, and much effective novelty introduced, and much neatness in dialogue, and a higher species of genius in composition added, to form an able and a justly popular whole. The present production is, however, of a more ambitious character, and will establish Mr. Planché in a rank to which accurate and more comprehensive observers have long felt that he was completely entitled. It possesses much poetry of an eminent order, which, we trust, we may demonstrate next week—our hurry at this, our latest hour, precluding the possibility now. All we have time to say is, that *the Partisans, or the War of Paris in 1649*, is a faithful picture of the violence, intrigues, and follies of that extraordinary period. The character of the first president, *Mathieu Molé*, is finely drawn, after the description of Cardinal de Retz, who in his *Memoirs* says, "Si ce n'étoit pas une espèce de blasphème de dire qu'il y a quelqu'un dans notre siècle plus intrépide que le Grand Gustave et Monsieur le Prince, je dirais que c'a été M. Molé, premier président." The attempt to assassinate him in the first scene of the play, and the bursting of the mob into his hotel in the third act, are strictly historical incidents. *The Marquis de Jarsay*, and the enterprising *Duchesse de Longueville*, are also historical personages, and depicted with great fidelity. Cooper as the *President*, Webster as *Perinet*, Jones as the *Marquis*, Miss Love as *Georgette*, J. Vining as *Henri*, and Miss E. Tree as the *Duchess*,—all excellent; but Liston in *Papelard* one of the finest pieces of acting ever seen, and quite a new epoch in his distinguished histrionic career. Here he is no *droll*, but an actor of the first class in comedy!

COVENT GARDEN.

Miss SMITHSON, after repeating *Jane Shore*, has appeared in *Juliet*, and confirmed our opinion that she did wisely in selecting the former character for her *début*. It afforded more opportunities for the display of those attitudes which particularly distinguished her performance from that of her contemporaries: the language of Rowe was as melodramatic as could be desired; and though that of Shakespeare, however indifferently spoken, cannot fail to touch the heart, and thereby enlist the auditors in some measure on the side of the actor, there was infinitely more risk to run in that awkward test—comparison. In the early scenes of *Juliet*, Miss Smithson's height and figure, her decidedly womanly appearance, militated against our mental picture of the young girl of Verona, who, according to Shakespeare, wanted a fortnight of being fourteen (and who, even as *now* described by the nurse, is not eighteen); and there was nothing in the acting to create such an illusion. Her reception of the news of Romeo's unfortunate combat, and consequent banishment, was her best effort; and it was adequately rewarded by the audience. Despite, however, of the fine acting of Kemble, who perhaps never played *Romeo* better in his life than on Monday evening, the last act went off languidly.

COVENT GARDEN MANAGEMENT.—The glorious uncertainty of the law has been again made manifest by a judgment of the Lord Chancellor in the Covent Garden cause. His lordship, on Tuesday, decided just exactly the reverse of the preceding decisions, and thus gave to Messrs. Willett, Forbes, and Kemble, what had previously been given in favour of Mr. Harris.

PRINTERS' PLAY.—A play is announced at Covent Garden for next Wednesday, and in aid of that meritorious charity the Printers' Pension Society. The entertainments are as well calculated to amuse, as the occasion is to gratify the better feelings of an audience; and a crowd is expected in the combined cause of *letters* and benevolence. Something is whispered about Keesley's delivering an address in the character of a Printer's Devil; which we are sure he would perform to the life, as this (in his line) most original and inimitable actor was bred to the business before his vocation to the stage.

The other house has also a rich treat on the same evening, for Mr. Cooper's benefit. We have hardly ever seen a more attractive bill of fare: the *Jealous Wife*, strongly cast with three "first appearances," namely, Farren, Liston, and Miss Phillips, in new characters, would seem to be enough in itself; but to this is added Malibran's *début* on the English stage, and a duet between her and Braham! with other entertainments! Well managed, Mr. Stage-Manager.

HAYMARKET.—This theatre opens, we understand, on Monday the 15th of June. Farren, Cooper, F. Vining, Webster, Miss F. Kelly, Mrs. Glover, and Mrs. Humby, commence the campaign. Liston is engaged for six weeks; and several new pieces are in great forwardness.

THE ENGLISH OPERA HOUSE will be about a fortnight later (July 1). Among the new engagements, we hear of Sapio; and it is reported that an offer has been made to Miss Paton.

GERMAN OPERA.—A company of German vocalists has lately arrived at Paris, and has commenced representing, in the Théâtre Ita-

lien, Der Freyschütz, and the other principal operas of the German school.

VARIETIES.

Recovery from Drowning.—At a late meeting of the Royal Academy of Sciences in Paris, a paper was read, "On the mode of recovering persons from drowning." The remarks on this paper were accompanied by a table, in which it was shewn that in consequence of the violence of the method now used of inflating the lungs, only two-thirds of the persons susceptible of recovery are brought to life; whereas formerly the number restored was in the proportion of nine-tenths.

The Artists' General Benevolent Institution holds its great day on Saturday next; Lord Goderich, president. The list of stewards (as the advertisement shews) is attractive, and we rejoice to learn that a distinguished meeting of rank and talent is anticipated.

The Literary Fund.—The subscriptions for this, the best of benevolent funds, amounted to about 600*l.* from anniversary to anniversary, though only 200*l.* were given at the dinner. The Greenwich *fête* is fixed for June 10th, at the Crown and Sceptre, where the friends of the charity are expected to muster in great force. The public may not, generally, be aware that this is a pleasant holiday meeting, subsidiary to the good cause of the fund, but without the ceremoniousness of a regular anniversary. Not only subscribers but any well-wishers to the Institution are welcome: the day is usually very pleasantly spent, and humanity and white bait are made to agree together.

Manufactures in France.—It appears from a French paper, that the broad cloth manufactures in France have fallen off considerably. In 1825 there were six hundred cloth manufacturers in Elbeuf and its environs—there are now only four hundred. At Louviers, within the last three years, two-thirds of the cloth manufacturers have disappeared; and at Sedan the number is reduced one-half.

Test.—At a late sitting of the Royal Academy of Metz, the following method of detecting the presence of cotton in woollen stuffs was communicated. An ounce of pure alkali is dissolved in half a pound of water, and in this the suspected stuff is boiled for two hours. If the stuff is of pure wool it dissolves entirely, and forms upon the surface a soap, which will pass through a fine sieve; but if, on the contrary, the stuff contains cotton, or any other vegetable fibre, it will not be entirely dissolved, but will shew itself when thrown into the sieve.

Comets.—M. Humboldt has made a communication to M. Arago of some remarks by M. Encke on the progress of a comet, from which he draws inferences confirmatory of the hypothesis respecting the resistance opposed to the motions of the heavenly bodies by the atmosphere.

Quick Work!—At the Paris Royal Academy of Medicine, a remarkable instance of sharp practice was mentioned at a meeting on the 16th inst. by M. Lisfranc. A patient who was suffering from tetanus, after having been bled from the arm very copiously eight times, had *seven hundred and ninety-two leeches* applied to the vertebral column and on the epigastric region (on the latter, however, only fifty of the entire number) within a period of only nineteen days, during which time he had no other food than very light broths. On the twenty-third day he was sufficiently well to leave his apartment.

LITERARY NOVELTIES.

Portraits of the most celebrated Beauties of all Nations is announced by Messrs. Longman and Co., under the superintendence of Mr. Alaric Watts. It is to consist of a series of portraits of the most beautiful and celebrated women of all nations, from an early period in the history of portrait-painting to the present time, with biographical notices; and comprises some of the finest specimens of Leonardo da Vinci, Raffaello, Holbein, Giorgione, Tintoretto, Titian, Sir Antonio Moro, Paul Veronese, Guido, Rubens, Velasquez, Vandyck, Mignard, Rembrandt, Murillo, Sir Peter Lely, Kneller, Sir Joshua Reynolds, Romney, David, Ople, Harlowe, and several of the most distinguished painters of the present day. For the sake of variety of style and costume, a chronological arrangement will be avoided; so that it is not improbable that the first Number may contain portraits by Titian, Guido, Mignard, Vandyck, and Sir Thomas Lawrence.

The Three Chapters, to be published monthly, under the superintendence of Mr. Sharpe, is to commence on the first of July, with an engraving from the pencil of Mr. Wilkie.

Another portion of Mr. Booth's Analytical Dictionary is now in the press.

Mr. Babin's *Battle of the Boyne* is among the most recent translations of our abundant works of fiction into the French tongue. It is done by M. Dufaupret; and we observe that the critic in the *Revue Encyclopédique* repeats our remarks upon this clever production. *Apocryph* of plagiarism unworthy of a liberal journal, the same Review, pp. 231, 2, 3, has literally translated the account of the Cherokee Phoenix (newspaper) from the *Literary Gazette*, not only without the slightest acknowledgment, but with the name of Mme. L.-Sw. Belloc appended to it, as to an original article! We expected greater candour from our contemporary, M. Jullien.

LIST OF NEW BOOKS.

CHARLES H. ADAMS.

TO CORRESPONDENTS.

We are much obliged to Shentee. Being compelled to go to press with part of our impression, on account of the extra sheet, on Thursday evening, and with the other part, as usual, on Friday, we have again to notice the impossibility of attending to communications late in the week.

☞ Since we wrote our paragraph respecting the benefit for the Printers' Pension Society, the bills not only exhibit great accessions of musical attraction, but Keesley has, we observe, announced his address in the character of a *Devil*. Considering how much he has suffered from the *Bottle Imp*, and how dread his superstitious horrors are in the *Devil's Elbow*, we consider this assumption to be the best proof of moral courage which he could give the world, and think him a brave fellow for his pains. But a good heart will do a great deal in a good cause.

BARAGUINE.—We find we were mistaken in understanding that Mrs. Charles Lushington was the first female who had performed the overland journey from India. She was the first lady from Bengal; but Lady Nightingale and another lady preceded her from Bombay in this adventurous travel.

In 2 vols. small 8vo. price 11. in boards,
FOSCARINI, or, the Patrician
 of Venice.
 R. Hunter, 73, St. Paul's Churchyard.

New edition, corrected to the present period.
 Incribed, by permission, to His Most Gracious Majesty,
 in a very large vol. 8vo. price 85s.

BURKE'S DICTIONARY of the
 PEERAGE and BARONETAGE of the BRITISH
 EMPIRE.

This work has undergone a very laborious revision. In every
 instance where the slightest obscurity appeared in tracing lines
 of descent, the whole matter has been remodelled, and a plan
 entirely new pursued generally, which it is hoped will satisfactorily
 obviate the hitherto universal complaint against books of
 genealogy in regard to perspicuity. To render this department
 as interesting as possible, accounts will be found of many cele-
 brated extinct houses.

A very large addition has likewise been made to collaterals, so
 that all within the remotest remaindership to honours, appear in
 their proper place; and a description of the armorial bearings
 of each house is given in the body of the work, independently of
 the engravings.

Printed for Henry Colburn, 5, New Burlington Street.

In 3 vols. post 8vo. price 54s. boards,
REAY MORDEN, a Novel.

"Dic mihi quid melius desideras agam?"—*Martial*.
 Published by G. A. De la Beche, 19, St. Martin's Lane, Edinburgh;
 Simpkin and Marshall, London; and John Canning, Dublin.
 "Reay Morden" is a clever and spirited work. The style
 throughout is at once energetic and lively; and in many passages
 we recognise a mind of intense power.—*Edinburgh Mercury*.
 "He (the author) is evidently a person of some ability, and his
 natural talents have been cultivated by a generally judicious
 He has studied human nature to some purpose, and stored his
 mind with a great deal of general information."—*Edinburgh*
Observer.

Just imported, in 1 large vol. medium 8vo. price 51s. boards,
THE AMERICAN ANNUAL

REGISTER FOR 1835-7, or the Fifty-first Year of American
 Independence.
 "The work before us is a plain, sound, and sensible production,
 full of information, and (though national enough) of much his-
 torical value. It is an able performance, and does credit to the
 American mind and literature."—*Literary Gazette*, April 11th,
 1835.

New York: Published by E. and G. W. Blunt; and sold by
 Thomas Ward, 64, High Holborn, London; and all Booksellers.
 The previous Volume, for 1835-6, may also
 be had, price 18s. boards.

In 8vo. price 10s. 6d. boards,
TWENTY-SIX SERMONS, on various
 important Subjects.

By the late Rev. ARCHIBALD GRACIE.
 "The discourses are well chosen and ably written, bearing in
 every page the stamp of a highly cultivated and superior mind."
 —*Edinburgh Literary Gazette*.
 "We do not know that sermons can well receive a higher de-
 gree of legitimate praise than we are disposed to bestow on this
 modest volume."—*Edinburgh Literary Journal*.
 "The sermons, taken singly, and will do so to every reader
 of them, the ideas not only of a person of superior intellectual
 vigour, but of a person whose mind was in its proper element,
 when occupied with thoughts of great solemnity and of much
 pure elevation."—*The Author of the Morning and Evening Sacri-
 fice*, &c.
 "We take blame to ourselves for not having before recom-
 mended this most estimable volume to our readers."—*London*
Literary Gazette.

Printed for Longman, Rees, Orme, Brown, and Green, London;
 and Adam Black, Edinburgh.

In 8vo. price 14s. in boards, with a fine Portrait of the Earl,
 engraved by Scriven.

THE DIARY and CORRESPONDENCE
 of PHILIP, Second EARL of CHESTERFIELD, con-
 sisting of Letters to several distinguished Individuals, and of the
 Charles the Second, William the Third, and Queen Anne; with
 some of their replies.

2. **Ecce homo da Romano**, surnamed the Tyrant
 of Padua. A Poem, in Twelve Books. By Viscount Dillon. In
 8vo. price 18s. boards.

3. **Flora Historica**, or, the Three Seasons
 of the British Parterre, Historically and Botanically treated,
 with Observations on Planting, to secure a regular Succession of
 Flowers from the Commencement of Spring to the End of Au-
 tumn. By Henry Phillips, F.R.S. Author of "Festum et
 tannicum," &c. The 2d edition, revised, in 2 vols. post 8vo.
 price 51s. boards.

Also, just ready, in 1 vol. 18mo. neatly half-bound for Children,

4. **The Principal Events in the History of**
 Ireland, in the form of Stories. Dedicated to the Honourable
 Augusta and Frederick Pembroke.
 Printed for Edmund Lloyd and Co. 57, Harley Street.

2d edition, with Additions, in 2 vols. post 8vo. 18s.
BABYLON the GREAT, or, Men and
 Things in the British Capital.

"These volumes treat of all subjects connected with London,
 from the 'forest of masts' in the river, to the eloquence of the
 corporation; from the Chapel of St. Stephen's, to the steam-
 press in Printing-House Square; men, women, books, and news-
 papers; every thing in and about London that is worthy of notice
 in an intellectual point of view. Nothing escapes the eye and
 the lash of the critic. He insinuates himself into coteries, and
 collects their follies; he examines men of every grade and class
 with an inquisitorial precision, as if he stopped the passengers in
 the street, one by one, and, after putting his interrogatories, sat
 down to sum up the general character. All this is done with an
 air of philosophical truth, a certain gravity and sedateness, that
 impart a high tone of moral excellence to the production. He
 has studied the character of London with accurate
 nous. We think there is no doubt that the author is a Scotch-
 man; but he who he may, he has produced two volumes that
 are highly creditable to his genius."—*Atlas*.

Printed for Henry Colburn, 5, New Burlington Street.

In 2 vols. 4to. Illustrated with fine Portraits, copied from the
 Originals, by permission of the Right Hon. the Earl of Clarendon,
 and other Engravings, 61. 2s.

THE CORRESPONDENCE
 and DIARIES of HENRY HYDE, EARL of CLAREN-
 DON, and LAWRENCE HYDE, EARL of ROCHESTER;
 comprising minute Particulars of the Events attending the Revo-
 lution, &c. &c. published from the original Manuscripts, with
 Notes.

"Of all the momentous epochs in the annals of England, from
 the Norman Conquest to the year 1688, there is not one of equal
 moment to that upon which the volumes before us throw so many
 new lights."—*Literary Gazette*.

"This valuable collection of papers is an important accession
 to the historical and biographical library."—*Gentleman's Maga-
 zine*.

Printed for Henry Colburn, 5, New Burlington Street.

2d edition, in 5 vols. 8vo. embellished with Portraits and other
 Engravings, by the first Artist, price 10s.

MEMOIRS and CORRESPONDENCE
 of SAMUEL PEPYS, Esq. F.R.S. Secretary of the
 Admiralty in the Reigns of Charles II. and James II.; and the
 intimate friend of the celebrated John Evelyn.

Edited by LORD BRAYBROOKE.

"Notwithstanding the extensive popularity of the Memoirs
 of Grammont, and the still greater attractions of those of Evelyn,
 we have no hesitation in stating our opinion, that these volumes
 will outstrip them both in public estimation. They reach the
 very beau ideal of what we desire from such records."—*Literary*
Gazette.

Printed for Henry Colburn, 5, New Burlington Street.

New Weekly Paper.

On Saturday, the 2d of May, was published by Mr. Colburn,
 New Burlington Street, the First Number of a New Weekly
 Paper, called

THE COURT JOURNAL. The leading

and peculiar object of this Paper is, to supply what has
 long been felt as a desideratum in the Higher Circles of the
 British Metropolis. Its pages will furnish a mingled Record and
 Review of all Matters and Events (Political Subjects alone ex-
 cepted) which are calculated to interest that class of readers who
 within what is understood by the "Court Circle." Such
 will be the peculiar, but by no means the sole, object of the Court
 Journal. It will, in fact, embrace every feature which favour-
 ably distinguishes the most approved literary Journals of the day.
 The Court Journal will appear every Saturday Morning, hand-
 somely printed on a 4to. sheet of sixteen pages, containing Forty-
 eight columns, printed, or, stamped for circulation in the
 Country, free of postage, 1s.

Orders received by all Booksellers and News-vendors, and by the
 Clerks of the Roads; and those who may desire to take it, are
 particularly advised to give their orders to the Bookseller or
 News-vendor in their own immediate neighbourhood.

The Third Number of this New Weekly Paper contains: Royal
 Correspondence—Courts and Courtiers—The Two Drawing-
 Rooms—Lisbon and St. James's—Royal and Noble Residences;
 the Marquis de Londonderry—Monsieur d'une Dame de la
 Cour de Louis XVIII.—Extraordinary Secret Treaty between
 the Emperor of Austria and Napoleon at Elba—Literary Letters
 to Lady — at Florence—Maxims on Rank—The Caledonian
 Rail—Ladies Campbell and Stafford—The Duke of Sussex and
 the Duke of Devonshire—The Duke of Cambridge—The Duke of
 Londonderry, Ingleton, Ann Bradenell, Newcastle, Salisbury,
 Litchfield, Richelieu, a Tale of France; Romances of Real
 Life, &c.—Royal Institutions—Dr. Young, Sir Humphry Davy,
 &c.

Published by W. Thomas, at the Office, 19, Catharine Street,
 Strand.

On the 21st was published, in folio 8vo. price 4s. 6d. boards,
JOHN HUSS, or, the Council of Constance.

A Poem, with numerous Historical and Descriptive
 Notes.
 Printed for C. J., G., and F. Rivington, St. Paul's Churchyard,
 and Waterloo Place, Pall Mall.

In 8vo. price 8s. boards,
SERMONS on the LIVES of some of the
 FIRST PROMULGATORS of CHRISTIANITY, and
 on Miscellaneous Subjects, preached in the Parish Church of
 Bromley, Middlesex.

By the Rev. PETER FRASER, M.A.

Fellow of Christ's College, Cambridge, and Chaplain to
 His Royal Highness the Duke of Cambridge.
 Printed for C. J., G., and F. Rivington, St. Paul's Churchyard,
 and Waterloo Place, Pall Mall.

On the 29th will be published, in 8vo. price 10s. 6d. boards,
SERMONS on VARIOUS SUBJECTS

and OCCASIONS, including Three Discourses on the
 Evidence, the Obligations, and the Spirit of the Gospel.
 By the Rev. JAMES WALKER, D.D. F.R.S.E.
 Of St. John's—Dean of the Episcopal Palace of
 Divinity in Edinburgh.

Printed for C. J., G., and F. Rivington, St. Paul's Churchyard,
 and Waterloo Place, Pall Mall.

In 18mo. the 6th edition, newly arranged, and very materially
 improved, with an elegant new Set of Copperplate Engravings,
 price 8s. handsomely half-bound in red leather.

SYLLABIC SPELLING, or, a Summary
 Method of Teaching Children to Spell and Read with
 facility and pleasure.

By Mr. WILLIAMS.

Author of the "Conversations on English Grammar."
 N.B. This edition contains a variety of testimonials in favour
 of the system, from some of the most respectable professors of
 the English Language, as well as from several parents, whose
 children (amused and interested by this novel mode of instruction)
 have learned in the course of a very few months to read correctly,
 and with perfect ease, the longest and most difficult words.

"The object of the useful little book before us is to reduce the
 difficulties of learning to read, and the author sets about the task
 that entitles her to the thanks of all mankind. Her book is a
 primer; but the child will want no other book,—for when this is
 properly finished, the pupil will be able to read the Encyclopæ-
 dia through alone."—*Edinburgh*, 4th of April.

Boxes, with appropriate Counters, for the amusement of Young
 Beginners, may be had, if required, of the Publishers.
 Printed for Whitaker, Treacher, and Co. Ave Marie Lane.

In 2 vols. 8vo. price 11. 4s. boards,
A KEY to the REVELATION
 of ST. JOHN the DIVINE; being an Analysis of those
 parts of that wonderful book which relate to the general State of
 the Christian Church, through all the times since it was written,
 and to the peculiar Signs of those Times.

By the Rev. PHILIP ALLWOOD, B.D.
 Fellow of Magdalene College, Cambridge.
 Printed for C. J., G., and F. Rivington, St. Paul's Churchyard,
 and Waterloo Place, Pall Mall.

In 1 vol. royal 18mo. containing upwards of 600 pages,
 price 10s. 6d. boards,

LIBER SCHOLASTICUS; or, an Account
 of the Fellowships, Scholarships, and Exhibitions, at
 the Universities of Oxford and Cambridge; by whom founded,
 and whether open to Natives of England and Wales, or restricted
 to particular Places and Persons; also, of such Colleges, Public
 Schools, Endowed Grammar Schools, Chartered Companies of
 the City of London, Corporate Bodies, Trustees, &c. as have Uni-
 versity advantages attached to them, or in their Patronage. With
 appropriate Indexes and References.
 London: C. J., G., and F. Rivington, St. Paul's Churchyard,
 and Waterloo Place, Pall Mall.

 Churches—Parochy—Education—the Poor—Religious—
 the Clergy—Cant—the Poor—Friendly Societies and Savings Banks
 —the Clergy.
 Printed for C. J., G., and F. Rivington, St. Paul's Churchyard,
 and Waterloo Place, Pall Mall.

In 8vo. price 10s. 6d. boards,
JUSTIFICATION.

This publication is a dissertation not only on the above
 subject, but also embraces the leading principles and
 doctrines relative to Salvation, Faith, and Good Works, wherein
 the following, among other most important points, are fully dis-
 cussed—As to the time when justification does, or is to take
 place—whether good works spring from, are the fruits of, and
 produced from faith—whether justification is by faith alone, and
 whether good works are indispensable in justification, or are to
 be received as evidence of faith. These interesting matters are
 stated in the plainest manner, and herein is intended to be shown,
 by fair argument, founded upon scriptural authority, that justifi-
 cation must take place by or through faith, at the Day of Judg-
 ment only; that good works are not necessarily produced from
 faith, but indispensably necessary to justification and salva-
 tion, and are not to be received as evidence only of faith; and
 that faith without works is by Scripture, and according to the
 words of the late Rev. Thomas Scott, dead, worthless, and
 useless.

By JOHN FULLER, Esq.

John Murray, Albemarle Street.

NARRATIVE of a JOURNEY from

CALCUTTA to EUROPE, by way of Egypt, in the Years 1827 and 1828.

By Mrs. CHARLES LUSHINGTON.

John Murray, Albemarle Street.

THE FAMILY LIBRARY; being the

Life of Napoleon Buonaparte.

"The first work published is a happy specimen of *et cetera omnia*, this will be the most delightful collection ever made. It is the Life of Buonaparte, told in a style which imparts all the charms of romance to the severe and exact truths of history. It is, indeed, in every respect, a model of composition."—*Standard*, April 16.

"The volume before us contains about as much matter as an ordinary octavo; and, considering the style in which it is brought out, it is certainly very cheap; but we have no doubt that the intrinsic merit of the plan, backed by Mr. Murray's great resources, will secure a high degree of popularity for the work."—*Scotman*, April 15.

"This 'Life of Buonaparte' is temperately and judiciously composed, and will supply what has hitherto been a desideratum in the country—a distinct digest, within a moderate compass, of all the principal events which distinguished the career of by far the most remarkable man of modern times."—*Edinburgh Literary Journal*.

"We are very sure that if the 'Family Library' goes on as it begins, it will soon do more to put down the trade of literary trashy than any arguments or reflections we could introduce here: and we therefore conclude with our most hearty commendation of a design, the first example of which merits the highest encomium we can bestow upon it."—*Literary Gazette*, March 20, 1829.

"This is both a beautiful and an interesting volume. The 'Life' itself is very pleasantly and clearly written, and forms an agreeable pendant to the more open and voluminous production of Sir Walter Scott."—*Edinburgh Mercury*.

"It is written with great judgment, clearness, and conciseness, and leaves nothing to be wished for, either in the matter or manner of its composition."—*John Bull*.

"We can confidently recommend the work to all persons desirous of possessing a popular life of Napoleon."—*Falmouth Packet*.

"Taking its demerits, which are but trivial, into consideration with its numerous beauties and excellences, we recommend the work to general perusal. It is, unquestionably, in a brief and tangible form, the most popular history of Napoleon that has been yet produced."—*Atlas*, April 1829.

"The 'Family Library'—a work which no one can take into his hands without perceiving, that the supply of the reading market is undergoing, or about to undergo, a complete revolution; which, in the names of some of its writers, furnishes evidence that the very highest talent no longer disdain to labour for those who can buy cheap books only—and evidence, we are still more happy to see, that an attempt at least is to be made to infuse and strengthen right principles and feelings, as well as to extend mere knowledge, among those classes."—*Quarterly Review*, Number 78.

Of the "Family Library," which has been some time in preparation, at least one volume will be published monthly, printed in a pocket size, but in a very legible type, and embellished with Engravings on Wood and Steel, by the first artists. During the present year the Editors intend to publish the most eminent writers in the country, the editors will henceforward direct their best efforts to provide a body of popular reading, adapted for all classes, and throughout selected on the principle of presenting nothing which Christian parent may not safely place in the hands of his family.

No. III. of the Family Library will be published on the 1st of June, and the successive Volumes on the 1st of each following Month.

Mr. Murray has in preparation, A Series of Pocket County Guides, comprising

1st. A general Map of Cities, Towns, Villages, Main and Cross Roads, Churches, Gentlemen's Seats, Rivers, Lakes, &c. &c.

2d. A Geological and Mineralogical Map.

Also some original Poetry, Letters, and Recollections of Lady Caroline Lamb.

By I. NATHAN, Author of an Essay on the History and Theory of Music, &c. London: Printed for Whitaker, Treacher, and Co. Ave Maria Lane.

For Travellers on the Continent.

INFORMATION and DIRECTIONS for TRAVELLERS on the CONTINENT.

By MARIANA STARKE.
 6th edition, thoroughly revised, and with considerable Additions. Post 8vo. 12s.

2. The Diary of an Invalid in pursuit of Health; being the Journal of a Tour in Portugal, Italy, Switzerland, and France. By the late Henry Matthews, A.M. 2d ed. 2 vols. post 8vo. 15s.

3. Antiquities, Arts, and Literature of Italy, By Joseph Forsyth, Esq. 2d edition, 2 vols. post 8vo. 15s.

4. Rome in the Nineteenth Century. 4th edition, 2 vols. 8vo. 11s. 6d.

5. Switzerland; or, a Journal of a Tour and Residence in that Country. Followed by a general View of its History, brought down to the present time. By B. Simond, 2d edition, 2 vols. 8vo. 2s.

6. An Autumn near the Rhine; or, Sketches of Courts, Society, and Scenery, in Germany near the Rhine, the 2d edition, 8vo. 15s.

PORTUGAL ILLUSTRATED.

By the Rev. W. M. KINSEY, B.D.
Fellow of Trinity College, Oxford, and Chaplain to
the Right Hon. Lord Auckland.
Embellished with 100 Plates of Colours, Vignettes, and various
Engravings of Costumes, Landscape Scenery, &c.
2d edition, with large Additional Matter, and several New Em-
bellishments. Handsomely printed in Imperial 8vo. price Two
Guineas in boards.

"Few books of the present day have had a more attractive or
imposing appearance than the work of Mr. Kinsey. It is well
calculated to afford that kind of information which is precisely
adapted to the actual wants of the greater number of readers. It
gives distinct and very admirable descriptions of the Portuguese
scenery; not the least important matter, but of that which is more
interesting—that which is formed by the grouping of objects met
in every-day life—by the peopling of the scenes of Portugal with
their proper inhabitants."—*Athenæum*.

"The chief merit of 'Portugal Illustrated' consists in the vast
mass of information it contains upon every thing that concerns
Portugal and the Portuguese: character, manners, religion,
scenery, customs, costume, music, literature, &c. are all more or
less ably described. The style is lively and pleasing; the senti-
ments are generally liberal; the remarks are frequently just and
well expressed. The map and the engravings are correctly and
neatly executed, and add much to the value and interest of the
work."—*Weekly Review*.

"Mr. Kinsey's work is neither a statistical treatise, nor a
regular tour, but a piece of literary art, in which history and antiquity
are combined with personal anecdotes, sketches of character, descrip-
tions of scenery and political discussion; forming, on the whole,
a tolerably instructive and very amusing mélange. But the
greatest charm of the work lies in its embellishments, which con-
sist of more than thirty engravings, and about twenty vignettes,
executed in the first style of excellence. They are all, we believe,
from original drawings. Some are landscapes, some views of
cities, palaces, or ancient castles; one or two are portraits, &c.;
and there are also very beautiful coloured plates of the national
costumes. Taste has presided over this department equally in
the design and the execution. It is, in short, one of the finest
specimens of an illustrated book which we have seen—a literary
luxury, designed, one would suppose, exclusively for the unadorned
finger of the artist, and yet so judiciously and so judiciously
inserted, considering the cost at which it must have been got
up."—*Scotsman*.

Printed for Treutzel and Würtz, Treutzel, Jun. and Richter,
80, Soho Square, London.

Important Works Just published by Henry Colburn, 8, New Burlington Street.

JOURNAL OF AN EMBASSY to the COURT OF AYA, from the Governor-General of India, in the Year 1827.

and the "Discovered." In 3 vols.

Works on Natural History.

John Murray, Albemarle Street.

THE JOURNAL of a NATURALIST,

with Plates, folio 8vo. 10s. 6d.

Plants, trees, and stones, &c. note.
Birds, insects, beasts, and rural things.

"We again most strongly recommend this little unpretending
volume to the attention of every lover of nature, and more particu-
larly of our country readers. It will induce them, we are sure,
to examine more closely than they have been accustomed to do,
into the objects of animated nature, and such examination will
prove one of the most innocent and the most satisfactory sources
of gratification and amusement. It is a book that ought to find
its way into every rural drawing-room in the kingdom, and one
that may safely be placed in every lady's boudoir, to be perused
in the leisure hours of the day."—*Quarterly Review*, No. 73.

"We think there are few readers who will not be delighted
(we are certain all will be instructed), by the 'Journal of a Na-
turalist.'"
—*Monthly Review*.

"This is a most delightful book, on the most delightful of all
studies. We are acquainted with no previous work which bears
any resemblance to this, except 'White's History of Saltmarshes,'
the most fascinating piece of rural writing and sound English philo-
sophy that ever issued from the press."—*Athenæum*.

2. **Salmonia**; or, Days of Fly-fishing. A
Series of Conversations on the Art of Fly-fishing for the Species
and Varieties of the Salmon, and on the habits of these Fishes.
By an Angler. 1 vol. 8vo. 10s. 6d. Illustrated with numerous
New Engravings and Woodcuts. A second edition, corrected and
enlarged.

"Our modern Pleasurer is one familiar equally with the world
of books and those high circles in society, which in our age, aris-
tocratically, pretend to the pretensions of mere wealth, open so
readily to distinguished talents and acquirements. His range,
therefore, both of enjoyments and instruction, is far wider than
that of Isaac Walton.

"The instructions and information imparted to anglers are, as
we may believe, equally accurate and interesting."
—*Quarterly Review*.

3. **The Zoology of the Northern Parts of
British America**; being Notices of the Quadrupeds, Birds, Fishes,
and Insects, including the Consulting the late Expeditions
under command of Captain Franklin. With Figures of the
new or rare Species. By John Richardson, M.D. F.R.S. F.L.S.
Esq. Surgeon to the Expeditions, with the assistance of several
eminent Naturalists. Published under the authority and patron-
age of His Majesty's Government, and authorized by the Admiralty.
To be printed in 4to. uniformly with the Narratives of Captain
Franklin's Expeditions through Canada and the Hudson's Bay
Company's Territories; to which, with the forthcoming Flora
of those countries by Dr. Hooker, it may be considered to be an
Appendix.

Part I. containing the Quadrupeds, illustrated by 28 spirited
Engravings on Copper, by Thomas Landseer, is nearly ready, and
will be speedily followed by Parts II. and III., being the remain-
der of the work, and containing the Birds, principally by William
Swainson, Esq. F.R.S. F.L.S. &c. and the Insects by the Rev.
William Kirby, M.A. F.R.S. F.L.S. &c., with the Fishes by Dr.
Richardson.

4. **Outlines of Geology**; being the Substance
of a Course of Lectures delivered in the Theatre of the Royal In-
stitution, by William Thomas Brande, F.R.S. Professor of Chem-
istry in the Royal Institution, &c. 1 vol. small 8vo.

The design of this work is to make the Student acquainted
with the objects and history of Geology.

5. **Botanical Miscellany**. No. 1. Intended to
comprise Figures and Descriptions of new, rare, or little-known
Plants from various Parts of the World, particularly of such as
are found in Commerce, in the Arts, in Medicine, or in Domestic
Economy. Royal 8vo. with 94 Plates. By W. I. Hooker, L.L.D.
F.R.S. and G.S. &c. &c. and Regius Professor of Botany in the
University of Glasgow, &c. &c.

A New Copy with the Cryptogamous Plates coloured, 15s.

In 1 vol. 18mo. bound in cloth, price 6s. 6d. with the Map,
and 6s. 6d. without Map.

A **COMPANION to the LAKES of CUM-
BERLAND, WESTMORELAND, and LANCA-
SHIRE**; in a Descriptive Account of a Part of the Lake, and an
Excursion on Horseback; comprising a Visit to Lancaster As-
sises. With a new and beautiful Map, and a new, copious, and
correct Itinerary.

By EDWARD RAINES, Jan.
Printed for Hurst, Chance, and Co. 55, St. Paul's Churchyard.

In post 8vo.

THE LEGEND of EINSIDLIN, a
Tale of Switzerland, with Poetical Sketches of Swiss
Scenery, &c. &c.

By the Rev. WILLIAM LIDDIARD.
Printed for Saunders and Oiley, Conduit Street.

Index to the Annual Register.

In a very thick 8vo. vol. price 10s.

A **GENERAL INDEX to DODSLEY'S
ANNUAL REGISTER**, from its Commencement in
1793 to the Year 1819, inclusive: since which period an Index is
attached to each volume.

London: Printed for Baldwin and Cradock; C. J. G., and F.
Sivings; J. Cathell; Longman, Rees, and Co.; E. Jeffery and
Son; J. Becher; J. M. Richardson; Hurst and Chance; Sher-
wood and Co.; Hamilton, Adams, and Co.; G. B. Whitaker
and Co.; S. Lloyd and Son; J. Booth; W. Reynolds; Simpkin
and Marshall; J. Martin; G. Lawford; T. Laycock; Samsom
and Strutch; and J. Collingwood.

"This Index will be found to be a most convenient Book of
Reference in any Library, whether containing the 'Annual
Register' or not. Mr. Haskisson, in the House of Commons, on
May 8, said, 'If any honourable gentleman would take the
trouble to refer to the Index of a useful work called the 'Annual
Register,' he would find that it would be found to be more
frequently mentioned than any other cause of riot.'

The publication of the Index has caused so many persons to
complete their imperfect Sets of the 'Annual Register,' that
several of the volumes are becoming exceedingly scarce.

The Volume for 1823 will be published in
June.

8vo. with Maps, 8s. 6d.

A DISSERTATION on the COURSE and PROBABLE TERMINATION of the NIGER.

By Lieut.-General Sir RUFANE DONKIN,
G.C.H. K.C.B. and P.R.S.
John Murray, Albemarle Street.

BOOKS IN THE PRESS.

following Works:—

ANNE of GEIERSTEIN.

By the Author of "Waverley."
3 vols. post 8vo. (In a few days.)

2. **Travels in North America**, by Captain
Basil Hall, R.N. 3 vols. post 8vo.

3. **Waverley, forming Vols. I. and II.** of
the new edition of the Waverley Novels, royal 18mo. To be
delivered on 1st May, with the Magazines and Reviews.

These two volumes, besides a general preface to the Series of
Novels now about to be republished, and a copious appendix,
contain many notes and additions by the author, and are illus-
trated by engravings, from designs by F. P. Stephano, James
Stephano, Edwin Landseer, and G. S. Newton, engraved in the
best manner by William Radford, R. Graves, and Charles Reiss.
Country Bookellers are particularly requested to state if they
wish to have the two volumes at one time.

Published in London, by Simpkin and Marshall,
Stationers' Court.

Hall's New General Atlas.

On the 1st of June will be published, Part XIV. printed
on elephant paper, price 10s. 6d. of a

NEW GENERAL ATLAS, with the

Divisions and Boundaries carefully coloured; constructed
entirely from New Drawings, and engraved
By SIDNEY HALL.

To be completed in Seventeen Parts.
Contents:—Eastern Hemisphere, Portugal—Northern Africa.
Printed for Longman, Rees, Orme, Brown, and Green.

Of whom may be had,

Parts I. to XIII. price 10s. 6d. each.

Next week will be published, in 2 vols. post 8vo.

TALES of the WARS of our TIMES.

By the Author of "Recollections of the Peninsula," "Sketches
of Longman, Rees, Orme, Brown, and Green."

County Genealogies.

On the 1st of June next will be published by Messrs. Sherwood,
Gilbert, and Piper, price 7s. 6d. per Guinea, Part I. of

THE KENTISH GENEALOGIES; con-

taining 250 pages of Pedigrees, on folio paper, bound
in cloth, with Engravings of the Arms of each Family. To be
completed in another Part.

By WILLIAM BERRY.

Late, and for Fifteen Years, Registering Clerk in the College of
Arms, London; Author of the "Encyclopædia Heraldica," and
other Works upon Heraldry and Genealogy.

This Work will be published separately in Counties, each in
Two Parts, containing a Series of Genealogies of the present and
past Families, with numerous Pedigrees from the Vestments of
each County, and other authentic Manuscript Collections; and
complete Index, not only of the Pedigrees, but of the several
Matches in them. For more ready Reference.

* Only 250 Copies of each County will be printed.

On Monday, June 1st, will be published, with nearly Ten Thou-
sand Engravings on Wood, complete in 1 large vol. 8vo. price
4s. 10s. 6d.; Parts, every two Months, 10s. 6d. each; Numbers,
Monthly, 2s. 6d. each.

AN ENCYCLOPÆDIA of PLANTS;

comprising the Description, Specific Character, Cul-
tural History, Application in the Arts, and every other desirable
particular respecting all the Plants indigenous, cultivated in, or
introduced to Britain: combining all the advantages of a Lin-
nean and Jusquean Species Plantarum, an Historical Plantarum,
a Grammar of Botany, and a Dictionary of Botany and Vegetable
Culture. The whole in English, with the Nomenclature in Latin,
and the Scientific Names accompanied, their Etymologies explained,
the Classes, Orders, and Botanical Terms illustrated by Engra-
vings; and with Figures of nearly Ten Thousand Species, num-
bered and arranged according to the System of Linnæus.

Edited by J. C. LOUDON, F.L.S. H.S. &c.
The Specific Characters, &c. by John Lindley, F.R.S. L.S.
and G.S. &c.

The Drawings by J. D. C. Sowerby, F.L.S.; and
the Engravings by R. Brown.

Printing for Longman, Rees, Orme, Brown, and Green.

The Second Number of

THE LONDON REVIEW,

Edited by the Rev. BLANCO WHITE.
Will be published on the 30th instant.
Printed for Saunders and Oiley, Conduit Street.

Where may be had,

The First Number, containing,—I. Periodi-
cal Literature.—II. Sir Walter Scott's Novels.—III. Church Re-
forms.—IV. Napoleon's Invasion of Russia.—V. France on
Diet.—VI. Great Tragedy.—VIII. Social Life of England
and France.—IX. Insanity and its Moral Preventives.—X. Inter-
nal Corn Trade.—XI. The Course of Time.—XII. Preventive
Police, &c. &c.

LONDON: Published every Saturday, by W. A. SCRIPPS, at
the LITTON PRESS, 14, Pall Mall, 1st, Wellington Street,
Waterloo Bridge, Strand, and 7, South Molton Street, Oxford
Street; sold also by J. Chappell, 55, Royal Exchange; E.
Marlborough, Ave Maria Lane, Ludgate Hill; A. Black,
Edinburgh; Smith and Son, and Robertson and Atkinson,
Glasgow; and J. Canning, Dublin.

J. MOYSE, Took's Court, Chancery Lane.

PRICE 8d.

fixed eyes and folded arms. Already had the musketeers presented their pieces; already had the victim breathed his last prayer, and, opening his eyes, was looking steadily at his executioners, that he might see their aim good and true before he gave the signal; when a cry of 'Hold, for the love of the most Holy Virgin! hold!' arrested the attention of all. Her mantilla fallen, her hair loose, her arms uplifted, her cheek flushed with the strugglings of hope and fear, Leonora de Velasco, majestic as a bright angel of mercy, rushed with winged speed, and when she found herself in the midst, between Eustace and the levelled arms, in presence of her brother and his band, she suddenly stopped, and again cried with a nervous tone, that went trembling to many a hearer's heart, — 'He shall not die! he shall not die! Brother, he spared you the night we kneeled and sung a requiem for our father. He shall not die, brother! he repaired the great Velasco's tomb. He shall not die.' 'Away! unworthy Velasco, away!' said Juan, sternly: 'will no one remove the girl?' The priest ran and caught her arm to drag her from the line of fire. With a strength lent her by despair, she threw him far and violently from her,—then turned, and was in a moment at the cross, and placed herself before it. 'Here,' said the ~~despairing~~ girl, 'here will I stand! here gladly fall, or for or with this noble enemy!—no enemy to me or living man! as a brother dear to me!' 'Fire!' cried Juan,—he was not obeyed. 'As a thousand brothers dear to me!' repeated Leonora: 'Daughter of my father! you have lived too long,' thundered Juan, as with lightning swiftness he flew to her, and she fell stabbed at his feet,—the blood of her stricken bosom flowing forth upon them. 'Brother, brother!' said she faintly, as soon as she could recover from the shock: — 'Juan, you used to love me—kiss me, Juan:—and she supported herself on her arm, and lifted up her pale lips, and kissed his murderous hand that hung stained down. 'Leonora, confess! speak, say that it was true!—say that you were guilty!' 'Of many sins against high Heaven, Juan, but none against my brother.' 'Is not this enemy your lover? Hath he not abused you?' 'Your sister is chaste and spotless as the unsunned snow,' said the voice of Eustace, now for the first time heeded; though, from the instant of Leonora's arrival, he had prayed her to let death take its course upon him. 'Brother! I forgive you more than my death-blow—I forgive you this.' With slow and solemn utterance she spoke, and paused, frowning at the close of this effort. One more she made,— 'Let it be that I have died for this good man:—and after, there were but murmurs not intelligible, and lips that moved in prayer,—and her cold cheek felt not the pressure of her brother's as he lay down by her, prostrate in his despair. The lady Castilda and Clemente found her as white and cold as marble when they arrived at the foot of the cross;—there, where she had fallen, she lay dead. Leaning against the cross, to which he was no longer

bound, stood Eustace like a statue of grief—the boy Presidio at his feet, kneeling before the cross, Juan and the priest and the guerrillas were gone.—In the chapel of San Francisco, in Cordova, there is a plain tablet of white marble to the memory of Leonora de Velasco: it records not the manner of her death, but is simply inscribed with her name: above are the words *in calo quies*. Beneath, *oveja perdida ven.*"

If the history of the most heroic courage—the most devoted affection, told in the most poetical language,—if vivid pictures of those dangers in which almost every fire-side has had some near and dear one partaking,—if such do not insure these volumes the most complete popularity, the human heart must have lost a large portion of its most ennobling affections.

The History of Napoleon Buonaparte. 2 vols. 18mo. With Engravings on Steel and Wood. London, 1829. Murray.

WERE we asked what would constitute the perfection of a book destined for universal circulation, we should say,—A subject of the utmost historical interest, an interest in which every rank took part—whose great outline, one of the memory's epochs, rivetted attention on the details—one which, while of paramount importance to our own country, involved also every foreign soil with which it had relations. Let such a subject be treated in a concise yet complete narrative; let its authority be authentic, and the charm of style be added to the attraction of incident; and let some great name, familiar even in its wonder, be the cope-stone of attention:—to these internal requisites let it join all external advantages,—a neat and portable form, beautiful printing, engravings some first-rate and all characteristic, and let it be equally calculated for the library-shelf and the drawing-room table; let it be a valuable compendium for the most experienced, and a mine of delight to the young and eager reader; lastly, let its moderate cost place it within the reach of every class;—and if all this does not constitute the perfection of a book, it at least approaches it very closely. It is but saying the simplest truth, when we affirm that all these requisites are to be found in the delightful pages under notice. Of the plan of their publication we have before expressed our cordial approbation, and we now still more cordially express our approval of the manner in which it has been executed. This is a most admirable life of Napoleon, when we only speak of the excellent judgment, the dramatic force of the narrative, the clear and flowing language, which make it a first-rate work; but when we consider the immense mass of information, the just opinions, the variety of anecdotes, condensed into two small volumes, we confess it no less excites our wonder than our warmest praise. We would fain quote a capital general view of the state of the imperial government at its zenith, but our space prevents us; and we must therefore content ourselves with the two following samples. The justice of the statement of his residence at St. Helena would alone make us extract it.

"The accusations brought by the prisoner and his instruments against the government of England, in regard to the accommodations at Longwood, the arrangements concerning the household establishment, and the regulations adopted with a view to the security of his person,—have been so often answered in detail, that we may spare ourselves the pain of dwelling on transactions little worthy of filling a

large space in the story of Napoleon. It being granted that it was necessary to provide against the evasion of Buonaparte; that the protracted separation from him of his wife and son (not, at any rate, the act of England, but of Austria) was in itself justified by obvious political considerations; and that England would have given good reason of offence to the King of France, had she complied with Napoleon's repeated demands to be styled and treated as emperor;—if these things be granted, we do not see how even the shadow of blame can attach to the much-abused ministers on whom fortune threw one of the most delicate and thankless of all offices. His house was, save one (that of the governor), the best on the island: from the beginning it was signified that any alterations or additions suggested by Napoleon would be immediately attended to; and the frame-work of many apartments was actually prepared in England, to be sent out and distributed according to his pleasure. As it was, Napoleon had for his own immediate personal accommodation a suite of rooms, consisting of a saloon, an eating-room, a library, a billiard-room, a small study, a bed-room, and a bath-room; and various English gentlemen, accustomed to all the appliances of modern luxury, who visited the exile of Longwood, concur in stating that the accommodations around him appeared to them every way complete and unobjectionable. He had a good collection of books, and the means of adding to these as much as he chose. His suite consisted in all of five gentlemen and two ladies: the superior French and Italian domestics about his own person were never fewer than eleven; and the sum allowed for his domestic expenditure was 12,000*l.* per annum—the governor of St. Helena, moreover, having authority to draw on the treasury for any larger sum, in case he should consider 12,000*l.* as insufficient. When we consider that wines, and most other articles heavily taxed in England, go duty-free to St. Helena, it is really intolerable to be told that this income was not adequate—nay, that it was not munificent—for a person in Napoleon's situation. It was a larger income than is allotted to the governor of any English colony whatever, except the governor-general of India. It was twice as large as the official income of a British secretary of state has ever been. We decline entering at all into the minor charges connected with this humiliating subject: at least a single example may serve. One of the loudest complaints was about the deficiency and inferior quality of wine: on examination, it appeared that Napoleon's upper domestics were allowed each day, per man, a bottle of claret, costing 6*d.* per dozen (without duty), and the lowest menial employed at Longwood a bottle of good Tenerife wine daily. That the table of the fallen emperor himself was always served in a style at least answerable to the dignity of a general officer in the British service—this was never even denied. Passing from the interior, we conceive that we cannot do better than quote the language of one of his casual and impartial visitors, Mr. Ellis. 'There never, perhaps (says this gentleman), was a prisoner so much requiring to be watched and guarded, to whom so much liberty and range for exercise was allowed. With an officer he may go over any part of the island: wholly unobserved, his limits extend four miles—partially observed, eight—and overlooked, twelve. At night the sentinels certainly close round Longwood itself.' It indeed appears impossible to conceive of a prisoner more liberally treated in

all these respects. There remains the constantly repeated vituperation of the climate of St. Helena. It appears, however, by tables kept and published by Dr. Arnott, that the sick-list of a regiment stationed close to Buonaparte's residence during his stay, rarely contained more than one name out of forty-five—a proportion which must be admitted to be most remarkably small. In effect, the house of Longwood stands 2000 feet above the level of the sea; the ocean breezes purify the air continually; and within the tropics there is probably no healthier situation whatever. If it be said that Napoleon should not have been confined within the tropics at all—it is answered, that it was necessary to remove him from the neighbourhood of the countries in which his name was the watch-word of rebellion and discord; and that, after all, Napoleon was a native of Corsica, one of the hottest climates in Europe, and was at all times, constitutionally, able to endure the extremes of heat much better than of cold—witness Egypt and Russia. There was a rule that Napoleon's correspondence should all pass through the hands of the governor of St. Helena—and this Sir Walter Scott condemns. Had the English government acted on the Buonapartean model, they would have made no such regulation, but taken the liberty of privately examining his letters and revealing them, after the fashion of the post-office under Lavalette. It diminishes our regret when we learn, from Sir Walter Scott's next page, that in spite of all laws and severities on this score, Napoleon and the companions of his exile contrived from the beginning to the end to communicate with their friends in Europe, without the supervision of any English authorities whatever. The finishing touch is put to the picture of unworthy duplicity by one of Napoleon's own followers and most noisy champions, General Gourgaud. This gentleman himself informed the English government, that at the time when Napoleon, in order to create the notion that his supplies were restricted beyond all endurance, sent some plate to James's Town to be broken up and sold, he, Napoleon, had in his strong box at Longwood at least ten thousand pounds in gold coin. There is one name which will descend to posterity laden with a tenfold portion of the abuse which Napoleon and his associates lavished on all persons connected in any degree with the superintendence and control of his captive condition—that of Sir Hudson Lowe, a general officer in the English army, who became governor of St. Helena in May 1816, and continued to hold that situation down to the period of the ex-emperor's death in 1821. The vanity of Napoleon appears to have been wounded from the beginning by this appointment. According to him, no person ought in decency to have been intrusted with the permanent care of his detention but some English nobleman of the highest rank. The answer is very plain—that the situation was not likely to find favour in the eyes of any such person; and when one considers what the birth and manners of by far the greater number of Buonaparte's own courtiers, peers and princes included, were, it is difficult to repress wonder in listening to this particular subject of complaint. Passing over this original quarrel, it appears that, according to Buonaparte's own admission, Sir H. Lowe endeavoured, when he took his thankless office upon him, to place the intercourse between himself and his prisoner on a footing as gracious as could well be looked for under

all the circumstances of the case; and that he, the ex-emperor, ere the governor had been a week at St. Helena, condescended to insult him to his face by language so extravagantly, intolerably, and vulgarly offensive, as never ought, under any circumstances whatever, to have stained the lips of one who made any pretension to the character of a gentleman. Granting that Sir Hudson Lowe was not an officer of the first distinction, it must be admitted that he did no wrong in accepting a duty offered to him by his government; and that Napoleon was guilty, not only of indecorum, but of meanness, in reproaching a man so situated, as he did almost at their first interview, with the circumstances—of which at worst it could but be said that they were not splendid—of his previous life. But this is far too little. Granting that Sir Hudson Lowe had been in history and in conduct, both before he came to St. Helena and during his stay there, all that the most ferocious libels of the Buonapartists have ever dared to say or to insinuate,—it would still remain a theme of unmixed wonder and regret that Napoleon Buonaparte should have stooped to visit on his head the wrongs which, if they were wrongs, proceeded not from the governor of St. Helena, but from the English ministry, whose servant he was. 'I can only account,' says Mr. Ellis, 'for his petulance and unfounded complaints from one of two motives—either he wishes by these means to keep alive an interest in Europe, and more especially in England, where he flatters himself he has a party; or his troubled mind finds an occupation in the tracasseries which his present conduct gives to the governor. If the latter be the case, it is in vain for any governor to unite being on good terms with him to the performance of his duty.' Napoleon did every thing he could to irritate this unfortunate governor. He called him *schlesener*, *thief-taker*, *har*, *hangman*; rejected all his civilities as insults; encouraged his attendants to rival in these particulars the audacity of his own language and conduct; refused by degrees to take the exercise which his health required, on pretext that it did him more harm than good when he knew himself to be riding within view of English sentinels (which was not necessary at all within four miles of Longwood), or attended by an English officer (which was not necessary unless at the distance of twelve miles from Longwood); above all, opposed every obstacle to the enforcement of that most proper regulation which made it necessary that his person should, once in every twenty-four hours, be visible to some British officer. In a word, Napoleon Buonaparte bent the whole energies of his mighty intellect to the ignoble task of tormenting Sir Hudson Lowe; and the extremes of degradation to which these efforts occasionally reduced himself in the eyes of his own attendants are such as we dare not particularize, and as will be guessed by no one who has not read the memoir of his Italian doctor, Antonmarchi. Meantime, the great object was effectually attained. The wrongs of Napoleon, the cold cruelty of the English government, and the pestilent petty tyranny of Sir Hudson Lowe, were the perpetual themes of table-talk all over Europe. There were statesmen of high rank in either house of the British parliament who periodically descended on these topics; and the answers as often elicited from the ministers of the crown, only seemed such declamations for the moment, that they might be renewed with increased violence, after time had elapsed sufficient to

allow the news to come back to England with the comments of Longwood. The utter impossibility of an escape from St. Helena was assumed on all such occasions, with the obvious inference that there could be no use for sentinels and domiciliary visitations at Longwood, except for the gratification of malignant power. But it is now ascertained that, throughout the whole period of the detention, schemes of evasion were in agitation at St. Helena, and that agents were busy, sometimes in London, more frequently in North America, with preparations which had no other object in view. A steamship, halting just beyond the line of sight, might undoubtedly have received Napoleon at certain seasons of the year without difficulty, could he only contrive to elude the nocturnal vigilance of the sentinels about the house of Longwood; and that this was impossible, or even difficult, General Gourgaud himself does not hesitate to deny. The rumours of these plots reached from time to time Sir Hudson Lowe; and, quickening of course his fears and his circumspection, kept the wounds of jealousy and distrust continually open and angry. There were moments, however, in which Napoleon appeared, to persons likely to influence public feeling in Europe by their reports, in attitudes of a far different description. When strangers of eminence (generally officers on their way to or from India), halting at St. Helena, requested and obtained permission to pay their respects at Longwood, Napoleon received them, for the most part, with the ease and dignity of a man superior to adversity. It was by these worthier exhibitions that the fallen emperor earned the lofty eulogy of Byron:

—Well thy soul hath brooked the turning tide,
With that untaught, innate philosophy,
Which, be it wisdom, coldness, or deep pride,
Is gall and wormwood to an enemy.
When the whole host of hatred stood hard by,
To watch and mock thee shrinking, thou hast smiled
With a sedate and all-enduring eye;
When Fortune fled her spoiled and favourite child,
He stood unbowed beneath theills upon him piled.

Among the visitors now alluded to was Captain Basil Hall; and he has, perhaps, presented the world with the most graphic sketch of Napoleon as he appeared on such occasions at Longwood. 'Buonaparte (says this traveller) struck me (Aug. 13, 1817) as differing considerably from all the pictures and busts I had seen of him. His face and figure looked much broader and more square—larger, indeed, in every way, than any representation I had met with. His corpulency, at this time reported to be excessive, was by no means remarkable. His flesh looked, on the contrary, firm and muscular. There was not the least trace of colour in his cheeks; in fact, his skin was more like marble than ordinary flesh. Not the smallest wrinkle was discernible on his brow, nor an approach to a furrow on any part of his countenance. His health and spirits, judging from appearances, were excellent; though, at this period, it was generally believed in England that he was fast sinking under a complication of diseases, and that his spirits were entirely gone. His manner of speaking was rather slow than otherwise, and perfectly distinct; and he waited with great patience and kindness for my answers to his questions. The brilliant and sometimes dazzling expression of his eye could not be overlooked. It was not, however, a permanent lustre, for it was only remarkable when he was excited by some point of particular interest. It is impossible to imagine an expression of more entire mildness, I may almost call it of benignity and kindness, than that which played over his features during the whole interview. If, therefore, he was at this time out

of health and in low spirits, his power of self-command must have been even more extraordinary than is generally supposed; for his whole deportment, his conversation, and the expression of his face, indicated a frame in perfect health, and a mind at ease.' These favourable reports, from seemingly impartial witnesses, lent new wings to the tale of Sir Hudson Lowe's oppression; and perhaps the exile of St. Helena continued to fill a larger space in the eye of the world at large, than had ever before fallen to the lot of one removed for ever, to all appearance, from the great theatre of human passions. It was then that Lord Byron thus apostrophised him:—

'Conqueror and captive of the earth art thou!
She trembles at thee still, and thy wild name
Was ne'er more bruited in men's minds than now
That thou art nothing, save the jest of Fame,
Who would thee once, thy vessel and became
The flatterer of thy fierceness till thou wert
A god unto thyself—nor less the same
To the astounded kingdoms all inert,
Who deemed thee for a time what'er thou didst assert.'

And it was then that an English nobleman of high rank, who throughout manifested especial interest in the fortunes of Napoleon, inscribed his statue (in the gardens of Holland House) with the lines of Homer:—

'The godlike Ulysses is not yet dead upon the earth;
He still lingers a living captive within the breach of ocean,
In some unapproachable island, where savage men detain
him.'
Odyss. book i. v. 195.

The closing review of the emperor's character is so admirable, that it would be injustice not to quote it; and with it we end our review.

'Napoleon confessed more than once at Longwood, that he owed his downfall to nothing but the extravagance of his own errors. 'It must be owned,' said he, 'that fortune spoiled me: ere I was thirty years of age, I found myself invested with great power, and the mover of great events.' No one, indeed, can hope to judge him fairly, either in the brilliancy of his day, or the troubled darkness of his evening, who does not task imagination to conceive the natural effects, on a temperament and genius so fiery and daring, of that almost instantaneous transition from poverty and obscurity to the summit of fame, fortune, and power. The blaze which dazzled other men's eyes, had fatal influence on his. He began to believe that there was something superhuman in his own faculties, and that he was privileged to deny that any laws were made for him. Obligations by which he expected all besides to be fettered, he considered himself entitled to snap and trample. He became a deity to himself; and expected mankind not merely to submit to, but to admire and reverence the actions of a demon. Well says the poet,

'Oh! more or less than man—in high or low,
Battling with nations, flying from the field;
Now making monarchs' necks thy footstool, now
More than thy meanest soldier taught to yield;
An empire thou couldst crush, command, rebuild;
But govern not thy pettiest passion, nor,
However deeply in men's spirits shed,
Look through thine own—nor curb the lust of war,
Nor learn that tempted fate will leave the loftiest star.'

His heart was naturally cold. His school-companion, who was afterwards his secretary, M. de Bourienne, confesses that, even in the spring of youth, he was very little disposed to form friendships. To say that he was incapable of such feelings, or that he really never had a friend, would be to deny to him any part in the nature and destiny of his species.—No one ever dared to be altogether alone in the world.—But we doubt if any man ever passed through life sympathizing so slightly with mankind; and the most wonderful part of his story is, the integrity of

sway which he exerted over the minds of those in whom he so seldom permitted himself to contemplate any thing more than the tools of his own ambition. So great a spirit must have had glimpses of whatever adorns and dignifies the character of man. But with him the feelings which blind love, played only on the surface—leaving the abyss of selfishness untouched. His one instrument of power was genius; hence his influence was greatest among those who had little access to observe, closely and leisurely, the minutenesses of his personal character and demeanour. The exceptions to this rule were very few. Pride and vanity were strangely mingled in his composition. Who does not pity the noble chamberlain that confesses his blood to have run cold when he heard Napoleon—seated at dinner at Dresden, among a circle of crowned heads—begin a story with, *When I was a lieutenant in the regiment of La Fere?* Who does not pity Napoleon when he is heard speaking of some decorations in the Tuilleries, as having taken place 'in the time of the king, my uncle?' This last weakness was the main engine of his overthrow. When he condescended to mimic all the established etiquettes of feudal monarchy—when he coined titles, and lavished stars, and sought to melt his family into the small circle of hereditary princes—he adopted the surest means which could have been devised for alienating from himself the affections of all the men of the revolution, the army alone excepted, and for re-animating the hopes and exertions of the Bourbonists. It is clear that thenceforth he leaned almost wholly on the soldiery. No civil changes could, after this, affect his real position. Oaths and vows, charters and concessions, all were alike in vain. When the army was humbled and weakened in 1814, he fell from his throne, without one voice being lifted up in his favour. The army was no sooner strengthened and re-encouraged, than it recalled him. He re-ascended the giddy height, with the daring step of a hero, and professed his desire to scatter from it nothing but justice and mercy. But no man trusted his words. His army was ruined at Waterloo; and the brief day of the second reign passed, without a twilight, into midnight. We are not yet far enough from Buonaparte, to estimate the effects of his career. He recast the art of war; and was conquered in the end by men who had caught wisdom and inspiration from his own campaigns. He gave both permanency and breadth to the influence of the French revolution. His reign, short as it was, was sufficient to make it impossible that the offensive privileges of *caste* should ever be revived in France; and, this iniquity being once removed, there could be little doubt that such a nation would gradually acquire possession of a body of institutions worthy of its intelligence. Napoleon was as essentially, and irreclaimably, a despot as a warrior; but his successor, whether a Bourbon or a Buonaparte, was likely to be a constitutional sovereign. The tyranny of a meaner hand would not have been endured after that precedent. On Europe at large he has left traces of his empire, not less marked or important. He broke down the barriers every where of custom and prejudice; and revolutionised the spirit of the continent. His successes, and his double downfall, taught absolute princes their weakness, and injured nations their strength. Such hurricanes of passion as the French revolution—such sweeping scourges of mankind as Napoleon Buonaparte, are not permitted but as the

avengers of great evils, and the harbingers of great good. Of the influence of both, as regards the continent, it may be safely said—that even now we have seen only 'the beginning of the end.' The reigning sovereigns of Europe are, with rare exceptions, benevolent and humane men; and their subjects, no less than they, ought to remember the lesson of all history—that violent and sudden changes, in the structure of social and political order, have never yet occurred, without inflicting utter misery upon at least one generation. It was England that fought the great battle throughout, on the same principle, without flinching; and but for her perseverance, all the rest would have struggled in vain. It is to be hoped that the British nation will continue to see, and to reverence, in the contest and in its result, the immeasurable advantages which the sober strength of a free but fixed constitution possesses over the mad energies of anarchy on the one hand, and, on the other, over all that despotic selfishness can effect, even under the guidance of the most consummate genius."

There are some very clever wood-cuts, excellently calculated to give accurate notions of the scenes described; and few things impress a particular passage on the mind more than a picture. A charge of the Cossacks, the battle of the Pyramids, and the bridge of Arcola, are particularly animated. There are good likenesses of the emperor, both the empresses, and the king of Rome; and a most spirited and beautiful line-engraving, in front of the first volume, represents Napoleon crossing the Alps.

Memoirs of Lady Fanshawe. 8vo. Colburn.

THIS is a very delightful volume—delightful for its simplicity and domestic interest. Lady Fanshawe is no "woman of great talents," who has a character to keep up on paper,—who makes the most of what she hears, sees, thinks, says, and does—who observes every celebrated person with a full intention of putting them in a book;—no such thing: she is writing a family record, and such it is; her husband is her hero—the Fanshaws, with their alliances, her world—and the kings, queens, dukes, and magnates, are only mentioned as shewing them such and such attentions, making them such and such presents, &c.:—it is just a long letter from a very affectionate, single-minded, feminine creature, placed in most painful circumstances, and supported through them, not so much by strong sense or extraordinary judgment, as by the most devoted love to her husband. But let our heroine speak for herself.

"Now it is necessary to say something of my mother's education of me, which was with all the advantages that time afforded, both for working all sorts of fine works with my needle, and learning French, singing, lute, the virginals and dancing; and notwithstanding I learned as well as most did, yet was I wild to that degree, that the hours of my beloved recreation took up too much of my time, for I loved riding, in the first place, running, and all active pastimes: in short, I was that which we graver people call a hoyting girl; but, to be just to myself, I never did mischief to myself or people, nor one immodest word or action in my life, though skipping and activity was my delight: but upon my mother's death, I then began to reflect, and, as an offering to her memory, I flung away those little childnesses, that had formerly possessed me, and, by my father's command, took upon me charge of his house and family, which I so ordered, by my excellent mother's example, as found acceptance in his sight. I was very well beloved by all our relations and

my mother's friends, whom I paid a great respect to; and I ever was ambitious to keep the best company, which I have done, I thank God, all the days of my life.

"My father commanded my sister and myself to come to him to Oxford, where the court then was; but we, that had till that hour lived in great plenty and great order, found ourselves like fishes out of the water, and the scene so changed, that we knew not at all how to act any part but obedience; for, from as good a house as any gentleman of England had, we came to a baker's house in an obscure street; and from rooms well furnished, to lie in a very bad bed in a garret; to one dish of meat, and that not the best ordered; no money, for we were as poor as Job; nor clothes more than a man or two brought in their cloak bags."

Soon after this she marries; and a little occurrence, which takes place about a year after, is so prettily told that we must extract it.

"My husband had provided very good lodgings for us, and as soon as he could come home from the council, where he was at my arrival, he, with all expressions of joy, received me in his arms, and gave me a hundred pieces of gold, saying, 'I know thou that keeps my heart so well, will keep my fortune, which from this time I will ever put into thy hands as God shall bless me with increase.' And now I thought myself a perfect queen, and my husband so glorious a crown, that I more valued myself to be called by his name than born a princess; for I knew him very wise and very good, and his soul doated on me, upon which confidence I will tell you what happened. My Lady Rivers, a brave woman, and one that had suffered many thousand pounds loss for the king, and whom I had a great reverence for, and she a kindness for me as a kinswoman, in discourse she tacitly commended the knowledge of state affairs, and that some women were very happy in a good understanding thereof, as my Lady Aubigny, Lady Isabel Thynne, and divers others, and yet none was at first more capable than I; that in the night she knew there came a post from Paris from the queen, and that she would be extremely glad to hear what the queen commanded the king in order to his affairs; saying, if I would ask my husband privately, he would tell me what he found in the packet, and I might tell her. I, that was young and innocent, and to that day had never in my mouth what news, began to think there was more in inquiring into public affairs than I thought of, and that it, being a fashionable thing, would make me more beloved of my husband, if that had been possible, than I was. When my husband returned home from council, after welcoming him, as his custom ever was, he went with his handful of papers into his study for an hour or more; I followed him; he turned hastily, and said, 'What wouldst thou have, my life?' I told him, I heard the prince had received a packet from the queen, and I guessed it was that in his hand, and I desired to know what was in it. He smilingly replied, 'My love, I will immediately come to thee; pray thee go, for I am very busy.' When he came out of his closet I revived my suit; he kissed me, and talked of other things. At supper I would eat nothing; he as usual sat by me, and drank often to me, which was his custom, and was full of discourse to company that was at table. Going to bed I asked again, and said I could not believe he loved me if he refused to tell me all he knew; but he answered nothing, but stopped my mouth with kisses. So we went to bed, I cried, and he went to sleep. Next morning early, as his custom was, he called to rise,

but began to discourse with me first, to which I made no reply; he rose, came on the other side of the bed and kissed me, and drew the curtains softly and went to court. When he came home to dinner, he presently came to me as was usual, and when I had him by the hand, I said, 'Thou dost not care to see me troubled.' To which he, taking me in his arms, answered, 'My dearest soul, nothing upon earth can afflict me like that; and when you asked me of my business, it was wholly out of my power to satisfy thee; for my life and fortune shall be thine, and every thought of my heart in which the trust I am in may not be revealed; but my honour is my own, which I cannot preserve if I communicate the prince's affairs; and pray thee with this answer rest satisfied.' So great was his reason and goodness, that upon consideration it made my folly appear to me so vile, that from that day until the day of his death I never thought fit to ask him any business, but what he communicated freely to me in order to his estate or family."

They put to sea. "When we had just passed the Straits, we saw coming towards us, with full sails, a Turkish galley well manned, and we believed we should be all carried away slaves; for this man had so laden his ship with goods for Spain, that his guns were useless, though the ship carried sixty guns: he called for brandy, and after he had well drunken, and all his men, which were near two hundred, he called for arms, and cleared the deck as well as he could, resolving to fight rather than lose his ship, which was worth thirty thousand pounds. This was sad for us passengers; but my husband bid us be sure to keep in the cabin, and not appear, the women, which would make the Turks think that we were a man-of-war; but if they saw women, they would take us for merchants, and board us. He went upon the deck, and took a gun and bandollers, and sword, and, with the rest of the ship's company, stood upon deck, expecting the arrival of the Turkish man-of-war. This beast, the captain, had locked me up in the cabin; I knocked and called long to no purpose, until at length the cabin-boy came and opened the door: I, all in tears, desired him to be so good as to give me his blue thrum cap he wore, and his tarred coat, which he did, and I gave him half-a-crown; and putting them on, and flinging away my night-clothes, I crept up softly and stood upon the deck by my husband's side, as free from sickness and fear as, I confess, from discretion; but it was the effect of that passion which I could never master. By this time the two vessels were engaged in parley, and so well satisfied with speech and sight of each other's forces, that the Turks' man-of-war tacked about, and we continued our course. But when your father saw it convenient to retreat, looking upon me, he blessed himself, and snatched me up in his arms, saying, 'Good God, that love can make this change! and though he seemingly chid me, he would laugh at it as often as he remembered that voyage.'

In the time of the rebellion, Sir Richard is imprisoned.

"During the time of his imprisonment, I failed not constantly to go, when the clock struck four in the morning, with a dark lantern in my hand, all alone and on foot, from my lodging in Chancery Lane, at my cousin Young's, to Whitehall, in at the entry that went out at King-street into the bowling-green. There I would go under his window and softly call him: he, after the first time expected, never failed to put out his head at the first call: thus we talked together; and some-

times I was so wet with the rain, that it went in at my neck, and out at my heels."

He is, however, released, and at the restoration sent ambassador to Spain: of the magnificence of that court we can say nothing; but recommend the latter pages as both amusing in themselves, and as a pleasant contrast to this very charming volume.

Notice sur Edouard Ruppel, &c. Some Account of Edward Ruppel, and of his Journey into the Interior of Africa. Rev. Germ. Strasburgh. 1829.

IN our earlier years, Burckhardt, the illustrious traveller, was our fellow-student and bosom companion: * he was as robust in mind as in body, full of activity, exemplary for his application, sincere in his friendships, endued with a keen and sound judgment, of a lively, excellent temper, and passionately devoted to every pursuit which led across the seductive field of nature. He was remarkable, even when of an age which is peculiarly obnoxious to worldly blandishments, for (we could almost call it) a relentless determination to achieve whatever task he undertook. To select the objects of his studies with discrimination, and to follow them up with unflinching perseverance, seemed, with him, to be habits, derived from nature rather than acquired by education; and to these high qualities he added a manliness and simplicity of manners, and an integrity of conduct, which rendered him respected by all, while they endeared him to those by whom virtue and talent were considered as forming a title to personal esteem, and a provocative to the intimacies of friendship. Such was John Lewis Burckhardt when we sauntered with him beneath the shades where Gellert and Zollikofer had lifted their conceptions from Nature's self to Nature's God; such was he, but with augmented experience and acquirements, when our friendship was renewed under an English sky; and such was he to the last hour of an existence, of which science has so much reason to deplore the early and melancholy termination. We may well be excused this tribute to the recollections of an intimacy, begun in youth and cemented in maturer years, when we are about to make mention of a traveller whose disinterested zeal, and talents, and indefatigable thirst after science, appear scarcely inferior to those of the lamented Helvetian.

William P. E. S. Ruppel was born at Frankfurt in 1794. At eight years of age the native bent of his genius exhibited itself (says the author of the Notice before us) "in the indefatigable zeal with which he studied every individual specimen of a small collection of minerals, which his father had purchased for him at his earnest solicitation." His education was thenceforward directed to languages, history, geography, the mathematics, and natural philosophy; and at the age of sixteen "he was perfect master of Latin, French, English, and Italian." Upon the death of his father, he came over to England, where he sojourned fifteen months in London; and from thence, after revisiting his native country, bent his steps towards the South of France and Italy, from the shores of which he embarked for Alexandria in January 1817. Of his arrival in that port, one of his letters thus speaks:—"Every thing here is new to me. I might compare yesterday to an hour spent by a countryman in gazing at the reflections of a magic lantern. My mind

* It is hardly necessary to say, that, in a journal like ours, we have many valued associates: the present review, in its language, shews its origin from one of these, and not from Ed. L. G.

was familiarised to every object by the narratives of others: I came, big with expectation, to see them with my own eyes; but I am distracted by the rapid alternation of those objects, and am anxious to survey them at my leisure: it is the work of time alone to make every thing clear and distinct."

Having terminated the commercial engagements which called him to Cairo, he employed the five succeeding months in exploring Memphis, Upper Egypt, Thebes, Syene, &c. He passed five days at the pyramids, and conceived he had seen every thing worth the trouble, when he was asked by a capuchin whether he had not visited the "Grotta della Madonna," where Mary is said to have taken refuge at the time of the massacre of the innocents at Bethlehem. His remark upon this inquiry is *naïf* enough. "By my troth, I had not once thought of such a *curiosity* as this; it did not seem worthy to be named in the same day with the ruins of Memphis."

He quitted Egypt in October, landed at Leghorn, and before reaching Frankfort once more, had resolved upon abandoning the mercantile profession, for the purpose of exclusively occupying himself with scientific pursuits. "He returned to Frankfort in the spring of 1818, at a time when several naturalists had assembled with a view of establishing a society of physics and a museum of natural history. His first interview with Dr. Cretzschmar (the director, and one of the founders of the society) lasted twelve hours, and was decisive of the important enterprise Ruppel had in contemplation. It was on this occasion that he gave expression to the generous idea he had conceived of lending his aid towards the public institutions of his native town, and presenting them with whatever treasures he should collect upon his travels; and he has carried this noble purpose into effect with the most scrupulous punctuality up to the present hour." And he at once afforded an earnest of his sincerity by bestowing some valuable donations of Egyptian rarities upon the public library of Frankfort. He shortly afterwards returned, through Switzerland, to Pavia, where he prepared himself for a second expedition into Africa by attending courses of comparative anatomy, physiology, natural history, and chemistry, and studying astronomy and archaeology. His varied attainments here brought him into intimate acquaintance with Bardi, Della Marmora, De Zach, and the first literati of Italy; and his intense application was occasionally relieved by excursions to Elba, Vesuvius, Sicily, and the Lipari Islands. The recital of his descent into the crater of the Vulcano, one of the latter group, deserves to be given in his own words. "I cannot help thinking it would prove by no means an impracticable task to descend at this moment into the depths of the crater of Etna. But when I ascended that volcano I was totally unprepared for such an attempt; nor should I have probably determined on descending into it without a companion. So much the greater was the joy I experienced on setting foot within the abyss of the volcano of Vulcano, the depth of which is four hundred feet or thereabouts. Hot, sulphureous, and murky vapours rise from betwixt its rugged and almost peaked confines. It appeared in its existing state to be almost impervious to the observant eye; for when Delue, and Spallanzani after him, descended into it, its configuration was of a different character; but the foot of ardour succeeded in groping its perilous way in this rocky region. Every side of the crater bristled with sublimations of the purest vol-

canic sulphur; and nought but the hand of industry seemed wanting to ensure the deliverer an abundant remuneration. About seven years back, Nunciante, a Sicilian noble, and Arosto, an apothecary of Messina, joined in an attempt to work this copious mine; and to this attempt we are indebted for a path which courses along the southern side upon perpendicular rocks. He was the boldest of adventurers who hazarded a first descent: in fact, an extraordinary sensation affects you when you are fairly launched into this yawning gulf of four hundred feet depth; for, independently of the sulphureous exhalations and the escape of the other gases which oppress the powers of respiration, you experience a feeling of uneasiness which increases the native horrors of the spot. Yet there cannot be found any laboratory of the volcanic powers, of so inestimable a value towards collecting facts which will probably prove the future means of establishing a theory on the origin of igneous currents. The crater of Vulcano resembles that of every other volcano; it is a flattened funnel (*entonnoir applati*), inserted in a cone of the height of nearly nine hundred feet. The exterior margin of this funnel is rounded in the shape of an ellipsoid, the greatest diameter of which, from west to east, is about eleven hundred feet, and the least seven hundred. We have already spoken of its depth as being four hundred feet; nor is it shallower even in those spots where the marge is least elevated; and the compass of the level bottom, in comparison with the circumference of the exterior marge, is in the proportion of one to two. More than one-half of the interior declivity is a peaked rock; it is the upper portion only, consisting of volcanic ashes, which narrows into the shape of a funnel. The lower segment is composed of a whitish-yellow lava, perfectly compact, and presenting fissures of an ungainly aspect. These fissures are at every point the outlets of fumes strongly saturated with sulphur and other ingredients; and the path itself traverses several spots heated by gushing vapours. When you reach the bottom, which is any thing but a plane surface, your attention is first rivetted by a cone about sixty feet in height, to the north, which emits several columns of smoke; and of these there is one of a peculiarly violent action, which forces a passage on its eastern side through an aperture about four inches in diameter. It is scarcely possible to approach within two paces of this exhaustless current of combustible atmosphere. Your ears are assailed by an unceasing and appalling din, belike the roaring of some enormous mass in a state of fusion. Sublimations of sulphur, in the form of acicular crystals, and a red and yellow crust of muriate of ammonia, four lines in thickness, are suspended around the aperture. A number of rents and small orifices give a vent to columns of vapours, impregnated with sulphur, ammonia, and muriatic acid; and in this direction the soil is not merely warm, but of burning heat. This small cone appears to be the cauldron of volcanic action. The vapours which rise from this cone, especially in an easterly and westerly direction, deposit natural boracic acid in the shape of a crust, which is said at times to cover a considerable extent of soil, and to wear the appearance of saline snow.

On the base of the crater are found fragments of obsidian, bullous lava; many of these are of enormous size, and were emitted during an eruption of ashes in the year 1786. Some of them, weighing above eight hundred pounds each, were hurled as far

as the sea-shore, which is half a mile distant. Alum, sulphur, mineral salt, vitriol, ammonia, and boracic acid, are found within the crater of Vulcano, either in a state of sublimation or of efflorescence and concretion. But how many other matters may there not exist, as concurrent agents to volcanic action, which have escaped our attention, either from the predominance of those we have designated, or from their remaining constantly in the shape of an aeriform fluid? Chemists and mineralogists ought to make a point of visiting this interesting island, where many a valuable discovery might crown their exertions."

In the course of the fourth and last year of Ruppel's sojourn at Pavia, he entered into an engagement with the Society of Natural History of Frankfort, which evinces a rare spirit of liberality and patriotism combined. "He made a free gift to them, not only of the mineralogical collection he had then made, and of his apparatus and part of his library, but of every object belonging to natural history which he might glean during his travels in Northern Africa; merely stipulating, that the society should give him Michael Hey (an anatomist) as a companion, and pay the expenses of that gentleman during his peregrinations, as well as the cost of arms, gunpowder, lead, and other necessities; and engaging, on his own part, to defray every other outlay." The society not being in a condition to comply with these terms, Counsellor Bethmann (his fellow-townsmen) generously stepped forward, and provided the means out of his private purse.

Having thus laid in ample stores, both of materials and attainments, and been joined by his young companion Hey, Ruppel left Leghorn on the first of January, 1822; and soon after his arrival at Cairo insinuated himself into the viceroy's good graces, by the eagerness he manifested to explore the gold mines of Akaba in Arabia Petrea, and the satisfactory report which he brought back concerning them. During the return of the travellers from this visit, which was extended to Suez and Mount Sinai, they were the fleshly witnesses of an extraordinary phenomenon, the *Chamsin of the Arabs*. This occurrence is related by him in a letter to M. de Zach. "On the twenty-first of May we were at a distance of seven hours journey from Cairo, and making our way through the desert, when we were overtaken by the ill-starred blasts of the south, which are the favourite subject of travellers' wonders. The wind burst violently from the S.S.W., and the atmosphere was thickened with such immense clouds of dust, that even a camel became invisible at fifty paces distance. I heard a slight noise run along the ground, and at first conceived it to be occasioned by the rolling of pebbles, driving before the fury of the wind: on the side from which it proceeded, our faces, hands, and feet, became strangely inflamed; and we felt a painful sensation, as if our skin had been pricked with needles; both were accompanied by a low crackling noise on the skin. My first impression was, that what we felt arose from the effect of pebbles being driven against our bodies by the wind; and I held out my hat that I might catch and examine them; but, to my astonishment, not a single one was to be discovered in it. It then occurred to me that the sensation was occasioned by some unknown physical cause, which I could compare to nothing better than a current of electric matter. Being thus induced to pay minuter attention to the subject, I observed that our hair stood erect, and that the pain we endured was felt

most acutely at our joints: it was precisely the same in effect, as if I had been electrified on an electric stool. In order to convince myself that the pricking sensation was not caused by pebbles, I held out a sheet of paper, well distended, in the wind's eye: the minutest grains of sand could not have been driven against it without producing articulate sounds; but not a breath of noise was heard, nor could I find any marks whatever upon the paper. I stretched out my fingers, and instantly felt the pricking with increased violence at their extremities. If I should be correct in my conjecture, that this *Chamsin*, or *Khamsin*, (for the Egyptians use either term indiscriminately), is the effect of a superabundant presence of the electric fluid, we shall find no difficulty in assigning a reason why, as African travellers report, it should be attended with so much danger as even sometimes to occasion the destruction of entire caravans."

In the month of June, in the same year, Ruppel again quitted Cairo, and proceeded on a visit to the once fertile, but at present barren, province of Payoum and lake Moeris, whence they explored the Delta and lake Menzaleh, in the marshy vicinity of which he was attacked by a severe dysentery, which compelled him to seek the aid of quinquina and calomel at Alexandria. From this spot he forwarded to Europe the multifarious specimens collected during his several excursions, and then made preparations for a voyage up the Nile, of which a future number will afford an interesting summary.

Romances of Real Life. By the Author of "Hungarian Tales." 3 vols. 12mo. London, 1829. Colburn.

Two of the longest tales in this collection—the "Lettre de Cachet" and the "Reign of Terror"—have already received from us that commendation which we can freely extend to their companions: there are one or two among these stories which—for picturesque narration, for that indefinable airiness of touch which makes the merit of so many French *contes*, for a little sparkle on the surface, and a little sentiment underneath—are quite unrivalled. The "Princess's Birthday," or, to use the author's own words, "a fairy tale without a fairy," is a prettier story than has for many a month carried us out of "this work-a-day world." The following sketch of a new monarch is excellent:—

"If the mind of a king could be open to so degrading a fact, the new sovereign of Westernania was probably enlightened on the subject. Acute, cool, discerning, something of a humorist, and more of a philanthropist, Ferdinand had been trained in the severe school of royal cadetship. He had been debarred from all prospect of succession by the existence of several elder brothers, as well as by the prospects arising from the happy marriage of the reigning sovereign; and during the last twenty years, he had lived to be forgotten by all the world; saving his regiment, and the little frontier town of his royal brother's dominions assigned to his government, and for his subsistence. He was a man of inactive habits and unambitious character; and he would have been well contented to remain as stationary as the sentry-boxes that mouldered away at the entrance of his grass-grown court-yard, had it not pleased Providence to afflict him in holy wedlock with a princess who could never reconcile herself to the destiny averting from her own head one of the numerous matrimonial crowns showered down upon the arch-duchesses

her sisters. From her early youth she had been accumulating a treasury of despotic principles and arbitrary feelings, for the benefit and governance of her expected subjects; but as her hand had chanced to be accorded to a pitiful younger brother,—heir neither apparent nor presumptive to any earthly dignity beyond the paltry government of a frontier province, her highness's sense of retributive justice had determined her to bestow upon his single person the result of all the maxims of government she had acquired for the advantage of her people. Prince Ferdinand had, therefore, the good fortune to be as hen-pecked a husband as the poorest burgess finding refuge from his domestic plagues in skittles and *schnapps* throughout his brother's dominions. Thus only can the historian imagine a motive for his royal highness's singular selection of a *passetemps* for his leisure hours. Armory in all its branches was his single hobby; as if the ringing of a sledge-hammer were alone capable of deafening the *Amatarre* of feminine expostulation which rattled in his ears from morn till night. Thus harassed, and thus scantily gifted with the pleasures and privileges promised by a royal birth, Prince Ferdinand seemed destined to vegetate among files and vices, steel and iron,—when Death was pleased to befriend one whom all mankind conspired to overlook. His wife—*died*; and that at the very period when the decease of his two elder brothers began to open her views towards the throne;—the following year the reigning sovereign himself was snatched away. This last stroke, however, was far from being so endurable a calamity as the previous mortality of the family. Ferdinand loved his brother with the cordial warmth of fraternal affection, and reverence with an equal sincerity his conscientious discharge of the mighty duties of his station. Persuaded that he was himself incapacitated for fulfilling those duties with similar wisdom and perseverance, no one grieved with truer sympathy over the evil destiny which had blighted one of the happiest *ménages* in Germany, than the new King of Westermania. To recede from his appointed path was, however, impossible; and even the expression of his modest doubts whether the execution of his regal functions would redound to his own credit, or to the profit of his people, was quickly overpowered by the clamorous flattery of his brother's courtiers. During his dying moments they had ventured upon a perilous voyage of discovery, along the forgotten road leading to Ferdinand's frontier seat of petty government, in order to assure the majesty expectant, that the eyes of all Germany had long fixed themselves on his secluded retreat; that an era of new hopes had dawned upon Westermania; and that the wisest and best of princes was at length vouchsafed to the prayers of the nation. The maiden speech of the new monarch was appropriately gracious; but while he looked upon the fawning curts that licked his feet, a significant curl quivered at the corner of his eyelids, and some suppressed feeling twinkled within. 'The thieves!' said he to himself; 'would they were griped in my great vice!'

The letter which winds up the *dénouement* of the queen and her fair daughter's adventure, is too good to be omitted.

"To her Majesty the Queen Dowager of Westermania, *these*.—This letter, dearest sister, will precede but by a moment the arrival of the Prince of Casselaria. I trust Theresa will forgive his resemblance to young Herman von Haldenstadt, and that you will pardon me for

having practised upon your daughter's affections. Having discovered, through Madame d'Orledo, that my pretty niece had a vocation for becoming a heroine, I saw fit to provide a royal hero for her romance;

Sans un petit brin d'amour
On s'ennuieroit—même à la cour!

And I fancy the Princess of Casselaria will not love her husband the less, that he has been long her lover. With respect to Agneta,—*'nous avons changé tout cela,'* and even you, Paulina, will in this instance applaud my versatility. Her qualities are such, that from this hour I disclaim her as my niece!—with her mother's consent, she shall live in my bosom, and be unto me as a daughter; and you can have no further excuse for rejecting my Max as your son-in-law; he has learned to dance, as well as taught others to fight, since his last visit. Our Agneta is indeed something of the youngest for a bride; but as I should be grieved to separate such a daughter from such a mother, I trust you will receive the hereditary prince and princess of Westermania under your roof,—alternately at Westenburg, and at the Residence, where the Favorita palace is fitted for your reception. The youth and inexperience of my gentle niece will thus be remedied; my son, who has a noble heart, will make the best of husbands; and I am persuaded that the meek abbess of Kastanienwald will never drive him to the refuge of a furnace and a sledge-hammer! I do not abdicate in their favour; because history records that all monarchs who have philosophically descended from their thrones, have attempted to fight their way up again within a calendar year; and Max is all the more secure of my people's love,—for nothing surpasses the popularity of an heir-apparent. My dear Paulina, I would willingly have witnessed the meeting of the young lovers; but since my son's marriage was yesterday declared in council, every living soul in the capital has taken the road to Westenburg, as the shortest to preferment. There is no one left here to look to the palace but myself and a lame shoeblack! Wherefore, Heaven send you a joyous bridal, and a speedy journey hitherward, prays your loving brother,

"FERDINAND."

Some of the smaller tales are thrown in merely as make-weights, and might as well have been left to the oblivion of the Annuals. We observe that our author succeeds most when she trusts entirely to her own invention;—your short facts worked up into fictions are scarcely worth much;—and, what is of rarer occurrence, her longest tales are by far the best. The whole three volumes combine a great deal both to amuse and interest the reader, and nothing to induce weariness or fatigue.

Mrs. Lushington's Journey from Calcutta to Europe.

[Third notice: conclusion.]

OUR extracts from this animated and pleasing Narrative have already exceeded our usual limits for a volume of its size; but the interest of the scenes described, and the natural and truly feminine manner in which the various topics are treated, will, we are sure, be a sufficient apology for deviating from our accustomed course in the present instance; and though, even now, we could find much that we should feel pleasure in transferring to our pages, yet the pressing nature of many other novelties obliges us to conclude with a few additional samples. The first is a picturesque and graphic description of Shooobra, the country-seat of the

renowned Mahomet Pasha, and is as follows:—

"Proceeding by a fine road, planted on each side with acacias and sycamores, whose growth, owing to the richness of the soil, kept pace with the impatient disposition of the pasha, who had, at one sweep, cut down the avenue of mulberry trees three years before, we arrived at the house, which is situated close to the Nile, and commands a fine prospect of the river and city. The exterior of the building exhibited nothing remarkable. On ascending a terrace a few feet square, we passed through a rough wooden door, such as is fit only for an outhouse, and found ourselves in the pasha's room of audience. It was matted, and round the walls was fixed a row of cushions, on two corners of which were placed satin pillows, marking the seat the pasha occupied according to the position of the sun. Just over a low ledge in the door, we stepped into a small room with a bedding on the floor: this was his sleeping chamber. Surely never monarch had so little luxury or state. Thence we came at once to the magnificent suite of apartments appropriated to the chief lady of the harem. The centre of the principal room formed a sort of octagon, with three recesses, all inlaid with marble. From the four corners opened four smaller rooms, fitted with splendid divans and cushions of velvet and cloth of gold; and a set of marble baths completed this series of elegant apartments. The ceilings, executed by a Greek artist, were lofty and vaulted, ornamented with gold and representations of landscapes, or of palaces and colonnades, the whole painted in light and pleasing colours. The sultana's private sitting-room was still more sumptuous. The ceiling consisted of a circus of palaces, the columns and arches of which were delineated with a most successful regard to perspective. These apartments were until lately occupied by the pasha's deceased wife, mother of Ibrahim Pasha by a former husband. Their splendour was singularly contrasted with the plainness of those inhabited by the pasha himself. This led one of my friends to ask if I was not penetrated with so convincing a proof of the gallantry of the Turk; and he challenged me to cite the English husband who would have done so much for the exclusive gratification of his wife. To which I could only reply that, with my erratic propensities, I should not willingly resign the privilege of locomotion for such proofs of affection; and that I apprehended few English women would answer either the pasha's or Sancho Panza's idea of a good wife, by continually remaining, according to the latter proverb, 'like an honest woman, at home, as if her leg were broken.' Mahomed Ali's late consort had great influence over him during her life, as he considered his marriage with her the foundation of his good fortune. She was esteemed and beloved by the people; for her influence was ever employed on the side of justice and mercy. Much of her time was occupied in receiving petitions; but it was seldom she had to refer them to the pasha, as her power was too well known by the ministers to require this last appeal. If, however, in consequence of any demur on their part, she had to apply to him, he answered their remonstrance by saying—'It is enough. By my two eyes! if she requires it, the thing must be done; be it through fire, water, or stone.' His highness, during the heats of summer, sits below in a room particularly adapted for coolness, and having a marble fountain in the centre. On one of the walls is inscribed, in large Arabic characters, a verse

from the Koran, signifying, 'An hour of justice is worth seventy days of prayer.' The gardens of Shobbra, with their golden fruit and aromatic flowers, having already been described by former travellers, I shall pass on to the magnificent pavilion, which constitutes the chief embellishment of the place, and which was completed only a few weeks before my visit. This pavilion is about 250 feet long by 200 broad. On its sides run four galleries or colonnades, composed of elegant pillars of the finest white marble (of an order resembling the Composite), surrounding a sunken court of six feet deep, paved throughout with the same beautiful material. At each corner of the colonnade is a terrace, over which water passes into the court below in a murmuring cascade, having on its ledges figures of fish, sculptured so true to nature, that, with the flowing stream, they appear to move. The whole supply of water rises again through a fountain in the centre, and re-appears in a beautiful jet-d'eau, left, sparkling, and abundant. One seldom sees an exhibition of this character without apprehending a failure of water; but here the works are fed by the Nile, and the spectator is aware that its exuberance will not cease. In fine weather the pasha occasionally resorts to this splendid fountain with the ladies of his harem, who row about in the flooded court for the amusement of his highness, while he is seated in the colonnade. Great is the commotion when the ladies descend into the garden. A signal is given, and the gardeners vanish in an instant. We were all struck with the ruddy cheeks and healthy appearance of these men. They were principally Greeks; and the gay colours of their fanciful costume,—each with a nosegay or bunch of fruit in his hand,—combined with the luxuriant scenery around, gave them more the semblance of actors in a ballet representing a fête in Arcadia, than the real labourers of a Turkish despot."

As it is not our purpose to pursue this journey to Malta, Sicily, Naples, and England, we shall here close our notice with two or three anecdotes and incidental matters. The first is a striking trait of character, which occurred during a late "untoward battle."

"Sir Thomas Fellowes had two of his sons, one a child of nine years old, on board the Dartmouth at the battle of Navarino. These young midshipmen behaved with a coolness scarcely to be expected at their tender age; and during the action, the elder, only twelve himself, had the admirable good sense and feeling to keep his brother out of their father's sight, lest the latter's anxiety should be excited."

At Giarra, in Sicily, we have a different trait, viz. one affecting a whole crowd of "dames of Ephesus" mourning their loves!

"The village had contained 150 men, with their wives and children. From the smallness of the church, these were compelled to attend divine service at different times. The women had gone and returned first as usual, and the men occupied their places; but scarcely had they assembled, when an earthquake occurred, which destroyed the priest and the whole of the congregation—absolutely not one man in the village escaped! My informant added, that the poor women being left destitute (here I expected a tale of distress), resorted to another parish to recruit for fresh husbands; 'for what,' said he, 'could they do, but settle themselves again in matrimony as soon as possible?'"

The annexed summary respecting Egyptian antiquities, from the Appendix, may be ac-

ceptable to most readers at the present time, when we are so frequently receiving intelligence from that region.

"The following buildings in Egypt are ascertained, according to Champollion, to have been erected under the Pharaohs:—The ruins of San, the obelisk of Heliopolis, the palace of Abydos or El Arabah, a small temple at Dendera, Carnac, Luxor, Medamoud, Gournoo, the Memnonium, the palace called the Tomb of Osymandyas, the excavations at Biban ool Moolk, the hypogees in the mountain over Thebes, the temples of Elephantine, and a small part of those at Philæ. The Greeks and Romans erected the following in Egypt:—the temple of Bahbert, the Kasr-Keroun, the portico of Kaül-Kebir, the great temple and typhonium at Dendera, the portico at Esneh, the temple north of Esneh; the temple and typhonium at Edfoo; the temples of Ambos, the greatest part of the buildings at Philæ. Ptolemaic ruins:—the temple at Erment and Tuot, temple at Edfoo, Esneh, temple of Aphroditopolis, now called E'days, to the north of Esneh; Contralatopolis, a small temple on the east bank of the Nile; El Hegs (Eleithya), small but ruinous temples and interesting catacombs, east bank. The great tomb discovered by Belzoni is called also Amun Mai Ramses; Bruce's tomb, Ramses III. The third tomb was called by the ancients that of Memnon. The finest sculptures are those of the kings of the eighteenth and nineteenth dynasty. All authorities agree that Ramses, Sethosis, and Sesostris, are the same person. Plausible accounts make him contemporary with the Trojan war.—(See *Edinburgh Review*, No. LX.) Champollion, it is believed, is an exception to this opinion. Ramses Meiamon built the palace of Medinet Habon, and several parts of the buildings at Carnac and Luxor. He was father of Amenophis, and grandfather of Rhames the Great, or Sesostris. The deities in the tombs, as presiding over the dead, are different from those found in other monuments; the chief are Osiris and Isis. The attributes of different deities are confounded by being applied to each other; but the phonetic name is generally inscribed over the figure. Deities have curved beards. The throne is the only certain mark of Isis."

Here we conclude, with many thanks to the fair writer, who has proved that even for a delicate female the overland route from India (while at peace with Turkey) is preferable to the sea voyage;—requiring less time and less expense, and being in every way more pleasant and instructive. In the end, she gives directions to those who may wish to follow her gallant example; and notices, as the chief drawback, the imperfect surveys of the Red Sea:—and here we take shame to ourselves; for we have long had in our possession a valuable manuscript correction of the charts in this quarter, which want of opportunity has prevented us from publishing. This hint, however, will probably induce us to print it in an early *Gazette*.

SIGHTS OF BOOKS.

The Poetical Sketch-book; including a Third Edition of Australia. By Thomas K. Hervey. London, 1829. E. Bull.

WE must begin our notice by a few words of censure on the form in which this volume appears:—from a new title we expect a new work; and it would have been but common fairness to have stated that the *Poetical Sketch-book* is merely a reprint of pieces which are already familiar to every reader of poetry,

from their having been published in the different *Annals*. Having mentioned this point, there now only remains the more pleasant task of praising; and we are glad to see that Mr. Hervey has collected together many a former favourite, in a more durable shape. Florantha, the most exquisite poem of its length almost ever written, opens the work. It is needless to make a selection from what is already so popular; and we therefore close with observing, that this is a most delightful volume, and that many of the expressions and images are only surpassed in their originality by their sweetness. Mr. Hervey is a poet: but we must again protest against the deception of the title of this publication.

Lord Moreau of Hereward. 4 vols. London, 1829. Newnam and Co.

BELONGING to the better order of a former school; and narrates "divers passages" of love and warfare in the struggles between the Saxons and their Norman conquerors.

A Memento for the Afflicted. By Barzillai Quaife. 18mo. pp. 201. London. Nisbet. A SINCERE and well-meant exhortation, inculcating patience, and even satisfaction, under the deepest afflictions, as conducive to eternal happiness, however severe the suffering in this life.

ORIGINAL CORRESPONDENCE.

Paris, May 31st.

NOTWITHSTANDING Tivoli fêtes, the screaming of fiddles at the Champs Elysées, the vagaries of monkeys, and the swallowing of ice at Tortoni's, we should inevitably expire of ennui, were it not for the arrival of foreigners, wild beasts, and sea monsters, which give a fillip to our curiosity.

Our costumed have been lately filled forth by the German performers in the *opéra romantique du Freyschütz*. La Salle de Favart was crowded; the very passages were filled with heads (for I could perceive no bodies); nor was it possible to gain a breath of air even by leaving the box-door open. However, we were more than indemnified for being nearly stifled to death, when the curtain rose; for *le chœur d'introduction* is replete with that harmony so familiar to German composition. Madame Fischer is both a *belle et jolie femme*; her voice is clear and strong, but not always what the French term *gracieuse*; still, in the second act, and in the final prayer of the third, she merited those applauses which French gallantry at the commencement accorded to her beauty and quality of *étrangère*. As to Haintzinger, his voice alone is music; every tone reaches the soul: I never heard a finer tenor. The waltzing, too, was really "the poetry of motion;" and was partly performed *sur la scène*, which has the best effect. The demon *Samiel* crosses the stage three times in a car of fire, to the great amusement of the spectators, who by no means found his demonship a fearful personage. *La chasse aérienne* is executed by means of fantastic forms and images entirely *dans le goût* of northern traditions. The *dénouement* of the opera is rather too tedious; still the ear never wearies, though the imagination becomes impatient. I observed at the final prayer, that neither the Bohemian prince nor the hermit deigns to kneel: this is carrying aristocratic principles *jusqu'au ciel*.

The ball for the bazar sufferers took place at No. 18, Rue de Rivoli on Thursday evening: the crowds without were double the number of those within. I understand that thirty thou-

sand franks were cleared. The king gave the flowers to deck the apartments, and the proprietor of the hotel also lent his rooms gratis: *etiam*, charity had its full effect.

We are now in breathless expectation of the arrival of the *whale* which the public prints have announced as being on its way to this capital; and a wooden house of immense dimensions has been constructed for its reception on the Place de Louis Seize, where the animal is to be exhibited;—an elephant from Asia is also shortly expected: so that curiosity will at least be nourished for a short period—and of all the Parisian sensations, this is the most necessary to gratify.—I believe surgeons and builders have come to a good understanding: scarcely a year elapses without the occurrence of chimneys falling or floors giving way: even yesterday, in the Faubourg St. Honoré, several people were killed and wounded by the tumbling of a house. These accidents proceed entirely from the avidity of proprietors, who only take into consideration the rents they are to receive—not the lives of their *locataires*. It is to English example that we are indebted for the present mode of “running up houses” with walls of an inch in thickness.

I wronged Mr. Scribe in having attributed to his pen “*Les Suites du Mariage de Raison*.” Mr. Brunswick is the author guilty of portraying in this “piece” the real manners of the age, and the consequences resulting from prudent marriages.

ARTS AND SCIENCES.

ROYAL INSTITUTION.

MAY 22.—The subject discussed in the theatre this evening was the nodal figures produced by the phonic vibrations of elastic laminæ: it was one of a series, of which the matter, illustration, and arrangement, have been contributed by Mr. Wheatstone, and the delivery confided to Mr. Faraday.

The nature of a nodal point was first illustrated upon an extended wire, which being touched at one-third of its length, had the shorter part put into a vibrating state by the application of a violin-bow, when the longer part immediately entered into a state of vibration, as if it consisted of two portions, a point of rest occurring exactly at the middle: this point was described as a nodal point, the earliest observation of which is attributed to Messrs. Noble and Pigot, two of Dr. Wallis's pupils, in the year 1673.

Mr. Faraday next directed the attention of his audience to Chladne's beautiful discovery relative to the production of regular forms by the arrangement of grains of sand sprinkled upon a horizontal and vibrating plate of glass, or other elastic substance. Thus, for instance, a round plate of window-glass being held firmly between the extremes of the thumb and second finger, applied exactly at the centre, and a violin-bow drawn over one part of the edge, a clear musical sound will be produced: if at the same time the plate be held horizontally, and a little dry sand, or metallic filings, sprinkled over the surface, the sand or filings will arrange itself into a regular form, probably a star, with 6, 8, 10, or 12 radii. The lines thus formed are called nodal lines; the sand or filings being thrown from the vibrating parts to these places; and according as the plate divides into different vibrating portions, so do the sound and the figures change. The mode of producing various forms was next entered into and fully illustrated; all the possible forms that could be obtained from square, round, and other plates, being shewn upon

large diagrams, constructed from Chladne's latest work.

Mr. Faraday then proceeded to notice the figures obtained upon surfaces vibrating only by reciprocation. Thus, sand, sprinkled upon a plate of glass properly connected by a sounding string, gave a series of figures, according to the notes produced by the string: thin membranes also, extended over frames, being sprinkled with sand, and brought over vibrating plates, immediately reciprocated to them, the sand taking regular forms. By this means various phenomena in the transformation of these figures were perceptible, which could not be observed in plates of glass.

At the conclusion, Mr. Faraday briefly noticed the mathematical investigations which had been entered upon, for the purpose of discovering formulæ applicable to these phenomena, and gave promise of bringing forward some important simplifications of the theory of these effects, made very recently by Mr. Wheatstone.

On the library-table were placed a variety of minerals, fine specimens of crystallised glass, and works of literature, presented to the Institution; together with a number of Eastern curiosities, from the collection of the Asiatic Society, including a new species of vegetable wax abundant in Japan, and obtained from a species of *rhus*.

LINNÆAN SOCIETY.

THE anniversary meeting of this Society took place on Monday, at the Society's house in Soho Square; A. B. Lambert, Esq., vice-president, in the chair; Lord Stanley, the president, not being able to attend, in consequence of a recent family affliction. The Secretary detailed the proceedings of the Society since its last yearly meeting; from which it appeared that thirty-nine Fellows, five Foreign Members, and six Associates, had been elected into the Society; while, during the same period, it had lost by death nine Fellows, amongst whom were the Duke de St. Carlos at Paris, and Archdeacon Cox; and though last, not least in the annals of science, Dr. Thomas Young: of the Foreign Members two had died, viz. Professor Thunberg, the pupil and successor of Linnæus at Upsal, and Monsieur Bosc, professor of agriculture at the Jardin du Roi. Whilst the Society deeply lamented the loss of these distinguished men, there was matter of congratulation on the other hand: the receipts for the year, including the subscription for the Linnæan Library and Collection, late the property of Sir James Edward Smith, amounted to 361*l.* 1*s.* 2*d.*; of this sum, 2200*l.* had been paid as part of the price of the Linnæan Herbarium, &c. purchased by the Society, and now arranged, for the use of the Fellows, &c., by Mr. Don, the librarian of the Institution: a variety of valuable donations had also been added to the library and museum since the last anniversary.

A ballot for officers then took place; at its conclusion the following were declared duly elected: viz. the Marquess of Bath *vice* T. Bell, Esq., W. J. Broderip, Esq. *vice* Dr. Fitton, R. E. Grant, M.D. *vice* D. Gilbert, Esq., J. Lindley, Esq. *vice* J. Sabine, Esq., N. Wallich, M.D. *vice* J. F. South, Esq.

The other officers stand as heretofore.

In the evening the Fellows and their friends dined together at the Freemasons' Tavern.

At the last meeting, M. Mirbel of the French Academy, Professor Meckel of Halle, M. Bonpland, Mr. Say of Philadelphia, and Dr. Wahlenberg of Upsal, were elected Foreign

Members; and a paper on the geology and botany of the banks of Swan River, by Mr. James Fraser, colonial botanist, New South Wales, was read.

PHRENOLOGICAL SOCIETY.

MONDAY, May 18th.—Joseph Moore, M.D., president, in the chair. A paper was read by Mr. George Taylor, being a translation of the account of Dr. Gall and his system, as given by M. Ph. Damiron, in his “*Essai sur l'histoire de la Philosophie en France au dix-neuvième Siècle*.” M. Damiron places Gall in the “*école sensualiste*,” and endeavours to prove that the science of phrenology tends to materialism: from this it was declared to be evident that he had not sufficiently examined the principles of the system, as the brain is merely the material organ through which the mind acts. Two interesting cases of phrenological pathology were mentioned by Dr. Elliotson as having been attended by him: one that of a lady who forgot the names of every thing, and, while the attack lasted, had pain in the situation of the organ of language:—the other, that of a woman in St. Thomas's Hospital, who, in consequence of her husband having taken away her child, was affected with great giddiness, rendering her unable to walk across the ward, and with intense pain in that part of the head recognised as the seat of *phlogogenitiveness*, and in that *only* the symptoms were much increased upon the child being brought to her for a few minutes, and again taken away. A chart of Dr. Gall's system, by Dr. Fossati, and a chart of Lavater's system of physiognomy, were presented from M. Otting, of Paris, by Dr. Elliotson.

CELESTIAL PHENOMENA FOR JUNE.

21st day, 6 hrs. 8 min.—the sun attains his greatest northern declination in the foot of Castor.

Lunar Phases and Conjunctions.

	D.	H.	M.
● New Moon in Taurus . . .	1	5	49
☾ First Quarter in Leo . . .	9	1	23
○ Full Moon in Ophiuchus . . .	16	18	15
☾ Last Quarter in Pisces . . .	23	12	57
● New Moon in Gemini . . .	30	16	45

The moon will be in conjunction with

	D.	H.	M.
Venus in Taurus . . .	1	12	15
Mercury in Gemini . . .	3	3	15
Mars in Gemini . . .	3	5	0
Saturn in Cancer . . .	5	3	0
Jupiter in Scorpio . . .	15	12	0

4th day, 17 hrs.—The planets Mercury and Mars in conjunction near: Geminorum, a double star of the third magnitude in the knee of Castor.

8th day.—Mercury at his greatest elongation, and visible after sunset. Venus is now an evening star; but being mingled with the solar rays, and at nearly its greatest distance from the earth, it will not be satisfactorily visible.

The asteroids Vesta and Juno are now visible; the former a little more than a degree to the south of ϕ Virginis, and may be seen, if the evening be clear, by the unassisted sight; its light being more intense than the other asteroids: it is very similar in appearance to Uranus.

The annexed will more particularly indicate the place of Juno, which may also be distinguished by its reddish colour:—

5th day, R. A. 16 hrs. 33 min.—South Declin.	3° 27'
15th . . . 16 . . . 25	3 16
25th . . . 16 . . . 18	3 18

Jupiter will be in opposition the morning of the 1st day, and consequently in the most favourable position for observation. It will continue during the summer evenings a conspicuous and beautiful object, transiting the

meridian during the month at the following times respectively :—

D. H. M.	D. H. M.	D. H. M.
1 11 57	13 11 1	25 10 6

[Want of room obliges us to postpone an interesting and minute history of Jupiter, which we hope to be able to lay before our readers in our next No.]

LITERARY AND LEARNED.

OXFORD, May 16th.—On Saturday last the electors appointed to decide on the respective merits of the candidates for the three Craven Scholarships, lately vacated by lapse of time, declared their choice to have fallen on the following gentlemen :—

W. H. Johnson, Commoner, Worcester College, as of kin to the Founder; J. Thomas, Commoner, Wadham College; F. Rogers, Commoner, Oriel College.

On Thursday the following degrees were conferred :—
Doctor in Divinity.—Rev. J. Webber, Christ Church, Dean of Rippon and Prebendary of Westminster, Grand Compounder.

Masters of Arts.—Rev. J. Jenkins, Merton College, Grand Compounder; Rev. W. Lockwood, University College, Grand Compounder; T. P. Meade, Fellow, All Souls College; Rev. R. Brickdale, Christ Church; Rev. H. Oldenbaw, Brasenose College; F. L. B. Dykes, Oriel College; Rev. H. Richards, Magdalen Hall; *Bachelors of Arts*.—C. Alderson, Magdalen Hall; M. R. Jeffreys, Christ Church; J. Bomors, Exeter College; R. Armistead, Worcester College; J. R. F. Billingsley, L. Armistead, G. Bellamy, J. C. Aldrich, Lincoln College; A. D. Stacpoole, R. J. Mackintosh, Fellows, New College; W. G. Duncombe, W. W. Johnson, Brasenose College; J. Armistead, Wadham College.

May 22d.—On Thursday the following degrees were conferred :—

Bachelor in Divinity.—Rev. H. White, Fellow of Corpus Christi College.

Masters of Arts.—T. O. Ward, Rev. H. J. Buckoll, Michel Scholar, Queen's College; Rev. E. Girdlestone, Scholar, Rev. T. P. Holdich, D. S. Melkham, Balliol College; Hon. J. C. Talbot, Student, Christ Church; Rev. W. D. Harrison, Rev. H. Chavasse, Worcester College.

Bachelors of Arts.—C. Dowling, G. W. Bush, J. Dinning, Queen's College; Rev. A. Bromley, St. Edmund Hall; C. E. Dukinfield, C. E. Bishop, Magdalen Hall; W. B. Clark, University College; G. H. Cotton, J. C. Chaytor, Worcester College; W. W. Clarke, W. Y. Draper, E. Thomas, Wadham College; C. J. Birch, Fellow, St. John's College; J. G. Bussell, Trinity College; Sir J. T. B. Duckworth, H. J. B. Withers, Oriel College.

ROYAL SOCIETY.

MAY 28th. The President in the chair.—A paper was read, "on the nerves of the face;" by Charles Bell, Esq. E. F. Maitland, Esq., M.P., was elected. Amongst the presents were, Professor Bessel's important inquiries into the Length of the simple Seconds' Pendulum; Mons. Poisson's Memoir on the Equilibrium of Fluids; the Eighth Volume of the Memoirs of the Royal Academy at Paris, &c. &c.

May 14th.—A paper was read, entitled "on the brain as an aggregation of parts." By G. Spurzheim, M.D.; communicated by R. Chenevix, Esq., F.R.S.

The author contends that the human brain should be viewed not as a single organ, but as an aggregate of many different nervous apparatuses, each destined to the performance of a special function. What the peculiar function is which each of the cerebral organs performs, cannot, indeed, be at all inferred from its anatomical structure, but must be gathered from other evidence. In comparing the brains of different animals, this process must be reversed; and whenever we find organs performing the same function in different animals, we must conclude that they are in reality the same organs, however they may differ in their size, structure, appearance, or situation. The brains of animals belonging to the same class resemble each other in their general type, although the special apparatuses appropriated to each function may vary in their size and number.

The author next attempts to establish the proposition, that the parts of the healthy human brain are essentially the same, although somewhat modified in their size and quality, in different individuals. In support of this doc-

trine, he endeavours to shew, that the several convolutions on the surface of the cerebrum may be identified in different brains; and that this identity may be recognised in the two lateral halves of the same brain. On examining the brains of some idiots, he found that certain convolutions, which he believes to be capable of being thus identified, are defective, and others entirely wanting. He makes a similar observation on the brain of an orang-outang which exhibits a closer analogy to the human structure than that of any other mammiferous animal, and in which he could not discern some of the convolutions which exist in the brain of man. The paper was accompanied by drawings of the brain of an idiot, from a preparation in the possession of Mr. Stanley; and of that of an orang-outang belonging to Dr. Leach, now deposited in the museum of the Royal College of Surgeons.

SOCIETY OF ANTIQUARIES.

MAY 28th. Hudson Gurney, Esq., M.P., in the chair.—Certain proposed alterations in the statutes of the Society were read and suspended in the room. A paper on the round towers of the churches in Norfolk and Suffolk, by Mr. Samuel Woodward was next read. A paper containing observations on the present state of Norwich Castle, by the same gentleman, followed; and part of a paper, by Mr. Britton, on the origin and use of bells.

At the meeting on the 21st, a very interesting paper, by Dr. Meyrick, was read, upon an ancient fibule cross; which contained remarks upon the cross used for the execution of criminals among the Romans, proving it to have been what is now called St. Andrew's cross, or what heralds call the *saltire*.

An eloquent discussion followed, on certain proposed alterations in the statutes, in which Messrs. Foss, Bland, Caley, Rosser, and Amyot; took a prominent part.

THE LONDON UNIVERSITY.

ON Saturday we enjoyed a very great gratification in witnessing the first fruits of the system of education in the London University. Though confined to the medical classes (seven in number), the distribution of prizes to the most successful students was extremely interesting. They were propounded by the various professors, Mr. C. Bell, Dr. A. T. Thomson, Mr. E. Turner, Dr. D. D. Davis, Dr. Conolly, Mr. G. S. Pattison, and Mr. J. R. Bennett, and delivered by the Marquess of Lansdowne. The former severally explained the system according to which these honours had been adjudged, and highly complimented their pupils for industry and ability. The noble marquess, in conclusion, pronounced a very eloquent address. The Duke of Somerset, Lord Auckland, Mr. Brougham, T. Moore, Mr. Hume, and other distinguished individuals, were present.

FINE ARTS.

EXHIBITION OF THE ROYAL ACADEMY.

[Fourth Notice.]

No. 36. *A Girl at a Cottage-door*. R. Westall, R.A.—A very pleasing work, distinguished by its simplicity, and at the same time by the novelty of its treatment. The management of the light is remarkably happy; and, upon the distant landscape especially, is truth itself.

No. 18. *A Greek Girl*. H. W. Pickersgill, R.A.—Of a character similar to the "Oriental Love Letter," exhibited by the same able artist two or three years ago, and possessing the same grace of form, the same sweetness of

expression; the same display of splendid accessories, harmoniously disposed. We were about to protest against the barbarity of leaving so lovely a creature barefooted, when lo! on looking at the picture again, on our second visit, we found that Mr. Pickersgill's compassionate heart had in the meanwhile induced him to supply the deficiency.

No. 4. *Subject from the Revelations*. F. Danby, A.—Mr. Danby appears this year to be making one of those pauses which sometimes intervene between the great efforts of either a poet or a painter. The smallness of the production under our notice is injurious to it. If the angel had been of the size of life (may we use such an expression?), and if the picture had been proportionably large, and had been hung up aloft instead of level with the eye, we have no doubt that the effect would have been very striking.

No. 186. *The Meeting of Abraham's Servant and Rebekah*. W. Hilton, R.A.—It is pleasing to turn the eye from dark denunciations of human woe to the calm sunshine of patriarchal times, when the care of flocks and herds was the innocent occupation of the sons and daughters of the greatest among mankind. There is no passage of Scripture which gives a more favourable view of society than that selected by Mr. Hilton as the subject of this picture; over which he has thrown a bright but rich tone of colour, finely blended and harmonised by the characteristic softness of his pencil.

No. 207. *Milton's Reconciliation with his Wife*. W. Boxall.—Full of grace and feeling; the colour and effect remarkably good; and executed in a fine, broad, artist-like manner.

We now pass (for the present, at least) into THE SCHOOL OF PAINTING, on entering which we are struck with

No. 291. *Rasham, the property of the Right Hon. the Earl of Dudley*. E. Landseer, A.—No turbaned Turk, but an admirable specimen of that noble creature, a Newfoundland dog, in the most spirited action; and painted with all the well-known vigour and skill of Mr. Landseer's pencil.

No. 263. *Scandal*. "Only think!" T. Clater.—An excellent representation of one of the greatest curses of society. The demon-like malice of both the relater and the auditors is expressed to the life. Mr. Clater has much enhanced the picturesque effect of his work by his judicious choice of costume, which is that of the last century, and by his happy adoption of the style and manner of one of the best masters of the Flemish school—we mean Terburg.

No. 282. *A Troubadour relating his Adventures to a party of Ladies*. R. T. Bone.—A very different tale from the last mentioned, we will be sworn. The spirit of love and romance pervades this elegant and well-painted group, and carries the imagination back to the days and regions of chivalrous gallantry and exploit.

No. 269. *Landscape after a Shower*. F. R. Lee.—We have always expressed a high opinion of Mr. Lee's talents; and this noble picture, which places him at once in the foremost rank of English landscape painters, confirms all our hopes of him. It is utterly devoid of trickery, or affectation, or extravagance; and is as fine a specimen of firm masterly painting as we have ever seen.

No. 322. *Hadleigh Castle: the Mouth of the Thames: Morning, after a stormy Night*. J. Constable, R.A. elect.—In his own truly original manner, Mr. Constable has here imparted a most grand and imposing character to

a scene of great diversity and extent. It is a very powerful production.

No. 246. *Camilla introduced to Gil Blas at the Inn*. G. S. Newton, A.—Cervantes and Le Sage afford excellent and exhaustive materials for the painter; and no one knows better how to use them than Mr. Newton. In the treatment of his present subject he has been very successful, with the exception (as it strikes us) of the too slender and perpendicular figure of Gil Blas, which, forming a line parallel to that of the female figure, rather hurts the composition.

No. 357. *Scene from the Tempest*. H. P. Bone.—The second scene of the first act. A subject exhibiting more contrasted passions and emotions,—pity, love, anger, resentment,—or one better calculated to shew the talents of the artist to advantage, could scarcely have been selected. It is a work which does Mr. Bone great credit.

EXHIBITION OF THE SOCIETY OF PAINTERS IN WATER-COLOURS.

[Concluding notice.]

No. 256. *The Great Gallery of the Louvre, Pont Royal, Quai Voltaire, and part of the Palais des Beaux Arts, at Paris*. F. Nash.—There is not a finer work in the room, nor one which has a more resplendent effect of daylight. The grandeur of the architecture, its noble perspective, and the level and receding river, reflecting like a polished mirror the varied vessels and craft upon its bosom, altogether form a scene of beauty which is seldom to be witnessed, either in nature or in art.

No. 184. *Gleaners*. S. Austin.—Of as brilliant a character as the last-mentioned drawing, although composed of very different and of much more simple materials.

No. 233. *The Red Lion*. G. Pyne.—It is the privilege of art to confer dignity on the humblest, as well as on the most exalted, subjects. The present work, as well as No. 116, *Morning*, and No. 101, *Aylesford, Kent*, by the same artist, shew Mr. Pyne's varied talents to great advantage.

No. 100. *An old Keeper of Mr. Wyndham's at Corhampton*. W. Evans.—Carefully studied in all its parts; although as much distinguished by the plainness and simplicity of its execution, as the character represented is by the plainness and simplicity of his professional costume.

No. 97. *Scene at the Bear's Head, Eastcheap*. T. M. Wright.—This spirited little sketch is all we can find from the hand of an artist whose talents have so frequently challenged our admiration. It would be an excellent subject for a large and finished drawing.

No. 212. *Calais Pier*. D. Cox.—An admirable representation of life and motion, both by sea and land. Mr. Cox has several small, sparkling drawings in this exhibition, the tones of which are exquisitely true to nature.

No. 249. *Mor de Glace, Chamouni*. H. Gastineau.—Where shall we find in the visions of the most fertile fancy scenes as extraordinary as this reality which Mr. Gastineau has so ably presented to our view?

No. 398. *Composition*. G. Cattermole.—A masterly and beautiful sketch. Mr. Cattermole has several other little designs in the room, which do him the highest credit.

NEW PUBLICATIONS.

The Wreckers, by Stanfield; engraved by Quilley. Moon, Boys, and Co.

We noticed this print in our review of the Suffolk Street Gallery. It is now published, and fairly enough multiplies, through the

medium of mezzotint, Mr. Stanfield's very clever and interesting picture.

Our Saviour casting out Devils. W. C. Ross. Lithographed by Hullmandel. Colnaghi, Pall Mall East.

THE large picture which did so much honour to the pencil of a young artist at the Somerset House Exhibition two or three years ago. It is well executed by Hullmandel; and, as an effort in the highest class of art, deserves our particular praise. Mr. Ross has only to proceed in his great career.

The Martyrdom of Charles the First, King of England. Drawn, transferred to stone, and printed, by J. Netherclift.

AN extraordinary specimen of what can be done by transfer from paper to the stone. We understand that Mr. Netherclift prepares the paper himself, by a novel process. Whatever may have been the means used, the result is singularly curious. As an historical document also, the print, which is large, and which contains portraits of the unfortunate Monarch, Bradshaw, Cromwell, Ireton, and Fairfax; representations of the trial and execution; and a fac-simile of the order for the latter, with the signatures of fifty-nine of the regicides,—is valuable.

DIORAMA, REGENT'S PARK.

A CHANGE having lately been made in this very interesting and attractive exhibition, it was re-opened on Thursday last, with a View of the Interior of the Church of St. Peter's, at Rome, painted by M. Bouton; and a View of Thiers, near the Bridge of St. John, department of the Puy de Dome, France, painted by M. Daguerre. The public have become too familiar with the talents of these able artists, and with the extraordinary effects which they are capable of producing, to render it necessary for us to expatiate on those points. The Interior of St. Peter's is a most skilful piece of both linear and aerial perspective, and conveys an excellent idea of the magnificent original; but the subject is by no means so susceptible of picturesque illustration as some of the less regular interiors, or portions of interiors, of cathedrals, and other buildings, upon which M. Bouton has on former occasions employed his pencil. The View of Thiers is eminently beautiful in composition, and (with the exception of a few purplish tints near the foreground) true in colour. The ascent of smoke from a cottage-chimney, the trickling of water over stones so deceptively painted that the spectator can with difficulty persuade himself that he may not step from one to another, and the occasional appearance and disappearance of the sun, are all admirably managed. Upon the whole, without meaning to say that the present exhibition is superior, or even perhaps equal, to some of its predecessors, it is certainly one which richly deserves to be visited by every person of taste in the metropolis.

SKETCHES OF SOCIETY.

PICTURE OF CHINA.—NO. VI.

OUR next extract from these interesting papers is not only a curious commercial anecdote, which may be worthy of attention while we are at home investigating the subject of Indian trade, but affords a remarkable proof of the jealousy of the Chinese in such intercourse.

"*Lintin Anchorage*.—The Poonu, or Whampoa magistrate, has, in pursuance of orders from the treasurer's office, been calling for securities, and giving licenses to, the ship compradors.

After the Masao expedition, Governor Pak issued orders that all compradors should be insured by the elders of their kindred, and receive from government a sealed badge, to be worn about their waist, and produced whenever called for. The badge is a piece of wood on which the comprador's name is written, and a seal is attached by the magistrate: it is called *yewpaiyinchew*. The reason assigned for this arrangement is, to prevent traitorous natives disclosing the secrets of the empire to foreigners. And the Poon-u-une magistrate adds, as an additional reason, the fact that of late years a gradually increasing number of foreign vessels anchor at Lintin, from whence they cruise about; while traitorous natives, in fishing and tanka-boats, supply them with provisions, smuggle goods, diminish the revenue, deal in contraband articles, &c. He has taken the securities, and licensed a few compradors, whom he calls substantial people, skilled in foreign languages."

Other traits of national customs, &c. follow; and the annexed is a very curious one.

"*Lares and Penates*.—March 17th. This day, being the second day of the second moon, is an annual festival in China in honour of the Fokshin Towte taan, 'felicitous gods of the district's apotheosis.' Taan means, in ordinary language, the birthday of a mortal; but in this connexion means the day when a mortal became a god. As you walk the streets of Canton, you (if observant) will see in niches and corners stone figures of a little bearded old man and an old woman sitting beside each other. These are the Towte Powsaat—the district gods and goddesses. On this day, atheistical literati, magistrates, mandarins, merchants, shopmen, and plebeians, all let off crackers, and light candles, roast pigs, and present them with geese, ducks, fowls, &c. as sacrificial victims, with dumplings, fruits, and spirituous liquors, as offerings to the Towte Powsaat. Caps, boots, jackets, &c., made of paper—a complete wardrobe—being placed in a red-paper trunk, are all burnt, and sent into the invisible state, for the use of these deified personages. These foolish observances are attended to, with special devotion, in all the government offices. The thing most dreaded on this day is the falling of rain; which indicates the opposite, viz., a drought in the course of the year. The proverb runs thus—

Tapehap Towte eechay;
Yatpakyat shal.

'The wetted divinity's clothes will take a hundred days to dry.' The worshippers of these dumb idols are on this day dressed in the best attire they can procure. Bennets are borrowed for the occasion by those who have none of their own. They perform the thrice three prostrations called saam-kwei kaw-kav,—i. e. 'three kneelings, nine knocks.' At the public offices, a master of ceremonies, in imitation of imperial etiquette, attends. He calls out, 'Approach the altar—kneel—knockhead—rise;—again kneel—knockhead—rise;—a third time kneel—knockhead—rise. The ceremony is finished.' Such are the divine honours required of an ambassador to the court of Peking. Whilst kneeling, the people often mutter indistinctly prayers to the Towte Powsaat, imploring temporal prosperity. That they may (fattsoy) 'increase in wealth,' is the first petition of the tradesmen's prayer. After these forms are gone through, plays are acted at all the public offices for many days afterwards. The populace let off an enormous rocket, called faa-paou, 'the flower gun.' There is a straw shot placed at the mouth of it, which rises a

considerable height in the air, and blesses the man on whom it falls. The people strive against each other to get possession of it, till, occasionally, lives are lost in the conflict. He who gets it is expected to provide the *fa-paou* for the ensuing year. Some go to a hundred dollars expense. All Canton feast to-day on the tens of thousands of victims offered to the *Towte Powsaat*.—The new moon and the full are days observed by all the Chinese as times of worship to the gods. People in dwelling-houses, shops, temples, and government offices, on these days burn gold and silver papers, light candles, offer incense, let off crackers, and present cups of tea, before the domestic and other idols. Some perform these rites without adding personal adoration, whilst others choose to worship and pray. Government officers usually quit their houses before day-light, and repair to some adjacent temple to burn incense. This is the custom at the new and full moon all the year round. On the first and second new moons in the year there are extraordinary observances, when sacrifices of various kinds and burnt offerings are presented to the idols, libations of wine (or rather spirits) are poured out, prayers offered in full dress, money given by superiors to children and dependents, for good luck, &c. &c. The court circular of his excellency the governor announces to-day, that on the second new moon of the present year he went out early and repaired to the temple of *Wanchfong Powsaat*, and offered incense. He then went to the red-walled, yellow-tiled imperial temple of ten thousand years, and attended the reading of the sacred edict; i. e. imperial sermons on the political and social duties of subjects. This service being finished, he repaired to the temple of the old mother of *Ursa Major*, called *Tawmowkung*, and offered incense. Then he returned to his palace, and received the congratulations of all the civil and military officers in the city on the return of the new moon. His excellency the *Fouane*, or deputy governor, went through similar ceremonies on the same day, and also attended the imperial hall. There are only sixteen of these imperial sermons, and they have been read and re-read for the last thirty years; so that, although they were written and paraphrased for the use of the people, but very few attend. The governor and his fellow-officers, who are obliged to attend, have the advice all to themselves. After the service, his excellency paid several visits, one to congratulate the commissary general of the province on his wife's birthday; another to the chancellor of the literati, &c. On his return home the Hong merchants and salt merchants waited on his excellency to congratulate him on the new moon, and all the officers of the city either called or sent their cards. A great deal of time is spent in official visiting by the Chinese officers; and an opportunity is thereby afforded, without exciting suspicion, for carrying on their intrigues by verbal communication, on subjects about which they dare not write. A man in China cares very little what he says: words vanish into thin air, and leave no trace behind. But they are very cautious what they commit to writing, because documents remain, and may be produced as proof."

MUSIC.

PHILHARMONIC CONCERTS.

THE seventh of these performances, on Monday last, was distinguished by more novelty than any preceding one. It opened with a new symphony by F. Mendelssohn, an amateur from Berlin, and a near relative of the famous

philosopher of the same name and place. As this gentleman himself directed, and the performers exerted their utmost, nothing was wanting to make the composition appear to advantage: and so it certainly did—for the audience expressed a strong desire to hear both the andante and scherzo, undoubtedly the two best movements, a second time. The design of the work, though at first not very striking, would probably become clearer on listening again to its original ideas. A M. Rosner, also a German, sang an air out of the "Magic Flute," in German words, with tolerable success. His high tenor, being any thing but a *voce di petto*, sounded, particularly in ascending, exactly like a falsetto; and his manner is somewhat too calm. In the duet for harp and pianoforte, Mrs. Anderson had but little opportunity of displaying those talents which lately gained her so much applause in the performance of Hummel and Onslow's compositions; and Mr. Dizi, besides being occasionally rather out of time, had certainly some difficulty in keeping up with his partner. The composition, by Kalkbrenner and Dizi, did not please much. Weber's scena, "Misero me," was for the most part what we should have expected from Miss Paton. There being, contrary to usage, six pieces in the second act, instead of five, the call for a repetition of the andante in Mozart's all-admired symphony (E flat) was not attended to. Madame Wranitskij, also a German singer of by no means common pretensions, made her debut with Mozart's "Non più di fiori," and was accompanied in a masterly manner by Mr. Willman on the *corno bassetto*, an instrument only recently introduced into this country, but long in use in Germany. Madame Wranitskij's voice, although neither first-rate in compass, power, or flexibility, is nevertheless rich and pleasing; and in style and expression few are superior to her: all these fine qualities combined, obtained for her the most flattering reception. Mr. Oury's performance of a violin-concerto by Kreutzer and De Beriot, was in every way calculated to make us entertain the hope that he will ere long be one of the first violin players this country has ever had. The concert concluded at a late hour with Cherubini's fine overture to *Anacreon*.

CONCERTS.

MADAME STOCKHAUSEN's concert met with the encouragement that delightful performer so richly merited it should. The duet between her and Malibran was rapturously enjoyed.

A concert for the benefit of the Adult Orphan Institution was held on Tuesday at the Hanover Square Rooms, and was not so numerously attended as it deserved,—for a more admirable charity does not exist. The performances were well varied: Malibran sang an aria from *Mercandante*; Miss Essex met with much applause for her performance on the piano: Mr. Sedlatzek on the flute, accompanied on the organ by Mr. Grestorez, was quite unique.

DRAMA.

DRURY LANE.

THE period in which the events occurred, so faithfully delineated in the new play of the *Partisans*, seems, as an able contemporary has already remarked, with the richest materials for the dramatist and the romance-writer. The hair-breadth escapes of the principal agitators of that day—those particularly of the Duke de Beaufort from Vincennes, the Duchess

de Longueville from Dieppe (in itself a novel), the Duchess de Bouillon from Paris, the young Princess de Condé and her child from Chantilly, are all full of the most stirring and exciting incidents. The truly French mixture of fighting and dancing, amours and assassinations, fêtes and cabals, affords opportunities for situation and effect rarely to be paralleled by any other portion of European history. The wily Mazarin's confidence in the political coxcomb Jarsay, whose *entreprises dans tous les genres denotaient beaucoup d'audace*, and were yet so cloaked by a veil of frippery as to baffle all suspicion of their serious purpose; and the intriguing and restless spirit of the beautiful and witty Genevieve de Bourbon, have been most happily turned to account on the present occasion, and form an admirable contrast to the straightforward, inflexible patriotism of the First President and his almost superhuman influence over the Parisian populace. The following extracts from Monsieur le Conte de St. Aulaire's History of the Fronde, will show how closely Mr. Planché has adhered to the memoirs of the time.

"Un avocat au Châtelet nommé Deboile, à la tête d'une centaine de bandits, armés de poignards et de pistolets, demandait, avec des cris forcenés, qu'on leur livrât la grande barbe (le peuple nommait ainsi Mathieu Molé). . . . Son admirable courage ne se démentit pas un instant. Un des assassins parvenu à s'approcher de lui, appuyant la pointe d'un couteau sur sa poitrine, il lui dit, avec un regard paisible, 'Mon ami, quand je serai mort, il ne me faudra que six pieds de terre.'—Tom. i. p. 337.

"La troupe se grossissant à chaque pas, la fureur s'exaltait par le tumulte, ils arrivèrent dans le plus effrayant désordre à l'hôtel du premier président. . . . Les domestiques épouvantés barricadèrent l'entrée. . . . Mathieu Molé travaillait assis près d'une table dans son cabinet; il ne se dérangea pas, et cria seulement à ses gens, par la fenêtre, qu'ils ouvrirent toutes les portes. La populace se précipita dans les appartemens; Molé, s'avançant alors à la porte de son cabinet, leur dit, qu'ils étaient des misérables, et qu'il les ferait tous pendre, s'ils ne se retiraient à l'instant. L'autorité du premier président sur le peuple de Paris semble véritablement avoir été prodigieuse. Les plus furieux, entendant sa menace, prirent la fuite, épouvantés comme s'il eût eu le pouvoir de la faire exécuter sur l'heure."—Tom. iii. p. 47, note.

The following are our promised specimens of the language of the *Partisans*—all from the third act:—

"Bernard.—What! you thought, I warrant me, of the old adage—No pay, no Swiss: the proverb is overstrained, lady; we sell our service sometimes—but not our hearts.

Duchess.—I do believe thee! 'Tis a shameful blot Some little wit hath cast on a great nation! Men who are born upon the mountain top Are seldom greedy of the shining dross That lies so far beneath them: the pure air They breathe immaculate from heaven blows all Such earthy feelings from them!

Molé.—Jarjay in Paris! Humph, that must mean mischief!

For mischief is the atmosphere he lives in. But whether it is brewing 'gainst the state, Or the heart's peace of some poor silly woman, The devil, his dear prompter, only knows! A well-turned ankle or a wanton eye

Were bait enough to lure the coxcomb hither:— Yet he's the creature of the cardinal, And must be most closely looked to: oft beneath A veil of lightness are affairs of weight Most perfectly concealed—(about without)—More tumults toward!

What outrage next? I sicken at the sound! O Paris! queen of cities!—thou great envy Of half the world!—thou Cybele, whose crown Is made of palaces—their gilded domes— Like rival suns disputing the blue throne

Of the o'erarching sky!—how long, fair Paris,
Shall thy indignant walls hurl back the howl
Of stark rebellion and blind anarchy?
Will thy false river—the ungrateful Seine—
Which, as infected by example, now
Hath burst its banks and rises, rebel like,
To desolate the city it should serve!
Will its retiring waters wash away
The slime of treason with their own?—or leave
The filthy record, swarming with new serpents,
Like the prolific slaver of the Nile!—
O France! my country!—must the loving few
Who have strain'd every nerve to steer thee wide
Of one most dangerous rock, now run thee on't,
Rather than see thee founder in a gulf
Where all hands must be lost?

Henri.—No, not to thee, thou dark, funeral yew,
Nor to thy mournful sister, there, the cypress,
Will I intrust her fate!—nor yet to thee,
Thou coward aspen, with thy shivering leaves
White with eternal fears!—But here, around
The stem of the firm-rooted oak,—the tree
Whose sacred garlands in Rome's elder day
Circled his happy brows who had preserved
A Roman's life!—yes, yes; to thee
As to a friend whom danger cannot shake,
I will confide the precious charge: and lo!
Where close beside thee springs a silver lily!
The badge of her illustrious race!—O let the wise
Smile as they will at superstition—when
The full heart waxes an honest pray'r to Heaven,
A bird—a leaf—a pebble—seems to bring
The cheering answer back."

VARIETIES.

Gardening.—At one of the meetings of the Paris Horticultural Society, a M. Fourquet presented some potato plants upon which had been grafted the stalks of the tomato (*solanum lycopersicum* L.). The vegetation of these plants was very vigorous, and the potatoes are described to have been of excellent quality.

Earthquake in Spain.—It appears by the last accounts from Murcia, that the shock of earthquake which was felt there on the 18th ult. lasted more than thirteen minutes, and that during its continuance several columns of fire were seen to fall on the mountains. The earth in some places opened, and spout forth volcanic eruptions,—some of which are said to have been of considerable extent.

French Literary Appointments.—M. Auber has been elected a member of the Institute, in the room of M. Gossec, deceased; and M. Boissonnade, member of the Academy of Inscriptions and Belles Lettres, is appointed Greek professor at the college of France, in the room of the late M. Gall.

The Swiss Press.—Of a hundred and thirty presses in Switzerland, about half are at present unemployed. Geneva has the greatest number, 18; Zurich, 17; Bale and Aargau, 16; Berne and Saint-Gall, only 9. The Pays de Vaud publishes three gazettes in French, Geneva only one—but it is the best in Switzerland; the Canton of Tessin publishes two gazettes in Italian; Zurich four in German. The journals which are published in the other cantons are all in German.—*Foreign Journal.*

Plinian Society.—May 12. Mr. Balfour read a communication on the state of vegetation around Edinburgh. He submitted to the Society a list of 106 plants which are now in flower in this neighbourhood; among other rare specimens were the *ornithogalum luteum* from Fife, and the *lathraea squamaria* from Roslin. Mr. B. exhibited growing specimens of a peculiar variety of the *daphne creorum*, and also a nondescript species of geranium, which is not mentioned by De Candolle, the seeds of which were sent to Scotland by Dr. Richardson, who collected them on the North American expedition. Mr. Brown read a communication, in which he endeavoured to prove that the Pretender, Prince Charles Edward,

• Madame de Motteville mentions this aggravation of the miseries of Paris, in her Memoirs. The people sailed about ropes of the streets in boats.

lived and died a member of the Protestant Episcopal Church. His proofs chiefly rested on the facts, that the prince was known to have in his possession, and to be conversant with, the Prayer-Book and Ritual of the Church of England; and that in a pamphlet written by Dr. Archibald Cameron, the brother of Lochiel, professing to be "a copy of what he intended to have delivered to the Sheriff of Middlesex at the place of execution, but which he left in the hands of his wife for that end," the doctor, among other similar declarations, solemnly avers, on the word of a dying man, that the prince assured him he was a member of the Church of England. A paper was read by Mr. Bushnaq, "on the natural history of the various plants yielding the ipecacuanha of commerce;" a very valuable collection of which the author presented to the Society's museum.—*Edinburgh Weekly Chronicle.*

A meeting of the Philosophical Society was held on Monday evening; Dr. F. Thackeray, the treasurer, being in the chair. A paper by W. H. Miller, Esq., of St. John's College, was read, "on the caustics produced by successive reflections at a spherical surface." A memoir was also read by the Rev. R. Willis, "on the mechanism of the glottis;" in which the author explained the conditions under which sound is produced by air passing between the edges of two membranes, and the manner in which the muscles of the larynx bring the organs into and out of the positions which are thus required. This communication was illustrated by various drawings, models, and apparatus, illustrating both the formation of the sound and the means by which its pitch and quality are regulated.—*Cambridge Chronicle, May 23d.*

The Irish here keep up their blundering reputation. At a *soirée* given by the Ambassador de —, a young Irishman accosted the General de C—n—t; and after many excuses and flourishes of speech, he requested to know—"S'il avoit l'honneur de parler à Monsieur le Général, ou à Monsieur son frère?" "Monsieur," answered the general, "je suis mon frère." A general laugh ensued, and several moments elapsed ere the Hibernian perceived the absurdity of the question he had made.—*Paris Letter.*

LITERARY NOVELTIES.

The Lectures on the Elements of Hieroglyphics and Egyptian Antiquities, by the Marquess of Spilneto, will soon be ready for publication.

A new edition of Mr. Bowles' poem, *Departed Days*, or *Banwell Hill*, is about to be published.

There is in the press, and nearly ready, a Circumstantial Account of Persons remarkable for their Health and Longevity; exhibiting the habits, functions, and opinions of such persons in regard to the best means of prolonging life,—by a Physician. It will likewise contain a definite plan for the removal of that peculiar affection of the throat to which clergymen and other public speakers are liable.

The Second Part of Mr. Strong's Catalogue of the extensive library purchased of that well-known veteran bibliographer and bibliophile, the late Mr. Dyer of Exeter, the First Part of which we some time ago noticed, will, we hear, shortly appear, and contain from five to six thousand books in foreign theology, with every advantage of classification and description that the most diligent and laborious attention could supply.

Periodical Press of Finland.—From a recent account of the periodical press of Finland, it appears that there are in that country several periodical papers conducted with great talent, and possessing rather an extensive circulation; they are as follow: Abo Tidningar—Abo Gazette: this paper commenced in 1771: it contains important information on the history and geography of Finland. Finlande Allmanna Tidning—General Gazette of Finland: this paper, which is now nine years old, is considered the official journal of the province. Abo Underrettelser—Abo News, which has been established five years. Underrettelser fran Ketsenliga finska Hushallingsakademien—Memoirs of the Imperial Society of Economy: a paper chiefly devoted to questions of rural and domestic economy and technology. Turan Wukko Sanomat—Abo Weekly Journal, published in the Finland tongue, an

idiom hitherto but little known. Besides these publications, which have maintained their ground, several others in the Swedish language have been started, but have not succeeded.

Memoirs, by a Lady of Quality, is the present literary work *à la mode*. This style of authorship has a peculiar attraction for the multitude;—so delightful is it to learn our neighbours' failings, and to be initiated into courtly gossip!—*Paris Letter.*

M. Cuvier has presented to the French Academy of Sciences, in his own name and in that of M. Latreille, the second edition of his work called *Le Règne Animal*. He has also presented to the Academy two new volumes of his large work on Fishes: a work which he is publishing in conjunction with M. Valenciennes.

Mr. Wickens has in the press An Argument for more of the Division of Labour in Civil Life in this Country, Part I.; in which Parliament, and the distracting number of its cares, are treated of.

In the Press—Gideon, and other Poems, by the Author of My Early Years, &c.—The Hallamshire Glossary, by the Rev. Joseph Hunter, F.S.A.; to which is added, Thoresby's Catalogue of Yorkshire Words, and Watson's List, from his History of Halifax.—King Alfred's Anglo-Saxon Version of Boethius, with an English Translation and Notes, by J. S. Cardale.—The Concise Arithmetician, or Accountant's Manual.

LIST OF NEW BOOKS.

London's Encyclopaedia of Plants, 8vo. 4l. 14s. 6d. hf. bd.; Part I. 8vo. 10s. 6d. sewed. Vol. I. 8vo. 2s. 6d. sewed. Turner's Edward the Sixth, Mary, and Elizabeth, 3 vols. 8vo. 1l. 12s. 6d. Prevailing wind, N.

Generally clear, except the 24th, when it was raining heavily.

Rain fallen, .45 of an inch.

Extracts from a Meteorological Register kept at High Wycombe, Bucks, by a Member of the London Meteorological Society. April 1829.

Thermometer—Highest.....	57° 50'
Lowest	26
Mean	41-60208
Barometer—Highest.....	29-86
Lowest	29-68
Mean	29-78477

Quantity of rain and melted snow in inches and decimals, 4.45825.

Number of days of rain and snow, 24.

Winds.—2 East—4 West—2 North—4 South—4 North-east—0 South-east—10 South-west—4 North-west.

General Observations.—The month commenced with snow about an inch and a half fell on the night of the 1st, and the whole month was extremely cold, the mean temperature being below any one in April since 1823, and more than three degrees lower than the average of the last twelve years. Rain, with the snow on the 1st, fell on twenty-four different days—the whole quantity remarkably great, exceeding that of last year by nearly an inch. The mean of the barometer lower than for many years, although the range was not very great. Heavy gales of wind at the latter end of the month, particularly on the 28th, which were similar to those frequently experienced at the equinoxes. Thunder heard on the 10th, about 2 P. M. The evaporation 0-06125 of an inch.

TO CORRESPONDENTS.

We are again obliged to defer our remarks on Sir Rufane Donkin's volume; but the Greek Digamma and the course of the Niger are two problems which cannot be summarily treated.

FALL MAIL.
The Gallery will be opened in the course of the week, with a Selection of the Works of the Ancient Masters.
WILLIAM BARNARD, Keeper.

THE GALLERY OF ARTS, No. 27, Regent Street, Corner of Jermyn Street, is constantly Open, with a beautiful Collection, and a continual variety, of Water-colour Drawings by the most distinguished modern Artists: viz. Messrs. Varley, Barrett, Copley Fielding, J. Harding, Frost, D. Cox, C. Wild, Wright, Gassiot, Lewis, Scott, Cattermole, Albert Varley, Francis Atkinson, Ince, &c. &c.
Hall and Smart beg to announce, that they have opened a Room for the Sale of Drawing Materials of the most superior description, where Artists and the Public may be supplied upon the same Terms as at any other House.

MR. WEST'S Great Pictures of CHRIST REJECTED, and DEATH on the PALE HORSE.
The Public is respectfully informed, that in consequence of the great desire which has been expressed by many who were prevented seeing these two stupendous Works, from the crowded state of the Gallery for several days preceding the Sale—the Gallery will re-open on Monday June 1st, and will continue open for Fourteen Days, previously to their removal.
Admission 1s.—Descriptive Catalogue of Christ Rejected, 6d.

LONDON ORIENTAL INSTITUTION
for INDIAN LANGUAGES and LITERATURE, and for promoting a System of Education adapted to those destined for British India; established in 1823, Leicester Square, No. 2, South Crescent, Bedford Square, near the British Museum and University of London; under the Direction of HANFORD ARNOT, Member of the Asiatic Society of Paris, and DUNCAN FORBES, A.M.

This Institution, originally established about ten years past, though with a different name, under the auspices of the Hon. East India Company, has already, according to the printed lists before the public, given instruction to nearly two thousand gentlemen proceeding to British India.

It is the only Asiatic in the British metropolis at which the most important Eastern languages, including the Hindoostanee, Persian, Bengalee, and Arabic, are taught (with their true pronunciation and in their proper characters), by persons who have actually studied and practised them among the natives of the East (a point of great moment in all languages), according to the system followed in India, as well as at the East India College of Haileybury and Addiscombe, where the same class books are also used, for which therefore it serves as a preparation.

Among its advantages are, 1st. That by a brief attendance here, the military officer may soon become qualified to hold extra appointments in India, worth some hundreds per annum. 2dly. The civilian may save himself one or two years' detention at Calcutta, and gain a corresponding advantage in rank and allowances. 3dly. The candidate for, or student at, Addiscombe, may secure similar promotion and advancement.

In order to accomplish these objects, this establishment has now been removed to a commodious building in the above central situation, in a most healthy and eligible part of the metropolis, lying convenient for all that quarter of it in which families connected with India chiefly reside in life combines the advantage of easy access with that of the seclusion and retirement which are so favourable for study. It possesses excellent accommodation for students; and being near to that great emporium of literature and science, the British Museum, as well as to the University of London, these advantages which it rests that best means that can be devised of completing their education, and cultivating every branch of human knowledge.

For further information, the Directors of this seminary refer to their Second Annual Report, lately published, containing a list of above two hundred gentlemen, who have completed their military and medical officers, &c. who have under their tuition acquired the elements of oriental learning, with an account of the honours conferred on the attainments of such of them as have had an opportunity of being examined preparatory to obtaining admission into the Honourable East India Company's Service. This Report may be had gratis, on application to Messrs. J. M. Richardson, 28, Cornhill; Cochran, 108, Strand; and Howell and Co. 55, Holborn; Treutzel and Wertz, 80, Soho Square; or at the Institution, 2, South Crescent, Bedford Square.
As Classes are now forming here for the above Languages (for the Arabic, by a Native of Grand Cairo), early application is recommended.

KING'S GREAT CONCERT ROOMS,

ITALIAN OPERA.
Mr. BUCKINGHAM has the honour to announce that, in compliance with the wish of several distinguished Families, he will, previous to resuming his Tour through the Provinces, repeat once more in Town his Course of Lectures, or Extensive Descriptions of the following Countries of the Eastern World, in the order named:—

1. Egypt.
2. Palestine.
3. Persia.
4. Mesopotamia.
5. India.
6. Arabia.
7. Supplementary Address on the Commerce of the East.

These Lectures will be delivered at the King's Concert Rooms, in the Italian Opera House, Haymarket, on the Mornings of Tuesday, Thursday, and Saturday, the 24, 4th, 6th, 16th, 18th, and 20th of June, commencing at 7 o'clock, and ending at 9 o'clock; and the Description of each Country will be rendered so complete in itself as to be perfectly independent of all the others. The Supplementary Address will be delivered on the 22d. Admission to any Single Lecture, 5s. Tickets for the Course of Six Lectures, one Guinea; to be had at the Box Office of the Opera House, where Private Boxes for Parties may also be taken.

CITY CONCERT ROOMS, Blomfield Street, Finsbury Circus. For the convenience of a large Class of Residents in the Eastern Division of the Metropolis, the same Course will be delivered at the City Concert Rooms, near the London Institution, on Monday, Wednesday, and Friday Evenings, the 1st, 3d, 5th, 8th, 10th, 12th, and 15th of June, precisely at Eight o'clock. Single Admissions and Tickets, on the same terms, to be had at the Rooms named above; and at each place a descriptive Pamphlet, which is recommended for previous perusal.

Dedicated, by special permission, to the King, in imperial folio, containing Four Plates, with Letter-press Descriptions in English, French, Italian, and German, Part the First of

MUSIC.

Cheap and superior editions of Musical Works, printed from Copper Type on a Patent Principle.

THE Musical Public are respectfully informed, that most Correct and Elegant Editions are just published of a variety of Classical Works, for the Piano-forte, &c. at a considerably reduced Price; and that it is the intention of the Proprietors to comprise in this Cheap and Classical Edition all the best non-Copyright Works of the great Authors Ancient and Modern.

Of the superior beauty of these editions the Public will form their own judgment; for their correctness they have the authority of a numerous list of the first Professors in London, who warmly patronise the undertaking.
Catalogues and Specimens of the Works now ready may be had at any of the principal Music Shops in Town and Country.

BOOKS PUBLISHED THIS DAY.

New edition, corrected to the present period.
Inscribed, by permission, to His Most Gracious Majesty, in 1 very large vol. 8vo. price 25s.

BURKE'S DICTIONARY of the PEERAGE and BARONETAGE of the BRITISH EMPIRE.

This work has undergone a very laborious revision. In every instance where the slightest obscurity appeared in tracing down of descent, the whole matter has been remodelled, and a plan entirely new pursued generally, which it is hoped will satisfactorily obviate the hitherto universal complaint against books of genealogy is regard to perspicuity. To render this department as interesting as possible, accounts will be found of many celebrated extinct houses.

A very large addition has likewise been made to collaterals, so that all within the remotest remembrance to honours, appear in their proper places; and a description of the armorial bearings of each house is given in the body of the work, independently of the engravings.
Printed for Henry Colburn, 5, New Burlington Street.

In 3 vols. post 8vo. price 94s. boards,
REAY MORDEN; a Novel.

Published by G. A. Douglas, 19, Castle Street, Edinburgh; Simpkin and Marshall, London; and John Cunningham, Dublin.
"Reay Morden" is a clever and spirited work. The style throughout at once energetic and lively; and in many passages we recognise a mind of intense power. —*Edinburgh Mercury*.
"He (the author) is evidently a person of some ability, and his natural sense has been cultivated by a gentlemanly education. He has studied human nature to some purpose, and stored his mind with a great deal of general information." —*Edinburgh Observer*.

In 1 vol. 8vo. illustrated with 28 Plates, drawn from Nature, price 16s. boards, plain; or beautifully coloured by Sowerby,
ELEMENTS of CONCHOLOGY, accord-

ing to the Linnæan System.
By the Rev. E. J. BURROUGHS, A.M. F.R.S. F.L.S. Mem. Acad. Sc.
James Duncan, 37, Paternoster Row, London.

Just published, in 5 vols. 8vo. 11. 10s.
THE SECOND EDITION of the MEMOIRS of GENERAL MILLER, considerably augmented.

Also a Spanish Edition of the same Work.
"In this memoir we find more of novelty and entertainment than a score of modern novels and romances. The appearance to us to be one of the most interesting that have recently issued from the press." —*Quarterly Review*, No. 76.
Published by Longman, Rees, Orme, Brown, and Green.

Dr. Ferri's Pharmacologia.
In 2 vols. 8vo. new edition, price 50s.

PHARMACOLOGIA; comprehending the Art of Prescribing upon Fixed and Scientific Principles; together with the History of Medicines and Medicaments.
By J. A. FERRI, M.D. F.R.S. &c.
7th edition.

This edition contains the Medicinal Dynameter, or Revolving Scale, by which the absolute and relative strength of any quantity of a medicinal compound, as well as its several equivalents, may be immediately found by bringing the substance in question to the figure representing its dose; also, the Analyses of upwards of 180 Quacks or Patent Medicines.
Printed for Thomas and George Underwood, 32, Fleet Street.

Also, by the same Author,
A Treatise on Diet. 4th edition, 8vo. price 10s. 6d.

A DISSERTATION on the COURSE and PROBABLE TERMINATION of the NIGER.
By Lieut.-General Sir RUFANE DONKIN, G.C.B. &c. &c. &c.
John Murray, Albemarle Street.

Price 21. 10s. in cloth boards, illustrated with One Hundred Engravings.

LONDONIANA; or, Anecdotes, Facts, and Memorials of the Streets, Buildings, and Personages connected with the History of London in all Ages.

By E. W. BRAYLEY, Esq.
"The Character of Mr. Brayley's work will be tolerably understood by what we have already said of its contents; but we may add, that it deserves a place in every library, both public and private. The mass of useful and interesting information which it contains does the greatest good to the learning and research of the author, who richly merits the praise of having done much to redeem the name of an antiquary from the obloquy which sometimes attaches to it, from the aspersions of the vulgar profanum. We trust he will again appear before us, as a wide and various field of inquiry is still before him; and his talents he has displayed in his present undertaking, make his labours and further exertions a sort of public duty." —*Monthly Review*, May 1829.
London: Hurst, Chance, and Co. 65, St. Paul's Churchyard.

Of whom may be had, just published,
The Operative Chemist. By Samuel F. Gray, Esq. Author of the Supplement to the London Pharmacopoeia, &c. Price 31s. 6d.

In 1 vol. 12mo. price 5s. boards,

Printed for Longman, Rees, Orme, Brown, and Green.

On Saturday, the 2d of May, was published by Mr. Colburn, the First Number of a New Weekly Paper, called

THE COURT JOURNAL. The leading and peculiar object of this Paper is, to supply what has long been felt as a desideratum in the Higher Circles of the British Metropolis. Its pages will furnish a mingled Record and Review of all Matters and Events (Political Subjects alone excepted) which are calculated to interest that class of readers who come within what is understood by the "Court Circle." Such will be the peculiar, but by no means the sole, object of the Court Journal. It will, in fact, embrace every feature which favourably distinguishes the most approved Literary Journals of the day. The Court Journal is published every Saturday Morning, hand-pressed on a 4to. sheet of sixteen pages, containing Forty-eight columns, price 6d., or, stamped for circulation in the Country, free of postage, 1s. Orders received by all Booksellers and News-vendors, and by the Clerks of the Roads. Advertisements should be sent to the Office, No. 19, Catherine Street, Strand. Communications for the Editor may be addressed to the care of Mr. Colburn.

LIBRARY OF ENTERTAINING KNOWLEDGE.

The Publication of the Third Part of this Work, being the Second of the *Metaphysics*, is unavoidably postponed to the 1st July, to provide for the admission of some original Communications, which will add to the interest of the Work.
Charles Knight, Pall Mall East.

May 2d

Naval and Military Works just published by Henry Colburn, New Burlington Street.
3d edition, comprising the Correspondence of many distinguished Officers with the Author,

THE MARQUESS OF LONDONDERRY'S NARRATIVE OF THE LATE WAR IN THE PENINSULA. 3 vols. 8vo. with Maps and Plans, 2s. 6d.

"We have no hesitation in saying that we have read nothing descriptive of any portion of the Peninsular War, at all to be compared in point of interest and important information with the work now before us."—*Blackwood's Magazine.*

2. Memoirs of the War in Spain. By Marshal Suchet, Duke d'Albani. Complete in 2 vols. 8vo. 2s. 6d. French, 21s.

3. The Naval Officer; or, Scenes and Adventures in the Life of Frank Mildmay. In 3 vols. post 8vo. 2s. 6d.

"This is the most seamanlike composition that has yet issued from the press. We recommend it to all who 'live at home at ease,' and need scarcely say, that no man-of-war's man should remain an hour without it."—*Atlas.*

4. Tales of Military Life, by the Author of the "Military Sketch Book." Containing Vandeleur and Gensman Gray. In 3 vols. post 8vo. 21s. 6d.

"The military are bivouacked in the heart of society; they are constantly in the centre of its gaieties; the shivers alike of the joy and the pain of the progress is full of diversity, and their adventures are equally tinged with the marvellous, the pathetic, and the humorous. Our author has profited by his opportunities, and seems as much at his ease among the Guerrillas and spoliated vineyards of Spain, as when he sketches the domestic doings in the pleasant summer-quarters at Bath."—*Atlas.*

In the press and nearly ready,
5. The Chelsea Pensioners, by the Author of the "Subaltern." 3 vols. post 8vo.

Revue of the Court of George IV.

LA BELLE ASSEMBLEE, for June, is embellished by a beautiful Portrait of LADY ELLEN BOURGHE, and contains an extra Plate of English Fashions, besides the usual French Fashions, appropriately coloured and described.—The Title-page, Index, Contents, &c. to complete the Volume form part of the Number. The literary part consists of an illustrative Memoir—Contemporary Poets—S. T. Coleridge—*Marica*, a Tale of Guerrilla Warfare, by the Author of the "Castilian"—Notes and Sketches of Paris, by Miss Castelle—*Count de Lam's Poetry*—The Philosophy of Dress—A Visit to Arlington Manor—Whitcomb by W. G. Stafford. The Recreant—Original Poetry, by H. Brandreth, &c. &c. &c.—Reviews of Life and Times of Francis I. &c. &c.—Theatres, New Music, Exhibitions, &c. &c. &c.

The Portrait of the Hon. Mrs. C. Arbuthnot, by Sir Thomas Lawrence, will enrich the July Number. The Portrait of Lady Charlotte Barry, by Sir Thomas Lawrence, Viscountess Eastnor, Lady Normanby, Lady Anne Ramsay, Lady Sophia Gresham, and Lady Anne Becker, are in preparation for the next volume. Published by Whittaker and Co. London; Waugh and Innes, Edinburgh; and G. and S. Dublin.

The Five Botanical Works above enumerated, are all drawn, engraved, described, and finely coloured from the living Plants, with Botanical Dissections, in Latin and English.

Subscribers who have not completed their copies, may be supplied with the remainder by the Author, 21, St. Anne Street, Chelsea, or by any of the principal Booksellers.

Non-Resident Voters and Registry System.—No. 6d.

THE LAW AND JUDICATURE OF ELECTIONS, and the Changes effected by the late Measures of Parliament reviewed; together with Suggestions of Amendment.
By C. SINCLAIR CULLEN, Esq.
Barrister-at-law, and Commissioner of Bankrupts.
James Ridgway, Piccadilly; and, by order, of every Bookseller.

THE UNITED SERVICE JOURNAL, and NAVAL AND MILITARY MAGAZINE.

The attention of the public, and particularly that of the United Services, is respectfully invited to this new Periodical, which was commenced on the 1st January, 1839, in monthly Numbers, price 6d. each, and embraces subjects of such extensive variety, and of such powerful interest, as must render it scarcely acceptable to the well-informed civilian, than to the Members of those Professions for whose use it is more particularly intended.

Independently of a succession of original papers on innumerable interesting subjects, Personal Narratives, Correspondence, Anecdotes, &c. each Number comprises Biographical Notices of eminent Officers—Reviews of new Publications, either immediately relating to the Army and Navy, or involving Subjects of utility or interest to the Members of either—Parliamentary Reports, &c. &c. they relate to the Army or Military Affairs—Circulars by Courts Martial, General Orders, Circulars, &c.—Distinctions of the Army and Navy—Promotions and Appointments—Births, Marriages, Obituaries, and Miscellaneous, Naval and Military, comprehending such brief Notices, Professional, Literary, and other, as cannot with propriety be arranged under the preceding heads.

It would be impossible, however, within the narrow compass of this announcement, to enumerate all the subjects which this miscellany is designed to embrace. The Publisher will only therefore add, that it is conducted by a gentleman of high professional and literary character, and that it will be uniformly animated by the same ardent spirit of patriotism and loyalty which achieved the triumphs of Trafalgar and of Waterloo.

Testimony in favour of this Work.

"This is a most able and interesting miscellany; the more so, as it has taken up a department of periodical literature hitherto almost entirely neglected. It certainly is a subject of surprise that an Army and Navy of Great Britain—to which the country owes so large a share of its pre-eminent prosperity and glory—should not have possessed a separate and more appropriate Magazine, as a channel for their communications, and as a record of their proceedings, improvements, and exploits. No profession is more exposed to vicissitudes, perils, and adventure, and consequently none affords so abundant a supply of amusing anecdote. What can be so interesting, not merely to the profession, but to the general reader, as the narratives of battles and sieges—the moving accidents by flood and field—of which the recent annals of British warfare are so replete with so many memorable instances? We are pleased, therefore, to see the present attempt to supply this deficiency; to concentrate, as it were, in one focus, the scattered rays of information, and furnish a repository for the preservation of many valuable details relative to the United Service."—*Scottish Literary Gazette.*

Published by Henry Colburn, New Burlington Street, to whom Communications for the Editor may be addressed.

The Numbers are supplied by all retail Booksellers and News-vendors throughout the Kingdom; and those who may desire to take them are particularly requested to do so, to give their orders to the Bookseller or Newsmen in their own immediate neighbourhood, as the best mode of obtaining it regularly.

For Travellers on the Continent.

INFORMATION AND DIRECTIONS FOR TRAVELLERS ON THE CONTINENT.

By MARIANA STARRKE.

6th edition, thoroughly revised, and with considerable Additions.
Post 8vo. 15s.

On Wednesday, June 10th, will be published, in 3 vols. 4to. with Portraits from Original Paintings in the possession of His Grace the Duke of Newcastle,

MEMOIRS OF THE ADMINISTRATION of the Right Hon. HENRY PELHAM; chiefly drawn from Family Documents, and illustrated with Original Correspondence, never before published.

By the Rev. ARCHDEACON COKE. A few Copies are printed on large paper, uniform with the Author's preceding Works.

Printing for Longman, Rees, Orme, Brown, and Green.

On the 31st instant, embellished with Eighteen superior Engravings, in 4to. with proof Impressions of the Plates on India paper, price 24s. royal 8vo.; with the Plates accurately coloured, price 34s. royal 8vo.; with the Plates plain, price 12s.; and in demy 8vo. price 11s.; Part XIX. the Sixth of the Class Aves.

THE ANIMAL KINGDOM, described and arranged in conformity with its Organization.

By the BARON CUVIER. Member of the Institute of France, &c. &c. &c.

With additional Descriptions of all the Species hitherto named, and of many not before noticed; with other original Matter.

By EDWARD GRIFFITH, F.L.S. A.S. and others.

Printed for Whittaker, Treacher, and Co. Ave Maria Lane.

Of whom may be had,

The Class Mammalia, complete in Twelve

Parts, with upwards of Two Hundred Engravings, forming Five

Volumes, price, in extra cloth boards:

Demy 8vo. 27 4 0

Royal 8vo. 10 16 0

Ditto coloured 14 8 0

Demy 4to. India paper 14 8 0

The Thirteenth Part contains an account of the Fossil Mammals, which, with a subsequent Part to be devoted to other Organic Remains, is intended to form a distinct Volume on the Fossil Genera and Species.

The Class of Birds will occupy about Nine Parts; the Fishes and Insects will form about Eight Parts each; and the whole, it is computed, will comprise about Forty Parts. It will be so arranged, for the convenience of those who may confine their Zoological Studies to either of the Classes, that each Class will make a distinct work, as well as one of the Series of the "Animal Kingdom." The Conclusion will contain a tabular View of the System, and a general Index, and a general Table of Contents. The Illustrations will be from original Drawings, and will be confined to new or very rare Species.

No. 646.

SATURDAY, JUNE 6, 1829.

PRICE 8d.

REVIEW OF NEW BOOKS.

Memoirs of the Administration of the Right Hon. Henry Pelham, &c. &c. By the late Rev. Archdeacon Coxe, M.A., Rector of Bemerston. 2 vols. 4to. Longman and Co.

THE readers of British history are under no common obligations to Archdeacon Coxe. Few writers have displayed more industrious perseverance in the search after materials—more candour and integrity in their use—or more skill and judgment in selecting, comparing, and combining them. Superior to the affectation of a laboured and finical style, and to the vain parade of philosophical deduction and inference, he spared neither time nor labour in tracing the peculiarities of personal character, or in unravelling the tangled web of court intrigue. The result of his investigations he clothed in that plain and perspicuous style, which proved that his purpose was to inform, not to dazzle or surprise—to depict men and their actions, not according to preconceived theories of historical keeping, or as they would appear through the medium of party prejudice or personal antipathy,—but in true and natural colours. By another species of merit, the venerable Archdeacon was no less honourably distinguished. In the compilation of his first historical work, the *Memoirs of Sir Robert Walpole*, he acquired a title to general confidence, by his delicacy and discretion in the use of the valuable documents submitted to his scrutiny. This title was strengthened by his subsequent works: successive communications opened new courses of research and inquiry, till he finally was enabled to carry his investigations farther than almost any writer of modern times, into those curious and valuable, but generally sealed, documents which have been treasured up by the families and connexions of eminent statesmen.

This posthumous production will not diminish the reputation which the author had previously acquired in the course of his extended literary life, by his authentic and valuable contributions to the political history of England and of Europe. Among those works it will rank next to the *Memoirs of Sir Robert Walpole*, to which it is, in fact, a sequel—Mr. Pelham having been the pupil, and, by preference, the successor, of that able statesman and financier. It claims distinction also among the writings of the deceased historian for the rich variety of important correspondence, of the most confidential kind, with which it is illustrated, and which has been judiciously employed in elucidating many transactions of a period comparatively little known. While it thus serves to dispel doubt and correct misapprehensions relative to public affairs, it sets in a new and striking light the characters of the principal actors in the political drama. For instance, that singular personage the Duke of Newcastle, brother of Mr. Pelham, here displays qualities very different from those caricatured by Smollett; and we are no longer led to wonder how his grace was enabled for

twenty-six years to hold the seals of secretary of state, and to take so essential a share, during the greater part of that period, in the conduct of public affairs. We observe him, indeed, displaying those petty traits of weakness and vanity which afforded such ample scope for ridicule; but, at the same time he appears by no means deficient in that species of knowledge which is requisite to qualify a statesman,—ready in resources, intimately acquainted with the human heart, and not merely diligent, but even laborious, in the discharge of his high duties. In Lord Chancellor Hardwicke, who has been so grossly misrepresented by Lord Orford, we find cause to admire merits of the most splendid kind—whether we consider him simply as an individual, or as a lawyer and a statesman. We also discover something more to applaud in George II. than intrepidity in the field, and mechanical regularity in the details of domestic government and the habits of social life. The minister himself attracts our regard as one of those unsuspected and incorruptible public servants who, without the qualification of shining talents, or the incentive of ardent ambition, possess commanding claims to the confidence of a nation, in their practical sound sense, their singleness of heart, and their integrity of purpose.

In contemplating the period of Mr. Pelham's administration, extending from 1743 to his decease in 1754, every reader of history will anticipate the principal occurrences connected with his public career. The leading features of civil and military policy are, the war with Spain relative to the depredations on our commerce in the American seas; the rebellion of 1745; the singular revolution in the cabinet at that perilous crisis; the negotiations which terminated in the peace of Aix-la-Chapelle, and those undertaken for the purpose of fixing the imperial crown in the Austrian family, by the election of the Archduke Joseph as King of the Romans. The domestic transactions are those financial reforms, which are alike remarkable for boldness and prudence, connected with the reduction of the interest on the national debt. Under this head may also be comprised a long series of judicious and well-combined regulations for the advancement of trade and commerce, and the amelioration of internal policy. Incidentally our attention is drawn also to other measures of great temporary interest; namely, the Regency Bill, the Marriage Act, and the bill for the naturalisation of the Jews. On all these points the reader will find much original and useful information, and will observe many transactions of historical importance cleared of the doubt and obscurity in which they have hitherto been involved.

The merit of this piece of political biography does not, however, entirely rest on the details relative to national concerns, or the affairs of state. By means of the family papers opened to his investigation, the author has been enabled to introduce his reader not merely into the cabinet, but even into the closet of the sovereign; yet without violating in any degree

that rule of sound discretion, the observance of which enabled him to command so abundant a store of historical materials. We cannot better exemplify our remark than by selecting the account of a colloquy between George II. and the Lord Chancellor Hardwicke, soon after the formation of the Broad Bottom Administration. It is as characteristic of the monarch as it is pointed and dramatic.

“*Chancellor.* Sir,—I have forborne for some time to intrude upon your majesty, because I know that of late your time has been extremely taken up. But as the parliament is to meet again in a few days, I was desirous of an opportunity of waiting upon your majesty, to know if you had any commands for me—if there is any thing that it might be particularly agreeable to your majesty to give me your commands upon. [*Pause of above a minute, and the king stood silent.*] Sir—from some appearances which I have observed of late, I have been under very uneasy apprehensions that I may have incurred your majesty's displeasure; and though I am not conscious to myself of having deserved it, yet nothing ever did, or ever can, give me so great concern and so sensible a mortification in my whole life. [*Pause of above a minute, and the king silent.*] I beg your majesty will have the goodness and condescension for me, to hear me a few words upon the motives of my own conduct, the nature of your present situation, and the manner in which I humbly think it may be improved for your service. Whatever representations may have been made to your majesty, I and those with whom I have acted, if I know them at all, have had no view in the whole that has passed of late but your service and that of the public. I considered with myself that the principal point of the public service and your majesty's great object at present, is the carrying on the war; and though your majesty may have been told that we were against the war, that was a misrepresentation: we were zealously for it—but we were for it upon some practicable plan, and in such a way as we might see that it could be supported. I was always convinced that as your majesty was engaged, it was necessary to be carried on until an opportunity should arise of making a reasonable peace for the sake of your majesty and for the sake of your allies. I saw at the same time, that in the condition and disposition in which your allies are at present, it would require vast sums of money, and perhaps greater annual expenses, than this country ever bore in any former war, either in King William's or Queen Anne's reign. It would be impossible for any administration to carry them through, without taking some methods to reconcile the minds of men to the management of the war, and making it in some degree popular. This could not possibly be done without taking the nation to a certain degree along with them. I beg your majesty would consider the situation you are now in. Your old servants, and the old corps of Whigs who are connected with them, are ready and zealous to support you. The gentle-

men who are newly come in have come in upon that foundation, and have bound themselves by their declarations and engagements to support, by themselves and their friends and followers, the measures for carrying on the war; and I think the strongest of those measures has been opened to them. The gentlemen who have lately gone out of your service have, for reasons best known to themselves, declared that they will concur in all measures to support the war, and pretend to build a merit upon it. For my part, I never saw or heard of a situation which, if rightly improved, afforded a prospect of greater advantage to the crown than this. In parliament there have been generally three parties—the court party, a determined opposition, and a flying squadron: but I never yet saw a time in which all these three parties were brought to declare for the support of government in the grand essential measures of that government, and of which for some time all other measures will be but subordinate to it. There are two points for the support of the war:—one is the great proposition* from Russia; and though that cannot be brought about without a large new burden, yet if it can be turned in any practicable shape, I see a great disposition to make it effective. The other is the additional subsidy to the queen of Hungary, which is to be a method of keeping up your majesty's Hanover troops, for two views combined together; I mean the defence of your German dominions, and the support of the common cause, according to the general reason of the war.—*The King*. As to that, if they do not like it I am very easy. I do not desire it for my own sake. I can call home my troops for the defence of my own dominions.—*Chancellor*. I do not mention it in the view of a particular point of your majesty's, but as part of the general system of carrying on the war, and as an instance of their readiness to comply with expedients to get over their old prejudices. But, sir, there still remains something very material behind; how this situation may be best improved, and the advantage of it not be lost?—*The King*. I have done all you asked of me. I have put all my power into your hands, and I suppose you will make the most of it.—*Chancellor*. The disposition of places is not enough, if your majesty takes pains to shew the world that you disapprove of your own work.—*The King*. My work! I was forced; I was threatened.—*Chancellor*. I am sorry to hear your majesty use those expressions. I know of no force; I know of no threats. No means were employed but what have been used in all times, the humble advice of your servants, supported by such reasons as convinced them that the measure was necessary for your service.—*The King*. Yes, I was told that I should be opposed.—*Chancellor*. Never by me, sir, nor by any of my friends. How others might represent us, I do not pretend to know. But whatever had been our fate, and though your majesty had determined on the contrary side to what you did, we would never have gone into an opposition against the necessary measures for carrying on the war, and for the support of your government and family. For myself, I have served your majesty long in a very laborious situation, and am arrived at a length of service, which makes me very indifferent as to personal considerations. Taking your money only, is not serving you; and nothing can enable me to do that but being put into a possibility and capacity of doing so by

* "For taking thirty thousand Russian troops into the pay of Great Britain."

your gracious countenance and support. But, sir, to return to what I was mentioning, of making the proper use, and of taking advantage of your present situation.—*The King*. The change might have been made by bringing in proper persons; and not those brought in who had most notoriously distinguished themselves by a constant opposition to my government.—*Chancellor*. If changes were to be made in order to gain strength, such a force must be brought in as could bring that strength along with them, otherwise it would have been useless. On that account, it was necessary to take in the leaders, and that with the concurrence of their friends; and if your majesty looks round the House of Commons you will find no man of business, or even of weight, left, capable of heading or conducting an opposition.—[*Pause, the King silent.*]—Sir, permit me to say, the advantage of such a situation is a real advantage gained to the crown. Ministers may carry their point in parliament, and frequently do so, by small majorities; and in this way they may struggle on long; but by the same way the crown always loses both its lustre and its strength. But when things are put upon a national foot by a concurrence of the heads of all parties, and yet so as not to discourage your old friends, then a real solid strength is gained to the crown; and the king has both more power to carry his present measures for the support of government, and is more at liberty to choose and act as he pleases. Your ministers, sir, are only your instruments of government.—*The King*.—[*smiles*]. Ministers are the king in this country.—*Chancellor*. If one person is permitted to engross the ear of the crown, and invest himself with all its powers, he will become so in effect; but that is far from being the case now, and I know no one now in your majesty's service that aims at it. Sir, the world without doors is full of making schemes of an administration for your majesty for the future; but whatever be your intention for the future, I humbly beg that you would not spoil your own business for the present.—*The King*. I suppose you have taken care of that. If you have not success, the nation will require it at your hands.—*Chancellor*. If right measures are not pursued, nor proper care taken, then the nation will have reason to require it; but success is in no man's power; and that success must greatly depend on your majesty's shewing a proper countenance and support to your servants, and to what you have already done. I humbly beg leave to recommend it to your majesty, for your own sake, and for the sake of carrying those points, which are essential to you and the kingdom. In times of peace, sometimes a session of parliament may be played with, and events waited for; but in a time of war, and of such a war as this is, the case is quite different, and the ill success of it will not be the ill success of the ministry, but of the crown. It may be the loss of the whole.—[*Pause—the King silent.*]—Sir; there is another advantage that may be made of your present situation, which I think a very material one. The swarms of libels, which have gone about of late years, have greatly hurt the credit, and weakened the strength of government; and that weakness has produced an impunity to them. From this source has sprung much of the confusion and disorder which have been so justly complained of. I should think the present situation would afford an opportunity greatly to suppress and keep under that spirit; and, though this is the sea-

son of the year in which they used to abound, scarce any thing material of that kind has appeared this winter.—*The King*. I myself have seen twenty.—*Chancellor*. What strokes of that kind your majesty may have seen in the weekly papers, I cannot take upon me to say; but I have yet seen hardly any libellous pamphlets. In the last winter, before this time, there were volumes of virulent pamphlets published, which did infinite mischief. But, whatever has happened hitherto, if this work gains some solidity and * * * in the nation, it will strengthen your majesty's hands, and enable your magistrates to punish them effectually. Those who, perhaps, used to patronise and support them, will turn against them, and juries will be found now ready to convict them.—[*Pause—the King silent.*]—Sir; I ask your majesty's pardon for troubling you so long, but I thought it my duty to lay my thoughts before you.

In taking our leave of an author who is now removed beyond the reach of censure or praise, we cannot conclude without observing, that this work merits notice, even as an unusual proof of mental vigour. It was compiled under the disadvantage of total blindness, and amidst the infirmities of a very advanced age; for the venerable writer appears to have died in his eighty-fourth year.* Those who have been exercised in literary labours of less extent, and with the full possession of all their faculties, will readily conceive how great an exertion of memory, judgment, and patience, was requisite to reduce a vast mass of correspondence into order, to throw its leading particulars into narrative, to reconcile conflicting testimonies, to clear up and elucidate doubtful or misrepresented questions. How much greater, then, must have been the effort to attain all these ends, without the aid of the most necessary of the senses; a privation but partially compensated, in any circumstances, by the augmented strength which the faculties of the mind may acquire, when undisturbed in their exercise by objects of sight. From these considerations we must admit, that few authors have been enabled to heighten the merit of a well-earned reputation, by leaving behind them so extraordinary a monument of patience and sagacity, perseverance and intellectual power.

Fugitive Pieces and Reminiscences of Lord Byron; containing an entire new edition of the Hebrew Melodies, with some never before published; also Original Poetry and Letters of Lady Caroline Lamb. By J. Nathan, author of "An Essay on the History of Music." 12mo. pp. 191. London, 1839. Whittaker and Co.

A QUESTION for any debating society.—Which do us most harm, our friends or our enemies? If the French saying be true, "*On peut pardonner les injures, mais non les ridicules*," our friends are the worst. The present little volume is enough to call Lord Byron into life à coup d'épingle. Mr. Nathan is a very sweet singer, and a very worthy man; but what demon could have induced him "to write himself down" a certain quadruped, in this openness of simplicity, we are at a loss to conceive. To say nothing of a most absurd letter of mysterious invective against some unknown "*honourable gentleman*," what folly can have possessed him to

* His latest honour was that of receiving one of the two golden medals given annually by the King, and adjudged by the Council of the Royal Society of Literature; his letter of acknowledgment was a very gratifying document.—*Ed. Lit. Gaz.*

The table of contents will suffice for our next:—

"Lord Byron's penchant to see Dowton intoxicated—Dowton invited into Lord Byron's private room at Drury Lane Theatre to take wine—Raymond plentifully supplied by Mrs. Coutts—nothing but whisky—Lord Byron's skill in making toddy—Dowton's honourable retreat—Lord Byron's delight—carriage—pedestrian-like manner—highly relaxed—corps dramatic—the *rues* told against Dowton, with Lord Byron's embellishments—tumbling in the snow—spouting Falstaff to the winds—watchman knocked down because he had no spirits to drink the health of Mrs. Coutts."

The following extract, however, beats all its predecessors in absurdity hollow:—

"At the time Lord Byron was one of the managing committee of Drury Lane Theatre, Mrs. Mardyn, an actress of that establishment, had leave of absence for a fortnight: Lord Byron, on some occasion, had a necessity of quitting London about the same period. This circumstance gave rise to an immediate report through most of the newspapers, that the said lady and his lordship had eloped together, and were absolutely living at Bath: 'that there was no secret in the matter, as they were seen in the streets and elsewhere daily.' Now these reports, though false and malicious, gave him little or no uneasiness: in proof of which, I shall relate an event that offered him the most certain opportunities of contradicting them, had he thought it worth his while. I had the honour to be with Lord Byron one morning at his residence in Piccadilly, when Mr. Dowton's name was announced: he entered the drawing-room, and was received with great kindness; he, however, proposed to retire, observing that his visit at that moment was on business, but finding his lordship engaged, he would take another opportunity. 'Oh no!' replied Lord Byron, 'you shall not go: never mind Nathan: he has been composing—you love music and poetry, and you must listen to what he has done.' 'I should be much gratified,' answered Dowton; 'but I must, with your lordship's permission, relate a little anecdote, and read you a letter, in which I am, as well as your lordship, a little concerned, and which, I am proud to say, will enable me most clearly to demonstrate to the world the falsity of these reports in circulation respecting your lordship and Mrs. Mardyn; for, by heavens! my son Harry has been the gallant, and not your lordship: and he is at this moment on a living speculation with her round the Kentish coast.' Dowton here seemed in breathless anxiety to open a letter which he pulled from his pocket in a most animated manner, but could not restrain his feelings, and thus continued: 'his grandmother writes me here, that my son Harry sends her word from Dover that he is going to Folkestone, Hastings, and so on, to visit his father in London, in company with a friend: but that she had discovered that friend to be Mrs. Mardyn, who had been acting at Canterbury on the previous week.' Here Dowton made a full stop for a moment, and gave Lord Byron one of his peculiar good-humoured looks, exclaiming with great archness—'There, my lord! what think you of my Harry? There's a young dog—his father's son—a chip of the old block.' He then almost in the same breath thus continued: 'But what added to the horror his grandmother felt at the consequences was, that he had obtained from her (his grandmother) fifty pounds, under some specious pretence—which, doubtless, was to defray the cost of this hopeful adventure; adding, that she hoped I would fetch him back, and lecture him severely—not forgetting her fifty pounds.' 'Well, Dowton,' remarked his lordship, highly amused at the honest narration

of his naughty son's doings; 'what would you have me do in this affair?' 'Why, my lord,' returned Dowton, 'use this adventure in any way you please, as a contradiction of the damned calumnies heaped on yourself.' Poor Dowton, in the concluding sentence appeared very indignant: he paced the room, drew his hand across his forehead by way of cooling his rage, and warmly exclaimed against his lordship's calumniators. 'Though my boy,' continued Dowton, 'is only eighteen, and has begun his vagaries rather early, I confess; yet if your lordship chooses to use this matter, as I have before said, in any way you think proper, pray do so; for it is, after all, only a boyish folly, and cannot injure my son: therefore, my lord, pray stand upon no ceremony! As to his grandmother, she may lecture him herself: I'll be bound she'll not forget her fifty pounds—for my part I shall not notice it: he has only done what I have done before him. It's my way—it's all our ways—it runs in the blood of the Absolutes! Lord Byron—who had been listening attentively to Dowton's animated frankness, and highly entertained as well as delighted at the zeal he evinced in his cause, and the earnest manner in which he expressed himself—exclaimed with much cheerfulness, 'Dowton, I thank you; I take your offer kindly; but let them say on—it is alike to me indifferent.'"

Two or three more extracts, and we have done.

"Lord Byron's fondness for animals—beautiful parrots—one of them singularly attached to him—at war with strangers—indignation, jealousy, and affection—cottage—throne—his feelings well known to the public—Lord Byron's patience—favourite birds—his foot lacerated—'was this well done, Jenny?'—Jenny mistook her aim—imprisoned her—deceitful part—coax attention—revenge.

"He was in possession of some beautiful parrots, with which, during the intervals of his writing, he used commonly to amuse himself. He had rendered one of these so attached to him, that though entirely at war with strangers, it evinced the greatest anxiety to be always with him. If his lordship seemed to notice any person particularly, this bird would express its indignation and jealousy in the most amusing manner, and would immediately attack his lordship, until he bestowed his caresses on it. This little exhibition used to please him; and on one occasion he remarked—'This creature would exhibit no diminution of affection in a cottage, nor more if I were on the throne.' This remark was casual; but at the moment he made it his feelings were strongly aroused, from circumstances too well known to the public. My attention was one morning particularly attracted in witnessing the patience of Lord Byron when assailed by one of his favourite birds. I was leaving the room, accompanied to the door by his lordship, when one of them lighted upon his foot, which it lacerated till the blood flowed copiously: instead of being excited by the pain produced, his lordship was only lost in admiration at the strong attachment of the bird, which he instantly caressed, and, in the words of Macheath, exclaimed, 'Was this well done, Jenny?' It must be here remarked, that the bird took its name from that of the donor, given in compliment by his lordship. I waited upon Lord Byron the next morning to inquire after his foot: his lordship treated the matter with indifference, and said, 'I am confident, Nathan, that the wound was intended for you; but Jenny in her jealous fit mistook her aim.' He then imprisoned the parrot in its cage, and observed—'Jenny, like other ladies, can play a deceitful

part: she will coax your attention, and, when you least expect it, will revenge herself for yesterday's disappointment.'"

Lady Caroline Lamb's fate has been still more unhappy than Lord Byron's in Mr. Nathan's reminiscences. We cannot say too much to reprobate publicity to the ensuing abominable trash.

"The following lines were written, by Lady Caroline Lamb to Harriet Wilson, on observing some personal scurrility in a *certain publication*. The lines of themselves are couched in rather a familiar style, but they convey ironically a strong lesson; and although the tongue of calumny has been raised against her ladyship through various channels, yet accusation is no proof of guilt, especially emanating from one who by degradation had fallen so low as to preclude any thing like personal intercourse. The vile and treacherous conduct of Harriet Wilson in giving publicity to her own infamy is not overlooked: the lines reproach her with infidelity to her lovers, and urge integrity as a strong bond even to the wretched and degraded female; and here in powerful language triumphs over her enemies, by firmly stating that none could *buy or gain* the favours stated by her ladyship's calumniators; and towards the last ironically observes, that if bought, honour and integrity ought still to be revered; and, in allusion to family matters, remarks, that kindness and gratitude enjoin indissoluble ties. Her ladyship shews by the conclusion that she forgives the base attack, and makes a sacrifice of the book to the black emperor of the brimstone regions.

"Harriet Wilson, shall I tell thee where, Beside my being *cleaver*, We differ?—Thou wert hired to hold thy tongue, Thou hast no right to do thy lovers wrong: But I, whom none could buy or gain, Who am as proud, girl, as thyself art vain, And, like thyself, or sooner like the wind, Blow raging ever free and unconfined. What should withhold my tongue with pen of steel, The faults of those who have wrong'd me to reveal? Why should I hide men's follies, while my own Blase like the gas along this talking town? Is it being bitter to be too sincere? Must we adulterate truth as they do best? I'll tell thee why then! as each has his price, I have been bought at last—I am not ice: Kindness and gratitude have chained my tongue, From henceforth I will do no mortal wrong. Prate those who please—laugh, censure who that will, My mouth is sealed, my thoughts, my pen are still. In the mean time (we Lambs are seldom civil) I wish thy book, not thee, at the devil."

This is melancholy, mad degradation; and we gladly leave it even for the rubbish of Mr. Wilmington Fleming's celebration of a fête at Brocket Hall. "The following stanzas were written by a rising poet, patronised by Lady Caroline Lamb; they are of a descriptive nature, and contain a true picture of the scenes at Brocket Hall."

"Now see her with Hazard preside at the board, While Tolman right freely exhibits the board, And the song and the laughter of merriment pass, While honest enjoyment slips gay from each glass; And Hazard consigns each stormy feeling to rove By singing 'The wealth of a cottage is love!' But who is yon being that now doth appear, That roves all alone, or sits pensive and drear, As if some stray being from some distant clime, An outcast from hope—in his ruin sublime! To whom not the song nor the dance can impart One throb of that pleasure that glows in each heart? Behold how he strays, as if no one he knew, And lonely and friendless amid the gay crew, Where each has a friend and a welcome to find, While his is the solitude gloom'd by the mind. That's he!—'tis the poet!—Ah, pity his case, His heart can be grateful, though dark its despair; Though eccentric, yet spare him, nor rashly condemn him. Yet plant a fresh sting in the bosom of Fleming."

This gentleman, "in his ruin sublime," kindly informs us, in the notes, that Tolman was the housekeeper, and Hazard, "the good-natured

steward." We must quote the only things worthy of being printed—two unpublished songs of Byron's.

"I speak not, I trace not, I breathe not thy name—
There is grief in the sound—there were guilt in the fame;
But the tear which now burns on my cheek may impart
The deep thought that dwells in that silence of heart.

Too brief for our passion, too long for our peace,
Were those hours—can their joy or their bitterness cease?
We repent, we abjure, we will break from our chain—
We must part, we must fly, to unite it again.

Oh! thine be the gladness, and mine be the guilt;
Forgive me, adored one—forsake if thou wilt;
But the heart which I bear shall expire undebased,
And man shall not break it, whatever thou mayst.

And stern to the haughty, but humble to thee,
My soul in its bitterest blackness shall be;
And our days seem as swift, and our moments more sweet,
With thee by my side, than the world at our feet.

One sigh of thy sorrow, one look of thy love,
Shall turn me or fix, shall reward or reprove;
And the heartless may wonder at all we resign,
Thy lip shall reply not to them, but to mine."

"They say that Hope is happiness;
But genuine love must prize the past,
And memory wakes the thoughts that bless—
They rose the first, they set the last;
And all that memory loves the most
Was once our only hope to be,
And all that hope adored and lost
Hath melted into memory.

Alas! it is delusion all:
The future cheats us from afar,
Nor can we be what we recall,
Nor dare we think on what we are."

The folly of the present work is well meaning at least; else we could not endure for a moment the baseness of that alchymy which thus transmutes all recollections of a departed friend into shekels of silver and pieces of gold. So much for "Byron the poet, and Nathan the Jew."

Letters of Philip, second Earl of Chesterfield, to several Individuals of the time of Charles II., James II., William III., and Queen Anne; with some of their Replies. 8vo. pp. 387. London, 1829. Lloyd and Son.

As we shall take more occasions than one to call the public attention to this extremely curious volume,—throwing, as it does, much additional, though not a new, light on the manners of a remarkable period,—we need only, in the first instance, briefly characterise it, and give an extract or two.

The MS. was found in Bath House, in 1809-10, and the letters are the autograph of the writer; but they bear so resistless an internal evidence of authenticity, that no adjunct proofs in their favour are requisite. The early pages of the work furnish pictures of a very dissolute court and age: they are perhaps too prurient for the present taste of readers; but so vivid and so powerfully illustrative of the actors and the times, that, with all our dislike to such descriptions, we cannot condemn them so severely as we would under any other circumstances. Lord Chesterfield's amours with the famous Duchess of Cleveland, the king's (Charles II.) mistresses, are among the most remarkable reminiscences of these licentious days. Towards the conclusion, we have some memorable data for historical and political reflections: on these, however, we shall not now comment; nor, indeed, do more than make a few selections for the entertainment of our readers.

A ghost-story is always an acceptable variety—"and in 1652 the following singular occurrence, recorded by his lordship, is given literally from his annual remarks. 'A very odd accident this year befel mee, for being come about a law-sute to London, and lying in a lodging with my door fast locked (and by reason of the great heat that summer, all the side curtains being flung a top of the teaster of my bed), I, waking in the morning about eight

o'clock, and turning myself with intention to rise, plainly saw, within a yard of my bed side, a thing all in white like a standing sheet, with a knot a top of it, about four or five foot high, which I considered a good while, and did rayse myself up in my bed to view it the better. At last, I thrust out both my hands to catch hold of it; but, in a moment, like a shadow it slid to the feet of the bed, out of the which I leaping after it, could see it no more. The little believe I ever had in things of this nature made mee the more concerned, and doubting least some ill might have happened to my wife, I rid home that day to Petworth in Sussex, where I had left her with her father the Earl of Northumberland; and, as I was going up stairs to her chamber, I met one of my footmen, who told mee that hee was comming to me with a packet of letters, the which I having taken from him went to my wife, who I found in good health, being in company with the Lady Essex, her sister, and another gentlewoman, one Mrs. Ramsey. And, after the first salutation, they all asked mee what made mee to come home so much sooner than I intended? Whereupon I told them what had happened to mee that morning; which they all wondering at, desired mee to open and read the letter that I had taken from the footman; which having stit in my hand I immediately did, and read my wife's letter to mee aloud, wherein she desired my speedy return, as fearing that some ill would happen to mee, because that morning she had seen a thing all in white, with a black face, standing by her bed side, which had frighted her so much as to make her scribe out so loud, that her weemen came running into the room.

I confess this seemed very strange, for by examining all particulars, wee found that the same day, the same hour, and (as neer as could be computed) the same minute, all that had happened to mee had befallen her, being fortie miles a sunder. The Lady Essex and Mrs. Ramsey were witnesses to both our relations, and acquainted the Lord of Northumberland with it, who thought it a very extraordinary thing.' From this anecdote it appears that Lord Chesterfield, however generally sceptical of supernatural intervention, was occasionally liable to the impressions of fancy; for he regarded the 'singular appearance' as an omen; and it is recorded with every symptom of astonishment, united with credulity. The following relation is in a mood of similar susceptibility. 'This year (1653) I being at Tunbridge, a thing of almost as odd a nature as the former befell mee; for, being abroad one afternoon with a setting dog in a very bright day, with a gentleman named Mr. Pirs, and five or six other horsemen, as wee were beating a great stubble field, that was above mile about, and the which had no bushes or trees in it, but only a little hedge in the middle of it, which was not above ten or twelve yards long, on a sudden, wee all heard a terrible groan, and after that another much louder, and so a third, which made us all to conclude that somebody was a dying neer that little hedge, from whence the noise seem'd to come, which was within forty yards of us. And thereupon wee all went towards the hedge; but, when wee came almost to it, all our horses began to start, and fell a plunging, and did run a good way with us before wee could stop them; and afterwards, when we tried to make them goe neer the hedge, wee found it impossible: wherefore, Mr. Pirs and I alighting, went round the hedge and viewed every place about it, without finding or seeing any thing that could make that noise. But as soon as a servant of

mine heard the groans, he cried out, 'God bless my lady,' who was then big with child, and dyed three months after of the small pox; giving just three such groans when shee died; insomuch, that I being in another room and hearing her, sayd I was sure that she was a dying, for that those were the same dismal groans wee heard at Tunbridge. She lived eight days after the being brought to bed of a sonne, who only survived his mother three weeks.' The inference here deduced by Lord Chesterfield savours less of logic than of superstition: the following observation we give also in his own words. 'These two accidents before mentioned might have probably convinced any one (who had been witness to them) of the reality of the appearing of spirits; and yet, I confess, they have not absolutely cleared all my doubts on that subject, whether there be any such thing or no. 'Tis true, I know, that God can make any such things to appear; but because hee can, therefore to conclude that hee doth, is ill argued; and though divers books are full of such stories, yet the soberest sort of men, in all ages, have doubted the truth of them; and if I think with myself of what I have here mentioned, what can I conclude? for have I not known that a man waking out of a dream hath often fancied, for a good while after he was awake, that he really saw the same things that were presented to him in his dream? and is it impossible for two persons that were fortie miles asunder to have the same ideas at the same time? Secondly, as to the groans, is it not usual for horses and beasts to be frighted with an unusual noise? and may not they and men be easily deceived in thinking the sound and noise they heard to come from one place, when probably it might come from some other, at a greater distance? and where is the wonder, that a dying person should send forth groans like those that probably proceeded from some other dying animal in another place? But mankind loves to be deceived with strange stories of supernatural accidents; and is very unwilling to have the mistake or deceit of them found out.' In 1654 is the following annual remark. 'The great affliction I was in for my wife's death, made mee leave England, taking only with mee a little foot-boy. I stay'd for six weeks in France at Marsels for a passage, to have gone with pilgrims to Jerusalem; but, finding none, I went in a gallie to Cività Vecchia, and so to Room. As wee went, our gallie had a fight against two Majorkina, who boarded her twice, and killd fortie of her men. I stay'd at Room almost a year, where swimming one day in the Tiber (a rapid, muddie river) with the Earle of Lindsey, the cramp ceasing mee, I sunk down to the bottom, and not being able to rise againe upon the water, and feeling the bank under the water to slope, I crept on all four till I came out at the side; to the amazement of the Lord Lindsey and many more, who were standers by. At this time there happened a very great plague there, five persons dying out of the house where I lodged; in which sad time I received news by letters from England, that a decree in chancery being given against mee, my unkle Arthur had seized all my estate; and therefore that I ought not any more to expect returns of money; and that if I came into England, I should infallibly be imprisoned for a debt of ten thousand pound, which my unkle (who at that time was well with the Protector Cromwell) pretended that I owed him. In this unfortunat condition, having in the world but five-and-twenty pound, I left Italy, and went by sea to Marsels in France; from whence, after having made a

quarantine in the pest-house, I went to Lions; and from thence, sending my servant (for want of money) afoot to Paris, I went with the messenger; but falling desperately sick by the way of a violent fever, and having spent all the money I had, I was left alone in a cottage, and reduced to beggary. But, the merciful God did not long leave me in that condition; for a Jesuit coming along that road, who I had formerly been acquainted with in Italy, relieved me, and paid for my journey with him to Paris. At Paris Lord Chesterfield learned the tidings of his grandfather's decease; and accordingly departed forthwith for England, where, having compromised the difference between his uncle and himself, he took possession of his hereditary estate."

And a precious life he afterwards led:—his character is thus drawn, in a letter to himself, from Lady Essex, sister to his first wife, in 1658.

"My lord, had I not ever paid your lordship a very great deal of kindness and respect, I should let this quite alone, for I am almost discouraged to undertake it, believing that it will be as little thought on or regarded as you do that which is most necessary for you to have more in your thoughts than I fear and believe you have. Though I live here where I know very little of what is done in the world, yet I hear so much of your exceeding wildness, that I am confident I am more sensible of it than any friend you have; you treat all the mad drinking lords, you swear, you game, and commit all the extravagances that are incident to untamed youths, to such a degree, that you make your self the talk of all places, and the wonder of those who thought otherwise of you, and of all sober people; and the worst of all, I hear there is a handsome young lady (to both your shames) with child by you. My lord, these courses must needs undo your person, fortune, and reputation; for out of those wild persons' company you will not be esteemed, you will lose your most considerable friends, and at last make your life miserable, and, which is the saddest of all, ruin your own soul; for be confident that those momentary pleasures will have an end, and a sad one too, if you do not speedily consider your condition, and heartily repent of it. You have a person which might make you and a virtuous wife happy; you have wit, fortune, and all desirable things in this world; and you abuse them all, and turn them to wickedness, and do, I am sure, very unsuitable to what you owe to the memory of my most deserving sister. You have falsified your own words to me; for how often have you told me how honestly you lived both here and abroad, and I believed you all this while, till now that it is impossible to credit more, which truly gives me a very sensible concern? Though now that I have said thus much, I will give your lordship no more trouble nor interruption in your pleasure, but ever pray for your soul, as your most humble servant and most affectionate sister."

His answer displays tact and talent.

"Madam,—Your ladyship knows that the world is strangely given to lying, and therefore, had I not ever paid your ladyship a greater respect than to any body else, I should little care to give either your ladyship or my self the trouble of my justification; for since your ladyship has not credited my former professions, I can not now expect to be more fortunate, and therefore must leave this subject to a fitter season; only let me desire your ladyship (in the mean time) to forbear sen-

suring upon my account one of the most virtuous persons living. Madam, the concern your ladyship expresses for me in your obliging letter, has added pride to all my former good qualities, so that I am now a very accomplished gentleman, and have reason to believe, that your ladyship ought not to dislike that so singular a person should profess him self, madam, your most humble servant."

The lady was by no means satisfied with this apology, and a coolness ensued; nor does she seem to have been far misinformed of his lordship's rakish habits—witness the following letter (1659) "to a young widow."

"Madam,—I could not send to inquire of Mr. Seamer's condition, without presenting my humblest service to your ladyship, who I hope after some weeks to see at Oxford; but that will be for so short a while, that I doubt it will hardly afford us time to discourse (as formerly) of that contempt which is dew to the vanity of the world; nor, indeed, is it fit that so young, so beautiful, and so charming a creature should be any longer wayl'd with mortifying thoughts, especially while the creation smiles upon her, and invites her to those joys which can admit no blame, but for their want of being everlasting. Possibly your ladyship may think that this discourse suits ill with my former doctrine of platonicks; but what corresponds with so morose a temper as mine, would be very unfit for a young lady who is the admiration of all that see her, and whose perfections do transcend the envy of her sex.—Madam, your, &c. C."

Here we must stop till our next—but this volume is full of curious matter.

The Village Nightingale, and other Tales. By Elizabeth Frances Dagley, author of the "Birth-Day," "Fairy Favour," &c. 18mo. pp. 284. London, 1829. N. Hailes.

OF the value and importance of works placed in the hands of children too much cannot be said: to adapt itself to the simplicity, and yet meet the shrewdness, of infant judgment, requires a talent by itself; and early inculcation of kindly feelings and right principles, like early sowing of good seed, rarely fails to bring forth fruit in due season. It is the greatest praise we can give this little volume to say, that few children could read it without being benefited by that excellent morality, teaching by example, which pervades the various amusing and instructive tales.

The *Village Nightingale* sets forth most truly the mischief of injudicious praise; but we cannot do better than let the author speak for herself, by the ensuing extract from "Temptation." A poor cottager and his wife have, even with their small store, hospitably relieved the wants of an aged female; and the following conversation takes place:—

"Supper being over, and the little ones gone to bed, they began to enter into conversation; when the stranger remarked how comfortable they seemed to live in their snug little cottage. 'We do as well as we can,' said Morris; 'but—' 'Ah there is always a but,' interrupted the old dame; 'you want to be rich, and live without work.' 'By no means,' replied Morris; 'I am far from desiring riches, and least of all to lead an idle life. I should never complain of hard labour, if I could but ensure bread for my children; but the worst of it is, notwithstanding my endeavours, I am not always able to provide for the necessities of my family.' 'But that is not the worst of it,' cried Margaret, taking up the conversation; 'the worst is, that my poor husband is obliged

to be exposed to so much hardship and danger. Think, good dame, what a terrible thing it is for him to be so many hours, as he often is, tossing about on the stormy ocean; and judge how wretched it is for me to sit helpless at home, thinking of all the perils he is encountering. Oh! if we could but earn our living without Morris's being exposed to the dangers of the sea, in that bit of a fishing-boat, I should not mind any thing.' 'Truly I was not aware of all the circumstances attending your employment,' said the stranger, 'when I supposed you unreasonable in not being contented; but I see now that you have cause to complain of your condition. And now, my friends,' said the old woman rising, 'it is time to inform you, that in thus kindly relieving the wants of age and infirmity, you have discovered to the Fairy Benigna a liberality and kindness of disposition that shall not go unrewarded. I came to you at a time when, soured by your own disappointments, and oppressed by your own necessities, it would not have been surprising had you been regardless of the wants of others. I am pleased also with the moderation of your wishes, in desiring only the wealth which is acquired by diligence and industry. Take this,' continued the fairy, presenting to the astonished Morris a round grayish stone, 'and judge not the value of the present from its appearance; it is the Talisman of Independence, and one of the most valuable gifts in my power to bestow. It will not, indeed, prevent the necessity of labour, but it will make you prosperous by means of your own endeavours. There is, however, a condition belonging to my gift, which you must comply to ensure its possession. Those who hold the Talisman of Independence must learn to despise riches obtained by any other means than by their industry. On the last day of every year I shall place in your hands a casket of gold; and it is my command, that before twelve o'clock of the same night, you throw this casket, with all it contains, into the sea. Grieve not at thus bestowing the gold, and seek not to investigate the motives of the Fairy Benigna.' With these words the genius disappeared, leaving the fisherman and his wife in a state of astonishment that may easily be imagined. They talked and wondered, again and again, over the strange adventure of the night. Morris and his wife had heard of such things, and were not without their share of faith in the good fortune bestowed by fairies. Still the smooth gray stone was, in their eyes, a very insignificant possession; and a purse of gold would to them have been a far more acceptable present. As, however, according to the fairy's word, the talisman would be beneficial only in proportion to their exertions, and, whatever future good luck it might produce, was no relief to their present wants, the night being now far advanced, Hugh Morris resolved that, instead of going to rest, he would again try his fortune in his fishing-boat; and the very extraordinary success he met with on that occasion, and for a length of time after, sufficiently proved the influence of the magic gift. The Morrises now began to live in comparative comfort; but though the employment of fishing thus became more profitable, it was as perilous as ever; and recollecting that the genius had promised them success in whatever they undertook, it was resolved that Morris should transfer his labours from the sea to the land. They accordingly took a snug cottage, with a few acres of ground, and commenced the business of farming; and, considering that Hugh Morris knew little of agriculture, it was surprising to

see how well he succeeded. His crops were plentiful, and his cattle healthy; Margaret managed the dairy as well as her husband did the farm; and, even at the end of the first year, their profits were considerable. As Margaret said her husband were sitting by the fire-side, comparing the past with the present, and congratulating themselves on the comforts they now enjoyed—"Ay," said Hugh Morris, "it was, I think, this very night twelve months ago that the good fairy—" At this instant, however, he was interrupted, for the door suddenly opened, and a little dwarf, strangely habited, and of singular aspect, stood before them. Ere they could recover from the surprise which the sudden appearance of this extraordinary being occasioned, he had vanished as quickly. An ebony casket, however, was deposited on the table before them, on which the word 'REMEMBER!' was stamped in gold characters. They then recollected that this was the last day of the year, the period on which they were to fulfil the conditions annexed to the fairy gift. Again they talked over this extraordinary circumstance; again blessed their good fortune and the kind genius who, upon such easy terms, had conferred so great a benefit upon them. According to the fairy's command, Hugh Morris went and threw the casket into the sea; and all again went on as usual. Margaret and her husband continued to be diligent and industrious, and had the satisfaction of finding all their cares crowned with success. Another year rolled on in peace and plenty, and at the appointed period the mandate of the genius was again punctually obeyed. As time passed, however, the change in their circumstances made them not only forget their former poverty, but become more eager of gain than formerly; and, as is too often the case, the passion of avarice increased with their increasing wealth; and when, at the accustomed time, the ebony casket was placed in their hands, Margaret, who had never before ventured to touch the sacred deposit, now lifted it up, weighed it in her hand, and sighed, as she gave it to her husband for the purpose directed by the fairy. "What a strange thing!" said the dame, when Morris returned from executing his commission—"what a very strange thing it was for the fairy to order you to throw a casket of gold into the sea, when we consider to how many good purposes the money might be applied." "It was a strange fancy," replied Hugh, "and it is certainly rather a tantalising task to perform; however, there's no help for it." The subject then was dropped; but when another year had gone round, and the fairy's singular messenger once more put in their possession the treasure which was to be so strangely disposed of—"How provoking it is!" exclaimed Morris, "for at this very time I could make a capital bargain, by the purchase of some fine sheep, if I had but the money. True, the season has been plentiful, and I have had good returns; but at present I am short, and a moderate sum would be extremely useful." Both husband and wife were then silent for a few minutes, but at last—"What are you thinking about, Margaret?" said Hugh. "The same thing that you are," replied his wife. Morris started. "Ay," continued Margaret, "without being a fairy, I know you are thinking how glad you would be to make use of some of the money contained in that casket." "Why, truly," replied Morris, "I do consider it very hard to be under the necessity of throwing away a quantity of gold, when I am myself in want of it—in want, I should not say; but,

still, of which I could make such good use." "Well," cried the dame, "I would not advise you to do a dishonest action for the world; but, in this instance, supposing you were to take a little of the money, who would ever be the worse for it?—we should not injure any living creature. The fairy, at least, can turn whatever she pleases into gold; indeed it is a pretty clear proof how little value she sets upon money, to require you to throw it into the sea, where no one can be benefited by it. No; if it had been placed in our hands for any other purpose, I would on no account persuade you to meddle with it; but I can see no harm in taking a little of what would otherwise be entirely wasted." All these thoughts had actually passed through the mind of Morris. "At any rate," said he, "we will just, for the curiosity of the thing, open the casket. I should like to see how much there is in it; the fairy did not forbid our doing that." In an evil hour the casket was unfastened: the gold pieces rolled about the ground, and the numbers far exceeded what the Morrises had expected. In short, after seeing, counting, and touching the money, the temptation became too strong. Again they argued, that in taking some of it, no one would be wronged; and in conclusion, the sum necessary for the intended purchase was kept back; and the remainder returned to the casket, which Morris took, not without some grudge, to dispose of it as heretofore. It was a fine clear night, and as Morris raised the casket to throw it into the sea, the bright beams of the moon shone full upon it, and the word 'remember,' which, in characters of gold, was stamped upon the lid, flashed upon his sight. He started as if he had never before seen the inscription, and a feeling of terror crossed his mind. After the momentary splash occasioned by casting the treasure into the ocean, the waters closed over it, and every thing remained calm and undisturbed as before. "There certainly has been no harm in what I have done," thought Morris; but the pains he took to convince himself he had not committed a wrong action proved that his conscience was ill at rest."

Punishment—the entire loss of their prosperity—follows; but the *dénouement* is very pretty. After a long probation, the parents are restored to the favour of the fairy by the firmness of their children in each resisting temptation. There are various other interesting little tales; and as to the language of flowers, Miss Dagley might vie with any eastern maiden as its mistress. We have now only most cordially to recommend the present volume to the attention of all who would inculcate affection and uprightness in the youthful mind, and double the value of amusement by its instruction.

The Life of Belisarius. By Lord Mahon. 8vo. pp. 473. London, 1829. J. Murray.

SUPPORTED by the sole force of his genius, the history of Belisarius is the history of the Greek empire, and that, as the central point of warfare, includes almost the history of the then known world. Important in all its relations, yet has this period met with an unaccountable degree of neglect; but let our author here speak for himself.

"The events related in the following pages fall within the scope of Gibbon, in his justly celebrated history; and had he treated of them with that fulness of detail which distinguishes some other portions of his work, any further attempt to record them would be both unnecessary and presumptuous. But although

the space he has allotted to them is well proportioned to his general limits and design, yet he has dwelt so lightly on several important transactions, has omitted so many circumstances, and has merely alluded to so many others not unworthy of attention, that this interesting period may, perhaps, be thought to require a more particular narrative. A careful consideration of the original authorities has also led me in some cases to new conclusions; and thus, for instance, the mendacity and loss of sight of Belisarius, which every writer for the last century and a half has treated as a fable, may, I conceive, be established on firm historical grounds. An ancient and authentic testimony to that effect is now brought forward, which, though already printed, has hitherto been overlooked in the examination of this question."

As the physician said to his patient, in the most laudatory manner, "Ah! sir, you deserve to be ill," so we say to Lord Mahon, "You deserve to be an historian." The clearness and accuracy of the conclusions which he draws can only be equalled by the industry with which his materials are collected and weighed. His judgment is founded on his accuracy. Of the wild nature of really every-day events in those troubled times, the following sketch is a sample.

"The first act of Amalasontha, on assuming the regency, was to apprise Justinian of her son's accession, and request the continuance of the treaties and good understanding between him and the Goths. His alliance was readily granted her, so long as her influence and power seemed unshaken, but began to waver as her fortune declined. These haughty barbarians, whose ancestors had cheerfully submitted to queens, and had thereby, according to the harsh prejudice of Tacitus, sunk below slavery itself, now bore with impatience the dominion of a woman. The youth and beauty of Amalasontha appeared better fitted to adorn than to support a throne; and her lofty courage and superior talents were stained by the female frailties of capriciousness, cunning, and revenge. By her secret orders, three of the most powerful nobles, whose rivalry she feared, were treacherously seized, and executed without trial; their partisans were justly irritated by their fate, and so nearly was she overcome by domestic faction, that, on several occasions, she meditated flight to Constantinople, and had once already despatched a vessel, laden with her treasures, to the coast of Epirus. Her genius, however, succeeded in surmounting all these difficulties, but they could not fail to excite hopes of conquest in Justinian, who had probably intended to vindicate her cause, for his own advantage, had she taken shelter at his court, and who afterwards eagerly availed himself against her of the pretext which the seizure of Lilybæum afforded. This claim, which, as we have seen, had first been urged by Belisarius at Carthage, was prosecuted with vigour at Constantinople; nor was the emperor sparing in threats or warlike preparations, until a sudden change of circumstances induced him to alter his tone, and to perceive that his object would be most effectually attained under the mask of friendship for the Gothic queen. This singular revolution will require some detail. In the education of her son, Amalasontha had been desirous to enlarge his mind by liberal studies, but the loud clamours of the principal Goths, their opinion that learning was incompatible with valour, and their appeals to the ignorance of their ancestors, at last compelled her to abandon any

idea of instruction, and to leave the royal stripling almost without control. The consequences may be easily foreseen. Athalaric launched forth in pursuit of pleasure, with all the passionate ardour of early youth; his health sunk beneath his intemperance, and he expired after a nominal reign of eight years, and at the age of eighteen. It was the object of his mother to prolong her authority after his death; but as the Gothic laws now excluded females from the throne, she could only hope to govern under the protection of some other name. For this purpose she cast her eyes on Theodatus, the nephew of the great Theodoric, and offered to proclaim herself and him joint sovereigns of Italy, provided he would bind himself by a solemn oath, to content himself with the honours of royalty, without aspiring to its power and prerogatives. His advanced age, his secluded studies, his want of resolution, and his unpopularity with the Italians, were amongst his chief recommendations to her favour, for these qualities seemed auspicious to her views. She had lately, it is true, deeply wounded both his interest and his pride, by a sentence against him for some acts of oppression in his Tuscan domains; but she trusted that the preference which she shewed, and the rank to which she raised him, would change his resentment into gratitude. She was not aware that, with most minds, there can be no greater aggravation to an injury than a subsequent benefit. Theodatus subscribed to every condition, swore every oath which she required, and, having concerted his measures during a few months of seeming deference and respect, suddenly massacred her most faithful attendants, and confined her a close prisoner to an island of the lake of Bolsena. His attentive consideration spared her, at least, the pangs of suspense and uncertainty; within a few days from her arrival, she was stifled in the bath, by order of her thankless colleague."

The following is a curious, and we think probable, suggestion, of the origin of one of our present honours; speaking of the defeat of Kobad's army:—

"Inflamed with disappointment and anger, Kobad deprived the Mirraces of the golden fillet for his hair, which was worn in Persia as a most distinguished honour by special permission of the king. In this custom we may, perhaps, discover the earliest germ of those orders of knighthood, which now in almost every civilised nation reward the merit of the subject, or the favour of the sovereign. The institution is clearly the same, whether the emblems be worn on the head or on the breast. Should this conjecture be well founded, such orders have undergone a singular vicissitude in returning, as an imitation from the Europeans, to the very country whence they were first derived."

The ensuing observation on the effects of the defeat of the Vandals, is only one of many; but will shew the justice of the writer's general opinions.

"On viewing the conquest of Africa with that calmness and knowledge of results to which a contemporary writer cannot aspire, but which, at this distance of time, it is so easy to display, we shall find reason, both on political and religious grounds, to deplore the success of Belisarius. Had the Vandals remained in possession of this country, and had their valour been roused, and their discipline restored by another Genseric, a formidable, and perhaps effectual, barrier would have interposed, before the tide of Mahometan in-

vasion. Those hordes of Saracens who founded a monarchy in Spain, and carried their victorious arms to the Tiber and the Loire, might, at least in this direction, have been restrained to their native deserts; and Africa, in common with other ancient provinces of Rome, might now enjoy the benefits of civilisation and of Christianity. But the distracted and persecuting government of the Greeks in that country could only subsist by the weakness of its foes, and was subverted with little difficulty by the daring fanaticism of Hassan and Abdallah."

We have not time to enter into the discussion at the end, respecting Belisarius's blindness and poverty; but we must say, that to us Lord Mahon's arguments seem most conclusive; and we bid farewell to his work, with high appreciation of its research and talent. It is a book that does its author the greatest credit.

SIGHTS OF BOOKS.

A Letter on the State and Patronage of the Church in India. By a Chaplain on the Bombay Establishment. London, 1829. J. Murray.

THIS Letter is entitled to attention, because it comes from a person who actually fills a station, the nature and peculiarities of which he undertakes to describe. It contains an authentic account of the duties and position in society of the bishop, the archdeacons, and subordinate clergy in India; and the nature of the qualifications required to enable them to fill these offices with effect. The main object of the letter, however, is to point out (which it does at least with temper,) the unfitness of the Court of Directors to be the depository of the patronage of the church in India. The suggestions of the writer appear to be deserving of consideration; and the pamphlet will be read with interest by all those who attach importance to a due supply of the spiritual wants of British India.

Geraldine of Desmond: an Historical Romance. 3 vols. 12mo. Colburn.

How little could the chroniclers of olden time foresee their destiny—how their gorgeous processions, their descriptions of gold and silver raiment, their beheaded heroes and imprisoned heroines, after a period of black-letter slumber, would come forth, in clear neat type, three vols.,—in short, would cover the cost of an historical romance! A course of a few weeks' reading at the Museum seems inevitably to terminate in a novel. The present work is written quite on these principles of appropriation, instead of invention; and these materials are at once too tempting and too easy. The hero is a very fine young man, the heroine a beauty; page after page of description and costume is transcribed,

"And lo, three puddings smoke upon the board!"

We cannot better characterise this production than as an historical *Belle Assemblée*; for never did that most authentic repository detail the French fashions more minutely than its pages do all the old ones,—every dress is described with a very milliner's accuracy. The language is good, and many of the sketches spirited; but, as a story, *Geraldine of Desmond* wants both character and interest.

The Savings' Bank Assistant. By C. Compton. Longman and Co.

A USEFUL book, with tables and computations, for a very beneficial institution. It will save the friends and managers of savings' banks much labour.

ORIGINAL CORRESPONDENCE.

Paris, May 30.

Le Tableau du Sacre is now the grand point d'appui of conversation; and every quack connoisseur of the age criticises M. Gerard's talents with all the importance of "ignorance with looks profound." I can only say that the artist has given such spirit, movement, and action, to the personages represented in this painting, that life seems to breathe on canvass; and that the first effect is so extremely impressive, that spectators imagine themselves actually present at the coronation. The picture is, I understand, to serve as a *pendant* to *l'Entrée de Henri Quatre*, notwithstanding the severe criticisms of some rivals in the painting art.

As to new publications, there are really none worthy of mention. However, we are inundated with *poets*—that is, with such as style themselves so. Amongst the rising generation of versifiers is a M. Bébé, to whom some *gens de lettres* accord genius: I know not if his *Crispations Poétiques* have reached the London libraries: they are said to possess much originality; and are certainly calculated to set every nerve on edge, or give the nightmare.

ARTS AND SCIENCES.

ROYAL INSTITUTION.

MAY 29.—At the meeting this evening Mr. Singer gave some observations "on the fictile vases of the ancients," including a brief outline of their history. The illustrations, which were very numerous and curious, were from the cabinet of Mr. Halsewell, consisting of Greek vases of every age, and other specimens of the *terra cotta* of the ancients. Among them was the curious and interesting Athenian cylindrical vase, brought from Greece by Mr. Graham, representing the OXHAITHOAAONOX, which the late Dr. Clarke possessed, and which Mr. Wilkins made subservient to the explanation of the sculptures in the tympanum of the western pediment of the Parthenon. It is a curious fragment of Greek art; and the freedom of the drawing, and the care with which the whole appears to have been executed, is remarkable. There were also exhibited well-executed cork models of the temple of Paestum and of two ancient tombs.

Mr. Singer adverted to Mr. Christie's theory of the origin of the forms of the ancient vases being derived from the seed-vessels of the lotus tribe of plants, and the paintings from the Skiagraphia, or transparencies of the Eleusinian shows; and this part of the subject was illustrated by a well-decorated screen, containing a series of the subjects of the Hamiltonian vases, and capital diagrams of the forms. Mr. Singer's communication, as an elementary view, was clear and comprehensive. It was well received.

In connexion with the above subject, Mr. Singer mentioned to the audience that Mr. Faraday purposes to direct his attention to the analysis of the black glaze of the ancient vases,—a subject which has puzzled many chemists, and of which, as yet, no satisfactory account has been given,—with a view to bringing the point before the Institution.

On the library-table were mineralogical and geological specimens from India, presented by Captain Blake; and in the room was hung a curious historical flag, representing the emigration of the cinnamon-peelers of Ceylon.

COLLEGE OF PHYSICIANS.

On Monday evening a very numerous meeting took place; Sir Henry Hallford, Bart. in the chair. The first paper was read by Dr. Mac-michael; and was undoubtedly a great literary as well as medical curiosity, being no other than a medical case by the celebrated Locke, and treated by himself. It has long been disputed whether Locke, though he took the degree of M.B. at Oxford, in the year 1674, ever practised physic as a profession. Lord Grenville, in the pamphlet published lately by Mr. Murray, entitled "Oxford and Locke," says that he certainly did; and devotes a chapter in his work to make out that point; he quotes Anthony Wood, who asserts that Locke did, for a time, we know not how long, *præstare physicam* at Oxford;—besides, says Lord Grenville, his first connexion with Lord Shaftesbury was manifestly that of medical attendance, which appears from his patron's desire not to suffer him thenceforth to practise medicine out of his (Lord Shaftesbury's) house, except among some of his private friends. The case, however, which we had the pleasure of hearing read last night, puts the matter beyond all question, and fully justifies the high eulogium which Sydenham bestows upon Locke's medical talents.

Lord King, whom we saw present at the reading of this curious MS., found it lately amongst his papers, and very liberally presented it to the College. It is the history of the case of the Countess of Northumberland, the lady of our ambassador at Paris in 1677, where Locke then was,—having gone abroad a few years before, on account of his health. He describes his being called to her excellency Dec. 2, and finding her shrieking out, and in great agony from an attack of a pain in her face, which she describes as a flash of fire over its right side, from her teeth up to her ear, as if scalding liquor had been thrown upon her tongue. Locke gives a daily report of the state of his patient from this time till the 16th of the month, when she was free from the attacks. There was sometimes a complete abatement of the symptoms for many hours, when suddenly a very violent fit, without any visible cause, would come on; at other times talking was apt to induce them; sometimes touching the foot of the affected side would give her the twitches or fits, and soon after she could touch that side with impunity. The preceding summer she had had a tooth drawn to relieve a similar fit of pain, but without the slightest benefit. Locke concludes, that the root of the mischief lay in some harm done to the nerve of that side of the face. He chiefly found benefit from the employment of slight opiates, and the external application of laudanum, black-cherry water, and spirits of harts-horn, to those parts of the gums where she felt the most pain, when she had any respite from the fits. Locke adds, "But obstinate humours will not always obey remedies which one has reason to expect success from;" and it may with great truth be said, that the experience of modern times has added little to our means of relieving that formidable disease *tic douloureux*, of which this case of the Countess of Northumberland is the first well-authenticated instance with which we are acquainted.

Sir Henry Hallford, the president, then read a paper of his own, which, though he did not give it any particular title, might be called popular and classical illustrations of insanity. Some splendid passages of Horace and Shakespeare were quoted by the learned president, applicable to some forms of mental derange-

ment which had fallen under his notice. The manner in which these quotations were given was peculiarly striking, and they were so apt and felicitous, as to prove that those great poets had drawn their descriptions of mental delusion from actual prototypes, and not from their own imaginations.

MEDICO-BOTANICAL SOCIETY.

At the last meeting of this Society, the Prince Imperial of Austria, the Duke of Chartres, and the Grand Duke of Russia, were elected honorary Fellows; W. A. Mackinnon, Samuel Rootsey, and Samuel Dunstone, Esqrs., were elected Fellows. A paper was read, detailing different experiments made by Dr. Hancock, in the various modes of administering sarsaparilla; the author conceiving that a fermented infusion is more active than the decoction. A numerous collection of plants, from Kew Gardens, were presented by Mr. Aiton; the Earl of Stanhope also presented at this meeting the two concluding parts of Nees Von Esenbeck's complete collection of *officinal* plants, embracing nearly 440 folio lithographic coloured prints.

SOCIETY FOR THE ENLARGEMENT, & C. OF CHURCHES AND CHAPELS.

On Monday week, the 23d ultimo, was held the first annual general court of this excellent association, under the provisions of the Act of Parliament by which it was incorporated in the preceding session. The chair was taken by its president, the Archbishop of Canterbury, who was supported by the Archbishop of York, Bishops of London, Bath and Wells, Ely, Gloucester, Llandaff, Lichfield, Lincoln, Bristol, and Winchester, Lord Bexley, Archdeacons Watson and Hollingworth, the Dean of Peterborough, and a numerous assemblage of the most respectable members of the Society.

The administration of this new corporation, as we gathered from the report submitted to the meeting, is intrusted to a president, twenty-eight vice-presidents, and a committee of thirty-six members; and its objects, besides the *enlargement* and *building* of churches and chapels, now embrace the *repairing* of those edifices.

It was stated (and we hail it as a gratifying assurance of the deep root which pure Christianity has taken amongst us), that the royal letter of aid which was granted towards the close of last year, has produced no less a sum than 40,653*l.* 4*s.* 7*d.*; by which means, after defraying the numerous apportionments in furtherance of the purposes of the Society, the balance in hand on the 31st of March last was raised to 33,736*l.* 4*s.* 9*d.* The urgency of this successful appeal on the national benevolence may be inferred from the increase in the number of applications, that number having risen from 100 in 1827-8 to 140 in 1828-9, during the latter of which periods seventy-six grants, amounting to 10,583*l.* were made, and 20,004 additional sittings were obtained, inclusive of 13,604 *free sittings* for our poorer fellow-countrymen.

We have here recorded the result of a single year's exertions; but when we look at the benefits which have emanated from this Society, from its first institution down to the present time (an interval of eleven short years), we may well ask, Where is the Christian who will venture to estimate its value either as regards the present or the future, or its importance, whether in a religious or a national point of view? During that interval 120,000*l.* have been granted for enlarging or building places

of public worship; and for this sum 185,443 additional sittings have been obtained; of which number no less than 137,497 have been sittings secured for ever to the gratuitous use of those, to whom their richer brethren have thus thrown open the portals of those temples where is to be found "favour and good understanding in the sight of God and man!"

LITERARY AND LEARNED.

OXFORD, May 30th.—On Wednesday the following degrees were conferred:—

Masters of Arts.—W. Allfree, Exeter College, Grand Compounder, W. G. Lambert, Scholar, C. C. C.; F. J. Moore, Exeter College; S. L. Hammick, Christ Church; Rev. R. H. King, Magdalen Hall; Rev. S. Wilberforce, C. H. J. Anderson, Oriel College.

Bachelors of Arts.—W. N. Gresley, St. Mary Hall; T. Farebrother, Queen's College; R. Croft, Scholar, Balliol College; J. Dennis, Exeter College; F. O. Durant, Worcester College; H. Davison, Scholar, H. Gwyn, C. Powell, Trinity College.

CAMBRIDGE, May 29th.—At a congregation on Wednesday last the following degrees were conferred:—

Honorary Masters of Arts.—Lord Wriothesley Russell, Trinity College, son of the Duke of Bedford; Lord Norreys, Trinity College, son of the Earl of Abingdon.

Masters of Arts.—Rev. J. G. Milne, St. Peter's College; Rev. E. Murray, F. F. Pinder, Trinity College; F. Osborne, Trinity Hall; Rev. J. Phillips, Sidney College; Rev. S. Bagnall, Downing College, Grand Compounder.

Licentiates in Physic.—W. J. Bayne, Fellow, Trinity College; N. F. Davison, Caius College.

Bachelor in Civil Law.—Rev. R. M. Caunter, Sidney Sussex College.

Bachelors in Physic.—A. L. Wollaston, Caius College; J. F. Bernard, C. C. C.; F. K. Fox, St. John's College.

Bachelors of Arts.—J. W. Astley, C. Luxmore, T. Phillips, King's College; C. Weymouth, H. Bowyer, F. Reid, C. Bigby, Trinity College; G. Gordon, Caius College; J. E. Holden, J. G. Palant, Christ College.

At the above congregation the Rev. S. Smith, M.A. of Christ Church, Oxford, was admitted *ad eundem* of this University.

ROYAL SOCIETY.

JUNE 4th. The President in the chair.—A paper was read, entitled, "on the geometrical representation of the powers of quantities which involve the square roots of negative quantities;" by the Rev. John Warren. Another paper was also read, descriptive of a case of a tumour removed from the head by Sir Everard Home. The Hon. J. Stewart Wortley and the Rev. Joseph Bosworth were elected Fellows; and John Shaw and S. D. Broughton, Esqrs., were proposed. The presents consisted chiefly of the *Memoirs of De Witt Clinton*, the American statesman, by Dr. Hosack of New York; Dr. Clark's work on the Influence of Climate in Chronic Diseases; and Professor Rigaud's MS. Observations made at the Radcliffe Observatory, Oxford: several interesting foreign donations were also received through M. Moreau, from Messrs. Jomard and Serullas, and the Academies of Dijon and Bourdeaux.

At a recent meeting a paper was read, entitled "on the Composition of the Chloride of Barium," by Edward Turner, M.D. Professor of Chemistry in the University of London. Communicated by the Rev. Dr. Lardner, F.R.S.

The frequent employment of chloride of barium in delicate chemical investigations, renders an exact knowledge of its composition peculiarly desirable; and this has become a more important object of inquiry since it has been made by Dr. Thomson the basis of his calculation of the chemical equivalents of sulphuric acid, and of thirteen metals and their protoxides. He has deduced from his experiments with the chloride of barium, the number 36 as the equivalent of chlorine, 70 as that of barium, and 78 as that of baryta; whence the equivalent of the chloride of barium would be 106; and accordingly, on mixing this quantity of the chloride with 88 parts of sulphate of potash, each being previously dissolved in separate portions of distilled water, he finds

a complete double decomposition has taken place; the resulting sulphate of baryta reduced to dryness, weighing 118 parts; and the muriate of potash yielding 76 parts of chloride of potassium. Hence he infers that 40 is the equivalent number for sulphuric acid, and 48 that for potash. Berzelius, however, maintained that this experiment, as well as the deductions from it, are not exact. Dr. Thomson having, in consequence of Berzelius's objections, repeated his experiments, still asserts their accuracy. The author of the present paper investigated the subject with the greatest care, employing materials in a state of perfect purity, and obtained results which coincided with those of Berzelius. He details the precautions he took for ensuring the conditions of perfect purity in the substances with which his experiments were made, and to the neglect of which he traces some of the errors which he imputes to Dr. Thomson's analysis. But there exists also a more radical cause of error in the method employed by that chemist; for Dr. Turner finds, that when solutions of muriate of baryta and of sulphate of potash are mixed together, a small portion of the latter salt adheres tenaciously to the sulphate of baryta, which is precipitated, and thus escapes decomposition. By employing different processes, the author avoids this source of fallacy. First, from the chloride of barium, previously dissolved in water, he throws down sulphate of baryta by adding sulphuric acid; and secondly, he effects a precipitation from a similar solution of the chloride by nitrate of silver, and infers the quantity of chloride from that of the fixed horn-silver obtained; having previously determined, by a separate series of experiments, the exact composition of horn-silver. The conclusion he draws from his researches is, that 100 parts of the chloride of barium correspond to 157.63 parts of the chloride of silver, which latter substance contains 34.016 parts of chlorine, and therefore leaves for the proportion of barium, 65.984 parts. The real equivalent of barium, however, will depend upon that of chlorine, which is itself not yet satisfactorily determined.

THE LITERARY FUND.

THE Greenwich meeting, at four o'clock on Wednesday next, promises to be the most numerous that has been for many years: since the anniversary a considerable amount of subscriptions and many new friends have been obtained for this admirable Institution, which the better it is known, justly acquires the more extensive support.

ORIENTAL TRANSLATION FUND.

ON Saturday the Anniversary of this Institution was held; his Royal Highness the Duke of Sussex in the chair,—supported by their Excellencies the Hanoverian, Prussian, Neapolitan, Bavarian, and American ministers; Earls Spencer and Carlisle; the Marquess of Bute; Lords Amherst and Holmesdale; Sir G. Warrender, M.P., Sir Alexander Johnston, C. N. Palmer, M.P., Colonel Fitzclarence, Mr. Bowring the poet, and a great number of other persons of consideration.

The Right Hon. Sir Gore Ouseley, Bart. read the report. It stated that the knowledge of the Society had even extended beyond the eastern limits of Europe; that the friendly co-operation of the presidencies of Calcutta and Madras had been obtained; a like assurance was also daily expected from Bomb., through the medium of Sir John Malcolm. Five valu-

able Oriental works had been printed by the Society,—five more were in the press, and twenty-two were in progress of translation. The report also stated, that the Society had resolved to bestow four prizes annually for the best translations of Oriental works; two of the prizes to be in money, to the amount of fifty pounds each; the other two in gold medals, of the value of twenty guineas each. The funds of the Institution were also in a prosperous state, there remaining in the treasurer's hands, after the year's disbursements had been made, a balance of 1,250*l*.

Mr. Belfour, for his translation of Macarius, and Mr. Mitchell, for his History of the Maritime Wars of the Turks, were declared to be the successful candidates for the money prizes; and Drs. Dorn and Rosen,—the former for his History of the Afghans, translated from the Persian, and the latter for his translation of the earliest System of Algebra extant in Arabia, had the gold medals awarded to them.

The accomplished Prince in the chair, with the greatest condescension and urbanity, then presented the young Germans with their medals, which they acknowledged in suitable terms.

After the report was received, and a vote of thanks passed to his Royal Highness, the meeting separated, highly gratified with the day's proceedings.

FINE ARTS.

EXHIBITION OF THE ROYAL ACADEMY.

(Fifth Notice.)

No. 321. *Children with an Ass*.—The name of the artist is omitted in the Catalogue, and we are unable to supply the deficiency. We cannot therefore be charged with partiality when we characterise this as a very clever little performance.

No. 332. *The Coronation of the Remains of Ines de Castro*. G. St. Evre.—There is much more skill displayed in the execution of this picture than there is judgment or taste in the choice of the subject; than which it is difficult to conceive any thing more revolting.

No. 306. *The Market for Hay, called La Corrateri*. Geneva. J. J. Chalon, A.—A happy combination of the grand and the familiar: the partially concealed buildings are very judiciously relieved by the mass of dark foliage through which they are beheld; and the gay and picturesque costume of the figures imparts liveliness to the scene.

No. 247. *Blowing Bubbles*; No. 252. *The Dancing Dogs*. W. Gill.—The first of these little cabinet gems reminds us of our boyish delights, and naturally prompts the inquiry, if we have not been indulging in the same amusement all our lives? Neither this nor its companion, however, is a bubble of art. Both are solid and permanent examples of skill, in character, expression, and finish.

The principal portraits in this room are, No. 338. *Portrait of John Soane, Esq.*, Sir T. Lawrence, P.R.A.; No. 326. *Portrait of David Wilkie, Esq.*, R.A., T. Phillips, R.A.; and No. 341. *Portrait of the Bishop of Rochester*, B. R. Faulkner. Of the first, it may be justly said, that it is one of the President's most successful portraits; the second is an acknowledged resemblance, and is very finely painted, although, perhaps, with rather too much of that blending or softening in the pencilling, which has a tendency to impair character; the third is a highly creditable specimen of the powers of an artist who is rapidly rising in his branch of the profession. There are other portraits of much excellence both in this

and in the Great Room, by Mrs. Carpenter, Mrs. Pearson, W. E. West, J. Ramsay, J. Linnell, Esq., but which our limits will not permit us to enumerate.

ANTE-ROOM.

No. 380. *View near Chalons sur Saone*. C. Stanfield.—Principally remarkable for the simple dignity of the composition, but possessing every essential quality of the art in point of execution and effect.

No. 379. *The Little Savoyard*. W. Davison.—The childish drollery of the character united with the picturesque costume to render this a very interesting, as it is also a very clever performance. We do not think, however, that the back-ground harmonises completely with the figure.

No. 381. *Hamlet*. R. R. Reinagle, R.A.—A firm and well-painted picture, with properties of art that would distinguish it even by the side of the old Spanish masters; but no more like Hamlet "than we to Hercules!"

No. 451. *Sketch from Nature*. T. Warington.—Say rather a study, and a very able one.

No. 478. *The Sequestered Glen*. J. A. O'Connor.—The romantic in landscape composition is the favourite feature of Mr. O'Connor's pencil; and in all that we have seen of his productions, we have thought him highly successful. It occurs to us, however, that, in his present performance, the omission of the figure would have been advantageous; and that, instead of presenting a regularly foliaged tree as a principal object, one of ruder and more irregular form would have been in better unison with the scene.

No. 460. *The Falls of the Machno, North Wales*. F. C. Lewis.—Mr. Lewis's style is also well suited to the romantic in art. These Falls will contribute to the rise of his reputation.
